The following investigations are being performed: electronic conduction in solid oxide electrolytes, a subgroup of fast ionic conductors in which oxygen diffuses rapidly at elevated temperatures. Parameters controlling nonstoichiometry, impurities, and electronic mobility; pure and doped ThO2 examined for electronic conductivity, thermoelectric power, and ionic transference number; and microstructural studies of second phases, grain boundary effects, and segregation. 3.0019, SPECTROSCOPIC INVESTIGATIONS OF SMALL MOLECULE INTERACTIONS ON METAL OXIDE SURFACES
E.I. Solomon, Massachusetts Inst. of Technology, School of Science, Dept. of Chemistry, *77 Massachusetts Ave., Cambridge, Massachusetts* 02139 (ER-78-S-02-4988)

A research program for the investigation of the surface chemistry of catalytically important metal oxide systems is proposed. Primary emphasis will be placed on the interaction of a number of chemically relevant small molecules with zinc oxide, aluminum oxide and chromium oxide single crystal surfaces and catalytic powders. These experiments will employ two separate vacuum systems, in order to perform both survey type and detailed spectroscopic investigations. The surveys of the adsorption chemistry of these crystals will be performed using angle integrated ultraviolet photoemission spectroscopy in combination with Low Energy Electron Diffraction, Auger, and X-ray photoemission spectroscopy. More detailed spectroscopic investigations of the adsorbed molecules will be performed using angle-resolved ultraviolet photoemission and high resolution electron energy loss spectroscopy. By these techniques we hope to elucidate the nature of the surface geometric and electronic structural requirements for chemisorption on these materials, and thus gain insight into the fundamental processes of oxide catalysis.

RESULTS TO DATE: Studies have been performed on single crystal surfaces of zinc oxide for four orientations: (1010), (1120), (0001), and (0001). Adsorption of CO is strongly enhanced on the two non-polar (1010) and (1120) faces over the adsorption on the polar (0001) and (0001) faces, indicating that the adsorption requires both coordinatively unsaturated zinc and oxygen ions. (Adsorption on the polar faces would then be associated with the high density of non-polar steps occurring on these faces.) Further chemisorption studies have been performed with NH3, H2O, CO2, H2 and 02. Poisoning and ligand competition studies on the four ZnO faces have been used to investigate the adsorption behavior and to further characterize the nature of the interaction of CO with ZnO.

3.0020, ALTERNATIVE FUELS/ENERGY SOURCE STUDY FOR NONHIGHWAY TRANSPORT SYSTEMS
R. Alpaugh, Exxon Research & Engineering Co., *1600 Linden Ave., Linden, New Jersey* 07036 (EC-77-C-05-5438)

In this project combinations of power systems, fuels, and time frames will be evaluated for the purpose of identifying the most attractive of these combinations for further development and commercialization. To accomplish this a literature search will be conducted. The data will be screened by considering issues such as resource availability, interaction with military and international sectors, institutional problems, and cross-mode impacts. A ranking of fuel choices by mode and time frame will then be developed. From this, R and D requirements will be identified and the contractor will recommend an R and D program designed to promote the orderly transition of nonhighway modes to non-petroleum based fuels.

3.0021, DEUTERIUM PLASMA-MATERIAL WALL INTERACTIONS
J.K. Tien, Columbia University, School of Engineering & Applied Science, Dept. of Mining Metallurgical & Mineral Engineering, *Broadway & W. 116th St., New York, New York* 10027 (EG-77-S-02-4393)

The achievement of fusion as a safe, viable energy source depends on the integrity of the materials used to contain the thermonuclear reaction. Of all the fluxes which these materials will have to withstand, one of the most insidious involves the interaction of the fuel for the fusion reaction, that is, the hydrogen isotope plasma with material surfaces. Hydrogen isotopes are capable of reducing the ductility of structural materials to unacceptable levels. In addition, their bombardment of material surfaces results in significant loss of material leading to poisoning of the plasma and thus to preventing the achievement of fusion conditions. At Columbia University, we employ an electromagnetic plasma shock tube to study the accelerated exposure of materials to deuterium plasma. A single shock tube run, lasting only 20 hours, is the equivalent of an entire year of Tokamak fusion power reactor, deuterium plasma exposure. A range of materials is being subjected to plasma exposure. They include candidate fusion materials, such as stainless steels, and nickel base alloys; advanced concept materials such as refractory metal alloys; and nonmetallics such as graphite and boron nitride. We have documented the occurrence of unipolar arcing, a most insidious mechanism which is capable of producing copious amounts of plasma impurities. We have also determined by direct observation the penetration of deuterium into these materials. The occurrence of bulk embrittlement effects has also been detected. Our next objective is to extend our work to include the plasma exposure of specimens at elevated temperatures, typical of actual reactor operation (i.e., approximately 500 degrees C).

3.0022, NITRIC OXIDE PRODUCTION FROM CHEMICALLY BOUND NITROGEN IN COAL
Unknown, Research Foundation of State University of New York, *P.O. Box 9, Albany, New York* 12201 (EF-77-G-01-2742)

The factors which influence the conversion of chemically bound nitrogen in coal to the oxides of nitrogen will be exam-

best copy available

ined in a laboratory combustor. The work will focus on the role of flame temperature, coal and char composition and aerodynamic mixing on fuel nitrogen conversion in coal combustion. The problem will be approached experimentally in two steps. First the relative levels of fuel NO and thermal NO will be determined for a pulverized coal diffusion flame. Fuel NO will be isolated by using various mixtures of argon, oxygen and carbon dioxide in place of atmospheric air in our combustor and comparing to the NO levels obtained when the coal sample is burned in air under that same flame temperature condition. Different types and ranks of coal will be examined to determine the influence of the actual fuel composition upon our results. The composition will be determined from ultimate and proximate analysis. The composition of the products of combustion will be sampled and analyzed using a variety of techniques. The NO, NO2, CO2,O2, SO2 and total hydrocarbon gas concentrations will be monitored in the exit plane of the combustor. This will provide an overall evaluation of factor influencing NO production from fuel bound nitrogen compounds. The second phase of the work will examine the influence of coal particle density and velocity (hence mixing effects) upon NO generation. Sampling will also be done at these locations to provide a concentration map of constituents within the combustor. Results should provide insight of the local effects influencing fuel NO production.

G. Ladd, Hughes Aircraft Co., *3100 W. Lomita Blvd., Torrance, California* 90509 (DF912000; F30602-78-C-0326)

The objective of this effort will be to determine the reliability limitations of GaAs field effect transistor devices.

The approach will consist of in-depth physical studies of possible life limiting mechanisms such as electromigration, ohmic contact degradation, charge trapping at interface, crystal defects, deplating of metals, and defects in passivation. Arrhenius activation energies for the above mechanisms will be determined and their effect on the reliable life of various FET devices will be developed. Devices representing the limits of frequency, power output, and low noise will be analyzed to establish worst case operating conditions with trade-offs depending on the system life required for various applications. Test structures will be used to isolate various failure mechanisms for detailed determination of the activation energy and the affect of material, processing and stress factors on the activation energy. The end item will be a report.

AF function - secure space communications and covert optical electronics require devices which exploit special properties and interactions of materials with infrared radiation. Opportunity -infrared materials research has a high potential impact on novel detectors, sources and communications for airborne and spaceborne applications. Objective - this effort investigates a variety of nonlinear optical processes in semiconductors utilizing ultrafast spectroscopic techniques to probe the basic physics of the interaction of intense subpicosecond pulses with semiconductors. How work contributes - the ultimate goal of this work is to use these interactions as the basis for obtaining tunable coherent infrared sources as required for communications, optical radars, and plasma diagnostics for plumes and exhausts.

To achieve the goal of generating tunable coherent infrared sources and controlling this radiation by means of novel mode-locking and modulation techniques, the following nonlinear processes will be studied: 1) ultrafast radiative recombination processes in CDS and CDSE - the characteristic delay, rise and decay times of recombination radiation at high exciton densities will be measured, 2) enhancement of electron-hole recombinations by adjusting the band gap of narrow-gap semiconductors to the energy of elementary excitation in solids such as phonons or plasmons. Testing this approach via pumping of different samples of n-type semimetallic Hg1-x Cd x Te and making time resolved photoconductivity and lifetime measurements with an ultrafast streak camera, 3) pulsed, optical pumping experiments in semiconductors, 4) time resolved induced absorption due to exciton-biexciton transitions, 5) laser-induced dielectric breakdown in transparent solids, 6) optical frequency mixing spectroscopy in semiconductors.

5.0001, LNB SYSTEMS DEVELOPMENT

R.H. Canada, Sperry Support Services, *1112 Church St., Huntsville, Alabama* 35801 (NAS13-60)

OBJECTIVE: To develop a meteorological and oceanographic data acquisition system for installation on the U.S. Coast Guard's Large Navigation Buoys (LNB). The data will be transmitted via the GOES satellite and distributed via the National Weather Service's network.

APPROACH: A prototype system was installed in October 1979 on the Columbia River Bar LNB for a six-month test and evaluation. Results of the prototype testing will be used to finalize the design for refitting most of the LNB's.

CURRENT PLANS AND PROGRESS: The procurement and installation of operational systems will begin in FY81 as part of the National Weather Service's Coastal and Offshore Observation Programs (COOPS).

SUPPORTED BY U.S. Dept. of Commerce, Office of Ocean Engineering, National Data Buoy Office

5.0002, FIELD SUPPORT FOR STATE PLUME STUDIES

J.F. Meagher, U.S. Tennessee Valley Authority, Air Quality Research Section, *c/o OSWHA, Muscle Shoals, Alabama* 35660 (D8-E721-DL; G603A-AA-053)

This task is part of a large program to determine transport, transformation, and removal processes and rates affecting atmospheric concentrations of sulfur compounds. Initial emphasis is on studies of definable plumes out to times and distances of 24 hrs. and 500 km, respectively. Field support consists of providing personnel to make observations, collect data, perform limited source sampling, and support other investigators, as well as providing physical facilities, including power and communications for the many components of the study. Support aircraft are also provided.

The output of this task is principally support for all investigators in the program; limited analyses of data on source emissions rates and boundary layer structure will also be furnished.

Work underway in preparation for the study will be continued through the actual field work in August 1978.

Copies of data for deriving emission rates from the TVA's Cumberland power plant for all days of the August field study were furnished, together with data for the Johnsonville and Paradise plants when plumes from these sources might have been affecting sampling results. Copies of five unpublished data volumes listing meteorological and air quality monitoring data were prepared and distributed to participants for use in analyzing data from surface and airborne measurement platforms. Copies of the data on magnetic tape were provided to the STATE data bank. A two-volume analysis of the meteorological conditions for each sampling day was prepared and distributed to participants.

5.0006, MAGNETIC FIELD ANNIHILATION IN THE MAGNETOSPHERE AND SOME APPLICATIONS

S.I. Akasofu, University of Alaska, Fairbanks Campus, Geophysical Inst., *Fairbanks, Alaska* 99701 (EY-76-S-06-2229 005)

The magnetic field annihilation process has been believed to be one of the basic processes in cosmic electrodynamics, releasing a considerable amount of energy in a relatively short time, and has also been believed to take place in the tail region of the magnetosphere (manifested by magnetospheric substorms), in the planets (such as Mercury and Jupiter), in some comets, and in certain regions of the Galaxy. The one common feature in these regions is that the oppositely directed magnetic field regions are separated by a thin sheet-like region (often called the neutral sheet). We have been interested in energy-related geophysical problems in the arctic region. During the last 12 months, we helped corrosion engineers of the Alyeska Pipeline Co. in monitoring an induction current in the Trans-Alaska pipeline. We have found that electric currents of order 200 amperes are induced in the pipe during medium auroral activity. We are at present monitoring the amount of electric currents which leaks from short segments of an underground section of the pipe. We have also been interested in applying the audio-frequency (10 Hz to 10KHz) magnetotelluric method in sounding permafrost regions in Fairbanks. (ERDA 77-55)

5.0007, INTERPRETATION OF LARGE GEOLOGIC FEATURES AND TRENDS ASSOCIATED WITH ALASKAN MINERAL OCCURRENCES BY MEANS OF ENHANCED SATELLITE IMAGERY

P.A. Metz, University of Alaska, Fairbanks Campus, School of Mineral Industry, *Fairbanks, Alaska* 99735 (G5195004; ASK-79-XPL (7))

OBJECTIVE: To interpret and correlate large geologic features and trends with known Alaskan mineral occurrences by means of enhanced satellite imagery.

APPROACH: Major mineral occurrences (approximately 250) will be plotted on a 1:1,000,000 base map. Computer enhanced ERTS imagery of Alaska will be examined to determine optimal spectral combinations for depicting linear and geometric features, lithologies, and alteration suites. Orientation, length, spacing, and density of linear intersections will be determined. Density of linear intersections and mineral occurrences will be contoured by trend surface techniques. Rose diagrams will be constructed. Data obtained from this research will complement existing projects on mineral resource evaluation and will be incorporated in a publication on the Geology and Mineral Resources of Alaska.

5.0012, MECHANISMS FOR THE EFFECT OF SOLAR VARIABILITY ON WEATHER

W.O. Roberts, Aspen Inst. for Humanistic Studies, *1919 14th St., Suite 811, Boulder, Colorado* 80302 (ER-78-S-02-4634)

To establish statistical relationships between parameters of variable solar activity and meteorological effects. To fit physical mechanisms to these statistical results, attempting to find plausible physical explanations for the various features of the relationships discovered through statistical analysis. To attempt to verify these proposed mechanisms using independent data.

RESULTS: In the 2 1/2 months of the current project, we have examined the effects of the passage of large solar plages across the solar disc on the circulation of the earth's atmosphere. As the plage approaches the center of the sun, the intensity of cyclonic circulation in the earth's atmosphere increases.

SUPPORTED BY U.S. Dept. of Energy

5.0013, REMOTE SENSING OF WATER QUALITY VIA LASER-RAMAN SPECTROSCOPY

M.C. Goldberg, U.S. Dept. of the Interior, Geological Survey, Water Resources Div., *Denver, Colorado* (CR 71-176)

Water quality determinations in large lakes, estuaries or rivers are difficult at best by single point measurements. A remote sensing device capable of rapid scan over large areas would efficiently, and rapidly convey continuous water quality data to the water user and the hydrologist. This data would immediately give a quality map of basins, and estuaries. Such information cannot be obtained with present methods due to logistic and cost barriers. Remote methods cut cost, give continuous rather than point data, and reduce time of analysis from months to hours.

A study would utilize an array of lasers each operating at a particular frequency chosen to permit a 'fingerprinting' identification which utilizes the strongest absorptions of the particular compounds being sought, and detect laser-induced fluorescence of water contaminants. The energy source can be modulated and the 'fingerprinting' frequencies selected for maximum sensitivity. Laser light attenuation should be measured as a function of water composition, angle of incidence, water surface roughness and atmospheric interference. The laser frequencies and the details of light source modulation and detector design must be selected for maximum sensitivity. Sunlight interference can be simulated by superposing a sunlamp or actual sunlight onto the laboratory water sample.

A continuous wave laser, operating in the green red region will be used in conjunction with a detector package to evaluate the possibility of sensing surface films. Experience gained will be incorporated into a second phase which would be sensing and recording the sediment profile of surface waters. Use of a pulsed laser combined with a ranging detection system and a sweep field mounting would be incorporated into laboratory simulations to evaluate sensitivity and feasibility of this approach to remote sensing.

The project was inactive during FY 74.

Move to adequate space, set up a dual laser spectrometer system capable of examining dissolved solutes, suspended materials and solid surfaces. The limits of resolution and sensitivity for single component systems will be established.

SUPPORTED BY U.S. Dept. of the Interior, Geological Survey, Water Resources Div.

5.0014, RADIONUCLIDE MIGRATION NEAR NUCLEAR EXPLOSION SITES, NEVADA TEST SITE

H.C. Claassen, U.S. Dept. of the Interior, Geological Survey, Water Resources Div., *Bldg. 53 Denver Federal Ctr., Mail Stop 415 Box 25046, Lakewood, Colorado* 80225 (CR 77-207)

Approximately 90 nuclear devices have been exploded beneath the water table at Nevada Test Site. Although dissolved radionuclides have been identified in water collected from explosion cavities, the lack of documented migration of explosion-derived nuclides other than tritium has led to some complacency that the most hazardous contaminants are retained indefinitely at explosion sites. The mobility or immobility of specific radioisotopes must be documented by controlled field experiments at and near explosion sites.

The objective of the study is to determine as quantitatively as possible the degree of mobility of specific radionuclides in the natural media of Nevada Test Site. USGS/WRD objectives in the first of at least two experiments are: (1) determine the hydraulic properties of alluvium in the vicinity of the Cambric explosion sites in Frenchman Flat; (2) characterize the chemical quality of water and the changes resulting from the explosion; and (3) select a location and supervise construction and pumping of a well near the Cambric site. An additional objective is to identify sites for similar experiments in other media.

At the site currently being investigated and at future sites, the approach will be: (1) review of hydraulic and hydrochemical data to determine the probable natural characteristics; (2) drill through the collapsed rubble above and in the explosion cavity and pump water at several depths to determine chemical, radiochemical, and hydraulic properties; (3) pump water from a well located 3 to 5 cavity radii from the explosion point and sample for chemical and radiochemical analysis; (4) model the flow field and interpret data in terms of the model; and (5) prepare reports on experimental methods and results.

A total of 2.347 x 10**6 m**3 of water have been pumped from RNM-2S, a satellite well to Cambric Reentry site. A tritium breakthrough occurred about December 1977 and concentrations have steadily increased from below detection levels of 480 to 4.12 x 10**5 pCi/L without any indication of reaching a plateau. Quality of water samples from RNM-2S are very steady. A continuous record of water levels in three observation wells, including the pumped well, indicate near steady-state conditions.

Pumping at RNM-2S will continue, samples will be taken for tritium analysis 2 to 3 times per week. (Text Abridged)

SUPPORTED BY U.S. Dept. of the Interior, Geological Survey, Water Resources Div.

5.0015, INVESTIGATIONS OF POINT AND NON-POINT SOURCE EMISSIONS THROUGH CONTROLLED AIRBORNE SAMPLING

J.A. Armstrong, University of Denver, Denver Research Inst., *University Park, Denver, Colorado* 80210 (R805926-02)

Lightweight remote controlled samplers which are carried aloft by tethered balloons have been developed to investigate particulate and gaseous emissions from point and non-point sources. The sampling systems have both vertical and horizontal mobility and are capable of sampling at selected altitudes for relatively long periods of time. meterological packages are also attached to the balloons so that the ambient temperature, wet bulb temperature, and pressure are monitored at the same time as the sampling operations.

To date, the systems have been used to sample fly ash emissions from the plumes of coal fired power plants. Field programs to investigate the effects of flue gas conditioning on the emissions from a power plant burning low sulfur western coal and to investigate the particulate and gaseous constituents of the plume from a portland cement plant are planned for the near future.

During the second program year efforts will continue to quantify the impact of conditioning treatments on power plant emissions. The balloon-borne samplers will also be used to monitor other point and non-point source emitters where sampling from the ground, from towers, or by aircraft is impractical.

5.0016, CHARACTERIZATION OF GLASSY SILICATE SPHERULES IN DEEP-SEA SEDIMENTS

B.P. Glass, University of Delaware, School of Arts & Sciences, Dept. of Geology, *Newark, Delaware* 19711 (OCE77-08319 A01)

This research project is investigating the geographical distribution patterns, age of deposition, and the physical and chemical properties of small, glassy particles (microtektites) which have been observed in deep-sea sediment cores. The origin and significance of these glassy objects has been the subject of considerable discussion since their discovery about fifteen years ago. One interpretation is that they represent the direct input of extra terrestrial material after falling through the atmosphere and settling through the water column. Alternatively, they may reflect the impact of large extraterrestrial objects with the earth's crust and the re-melting of the earth's crust into glassy droplets which 'splashed' outward over a large portion of the earth's surface. The basic objective of the research is to determine the origin of these glassy objects, and use the results to interpret the history of extraterrestrial source materials to the earth's surface. The results also provide a means for precise stratigraphic control in particular age intervals of deep sea sediments.

5.0017, SEA SURFACE SATELLITE THERMAL RESOURCE DATA

G. Maul, U.S. Dept. of Commerce, National Oceanic & Atmospheric Admin., Environmental Research Lab., Atlantic Oceanic & Meteorological Lab., *15 Rickenbacker Cswy., Miami, Florida* 33149 (EX-76-A-29-1041,T.O.-T018)

The objective of this project is to provide an analytical tool for synoptic assessment of thermal resource and biota variations at sites of probable OTEC locations via satellite imagery. The project also provides a synoptic assessment of principal variant (sea surface temperatures) in OTEC thermal resources. The final scope of effort of this project is contingent upon related resource assessment projects.

The suggested scope of effort is to: a. Determine OTEC thermal resource data requirements by review of existing system and subsystems specifications. b. Assess the state of practice in thermal IR imagery via satellite and compare to OTEC requirements. c. Develop a methodology for acquiring relevant data and apply to OTEC resource assessment. d. Prepare a scheme for OTEC operational usage of satellite data. e. Analyze existing IR data and include this information in OTEC data summaries/atlas(es). f. Acquire and analyze oceanic optical properties for plant impact assessment.

5.0018, GEOHYDROLOGY OF SINKHOLES, WEST-CENTRAL FLORIDA

W.C. Sinclair, U.S. Dept. of the Interior, Geological Survey, Water Resources Div., *Tampa, Florida* (FL 79-308)

Sinkholes are an important avenue of recharge to the Floridan aquifer as well as a potential source of pollution. Aquifer stress caused by ground-water withdrawals accelerates sinkhole development, particularly during dry periods when pumpage is at a maximum and head difference between the surficial and artesian aquifer is greatest. Cases of sinkhole collapse and land subsidence due to the effects of pumpage have been documented. Occurrence of sinkholes in highways and in land adjacent to well fields is common. Because of the increasing demands for water in the near future, it is anticipated that the frequency and magnitude of sinkholes near well fields may increase.

Develop an understanding of sinkholes and their relation to the hydrologic system by relating sinkhole occurrence, density, and type to ground-water withdrawals, and to geohydrologic factors such as topography, drainage patterns and densities, confining-bed thickness, solution features in the limestone, head differences between surficial and artesian aquifers, and drought or flood conditions. Develop a classification of sinkhole types and potential of occurrence in selected well-field areas. A map of sinkhole-prone areas of Southwest Florida Water Management District will be compiled.

A terrain analysis of the study area will be made using parameters such as areas of internal drainage, size, shape, density and interrelations of sinkholes, thickness of overburden, confining-layer thickness, and head difference between Floridan and surficial aquifers. In addition, well-field records will be researched for quality-of-water data, pumpage records, and reported sinkhole occurrences.

Study sinkhole density, size, shape, interrelationships, on existing aerial photos and photomaps in selected areas. Research well-field records for quality of water data, pumpage records, and reported sinkhole occurrences. Field check selected sinks. Attempt spatial analysis of sink density and relationships. Attempt correlation of sink size, shape, interrelationship with head difference, confining bed thickness, occurrence on terraces of known geologic age. Compile final map of areas of internal drainage, evaluate data and write report.

5.0019, NORTH PACIFIC EXPERIMENT (NORPAX) - EXCHANGE OF EQUATORIAL PACIFIC WATERS FROM TRITIUM STUDIES

R.A. Fine, University of Miami, D.H. & Lewis Rosenstiel School of Marine & Atmospheric Sci., *4600 Rickenbacker Cswy., Coral Gables, Florida* 33149 (OCE78-22120)

This project is part of the North Pacific Experiment (NORPAX). The long-range goal of NORPAX is to understand fluctuations in the upper layers of the Pacific Ocean with scales of months to years and space scales in excess of 1,000 kilometers, and the relationship of these oceanographic fluctuations to overlying and adjoining atmosphere. Achievement of this goal should eventually lead to improved weather/climate prediction for both the Pacific Ocean and North America.

One major component of NORPAX is a coordinated field program to determine the space and time variability of the density and velocity fields in the upper layers of the Equatorial Pacific current system. This field program will occur between February 1979 and July 1980 and will involve the efforts of a number of scientists. Measurements will be made from ships, airplanes and moored and drifting instruments.

This grant will fund Drs. Fine and Ostland to do the logistics and analysis of tritium on the Equatorial shuttle. Initially, several hundred samples will be taken on two legs of the shuttle. Tritium and hydrographic data will be used to estimate the exchange rates between equatorial current systems and the quantitative importance of meridional transport to the data will

be used to estimate the exchange rates between equatorial current system and the quantitative importance of meridional transport to the upwelling process.

5.0021, PROGRAM FOR SOLAR ENERGY METEROLOGICAL RESEARCH AND TRAINING SITES

C.S. Ramage, University of Hawaii System, Manoa Campus, School of Arts & Sciences, Dept. of Meteorology, *2444 Dole St., Honolulu, Hawaii* 96822 (EG-77-G-03-1617)

We plan to modify, and where necessary, expand or contract the solar radiation and anemometer networks now operating in Hawaii so that in time we shall be able to estimate with some confidence the solar energy potential and its annual and diurnal variations at any point in the islands. Careful routine comparisons of radiometers with a sub-standard and calibration of anemometers in our wind tunnel would ensure high-quality measurements. Our already extensive list of courses relevant to solar energy would be supplemented by more focused courses in meteorology and engineering, incorporating laboratory work at solar radiation and wind field sites and emphasizing relationships between input and energy output. Seminars and workshops would reach and inform a wider, non-academic audience. Research, involving both graduates and undergraduates, would explore the underlying physical causes of diffuse radiation and of terrain-effects on radiation, of fluctuations in the trade wind inversion and their influence on surface wind speeds. We would also determine whether cloudiness monitored from satellites, and rainfall measured by recording gauges, could be correlated with direct measurements of radiation. Throughout we would seek to improve the quality of radiation and wind forecasts out to about 36 hours. Developments in numerical modelling would be tested and any that performed well, applied.

5.0022, FRACTURE CONTROL OF COEUR D'ALENE ORE DEPOSITS

R.R. Reid, University of Idaho, College of Mines & Earth Resources, Dept. of Geology, *Moscow, Idaho* 83843 (G5195012; IDA-79-XPL)

OBJECTIVE: Delineate new exploration targets for base metals in Northern Idaho's Coeur d'Alene mining district through study of regional distribution of fractures by remote-sensing methods combined with surface mapping and analysis of fracture control of underground ore bodies in operating mines.

APPROACH: Examine ore control of existing bodies and search for new in-mine exploration targets using remote-sensing imagery data and digital data combined with surface mapping techniques. The linear study will gather (1) known surface traces and trends of ore bodies, faults, and fractures, (2) available information on foliation attitudes of host rocks, and formation contacts, and (3) data on ore body orientation and orientation of ore body related fractures. Starting from the thesis that the bulk of the Coeur d'Alene ore bodies is fracture controlled, this project will attempt to develop a fuller knowledge of fracture patterns to recognize favorable new ideas for exploration on district-wide and individual mine bases. Efforts will address ground truth for various various fracture systems disclosed by linear analysis primarily at operating mines and other favorable-appearing target areas. Stratigraphic and chemical work will investigate the possibility of strata-bound sulfides in the Silver Belt.

5.0024, PLANNING STUDY FOR URBAN STORM-WATER-QUALITY INVESTIGATIONS IN THE SUB-HUMID PLAINS AREA

L.M. Pope, U.S. Dept. of the Interior, Geological Survey, Water Resources Div., *Lawrence, Kansas* 66044 (KS 79-104)

The U.S. Geological Survey under interagency agreement with the Environmental Protection Agency, will implement a program of studies to evaluate water-quality and water-quantity problems as associated with urban-stormwater runoff in several major cities nationwide. The studies will provide a data base for a wide geographic distribution. Because distribution densities and physiographic and climatic conditions will vary widely and will be unique to each area, prototype work plans must be developed regionally in order to arrive at a nationally consistent data base for urban hydrology.

To conceive a regional work plan for an urban-stormwater quality study to be made in the sub-humid plains area. The plan will detail procedures for (a) selection of basin(s) to be studied, (b) selection of data collection sites, (c) designation of the principal parameters and frequency for hydrologic data collection, and (d) definition of approach for evaluation and interpretation of the data.

The general approach for the preparation of the 'prototype' work plan will be to (1) select a typical urban watershed in the sub-humid plains area where an urban stormwater-quality study is considered feasible; (2) compile information on basin boundaries, basin characteristics, and storm-sewer network; (3) compile land use maps and aerial photos to determine various land uses and percentage of each within the basin; and (4) define hydraulic characteristics of the basin in relation to sampling site selections and suitability of sites for instrumentation.

Select a typical urban watershed and compile basin characteristics.

SUPPORTED BY U.S. Dept. of the Interior, Geological Survey, Water Resources Div.

5.0025, DEVELOPMENT & DEMONSTRATION OF A LONG RANGE TRACER SYSTEM

G.S. Benton, U.S. Dept. of Commerce, National Oceanic & Atmospheric Admin., *6010 Executive Blvd., Rockville, Maryland* 20852 (D9-E693-EK; W833 -0035)

OBJECTIVE: This project will provide meteorological assistance in describing and interpreting air quality in the Western U.S. from existing or proposed energy resource activities.

APPROACH: Energy development sites will be surveyed, existing or proposed air quality and meteorological monitoring networks will be surveyed and assessed, and environmental impact from future sources will be predicted. Selected air quality measurements will be analyzed, using meteorological trajectory and removal data.

PROGRESS: Recommendations for augmenting or modifying existing networks will be made, and meteorological support will be provided for ambient air monitoring performed in EPA Energy Accomplishment Plan 81 ABF.

5.0027, JOINT US-USSR MID-OCEAN DYNAMICS EXPERIMENT (POLYMODE) - THEORETICAL STUDIES OF LAGRANGIAN KINEMATICS AND DYNAMICS AND GULF STREAM RINGS

G.R. Flierl, Massachusetts Inst. of Technology, School of Science, Dept. of Meteorology, *77 Massachusetts Ave., Cambridge, Massachusetts* 02139 (OCE77-28350)

This project is part of POLYMODE. The long range goal of POLYMODE is to understand the role of the mesoscale eddies in the general circulation of the ocean.

This project includes theoretical work on two separate but overlapping problems in mesoscale oceanic theory: Lagrangian Kinematics and dynamics, and Gulf Stream Ring modelling. The Lagrangian problems study the movements of submerged floating particles such as Sofar floats, water with special chemical or temperature-salinity characteristics, or biological matter. The kinematic studies deal with the trajectories of particles in a given flow field (e.g. the velocity field of a moving Gulf Stream Ring) or in a turbulent flow field with given statistics. The dynamical studies will consider the simplification of the Lagrangian equations of motion under the standard constraints characterizing mesoscale motions--long time and length scales and dominantly geostrophic, hydrostatic force balances. Applications to oceanic experiments will be considered.

The Gulf Stream Ring studies will include calculations of the ability of one of these mesoscale vortices to carry particles along with it as it moves through the ocean. Dynamical models of the rings will be studied to determine which physical effects cause or inhibit translation, distortions of the circular shape, dispersion (formation of neighboring highs and lows by wave radiation), and decay. The existence and properties of 'Solitary waves' with a circular shape will be investigated. In these waves, the nonlinear terms in the equations of motion counteract the terms which tend to cause dispersion, leading to an eddy of a long-lived nature.

5.0028, DISPERSAL OF COAL DUST FROM TRANSSHIPMENT AND POWER PLANT STORAGE FACILITIES

M. Sydor, University of Minnesota, Duluth Campus, School of Letters & Science, Dept. of Physics, *331 Science, Duluth, Minnesota* 55812 (R806020-02)

Rapid methods for sampling and identification of particulates will be used to study the dispersal of wind-borne particulates from power plants and validation of numerical models for dust dispersal. A numerical model based on statistical solution to the gradient transfer problem has been developed for this project. The model will be validated at a test site in Minnesota.

Rapid detection of dustfall has been made possible by optically scanning for spherical fly ash on particle by particle basis. The method has been developed here for examination of particle shapes in suspended solids.

Samples will be collected at the Cohasset Power Plant for various wind episodes and scanned optically to determine dustfall rates as a function of winds for model calibration purposes. Subsequently, the model will be used to determine yearly deposition rate and distribution of fly ash fallout around the plant. Prediction of the long term accumulations will be checked by examination of dustfall accumulated in snow. Snow surface reflectivity monitored at ground and from satellite offers a possible check on the determination of the distribution of dustfall.

SUPPORTED BY U.S. Environmental Protection Agency

5.0029, POLLUTANT MONITORING BUOY DEVELOPMENT

R.H. Canada, U.S. Dept. of Commerce, National Oceanic & Atmospheric Admin., National Data Buoy Office, Engineering Div., *NSTL Sta., Biloxi, Mississippi* 39529

OBJECTIVE: To develop buoy systems for measuring limited parameters in areas of hazardous material spills. The buoys will be stored and maintained in an operational readiness state, be easily transportable to a deployment site in the coastal waters of the United States, and be deployed from 82-foot or larger vessel of opportunity without specal handling equipment. The program goals are for a production cost of approximately $15,000 per buoy.

APPROACH: To use a modified, off-the-shelf microprocessor-based data system for acquiring the data and transmitting it via the GOES satellite.

CURRENT PLANS AND PROGRESS: A new hull design being completed by April 1980 will then be developed for use in the prototype testing.

SUPPORTED BY U.S. Dept. of Commerce, Office of Ocean Engineering, National Data Buoy Office

5.0030, TECHNIQUES OF FLOOD-PLAIN MAPPING FOR LAND-USE MANAGEMENT OF FLOOD PLAINS

R.H. Brown, U.S. Dept. of the Interior, Geological Survey, Water Resources Div., *NSTL Station, Bay St. Louis, Mississippi* 39520 (SR 72-066)

Identification of lands subject to flooding is necessary for land-use management on flood plains. Accurate delineation on maps, of areas subject to inundation by floods of a given frequency is required--information on frequency of flood discharges, profiles of water-surface elevations along the channel, and large-scale topographic maps. Information obtained during field surveys is needed for computing water-surface profiles by step-backwater procedures. New techniques of photogrammetry, electronic measurement from aircraft, computation of backwater profiles, and the plotting of maps and cross sections by computer may offer more efficient means of flood-plain delineation.

To evaluate potential flood-mapping techniques, appraise their accuracy in relation to cost for various uses and time frame in which flood-plain maps are of maximum use, and to investigate means to carry out flood-mapping techniques at an accelerated rate.

Investigate and compare available methods of obtaining data required for preparing maps, charts, and interpretive reports associated with identification of flood-prone areas. Determine the range in costs involved in the conventional aerial photography-stereo model approach of obtaining measurements of valley cross sections. Investigate the potential of the laser altimeter in its application to aerial surveying, and the possibility of direct survey from the air without going through the stereomodel plotting process.

The fabrication phase of the contract work begins at Draper Lab Oct. 1, 1978 and because of budgetary constraints will likely span a 3-year period. The department has authorized USGS to include a $3.6 million item for this work in its FY'80 budget request. This would leave $770k to be requested for FY'81, assuming no added costs were incurred due to the time stretchout. About $1 million of unused inertial guidance hardware is being drawn from other Draper Lab contract work for adaptation to the USGS' APT system at substantial savings. (Text Abridged)

5.0031, PREDICTION OF SUBSIDENCE ASSOCIATED WITH UNDERGROUND COAL MINING

D.J. Barr, University of Missouri, Rolla Campus, School of Engineering, Dept. of Mining Petroleum & Geological Engineering, *Rolla, Missouri* 65401 (G5195025; MSR-79-XTR (2))

OBJECTIVES: To develop a predictive model for subsidence and ground stability in the Interior Coal Province.

APPROACH: Using an existing remote sensor image processing system and interactive data base software programs, a set of geographically referenced files of digitized topographic, stra-

tigraphic and structural geologic data will be created along with corresponding underground mine layout, extraction characteristics and underground operation conditions. The files of digitized surface and subsurface geologic features will be constructed for an area of known subsidence over existing underground coal mines in the Illinois coal basin. The relationships of spatial geologic data (including subsurface geology, surface lineaments, topography and drainage features) to depth and shape of mine workings; mine roof, pillar and floor stability; and surface subsidence effects will be determined. That combination of features which constitutes the predictive relationship for known conditions will then be tested in other areas of similar geology and mine practice in order to establish measures of accuracy and reliability.

5.0034, PRECIPITATION-RUNOFF MODELING OF WATERSHED SYSTEMS IN NORTHWESTERN NEW MEXICO
H.R. Hejl, U.S. Dept. of the Interior, Geological Survey, Water Resources Div., *Albuquerque, New Mexico* (NM 79-333)

The effects of surface mining for coal on the quantities and quality of surface flow systems in the strippable coal-lease area in the San Juan Basin during a period of change in land use are unknown. The Bureau of Land Management needs to predict the effects of surface mining on the water resources in the coal-lease areas in order to manage the coal-bearing areas of the public domain.

Develop, test, and verify precipitation-runoff models for predicting surface runoff characteristics and sediment yield under various land-use conditions in the coal-lease areas in northwestern New Mexico. The emphasis will be on relating parameters used by the model to measurable physical features of a selected watershed basin to facilitate transferability of the model from an instrumented basin to uninstrumented basins.

A selected watershed basin with a drainage area of less than 10 square miles in the strippable coal-lease area in the San Juan Basin will be instrumented for collecting streamflow data for quantity and quality of water, precipitation data, soil-moisture data in the root zone, and meteorological data. Data will be tested in the basic precipitation-runoff model development by the modeling group in the Central Region office, as it is collected, to aid in refinement of data collection and model development. The basic model is a modular package using a distributed-parameter approach. The long-term rainfall required as the driving variable for the model will be generated with a stochastic model from short-term rainfall records collected throughout the coal-lease region of San Juan Basin.

Operation of streamflow gaging station, recording raingage, PS-69 automatic pump sampler, and single-stage sampler at the selected watershed basin for precipitation-runoff modeling. Additional instrumentation to be installed and operated will include four recording raingages over the basin and meteorological station which will collect data on relative humidity, air temperature, wind speed, wind direction, and solar radiation. Soil-moisture observation wells will be installed in the watershed and monitored periodically. The operation of these recording raingages throughout the coal lease region will be a part of the project.

J.T. Kuo, Columbia University, School of Mines, *Broadway & W. 116th St., New York, New York* 10027 (DAR78-16320)

The purpose of the project is to investigate and verify the phenomenon of detecting plant stress, due to toxic metals in the soil, by spectral radiation. If the phenomenon is verifiable, as it appears to be, a method of prospecting for buried ore bodies in forested areas can be developed. The prospecting method would utilize a spectroradiometer and aircraft for rapid transects over an area of interest.

The project consists of: (1) a comprehensive analysis of existing spectral data obtained over known ore bodies, (2) geochemical and biochemical analyses of plant and soil samples obtained at the same sites as the spectral data and (3) controlled botanical experiments in the laboratory.

5.0043, HYDROLOGIC MODELING COAL CREEK BASIN NEAR LEHIGH, OKLAHOMA (EMRIA)
S.J. Playton, U.S. Dept. of the Interior, Geological Survey, Water Resources Div., *Oklahoma City, Oklahoma* (OK 78-049)

Coal underlying about 375,000 acres in the eastern Oklahoma coal field is Federally owned. The Bureau of Land Management is charged with the responsibility of assessing probable water-resource impacts and reclamation capabilities of any area under Federal jurisdiction in which surface mining for coal might occur. None of the studies so far underway in Oklahoma's coal fields specifically addresses the problem of predicting effects on water resources of extracting coal by surface mining techniques. A study by the U.S. Geological Survey, in cooperation with the Bureau of Land Management, is under way.

The study's primary objective is to collect and interpret sufficient hydrologic data to predict and assess the effects of surface mining for coal and subsequent reclamation efforts on hydrologic characteristics. A secondary objective is collection of sufficient hydrologic data so that baseline hydrologic conditions can be defined and possible changes occurring after mining takes place can be documented.

Development, calibration, and verification of a watershed model is the approach to be used to aid prediction of future effects of surface mining for coal. The data required for such a modeling effort are sufficiently complex and expensive as to render modeling large areas unfeasible in terms of available money and manpower. Oklahoma District's study will be concentrated in one basin, the Coal Creek basin near the town of Lehigh in Coal County, Oklahoma.

All instrumentation for necessary data collection was purchased and installed in FY78. Included are a stream-gaging station, a climatological data-gathering station, continuous water-quality monitor, automatic water sampler, 4 precipitation gages, neutron-probe access tubes, 3 crest-stage gages, and 2 batteries of single-stage sediment samplers. After installation, operation commenced on a part-year basis.

All installed instrumentation will be operated and maintained, and hydrologic data necessary for model calibration and establishment of base line conditions will be collected. A detailed geologic map of the area will be prepared.

5.0048, IMPROVING ESTIMATES OF STREAMFLOW CHARACTERISTICS IN COAL MINING AREAS WITH DIGITAL LAND-COVER DATA FROM SATELLITES
E.F. Hollyday, U.S. Dept. of the Interior, Geological Survey, Water Resources Div., *A 413 Federal Bldg., U.S. Courthouse, Nashville, Tennessee* 37203 (TN 79-039)

The government needs to judge the adequacy of proposed reclamation plans submitted by coal strip-mine operators. This judgment in part must be based upon the best available estimate of natural streamflow. These estimates may be made by transferring streamflow records from gaged to ungaged sites by techniques of regionalization that involve multiple regression of basin characteristics with streamflow characteristics. Studies have shown that basin characteristics measured from satellite data can improve the accuracy of these estimates in other regions.

The primary objective is to improve upon the regression equations used to estimate streamflow in areas affected by coal mining in the Cumberland Plateau by using land-cover information derived from digitally processed LANDSAT data as well as maps. The digital data will update the land-cover data base for the New River basin project 'Hydrologic Effects of Coal Mining'.

The usefulness of the digital land-cover data base, developed from LANDSAT tapes and available map data, will be tested by an experiment designed to compare two sets of regression equations, one containing the most up-to-date, but routinely-derived, basin characteristics, and the other containing the gee-whiz basin characteristics derived from LANDSAT tapes and available maps.

Acquire base map; transfer drainage divides to base; measure value of map-derived basin characteristics; acquire LANDSAT tapes; let data-processing contract; classify terrain based upon field reconnaissance and available imagery; transfer classification to base map and measure land-cover data by drainage basins; run regressions of streamflow characteristics vs. basin characteristics; interpret; draft report; publish report.

5.0054, COORDINATION OF WRD INSTRUMENTATION

R.W. Paulson, U.S. Dept. of the Interior, Geological Survey, Water Resources Div., *12201 Sunrise Valley Dr., Reston, Virginia* 22092 (WD 72-070)

Increasing requirements by WRD Districts for the supply of instrumentation, and by the WRD data collection program for new and better data define a need for coordination of instrumentation development and supply. Moreover, there needs to be a focal point through which WRD's instrumentation program is represented to other government agencies, foreign hydrologic activities, and instrument development companies in the private sector.

To establish an instrumentation coordination function within the WRD.

During the period FY77-79 WRD has established a hydrologic instrumentation facility at NSTL Station, Miss., to provide a central facility to supply, repair, and develop WRD instrumentation. The resources of this facility and the WRD's satellite telemetry research program are the principal activities being coordinated to insure that WRD priorities are met. With time the scope of coordination will expand.

Significant progress was made in defining the role of the Hydrologic Instrumentation Facility (HIF). A HIF Building was begun. A proposal from COMSAT General was received for a real time hydrologic data collection pilot program.

Staff the HIF and complete removal of all significant instrumentation activities from Reston. Finish negotiating a contract with COMSAT General. Finish program planning for an instrumentation development effort by the HIF.

SUPPORTED BY U.S. Dept. of the Interior, Geological Survey, Water Resources Div.

5.0055, EVALUATION OF A COMSAT GENERAL PILOT PROJECT TO PROVIDE THE USGS WITH A REAL-TIME HYDROLOGIC INFORMATION SERVICE

W.G. Shope, U.S. Dept. of the Interior, Geological Survey, Water Resources Div., *12201 Sunrise Valley Dr., Reston, Virginia* 22092 (WD 79-142)

The Water Resources Division has identified numerous needs and benefits for real-time hydrologic data telemetered from remote data collection sites. Acquisition of real-time data will allow better operation of the data collection network and permit timely delivery of critical data to the water user community. Because of limited manpower and ever-expanding technology, it would be very difficult, if not impossible, for WRD to provide extensive support to real-time data activities.

To evaluate the hydrologic information services proposed by COMSAT General and to develop specifications for a 5-year, 2,000-site, real-time network that will be contracted in 1981.

The pilot project calls for a 101-site network that includes Virginia (1), Pennsylvania (20), Massachusetts (20), Florida (15), Colorado (20), Arizona (15), and Washington (10). The contractor will be responsible for acquisition (sensors), collection (satellite telemetry), screening (error checks, alerts), and dissemination (teleprocessing). Data will be delivered to the Reston Honeywell computer in real-time where it will be available for interactive processing by WRD users. Once each day the data will be transferred to WATSTORE from the Honeywell computer. The project will be managed and evaluated by the Chief, WRD Data Relay Project, and participating Districts.

Select 101 sites, begin operations under the contract, and evaluate results of preliminary reports from the contractor on instrumentation and system performance. These data will be used to formulate specifications for an operational real-time data collection service involving more than 2,000 sites.

5.0056, MICROWAVE REMOTE SENSING

W.J. Campbell, U.S. Dept. of the Interior, Geological Survey, Water Resources Div., *Tacoma, Washington* (WR 73-088)

The project office is involved in a wide variety of remote sensing and ground truth work in the Arctic Ocean through the AIDJEX (Arctic Ice Dynamics Joint Experiment) and POLEX (Polar Experiment) organizations, and in the Gulf of St. Lawrence and Lake Ontario through NASA's SKYLAB program and the International Field Year for the Great Lakes (IFYGL). The imagery from ERTS-1 and NOAA-2 satellites have provided us with the first large-scale high resolution imagery of the sea ice canopy. Also the first all-weather, all-time synoptic imagery of the Arctic ice canopy is provided by the ESMR imagery from NIMBUS 5. It is necessary to compare the various data with surface data to get some idea of the gross dynamics and morphology of the Arctic canopy. Comparison of this satellite data with surface data from the Gulf and Lake Ontario areas will give us a picture of the gross dynamics and morphology of these regions.

The AIDJEX-NASA aircraft data and surface ground truth data have given us the means of distinguishing multiyear ice, first year ice, and water by means of microwave imagery of the ice canopy. Canadian and Creel scientists and NASA and Canadian aircraft will provide us with important aircraft data and ground truth measurements of fresh water and sea ice on the Gulf of St. Lawrence and Lake Ontario. However, in order to properly estimate the amount of each form and its metamorphosis it is necessary to cross-correlate the high resolution ERTS-1 and NOAA-2 imagery with the low resolution microwave imagery. Once this is done, select areas of the Arctic ice canopy where AIDJEX ground truth data is available will be studied and selected areas in the Gulf and Lake Ontario where SKYLAB data and ground truth measurement are available will be studied. These data will be very useful to help in the planning of the main AIDJEX experiment to take place in 1975-1976 and for future POLEX experiments.

The project office receives ERTS-1 data from several sources and NOAA-2 data from the National Environmental Satellite Service. The ESMR data comes slowly from Goddard Space Flight Center to the project office, and NASA SKYLAB

data will be available also covering the Gulf of St. Lawrence and Lake Ontario. (Text Abridged)

5.0057, ELECTROMAGNETIC METHODS FOR MEASURING SNOWPACKS

M.F. Meier, U.S. Dept. of the Interior, Geological Survey, Water Resources Div., *Tacoma, Washington* (WR 73-101)

Snow is an important water resource in many areas, but it changes rapidly and is difficult to measure. No method currently exists for measuring water equivalent (mass) or free-water content (wetness) of snow remotely. The latter characteristic cannot even be measured at a station with sufficient accuracy for many hydrologic or remote-sensing purposes.

Develop better understanding of electromagnetic properties of snow, especially absorption, volume-scattering, and back-scattering. Devise instruments to be used in the field to make these measurements and to obtain hydrologically useful data. Adapt these instruments to remote (airborne) systems.

Study theory, do numerical modelling, develop instruments, test these in the field, and design prototype systems. Investigate swept-frequency radar, electrical resonance-width, and microwave-absorption methods, and other innovative techniques.

No funding was provided this year, but cooperation did continue with Dr. Linlor. A profiling snow-wetness (liquid water content) meter using active microwave absorption was completed and testing begun in snow. This instrument and others were used to determine radar parameters of snow.

Continue modest cooperative effort.

5.0060, NONPOINT-SOURCE POLLUTION FOR URBAN AND RURAL AREAS IN LOWER FOX RIVER BASIN

P.E. Hughes, U.S. Dept. of the Interior, Geological Survey, Water Resources Div., *Madison, Wisconsin* (WI 79-096)

Methods for estimating nonpoint-source pollutant loading from different land-use types and intensities in urban and rural areas are required to develop effective water-quality-management plans. Before such pollution can be controlled adequately, better methods are required to identify source areas, determine quantity and quality of runoff, and correlate change in loads with change in land-use practices or management.

Determine nonpoint-source pollutant loads in urban and rural streams. Estimate effects of change in land-use practice or management on loads. Test the application of several water-quality models for estimating loads. Evaluate remote sensing techniques for land-use characteristics for water-quality modeling.

Streamflow and water-quality data will be collected at 2 urban sites and one rural site which are representative of different types of land use. Land-use data will be determined by the University of Wisconsin from high altitude and LANDSAT imagery. Four water-quality models will be calibrated and verified, and their results compared for accuracy. Nonpoint-source pollutant load will be computed for the basin using best model.

Establish 2 urban and 1 rural watershed-monitoring stations. Rate stations and collect water-quality samples for 9 or 10 storms. Monitor streamflow and precipitation in basin. Select water-quality models for evaluation, and perform initial calibration of models.

R. Reiter, Institut fur Atmospharische Umweltforschung der Fraun. Gesel, *Kreuzeckbahnstrasse 19 Frg, Garmisch Partenkirchen, Federal Republic of Germany* (EY-76-C-02-3425)

The influx of stratospheric air into the biosphere is studied with the objective to obtain information about the frequency distribution of stratospheric intrusions as a function of seasonal and inter-annual variations. Stratospheric intrusions are indicated by high concentrations of the cosmogenic radionuclides Be7, P32, P33, and the ozone, measured at the mountain observatory Zugspitze (300 m a.s.l.). The transport of stratospheric air into the troposphere is determined on the basis of the isentropic trajectory analysis. The forecasting of stratospheric intrusions is performed based on observations of the variation of the relative humidity in the upper troposphere.

The quality of the forecasting technique is subjected to a statistical examination.

Aerosol layers in the stratosphere are measured by means of a lidar system.

RESULTS: It has been possible to prognosticate the fallout of the Chinese nuclear test of 25 September 1976. The forecasts of the influx intensity of stratospheric air into the biosphere came exactly true in 70% of the cases. The height of the stratospheric aerosol layer found changed during the period of observation.

6.0012, HUMAN CAPABILITIES IN ACOUSTIC ENVIRONMENTS
C.S. Harris, U.S. Dept. of Defense, Air Force, Aerospace Medical Research Lab., *Wright Patterson A.F.B., Dayton, Ohio* 45433 (DF325120)

Air Force noise environments may affect motor performance, physiological function, thought processes and contribute to fatigue in personnel as well as affecting hearing. Special problems may arise with infrasonic, impulsive, and noncontinuous acoustic energy exposures. This effort is to define noise exposure conditions which degrade and threaten task accomplishment in order to specify safe operating parameters and eventually exposure guidelines. This effort will provide support for the whole body exposure effects standards sections in AFR 161-35.

The approach is to quantify cognitive and psychomotor performance on specific tasks in acoustic environs to such a degree that allowable exposure conditions can be adequately defined. The nature and difficulty of the performance tasks will be varied together with the frequency, duration and intensity of the acoustic stimulus in an effort to identify variables in the stimulus, task or subject that might result in reduced human capabilities. Post-exposure task performance will be examined for continuous and varying acoustic signals. A substantial technology base describing human performance in acoustic environs will be realized when these results are integrated with those from earlier efforts. This work unit is a continuation of work unit 72310903, Human Capabilities in Infrasound, and work unit 72310904, Acoustic Degradation of Human Capabilities. Semiannual review was accomplished 30 Sep 78 in conjunction with the preparation of the technical management review.

SUPPORTED BY U.S. Dept. of Defense, Air Force, Aerospace Medical Research Lab.

6.0013, EFFECT OF EXPOSURE TO MICROWAVES ON THE NEUROENDOCRINE STATUS OF THE RAT
R.D. Stith, University of Oklahoma, Health Science Center, School of Medicine, Dept. of Physiology & Biophysics, *Box 26901, Oklahoma City, Oklahoma* 73190 (DF054360; AFOSR-79-0041)

AF function - Air Force operating environments expose personnel to a wide variety of potential hazards which may limit or degrade man's ability to perform effectively. Current technology does not permit an adequate assessment of responses and tolerance to single, sequential or long-term exposure to these radiations. Fundamental data on the bioeffects of microwaves are necessary for the establishment and maintenance of adequate electromagnetic radiation safety criteria. Deficiency - very little is known about possible electromagnetic effects on biological systems exposed to athermal densities. In certain brain regions, microwave absorption and temperature effects may be 4 to 6 times higher than the mean temperature increase. No systematic, controlled investigations on a well-known chain of biochemical events in microwave-irradiated animals have been reported. Objective - the objective of the proposed research is to determine if whole body exposure to continuous wave or pulsed wave microwave radiation will result in quantifiable alterations in the neuroendocrine status of the brain. How research contributes - data obtained from these experiments will enable more accurate reappraisal of Air Force and occupational personnel exposure standards for microwave radiation. This research will support and contribute to research outlined in RO 1.9.1.2, electromagnetic radiation.

The objectives of this proposal will be achieved by exposing rats to various power densities of microwaves and then assaying hypothalamic and brain stem slices for norepinephrine, dopamine, serotonin, cyclic adenosine monophosphate (cAMP), cyclic guanosine monophosphate (cGMP), tryosine hydroxylase,

and tryptophan hydroxylase. In addition, blood samples will be assayed for the pituitary hormones ACTH, GH, and TSH.

G.D. Taylor, Colorado State University, School of Natural Sciences, Dept. of Mathematics, *Fort Collins, Colorado* 80523 (DF055710; F49620-79-C-0124)

AF function - design of structural components for aerospace vehicles. Opportunity - to improve upon and expand the applicability of recent adaptive curve fitting schemes. Objective - to study and develop methods of fitting arbitrary data sets with computationally effective representations. How work contributes - results may hasten the development of data fitting computer software packages which would be useful for effective data reduction of massive data sets for computational manipulation or useful for data synthesis of sparse data sets for interpolation.

This effort will examine both one-dimensional and multi-dimensional data sets. (A) In the one-dimensional case, the study of recently developed adaptive curve fitting techniques and associated computer routines will continue. The main focus will be on the numerical testing and comparing of these routines. Also, the possibility of implementing these routines in a interactive mode will be examined. Finally, properties of a given data set that make one routine more effective than another will be identified and classified. (B) In the multi-dimensional case, adaptive piecewise polynomial surface fitting (2-D and higher-dimension) will be developed. The differential correction algorithm will be studied. Also, effective ways of selecting subsets of the original data set that exhibit the overall behavior of the data will be pursued.

7.0003, STUDIES OF THE NUMERICAL SOLUTION OF ELLIPTIC PARABOLIC BOUNDARY VALUE PROBLEMS
Unknown, University of Maryland, College Park Campus, Inst. for Physical Science & Technology, *College Park, Maryland* 20742 (EY-76-S-05-3443)

The goal of the project is to understand the theoretical behavior of the numerical treatment of partial differential equations which could be organically placed in the general finite-element solver. The main emphasis will be given to problems which are important in applications but are not the standard ones, and to the question of how to effectively handle problems with nonsmooth coefficients and singular solutions. The problem of reliability and accuracy in the prescribed range of computational cost with self-adaptive approach will be focussed on also. The theoretical notion of a closure of the entire numerical process will be applied to design and asymptotically optimal approach. The theoretical investigations will be in close conjunction with practical computations.

RESULTS: Results in the proposed field have been obtained by the investigators and published in the form of various reports and publications.

Unknown, New York University, Graduate School, *100 Washington Sq. E., New York, New York* 10003 (EY-76-C-02-3077)

The main thrust of the Laboratory is in numerical analysis and partial differential equations with emphasis on computational fluid dynamics. Topical areas of endeavor are as follows: Development of shockless airfoil codes for industry. The Laboratory has underway a joint project with Pratt-Whitney Aircraft to test compressor airfoils designed at N.Y.U. Computational magnetohydrodynamics in three dimensions, such as the modeling of equilibrium and stability of a plasma in toroidal geometry. One objective is to bring the high beta stellarator into a range of operation competitive with current Tokamak research. Flow problems relevant to the upgrading of compressors used in gaseous diffusion process for the enrichment of uranium. Elastodynamic and fracture problems related to nuclear shots to stimulate the flow of natural gas from relatively impermeable strata by fracturing the rock. Computer modeling of reacting chemical systems for new and more efficient ways of utilizing chemical fuels. Application of simulation methods to the study of time evolution of quenched binary alloys, to gain understanding of the formation of alloys to predict their strengths and behavior with respect to radiation damage. The environmental impact of a power station in raising the temperature of an adjacent flowing river, particularly when the river flow is controlled by the operation of a dam. Laser fusion studies with the goal of obtaining energy from controlled thermonuclear reactions driven by high power lasers. Theoretical and numerical methods used to

study the reflooding problem in a loss of coolant accident in reactors. Through participation in the ARPANET, the Laboratory has access to very fast and powerful computers that permit effective handling of the multidimensional problems that arise in energy research. In computer science, the Laboratory develops compilers and high level programming languages.

Unknown, University of Alabama, Graduate School, *P.O. Box 2846, University, Alabama* 35486 (EY-76-S-05-4062)

The objective of the present research is to examine the role of the host matrix as a function of temperature in determining the type and yield of radicals produced by X-irradiation of a crystalline or glass material using electron-electron double resonance (ELDOR), electron-nuclear double resonance (ENDOR), electron spin resonance (ESR) and heavy atom substitution techniques. After many years of research on the effects of radiation on crystalline materials, it is still difficult to predict from the thermal history, nature of radiation, crystal structure or form of the parent molecule what radical species will be stable at any given temperature. However, an examination of the ELDOR spectra of an irradiated substance results in a partial or complete measure of the relaxation mechanisms which, in turn, are related to the host matrix itself. The host matrix can be changed slightly by using the heavy atom substitution technique, by using different methods of crystallization, and by including radical precursors in clathrates, permitting a study of the relation among host matrix variation, radical yield and relaxation parameters.

RESULTS: ESR investigations carried out on single crystals of irradiated fluoro, chloro and bromo derivatives of acetamide and acetic acid have shown that a large matrix effect is present which is dependent upon the leaving group size, crystal structure and degree of crystallization. ELDOR measurements between 5 degrees K and 370 degrees K have shown a large variation in ELDOR intensity dependent on intramolecular motion, quadrupole coupling, p-orbital anisotropy, spin diffusion and tunnelling rotation. Forbidden ESR lines overlapped by intense ESR lines, ESR lines too broad to detect, ENDOR transitions and radical cluster have been studied by ELDOR.

8.0006, THE MEASUREMENT OF TOTAL CROSS SECTIONS AND EQUILIBRIUM FRACTIONS OF 10 TO 200 KEV D AND D2 POSITIVE IONS IN COLLISION WITH METAL VAPORS
T.J. Morgan, Wesleyan University, Graduate School, Dept. of Physics, *Middletown, Connecticut* 06457 (EY-76-S-02-4022)

PURPOSE: Measure cross-section for formation of negative deuterium ions (D-minus) by charge exchange of positive deuterium ions (D-plus) and dissociation of positive molecular deuterium ions (D-plus). Also measure equilibrium negative ion fractions. These data are required for understanding and design of negative ion type neutral beam injection systems. APPROACH: We are measuring the yields of D-plus, D-minus, and D as functions of target thickness. From the slope of the curve of yield versus thickness we obtain the cross-sections. As the target thickness is increased, the yields will eventually become constant. These values are the equilibrium yields. The initial D-plus ions are produced in an RF source, accelerated and momentum analyzed. They pass through a metal vapor target cell designed to reach temperatures near 1000 degrees C. The analysis section contains electrostatic separation plates,

three Faraday cups, and a secondary electron emission detector. (ERDA 77-66)

8.0008, QUANTITATIVE ANALYSIS OF SOLUTE SEGREGATION IN ALLOYS BY TRANSMISSION ELECTRON MICROSCOPY
Unknown, State University System of Florida, University of Florida, Graduate School, *Gainesville, Florida* 32601 (EY-76-S-05-4311)

OBJECTIVES: 1. To measure experimentally second phase nuclei or embryonic second phase particles at crystal defects. 2. To characterize very small crystal defects (less than or equal to 100 A) such as dislocation loops or voids.

Segregation of solute atoms, impurities, or point defects into clusters or onto existing crystal defects is a vital first step in the development of second phase precipitates or in the development of complex microstructures resulting from radiation damage. Such objects are beyond the direct analytical capabilities of even the best electron microscope. However, computer simulation of electron microscope images can be used to interpret highly complex strain contrast images provided: 1) the experimental conditions are well regulated and 2) the computer modeling conditions are sufficiently realistic. Both of these conditions have been shown to be met for a wide variety of complex linear and planar defects and for some point defect images. In addition, simulation experiments can be used to test complex imaging criteria and to suggest the optimum experimental conditions for the electron microscope.

Our test specimens have included θ' precipitates in Al-Cu alloys, oxide platelets in silicon, and quenched-in vacancies in pure Al. We propose next to use HVEM in situ irradiation of several BCC and FCC foils to fully test our catalog of computed dislocation loop images. If successful, these methods may be used to study the mechanisms of loop formation, the size distribution of defects, and the superposition of precipitates on loops and voids.

RESULTS: Development of rapid, general computer simulation program to match TEM images of dislocations, planar faults, dislocation loops and other small three dimensional defects, and combinations thereof. Calculated catalog of possible images for loops in FCC and BCC structures (isotropic, infinitesimal approximation). Applications to alloys (Al-Cu and Ni-base), oxidation defects in silicon, quenched-in defects in Al, irradiated defects in W.

8.0010, BASIC STUDIES OF ATOMIC DYNAMICS
Unknown, University of Chicago, Graduate School, *5801 S. Ellis Ave., Chicago, Illinois* 60637 (EY-76-S-02-1674)

This continuing project tries to unravel the correlations between the motions of different particles and the energy exchanges between different types of motion in electron collision and photoabsorption processes. The next major task which is contemplated is to concentrate effort toward achieving two distinct substantial advances on the theory of joint excitation and correlations of an electron pair. Other sustained efforts will be directed to the application of atomic points of view to solid-state problems and to the unraveling of the mechanism of atomic orientation by collision.

RESULTS: Since October 1, 1976 seven papers published or in the process of publication are identified as COO-1674-123, 124, 125, 130, 131, 132, and 136. Numbers 126, 127, 128, 129, are abstracts of papers presented at various conferences. Numbers 133, 134, and 135, are talks presented at various conferences and are to appear in print.

8.0011, THE STUDY OF PHONONS IN AMORPHOUS AND CRYSTALLINE SOLIDS UTILIZING THE APPLICATION OF LASER RAMAN SPECTROSCOPY
Unknown, University of Chicago, Graduate School, *5801 S. Ellis Ave., Chicago, Illinois* 60637 (EY-76-S-02-2126)

Amorphous diamond films, which are superhard and exhibit the physical characteristics of crystalline diamond, will be studied with optical techniques to ascertain their structural characteristics and the influence of those characteristics on physical properties.

We will attempt to intercalate the graphitic form of amorphous carbon films and vitreous carbon with the donor alkali metals, K, Rb, and Cs. Successful intercalation should yield information on the structure of disordered carbon as well as drastically alter the electronic properties of the material. Sufficient intercalation may result in a new type of metallic glass. We will also endeavor to intercalate the acceptor compounds, sulfuric and nitric acid. Successful intercalation will be detected from physical, electrical, and optical changes in the film.

The low-frequency Raman spectrum and Brillouin spectrum of amorphous arsenic will be studied to detect excess scattering from non-Debye-like excitations. Such excitations have been associated with the anomalous linear term in the specific heat exhibited by all glasses studied to date except amorphous arsenic.

An effort will be made to observe irreversible and reversible photostructural and thermostructural changes in evaporated bulk As2O3 glass. The optical effects associated with such changes provide the capacity for high-density rapid information storage. The atomic configurations associated with the changes will be studied using Raman, infrared, Brillouin, and X-ray techniques.

The two-dimensional order disorder transformation in graphite intercalated to stage 2 and higher with alkali metal atoms will be studied with X-ray and optical techniques. The temperature dependence of the Raman continuum in stage 1, C8K, C8Rb, and C8K, will be carefully studied as will the spectra of C6M, M equals Li, Sr, Ca, Ba to distinguish between the nearest layer model and zone folding model for vibrational excitations of intercalated graphite. An X-ray and Raman study of graphite intercalated with alkali metal ammonia solutions will be undertaken. The inversion splitting of the nu 2(A1) band of NH3 will be used to probe the graphite interlayer interaction.

Crystals of NaxWO3 0 less than or equal to x less than or equal to 0.5 will be prepared, characterized, and studied with polarized temperature-dependent Raman spectroscopy. (Text abridged)

8.0012, FIN STABILIZATION OF MAGNETICALLY CONFINED PLASMAS
V.H. Weston, Purdue Research Foundation, *West Lafayette, Indiana* 47907 (EY-76-S-02-4125)

It is proposed to continue the study of different outer conducting configurations on the stability of magnetically confined plasmas, with emphasis on fins or conducting surface lying on radial planes of field lines exterior to a cylindrical circular plasma. Multiple interaction terms between fins will be taken

into account and the extension from the small pitch case to the large pitch case will be considered. The effects of different outer conductor configurations on the stability of the various modes will be ascertained by comparing the corresponding minimum form of the perturbed vacuum field portion of the energy integrals.

RESULTS: A comparison of the effect of different configurations of the outer conducting surface on the stability of a cylindrical circular plasma of radius A and length L was made. The usual surface perturbation of the form eikz plus or minus in theta, k equals approximately 0 are treated. 'Fins' of zero thickness have no effect on the n equals 0 mode. However they do tend to stabilize the important n equals 1 mode. Neglecting multiple interaction terms, preliminary results indicated that four fins in the planes theta equals 0, plus or minus pi over 2 and pi with a/c equals .9 where c is distance of edge of fin to center of plasma have the same stabilization effect on the n equals 1 mode as the concentric outer cylinder of radius b where a/b equals .45.

8.0013, OPTICAL PROPERTIES OF SEMICONDUCTORS, MAGNETIC SEMICONDUCTORS AND FAR-INFRARED EMISSION FROM SEMICONDUCTORS

H.Y. Fan, Purdue University, School of Science, Dept. of Physics, *Executive Bldg., West Lafayette, Indiana* 47907 (DMR77-24306)

Experimental studies of magnetic semiconductors and far-infrared emission from semiconductors doped with impurities will be carried out as an extension of research supported by DMR-7511178. The one-magnon and two-magnon Raman scattering processes have been observed and investigated in manganese oxide, cobalt oxide and cubic manganese sulfide. The change in the Raman scattering of phonons associated with the structural phase transition in di-vanadium trioxide has also been observed. Careful spectroscopic studies of the Raman scattering in di-vanadium trioxide will be carried out to determine the effects of various external conditions, such as strong magnetic fields, on the metal-insulator, structural and antiferromagnetic phase transitions in this material. Also, the studies of far-infrared emission from semiconductors containing shallow impurity levels will be continued. This effort will be directed toward obtaining stimulated emission. Experiments to determine the level of stimulation as a function of wavelength and to observe spatial coherence of the emission will be carried out.

This is the first year of a two-year continuing grant.

8.0014, ATOMIC PHYSICS WITH HIGHLY IONIZED IONS

P. Richard, Kansas State University, School of Arts & Sciences, Dept. of Physics, *Anderson Hall, Manhattan, Kansas* 66502 (EY-76-S-02-2753)

Atomic physics with energetic highly ionized ions will be performed under five programs to study (1) the production of X-rays in solid media, (2) the processes of electron loss and gain in gas media, (3) X-ray spectroscopy in ion-atom collisions, (4) atomic collisions theory and (5) applications and developments with heavy ion beams. The process of electron capture will be studied experimentally and theoretically under topics 1, 2, 3, and 4. Alignment of atomic states will be investigated through the observation of target and projectile radiation. The target thickness dependence of X-ray yields will be studied to obtain target and projectile vacancy production and vacancy quenching cross sections in solids. X-ray spectroscopy of heavy ions will be initiated for X-rays with energy approximately greater than 4 keV using a new Cauchois spectrometer. Impact parameter dependences of cross sections will be extended to heavier ion partners.

RESULTS: During the 12-month period from 1 August 1976 to 31 July 1977, 19 scientific papers were published, 10 scientific papers are in the process of publication and 23 contributed and invited papers were presented on a wide range of experimental and theoretical analysis of ion-atom interactions at high energies.

8.0015, ELECTRON EXCITATION CROSS-SECTIONS FOR MULTIPLY CHARGED IONS

J. Callaway, Louisiana State University, Agricultural & Mechanical College, School of Arts & Sciences, Dept. of Physics & Astronomy, *University Station, Baton Rouge, Louisiana* 70803 (EY-76-S-05-4881)

The work proposed is the continuation of theoretical calculations of the cross-sections for excitation of positive ions of the lithium and helium isoelectronic sequences by electron impact. The energy range considered is from the threshold for excitation to approximately 4 times the ionization energy. The calculations will be based on a close coupling expansion with exchange. Different methods of solution of the coupled integro-differential equations including the R-matrix method, the matrix variational method, and the non-iterative integral equation method will be investigated for speed and accuracy. The energy range studied is one in which simple approximations of the Coulomb Born type are not valid. The contribution of Rydberg series of resonances below some excitation thresholds will be determined. Extrapolation of excitation cross-sections along helium-isoelectronic sequence will be made. Consideration of relativistic effects in both the structure of the ion and in the description of scattering as the nuclear charge increases will be made so that we can determine excitation cross-sections for highly stripped impurity ions in high temperature plasmas of interest in thermonuclear reactors.

SUPPORTED BY U.S. Dept. of Energy, Office of Energy Research

8.0016, A STUDY OF THE TWO-BODY DISSOCIATION OF LIGHT NUCLEI IN NUCLEAR FIELDS

R.W. Huggett, Louisiana State University, Agricultural & Mechanical College, School of Chemistry & Physics, Dept. of Physics & Astronomy, *University Station, Baton Rouge, Louisiana* 70803 (EY-76-S-05-4699)

The objective of the experiment is to measure the cross sections for the dissociation of light nuclei into two-body nuclear final states during peripheral nuclear collisions. The cross section for dissociation into a specific two-body nuclear final state is proportional to the square of the probability that the projectile nucleus existed as a configuration of the two final-state nuclei at the time of collision. The results will be significant because there has been increasing speculation recently concerning the existence of short-lived conglomerates of nucleons called 'clusters' within a parent nucleus.

The experiment will employ beams of 20/10 Ne, 16/8 O, 14/7 N, 12/6 C, 10/5 B, 6/3 Li, 4/2 He, and 2/1 H ions.

The kinetic energy of the heavy ions will be 2.1 GeV per nucleon. Those interactions in which the projectile nucleus dissociates into two fragments within the target will be selected electronically and recorded on magnetic tape for analysis.

The measured quantities will include the trajectories and charges of the incident nucleus and both final-state nuclei. The momenta of both final-state nuclei will be deduced from their bending angles in a magnetic field of 38 kG-m. Wire spark chambers with magnetostrictive readout will be used to encode the positions of projectile and final-state nuclei. Charges will be measured in scintillation counter hodoscopes.

SUPPORTED BY U.S. Dept. of Energy, Office of Energy Research

8.0017, THEORETICAL STUDIES OF HIGHLY IONIZED SPECIES

Unknown, Harvard University, Cambridge Campus, Graduate School, *Cambridge Station, Cambridge, Massachusetts* 02138 (Y-76-S-02-2887)

Applications of the relativistic random phase approximation will be carried out for the neon isoelectronic sequence, to inner shell ionization processes, and to electron scattering by elements of high nuclear charge. Non-radiative charge transfer processes will be studied. Dissociative recombination in low temperature

plasmas and dielectronic recombination in high temperature plasmas will be considered.

Model potential methods will be used to study the copper and zinc isoelectronic sequences, as well as multiphoton processes with weak and strong electromagnetic fields.

SUPPORTED BY U.S. Dept. of Energy, Office of Energy Research

8.0018, ELECTRONIC RELAXATION PROCESSES IN POLYATOMIC MOLECULES

Unknown, Wayne State University, Graduate School, *Cass & Antoinette Aves., Detroit, Michigan* 48202 (EY-76-S-02-2192)

The main thrust of this proposal is to investigate isotope effect on electronic relaxation as a probe of detailed mechanisms of radiationless processes. Three programs are presented in the proposal.

The first program explores the isotope effects on both the overall and the spin sublevel decay rates of the lowest triplet state (T1), and their dependence on the T1-T2 vibronic coupling. Much of the experiments are designed to test the specific theoretical predictions based on the important working hypothesis that the vibronic coupling between n pi* and pi pi* states leads to a very efficient radiationless transition from the lower of the two vibronically coupled states (proximity effect). The study represents the most stringent test of the proximity effect that has been carried out to date.

The second program involves studies of isotope, viscosity, and temperature effects on the formation and decay dynamics of excimers and exciplexes. The specific question we address is the role of the inter-ring stretching vibration in radiationless transitions of these systems. The results should provide the first step toward understanding the little known radiationless process in composite molecular systems. Supersonic molecular beam laser spectroscopy of excimers is also proposed to complement these photophysical studies.

Finally, in the third program, we propose to examine the lifetimes of triplet yields triplet fluorescence and their deuterium isotope effects in anthracene and its derivatives. These studies will be combined with the spectroscopic investigations of lower-lying triplet states to gain a detailed understanding of the mechanism of singlet yields triplet intersystem crossing in aromatic hydrocarbons.

RESULTS: Experimental and theoretical studies of isotopes and substituent effects on T1 radiationless decay rates have been carried out as a test of the working hypothesis that vibronic coupling between n pi* and pi pi* states leads to very efficient radiationless decay from the lower of the two vibronically coupled pair (proximity effect). In addition to providing general support to this hypothesis, the results indicate that isotope effects on spin sublevel decay rates are needed for a stringent test of the proximity effect.

The radiationless decay rates of the 3B1g state of anthracene and its derivatives have been deduced. (Text Abridged)

SUPPORTED BY U.S. Dept. of Energy

8.0019, EXPERIMENTAL AND THEORETICAL STUDIES IN SOLID STATE AND LOW TEMPERATURE PHYSICS EMPHASIZING RESEARCH LIQUID HELIUM AND OTHER MATERIALS

Unknown, University of Minnesota, Minneapolis Campus, Graduate School, *322 Johnston Hall, Minneapolis, Minnesota* 55455 (EY-76-S-02-1569)

The proposed research consists of studies of superconductivity, magnetism at low temperature, and of superfluidity in liquid helium.

The research on superconductivity is aimed at understanding the dynamics of the superconducting order parameter and the fluctuations associated with the superconducting-to-normal transition. The work proposed includes measurements of the pair-field susceptibility in films with magnetic impurities and in current-carrying films, with particular attention being paid to the behavior of the 'longitudinal' and 'transverse' modes of the order parameter. Also included are measurements of the specific heats of high-Tc Nb3Ge films. In addition, the competition between superconductivity and the metal-nonmetal transition in films of HgxXex-1 will be investigated.

The research on magnetism will employ nuclear orientation and SQUID magnetometry to study magnetization of very dilute alloys of manganese in copper, silver, and gold at temperatures in the range from 1 to 100 mK in applied fields from 10 G to 80 kG. Studies of the properties of hyperfine-enhanced nuclear collants and a search for collants capable of achieving temperatures below 1mK will be continued. A collaborative study of the properties of paramagnetic materials for magnetic refrigerators will be undertaken in the temperature range from 1 to 100 K in fields from 0 to 80 kG.

The research on superfluidity involves both pure 4He and 3He/4He mixtures and concerns the dynamics of superfluid flow. It is proposed to carry out measurements of the superfluid density of 3He/4He mixtures in fine regular pores using a Helmholtz resonator technique, extending previous measurements on pure 4He. A search for an AC Josephson effect in pure 4He will be undertaken using an apparatus conceived in analogy to an RF SQUID. In addition, measurements of the superfluid circulation around a fine wire in pure 4He will be continued with wires less than or equal to 25 microns in diameter to probe the quantization of circulation hypothesis.

RESULTS: Measurements of the superconducting pair-field susceptibility have been started in Er-doped Al films and on current-carrying films of pure Al. A technique to measure the heat capacities of thin superconducting films has been developed. (Text Abridged)

SUPPORTED BY U.S. Dept. of Energy

8.0020, OBSERVATION OF LUMINESCENT SPECTRA IN LOW ENERGY ION-NEUTRAL COLLISIONS

Unknown, University of Missouri, St. Louis Campus, Graduate School, *8001 Natural Bridge Rd., St. Louis, Missouri* 63121 (EY-76-S-02-2718)

The research is directed toward determination of the energy partitioning among internal energy states of the product of low-energy (1 to 500 eV) positive ion-neutral molecule collisions by observation of luminescence from decay of these excited products. Previous studies of kinematics and dynamics of reactive potential energy of exothermic systems showed that the energy can be efficiently converted to internal energy of the collision products. The present research is designed to yield precise internal state distributions in the collision products. The apparatus provides a mass-selected ion beam which is directed into a collision cell containing neutral gas at low pressure. Photons emerging from the collision cell are analyzed and counted to yield the collision-produced spectrum. Since the experiments are performed under single-collision conditions, details of the energy partitioning on a molecular level are obtained.

SUPPORTED BY U.S. Dept. of Energy, Office of Energy Research

8.0021, A STUDY OF THE PHOTOIONIZATION PROCESSES OF ATOMS

J.A. Samson, University of Nebraska, Lincoln Campus, School of Arts & Sciences, Dept. of Physics & Astronomy, *Lincoln, Nebraska* 68508 (EY-76-S-02-2892)

The experimental and theoretical study of atomic photoionization processes has advanced rapidly in the past decade so that both experimental and theoretical total photoionization cross sections in the vacuum ultraviolet region, at least for the rare gases, are possible with accuracies of plus or minus 10%. This accuracy makes possible the major objective of the proposed experimental and theoretical research program, which is to unravel the effects of electron correlation and of spin-orbit interaction on atomic photoionization processes. While the proposed research nevertheless requires the refinement and advancement of current techniques, the possibility of combined theoretical and experimental attack on these new research problems is a distinct benefit to both theory and experiment and increases the probability of obtaining significant results. Specifically it is proposed to measure and/or calculate total and partial photoionization cross sections, photoelectron branching ratios and angular distributions, and multiple ionization cross sections either over an energy region of a few Rydbergs above threshold or over the narrow energy region of an autoionizing resonance. These studies will be carried out both for the rare gases as well as for

less studied atoms, in particular open-shell atoms. Among the atoms for which experimental work is proposed are the rare gases, metal vapors, and O. Among the atoms for which theoretical work is proposed are Al, Cl, and Xe. In addition, photoionization of hydrogen-like atoms in high magnetic fields will be studied theoretically.

RESULTS: Random phase approximation calculations for photoionization of an open-shell atom have been carried out for atomic chlorine. Virtual double excitations in the ground state, which influence rare gas photoabsorption cross sections significantly, do not play as important a role in atomic chlorine due to an averaging out of these effects among many final state channels. Photoelectron angular distributions have been calculated for the outer (open) shells of the halogens and the chalcogens and it is found that anisotropic electron-ion interactions are strongest in the second row of the periodic table. Experimentally, a rotatable vacuum UV polarizer and a fixed electron energy analyzer have been designed and built to measure the photoelectron angular distribution of atomic oxygen at 584 A; work is continuing. (Text Abridged)

8.0022, THEORY OF ELECTRON-PHONON SCATTERING EFFECTS IN METALS
W.E. Lawrence, Dartmouth College, School of Arts & Sciences, Dept. of Physics & Astronomy, *P.O. Box 833, Hanover, New Hampshire* 03755 (EY-76-S-02-2315)

Studies of quasiparticle lifetimes and transport relaxation times will be continued for the noble and polyvalent metals. A method for accurate calculation of the transport times at low temperatures will be developed, and applied in specific instances. The variational method will be applied to a number of non-equilibrium phenomena in superconductors. An attempt to clarify the relationships between superconducting and normal-phase lifetimes will be made. Electron-electron scattering will be studied further, with attempt to account for relaxation time anisotropy and the resulting interference with other scattering mechanisms.

RESULTS: Diffusion model derived and formalized; electrical and thermal DMR calculated in detail for potassium and copper, variational convergence tested; quasiparticle properties calculated for aluminium, method developed for low temperature lifetime calculations; superconducting order parameter relaxation times related to anisotropic quasiparticle lifetime of normal phase, detailed calculation done for aluminium; electron-electron effects calculated for noble metals, reviewed for simple metals.

8.0024, EXPERIMENTAL AND THEORETICAL STUDIES ON THE PHYSICS OF BIOLOGICAL MOLECULES
J.J. Hopfield, Princeton University, Graduate School, Dept. of Physics, *205 Nassau Hall, Princeton, New Jersey* 08540 (DMR78-05916)

This research is aimed at an understanding of how biological molecules, assemblies, and systems operate from a physical and quantitative viewpoint. Currently under study are electron transfer proteins and assemblies (where an understanding of the mechanism of electron transfer and its relation to molecular structure and environment are sought), hemoglobin (where the mechanism by which the global structure affects local chemical properties is investigated), and accuracy problems and mechanisms in biosynthesis. The work is a closely integrated combination of experiment and theory, as in the electron transfer studies. The theoretical description of vibronically coupled electron tunneling transfer is now being tested by studying a charge transfer band described by the theory. The band is three orders of magnitude weaker than any previously studied. This experimental study is capable of providing a complete test of the concepts, constructs, and parameters of the theory. With an understanding of the mechanism of reaction, an approach to understanding some of the physical problems of photosynthesis and oxidative phosphorylation can begin. The chief experimental tool is very sensitive. modulation spectroscopy.

This is a continuation of research supported under DMR 75-14264.

This is the first year of a three-year continuing grant.

8.0031, DIFFUSIONAL CREEP OF MULTICOMPONENT SYSTEMS

Unknown, University of Rochester, Graduate School, *Administration Bldg., Rochester, New York* 14627 (EY-76-S-02-2296)

The successful completion of impression creep studies on Cu-Ni single crystals of all compositions and on beta-Tin single crystals of 3 orientations proved to us once more that impression creep can be a convenient substitute for conventional creep testing. The data obtained on these crystals are actually better than literature values because of the elimination of sample-to-sample variations. In the next period we propose to finish the Bi-Sb system using the apparatus already built for beta-Tin studies.

In addition we propose to study micro-impression elasticity to measure local elastic modulus using the same indentation technique and, at the same time, to extend impression creep studies to low temperatures. However, most important of all, we propose to study creep mechanisms by selective laser excitation. A tunable laser will be used to sort out different deformation of diffusive mechanisms in both crystalline and amorphous solids.

RESULTS: Two manuscripts are in preparation: 1. Impression Creep of Cu-Ni Single Crystals; 2. Impression Creep of beta-Tin Single Crystals.

8.0033, NEUTRON STUDIES OF LIGHT NUCLEI

Unknown, Ohio University, Athens Campus, Graduate School, *Athens, Ohio* 45701 (EY-76-S-02-2490)

The structure of light nuclei will be studied by means of their interaction with neutrons. The experimental program will include the elastic and inelastic scattering for neutrons interacting with 6Li, 7Li, 10B, 11B, 12C and 13C measured at the Ohio University Tandem Accelerator Laboratory by use of sub-nanosecond pulsed beams and time-of-flight methods. These results will be analyzed via the R-matrix formalism for comparison to theoretical model predictions. This research will enable us to improve our knowledge of the structure of light nuclei and develop further the various theoretical models for nuclear structure and nuclear reactions. These nuclei have particularly important applications in fusion reactor programs as well as in the standards used for measurement of cross sections and neutron fluxes.

RESULTS: A large set of data has been measured for the elastic and some inelastic scattering cross sections for neutrons scattered from 6Li, 7Li, 10B, 11B and 12C between 4 MeV and 8 MeV for angles from 20 degrees to 160 degrees using the Ohio University Tandem Accelerator. An R-matrix calculation has extracted several properties for the compound nuclei.

8.0034, ELECTRONIC STRUCTURE OF DEFECTS IN OXIDES

G.P. Summers, Oklahoma State University, Agricultural Experiment Station, Dept. of Physics, *107 Whitehurst Hall, Stillwater, Oklahoma* 74075

Optical absorption bands have been found in 'as grown' Al2O3 which are similar to bands found in particle irradiated material. In particular, a band at 6 eV which has been assigned to an O2-vacancy is found to anneal at 1250 degrees C in 'as grown' material compared to 600 degrees C in particle irradiated material.

SUPPORTED BY Oklahoma State Government

8.0035, ELECTRONIC STRUCTURES OF DEFECTS IN OXIDES

Unknown, Oklahoma State University, Graduate School, *211-215 Whitehurst Hall, Stillwater, Oklahoma* 74075 (EY-76-S-05-4837)

The object of the proposed research is to determine the production and trapping of electric charge within the oxides alpha-Al2O3, CaO, SrO, ZnO and spinel, which can be excited by light (photoconductivity) both before and after irradiation of the materials by gamma-rays, high-energy electrons, protons, or neutrons. The purpose is to detemine as well as possible the electronic structure of defects produced in the materials as a result of the irradiation. In particular we are concerned with radiation-induced anion vacancies in these materials. Additional information will be obtained by measuring photoluminescence and fluorescence lifetimes associated with the radiation-induced defects. The measurements are composed closely with recent calculations of the electronic structure of the defects. We are also concerned with determining the role played by ion group impurities in controlling charge transfer in alpha-Al2O3. Also, we compare results of radiation-induced defects with those produced in non-stoichiometric oxides, in particular CaO.

RESULTS: Photoconductivity has been detected from radiation-induced anion vacancies in SrO of CaO. The thermal ac-

tivation energy for the one electron center is 0.12 eV and 0.24 eV in SrO and CaO, respectively. In SrO the charge is released into the conduction band or fluorescence occurs from a long-lived electronic state (approximately 0.42 microseconds). Photoconductivity measurements indicate that a radiation-induced optical band at 204 nm in alpha-Al2O3 is a composite band.

8.0036, A STUDY OF FLOW AND LOSS PROCESSES AT THE ENDS OF A LINEAR THETA PINCH

T.M. York, Pennsylvania State University, University Park Campus, School of Engineering, Dept. of Aerospace Engineering, *101 Hammond Bldg., University Park, Pennsylvania* 16802 (EY-76-S-02-4020)

Purpose: investigate the physics of end loss from a theta pinch including mechanisms governing the loss and methods of inhibiting loss to improve confinement. Approach: Construct a 50 cm pinch apparatus with a 10 cm discharge coil. Measure the loss rate of plasma within the pinch coil, and correlate measurements with properties (pressure, density and temperature) near and at ends; test the theoretical models of end loss with experiments for collisional and collisionless plasmas, with and without magnetic mirrors. (ERDA 77-66)

8.0037, EXCITATION AND IONIZATION OF HIGHLY CHARGED IONS BY ELECTRON IMPACT

D.H. Sampson, Pennsylvania State University, University Park Campus, School of Science, Dept. of Astronomy, *211 Whitmore Lab., University Park, Pennsylvania* 16802 (EY-76-S-02-2897)

The project involves calculation of the cross sections or rates for excitation and ionization of highly charged impurity ions by electron impact. This data is needed in determining the energy balance in the high temperature plasmas occurring in fusion energy research. The impurity ions are excited principally by electron impact and decay by emission of x-rays, which escape the plasma. This results in one of the principal energy loss mechanisms in the plasma. These atomic processes mostly occur at severe enough conditions that the cross sections or rates can't be directly measured and so theoretical quantum mechanical calculations are required.

SUPPORTED BY U.S. Dept. of Energy

8.0038, MICROWAVE-OPTICAL DOUBLE RESONANCE SPECTROSCOPY

Unknown, University of Pittsburgh, Graduate School, *1028H Cathedral of Learning, Pittsburgh, Pennsylvania* 15213 (EY-76-S-02-3435)

The principal objective of this research project is to develop basic knowledge about the structure of matter and its interaction with radiation through the exploration of new physical and chemical phenomena. Of particular interest are short-lived chemical species which are produced by irradiation of solids with x-rays, gamma-rays, and ultraviolet light, and include electronically excited molecules, free radicals, and collective excitations in solids. Because of their short lifetimes, the development of new experimental techniques such as optical detection of magnetic resonance spectroscopy forms an integral part of this project. The results of this research will find application in environmental chemistry, laser-induced isotope separation, natural product synthesis, and energy generation, storage, and conversion devices.

8.0040, ENERGETICS OF ATOMIC AND MOLECULAR INTERACTIONS

G.K. Walters, Rice University, School of Natural Sciences, Dept. of Physics, *6100 Main, Houston, Texas* 77001 (EY-76-S-05-4676)

This program emphasizes studies of structure and interactions of excited atoms, molecules, electrons and ions in both gases and liquids, as well as properties of and atomic interactions with solid surfaces. The program is oriented toward basic problems of relevance to the nation's energy program. Specific areas of current activity include studies of reactions and radiative lifetimes in atomic and molecular systems of high-efficiency laser promise (of interest for laser fusion, laser isotope separation), new approaches (both experimental and theoretical) to the study of solid surfaces, and ultimately heterogeneous catalysis, and understanding of spectra and collisional effects of general interest in plasma physics and controlled thermonuclear reaction technology.

The program involves 1) the use of electron (e-beam) bombardment and time-resolved spectroscopy in the study of transient excited species in dense gases of laser importance; 2) new approaches to the study of atomically clean crystalline surfaces, and their interaction with ambient gases; 3) development of tunable ultraviolet lasers; 4) theoretical studies of collision processes involving electrons, ions, atoms and molecules.

RESULTS: 1) Radiative lifetimes and reaction rates in dense rare gases and their mixtures (important to modeling and optimizing rare gas lasers); 2) demonstration of sizeable spin-polarization in low-energy electron diffraction from clean surfaces (important as new diagnostic for surface analysis, perhaps ultimately to heterogeneous catalysis); 3) advances in tunable dye laser technology; 4) new theoretical description of selected atomic and molecular collision processes and ion- and atom-surface interactions relevant to advanced energy research.

SUPPORTED BY U.S. Dept. of Energy, Office of Energy Research

8.0041, STUDY OF NEUTRON-PROTON INTERACTION IN THE 300-700 MEV ENERGY REGION

Unknown, Texas A & M Research Foundation, *Faculty Exchange Box H, College Station, Texas* 77843 (EY-76-S-05-4449)

The objectives of this work are: to determine the spectrum of neutrons produced in 500-800 MeV proton bombardment of deuterium and other light elements; to use the most suitable reaction for the development of monoenergetic neutron beams needed to study the neutron-proton interaction in the 500-800 MeV energy region; to measure the differential cross sections for elastic neutron-proton scattering and for pion production in neutron-proton collisions at 500-800 MeV; to measure the neutron-proton total cross section at 500-800 MeV; to measure the neutron-proton polarization and spin-correlation parameters at 500-800 MeV. These measurements will constitute a complete determination of the neutron-proton interaction in that energy region, realizing one of the fundamental goals of intermediate-energy physics. The 500-800 MeV neutron beams will also be used to study the spectra of charged particles produced in neutron bombardment of various nuclei. The experiments will be carried out at the Los Alamos Meson Physics Facility using a magnetic spectrometer, multiwire proportional counters, scintillation counters, a polarized hydrogen target, and other appropriate instrumentation.

RESULTS: Differential cross section for np elastic scattering and angular distribution for np d P at 463,647 and 800 MeV; cross sections for np charge-exchange and nD back-angle elastic scattering at 200-800 MeV; cross sections for np positive pion and negative pion at 800 MeV; neutron spectra from 647 and 800 MeV proton bombardment of 1H, 2H and various solid targets; p and d spectra from 800 neutron bombardment of various targets.

SUPPORTED BY U.S. Dept. of Energy, Office of Energy Research

8.0042, NUCLEAR SPECTROSCOPY WITH HEAVY IONS

Unknown, Texas A & M University, College Station Campus, Cyclotron Inst., *College Station, Texas* 77843 (EY-76-S-05-4322)

Heavy-ion reactions are used to populate a narrow range of spin states in residual nuclei in the rare-earth region. The mechanism of reactions such as (14N, alpha) or (19F, alpha) in which direct transfer of 10B or 15N occurs to the target nucleus is under study. Possible applications of such reactions to spectroscopic studies of high-spin states will be investigated. The use of neutron-rich incident heavy-ion beams and neutron-rich targets as a means of reducing interference from charged-particle evaporation in compound-nucleus reactions will be extended to higher bombarding energy. In-beam studies by conversion-electron spectroscopy will be continued.

RESULTS: The transitional nucleus 150Gd is well characterized below the pairing gap as a slightly anharmonic vibrator. Higher lying yrast states have negative parity and odd spin. Quasiparticle configurations appear to contribute strongly to states above spin 11. The transitional nucleus 128Ba has been found to be nearly unstable with respect to gamma deformation. An electron-gamma ray coincidence measurement has shown that the EO component in the 12 beta yields 12g transition in 154Gd is small. High-spin states in 168Hf and 172Hf have been investigated.

8.0043, RESEARCH PROGRAM IN ELEMENTARY PARTICLE THEORY

Unknown, University of Texas, Austin Campus, School of Natural Sciences, Dept. of Physics, *200 W. 21st St., Austin, Texas* 78712 (EY-76-S-05-3992)

The Center for Particle Theory's primary research mission is investigating the fundamental structure of matter. It proposes to carry out this research through a broad program of techniques currently utilized in elementary particle physics. Investigations of the fundamental quantum field theoretic method of the elementary particle interactions involves full understanding of the quantum measurement problem. In addition, whatever quantum field theoretical methods develop they must be applied to ongoing high energy experimental phenomenology. Therefore, a program using quantum field theories for the phenomenology of weak and electromagnetic interactions is proposed. Elementary particle physics developments have recently been shown to have important implications in current astrophysical problems. A program in extending the application of particle physics methods to Astrophysics will be continued. Recently the discovery of gauge fields has indicated the possibility of a unified theory of strong, weak, electromagnetic and gravitational force systems. A significant program in developing these supersymmetric theories of matter is currently underway at Texas. The methods of group theory analysis applied to particle phenomena has long been identified with the group at Texas. This program and its algebraic counterpart will continue.

8.0047, PION-NUCLEON INTERACTION AND MESONIC ATOMS

Unknown, University of Wyoming, Graduate School, *P.O. Box 3435, University Station, Laramie, Wyoming* 82070 (EY-76-S-02-2197)

A series of experiments has been initiated to study several charge states of the reaction pi N yields pi pi N near their thresholds and to compare the average moduli of the matrix elements extrapolated to the thresholds with the predictions of soft pion theory. These experiments will test the applicability of the theory to the reactions, and will also provide more information about the processes just above the thresholds than has previously been available. The theory contains two parameters, the pion decay constants f pi which is determined consistently to 15 percent by other processes and the measure of deviation from the sigma model xi; hence at least two charge states must be studied to confirm or deny the theory. The first experiment measured d2 sigma/d lambda dT for the positive pion mesons in the center of momentum for negative pion p yields negative pion positive pion n at six energies between 229 and 356 MeV with a doubly focusing magnetic spectrometer, and these doubly differential cross sections have been integrated to find the reaction cross section. From these measurements, xi has been determined to about 10 percent for a given pion decay constant. An additional experiment now in progress will measure the cross sections for this reaction at 200 and 229 MeV to reduce the uncertainty in the process of extrapolation and hence to establish xi to about 5 percent or better. Techniques for observing other charge states will be studied and a suitable experiment proposed which will critically test the applicability of soft pion theory. If the applicability is tentatively accepted, the experiment completed would yield the most accurate measurements available for the S wave, isoscalar and isotensor pi pi scattering lengths.

In another series of experiments with the same apparatus, the cross sections for positive pion and negative pion double charge exchange in the disintegration of 16O, 40Ca and 208Pb will be measured. Comparison with theory should indicate the importance of double scattering, 3.3 resonance exchange, and nucleon-nucleon correlation in this process. (Text abridged)

10.0008, IMPROVEMENT OF DATA HANDLING AT THE LICK OBSERVATORY
L.B. Robinson, University of California, Santa Cruz Campus, Lick Observatory, *Mount Hamilton, California* 95140 (AST78-23104)

This grant supports a modest improvement in the data handling facilities for the telescopes of the Lick Observatory of the University of California. Industry compatible tape drives will be supplied so that data taken with the Image Tube Scanner, a modern, efficient detector system, can be carried to various computers for data reduction. The Image Tube Scanner is one of the most effective and productive detector systems in use in astronomy today. The excellent linearity and accurate subtraction of interfering skylight increases manyfold the observational capabilities and has extended the useful life of the Lick Observatory in the face of encroaching cities and man-made light pollution.

E.M. Sion, Villanova University, School of Liberal Arts & Sciences, Dept. of Astronomy, *Villanova, Pennsylvania* 19085 (AST78-13396)

This grant will provide funds for updating a catalogue of spectroscopically identified white dwarf stars. The number of such stars has doubled since the first catalogue was published. In addition to including much new material in the catalogue, there will be new user additions and corrections. The updated

catalogue will contain data needed for many statistical studies of these objects. It will be valuable for studies of the kinetics, space densities, and origins of various types of white dwarf stars. The catalogue will enable astronomers to separate and classify various types of compact stars. Other applications of this catalogue include studies of the internal structure of white dwarf stars.

announces

Two New Films

America's Wings

The spirit and joy of creativity as exemplified in aircraft design is the story of this film. America's Wings looks at everything that has happened since Kitty Hawk and the "somebodies" who made it happen. (28.5 minutes, 16 mm color)

The Age of Space Transportation

Every breakthrough in transportation, from the wheel to the jet engine, has brought with it enormous social change. "The Age of Space Transportation" takes a particular look at mankind's next giant step in moving around -- the Space Shuttle, the vehicle itself and its implications. (20 minutes, 16 mm)

SOCIETY OF EXPERIMENTAL TEST PILOTS TECHNICAL REVIEW, VOLUME 14, NO. 4: 23RD SYMPOSIUM PROCEEDINGS
1980 252 p refs Symp held at Beverly Hills, Calif., 26-29 Sep 1979
Copyright. Avail: Issuing Activity
The design and performance of various military and civil aircraft are discussed. Other topics include runway repair, flight into icing conditions, research aircraft, the history of flight tests, as well as the history of flight. For individual titles, see N80-31306 through N80-31322.

N80-31306# McDonnell-Douglas Corp., St. Louis, Mo.
F/A-18 STATUS REPORT **c05**
John E. Krings. *In* Society of Experimental Test Pilots. Soc. of Exptl. Test Pilots Tech. Rev., Vol. 14, No. 4, 1980, p 1-9 (For primary document see N80-31305 22-01)
Avail: Issuing Activity
The design and configuration details of the F/A-18 aircraft are summarized. The test programs discussed include envelope expansion, propulsion, controllability, radar, and missile compatibility tests. Problems encountered and subsequent changes and improvements made are cited. E.D.K.

N80-31307# Fairchild Republic Co., Farmingdale, N. Y.
NIGHT/ADVERSE WEATHER A-10 EVALUATOR PROGRAM (A-10B) **c05**
Wendell H. Shawler. *In* Society of Experimental Test Pilots. Soc. of Exptl. Test Pilots Tech. Rev., Vol. 14, No. 4, 1980, p 10-21 (For primary document see N80-31305 22-01)
Avail: Issuing Activity
The development and flight testing of a cost effective system applicable to a ground attack system such as the A-10 and which would extend its mission capability to the night and adverse weather regime is discussed. Aircraft operability and survivability with low altitude attack is demonstrated as well as the ability to integrate tactics, sensors, and munitions to destroy a threat. The aircraft modifications required and the first flight test results of the modified aircraft are presented. E.D.K.

N80-31308# Messerschmitt-Boelkow-Blohm G.m.b.H., Munich (West Germany).
THE TORNADO ALL-WEATHER HIGH-SPEED LOW-LEVEL SYSTEM **c04**
Ludwig Obermeier. *In* Society of Experimental Test Pilots. Soc. of Exptl. Test Pilots Tech. Rev., Vol. 14, No. 4, 1980, p 22-36 (For primary document see N80-31305 22-01)
Avail: Issuing Activity
The military requirement for the Tornado Interdictor/Strike version (IDS) calls for an advanced air to ground weapon system capable of striking enemy targets in areas of heavy defensive armament and electronic countermeasures under all weather and light conditions. The Tornado as an airborne weapon system was developed to meet the requirement of flexible response in all weather conditions. The role of high speed, all weather, low level flying necessitates a high precision navigation and aiming system, defensive electronics, and advanced automatic terrain following capability coupled with good ride qualities. E.D.K.

Thomas P. McAtee and Loren Timm. *In* Society of Experimental Test Pilots. Soc. of Exptl. Test Pilots Tech. Rev., Vol. 14, No. 4, 1980, p 37-51 (For primary document see N80-31305 22-01)
Avail: Issuing Activity
European flight tests on the F-16 were performed to qualify the aircraft for operations in adverse weather and to complete operational tests and evaluations. The results are presented from the following areas: routine operations, air to air effectiveness, and air to surface effectiveness. E.D.K.

N80-31310# McDonnell-Douglas Corp., St. Louis, Mo.
YAV-8B STATUS REPORT **c05**
Charles A. Plummer, Jr. *In* Society of Experimental Test Pilots. Soc. of Exptl. Test Pilots Tech. Rev., Vol. 14, No. 4, 1980, p 52-59 (For primary document see N80-31305 22-01)
Avail: Issuing Activity
The AV-8A was modified into the YAV-8B configuration. The fuselage, cockpit, tail section, and main gear were only slightly changed. The major changes include: a supercritical airfoil to reduce transonic drag, improve maneuvering, and provide 75% more fuel storage; a second row of auxiliary inlet air doors was installed, the inlet lip shape changed, and the inlet radius increased about 1.5 inches; positive circulation is generated by large flaps interconnected with the nozzles such that full flap is obtained with approximately 50 deg of nozzle angle; and lift improvement devices which include strakes fitted to the 30 mm gun pods under the aircraft and a retractable door, or dam, which connects them at the forward end. E.D.K.

HAVE BOUNCE **c05**
Richard A. Borowski. *In* Society of Experimental Test Pilots. Soc. of Exptl. Test Pilots Tech. Rev., Vol. 14, No. 4, 1980, p 60-67 (For primary document see N80-31305 22-01)
Avail: Issuing Activity
A variety of runway repair methods were tested. The most successful repair method is the AM-2 mat. An AM-2 mat is made up of extruded aluminum sections 2 feet wide which interlock to form a mat 54 feet wide and of any desired length. The mat is 1.5 inches thick and has a 4 foot ramp at each end. The mats are anchored in place over bomb craters that were filled and leveled. The basic method used was to validate computer simulations of F-4 aircraft dynamic response to multiple runway repairs in which structural failures were indicated. E.D.K.

SPACE SHUTTLE STATUS **c16**
Donald K. Slayton. *In* Society of Experimental Test Pilots. Soc. of Exptl. Test Pilots Tech. Rev., Vol. 14, No. 4 1980 p 94-116 (For primary document see N80-31305 22-01)
Avail: Issuing Activity CSCL 22B

Technology problems relating to the shuttle thermal protection system and the auxiliary power units for flight control of engine gimbaling and aero surfaces are examined as well as yet unresolved difficulties associated with the main engine, external tank doors, and the payload bay doors. Concepts for launch crew escape and for flight inspection are discussed, and the orbital flight test drivers are identified. The majority of OFT objectives can be accomplished in a success oriented four flight program. Carry over will be accommodated in the operational phase with a mini-DFI package. Primary shuttle systems requiring additional testings are (1) aerodynamics (forward CG); (2) thermal control system (high beta); (3) payload deployment and retrieval system (retrieval, a maximum weight, and proximity operations); (4) SSME throttling to 109%; and (5) SSME nozzle entry aerodynamic heating (up elevon/body flap position at hypersonic velocities). THE DEVELOPMENT OF THE WORLD'S FIRST TRIENGINE BUSINESS JET, THE MYSTERE FALCON 50 **c05**
Jerome A. Resal. *In* Society of Experimental Test Pilots. Soc. of Exptl. Test Pilots Tech. Rev., Vol. 14, No. 4 1980 p 23-137 (For primary document see N80-31305 22-01)
Avail: Issuing Activity

To meet the demand for a business jet with a range of 2700 nautical miles, the fuselage of the F-20 was modified to accommodate three TRE731-2 engines identical to those of the F-10 aircraft. A three dimensional wing with a definite relationship to that of the F-10 and the Mercure was optimized to provide increased fuel capacity. Other changes to develop the prototype Falcon 50 are described as well as the telemetry used in its first flight test. Compared to the Falcon 20, the Falcon 50 weighs one third more, but for the same trip, burns less fuel and flies faster. It is twice as heavy as the Falcon 10 and with one more engine climbs higher. With five passengers, and full fuel (some 130 pounds under maximum gross weight), it can climb directly to 41,000 feet and fly 3500 nautical miles in still air, finishing the cruise at 45,000 feet. At maximum gross weight, the distance covered is 3300 nautical miles. Large range cruisings are set for Mach 0.72 to 0.75. A.R.H.

N80-31317# Canadair Ltd., Montreal (Quebec).
CL-600 CHALLENGER **c05**
E. D. Adkins. *In* Society of Experimental Test Pilots. Soc. of Exptl. Test Pilots Tech. Rev., Vol. 14, No. 4 1980 p 138-144 (For primary document see N80-31305 22-01)
Avail: Issuing Activity

The CL-600 aircraft has a span of 61 feet 10 inches, a length of 67 feet 9 inches, and a height of 20 feet 3 inches. The maximum takeoff weight is 36,000 pounds, and the maximum landing weight is 33,000 pounds. It is powered by two Avco Lycoming ALF-502 engines, each developing 7500 pounds of thrust at sea level. The flight flutter program and stall program are described. A.R.H.

P-59 **c05**
Laurence C. Craigie. *In its* Soc. of Exptl. Test Pilots Tech. Rev., Vol. 14, No. 4 1980 p 147-165 (For primary document see N80-31305 22-01)
Avail: Issuing Activity

The history of the development of propellerless aircraft is reviewed with particular emphasis on security measures taken during the design, production, and testing of the XP-59A, America's first jet aircraft. Special features of the Heinkel 178 and 280, the CC-1 and CC-2, the Gloster E-28/39, and the Messerschmitt 262 are also examined. A.R.H.

N80-31319# McDonnell-Douglas Corp., St. Louis, Mo.
AIRCRAFT WINGTIP COUPLING EXPERIMENTS **c05**
C. E. Anderson. *In* Society of Experimental Test Pilots. Soc. of Exptl. Test Pilots Tech. Rev., Vol. 14, No. 4 1980 p 166-184 refs (For primary document see N80-31305 22-01)
Avail: Issuing Activity

A method of increasing the range of an aircraft was investigated. The method involved attaching two free floating panels which carry fuel as extensions to the wings. The concept of this method was also extended to other uses; two escort fighters were carried along on a large bomber aircraft, without sacrifice of any bomber range. It is shown that the feasibility of this method is reliant on the proper alignment of the wingtip extensions (whatever they are), by a simple automatic flight control system. R.C.T.

PRODUCTION ORIENTED MAINTENANCE ORGANIZATION: A CRITICAL ANALYSIS OF SORTIE-GENERATION CAPABILITY AND MAINTENANCE QUALITY. M.S. Thesis
David A. Diener and Barry L. Hood. Jun. 1980. 179 p. refs. (AD-A087095; AFIT-LSSR-52-80) Avail: NTIS. HC A09/MF A01. CSCL 01/3

The Production Oriented Maintenance Organization (POMO) represents an Air Force initiative directed at improving sortie-generation capability. Although POMO is currently in use within TAC, PACAF, USAFE, and AAC, its impact has not been fully evaluated. This research was directed at determining what effect, if any, POMO has had on sortie-generation capability and aircraft quality. Six research hypothesis variables relating to sortie-generation capability and three relating to aircraft quality were evaluated to make this determination. Data were obtained from HQ ADCOM and six active duty ADCOM FISs. Performance data covered each FIS before and after POMO implementation. Research findings reflected both positive and negative results. Improvement was found in four sortie-generation variables of which three were strongly related to POMO. Degradation occurred in all three of the aircraft quality variables in the post-POMO period. Within the scope of this research, the authors conclude that, within ADCOM, POMO has had some positive effects on sortie-generation capability and some negative effects on aircraft quality. GRA

MAINTAINABILITY INDEX MODEL DATA BASE STUDY Final Report, Jul. 1970 - Sep. 1979
Dennis H. Kovatch. 16 Jun. 1980. 83 p. refs. (Contract N00140-79-C-0445) (AD-A087844; Rept-2-57404/OR-52451) Avail: NTIS. HC A05/MF A01. CSCL 01/3

This report presents a review of ten years of aircraft maintenance data and its effects on mathematical modeling. A Maintainability Index Model (MIM) was previously developed using 3-M data from the 1975-1976 time period. Since then, maintenance data for the aircraft used to develop the MIM has increased resulting in the model under predicting current year data by 40% and life cycle data by 18%. Because of the variability and instability of 3-M data, a recommendation is made to update the model annually on an interim basis through the use of Maintenance Inflation Factors and to provide a complete update of the MIM data base every five years. GRA

N80-31325# XYZYX Information Corp., Canoga Park, Calif.
AIRCRAFT MAINTENANCE EFFECTIVENESS SIMULATION (AMES) MODEL. Final Report, Oct. 1977 - Sep. 1979
David Gold, Bruce Kleine, Frank Fuchs, Sal Ravo, and Kay Inaba. Feb. 1980. 116 p. (Contract N61339-77-D-0028) (AD-A087516; NAVTRAEQUIPC-77-D-0028-1) Avail: NTIS. HC A06/MF A01. CSCL 01/3

This report covers a project to develop and test a functional simulation model of aircraft maintenance. The model is called AMES, which means Aircraft Maintenance Effectiveness Simulation. AMES is a computer model that simulates the operation and maintenance of an aircraft squadron. It is different from other aircraft models in that it measures the effects of human errors in maintenance (maintenance accuracy). AMES is a potential tool for managers to help identify those aspects of maintenance with large payoffs for improving operational readiness and/or mission completion rate. Additionally, AMES can be used to evaluate quantitatively the effects of human factors improvements on aircraft readiness. AMES is important to the maintenance community because of its treatment of maintenance error rates. Maintenance errors are known to have a large impact on many other factors in the maintenance performance equation, e.g., elapsed time, consumption of spares, aborted missions, etc. However, this knowledge has seldom been put to good use. One reason is that errors are difficult to measure. Another reason is that the effects of errors are highly interactive, and not easily traced by conventional analysis techniques. GRA

N80-31326# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
MATHEMATICAL MODELING OF LINEAR AND NON-LINEAR AIRCRAFT STRUCTURES
Jul. 1980. 38 p. refs. Presented at the Spring 1980 Meeting of the Struct. and Mater. Panel, Athens. (AGARD-R-687; ISBN-92-835-1365-7) Avail: NTIS. HC A03/MF A01

Mathematical modeling of aircraft structures were used to determine the flutter boundaries and the dynamics of the aircraft. Specific emphasis is placed on improving the theoretically obtained flexibility and mass distributions of a structure and analyzing the nonlinear behavior of wing stores configurations. For individual titles, see N80-31327 through N80-31328.

N80-31327# Vereinigte Flugtechnische Werke G.m.b.H., Bremen (West Germany).
OPTIMIZATION OF THE MATHEMATICAL MODEL OF A STRUCTURE c05
Helmut Zimmerman. *In* AGARD. Math. Modeling of Linear and Non-Linear Aircraft Struct. Jul. 1980. p. 1-14. refs. (For primary document see N80-31326 22-01)
Avail: NTIS. HC A03/MF A01

Adjustment algorithms are presented for improving the theoretically obtained flexibility or stiffness and mass distribution of such a structure by dynamic test or ground resonance test results. The necessary assumptions for the adjustment and the mathematical formalism for the adjustment procedure are given. Experiences gained and adjustment results obtained with these algorithms are reported on concentrating especially on one which uses only the measured and calculated eigenfrequencies. Proposals for improvements on the procedures and in the algorithms are also given. R.C.T.

N80-31328# Aeritalia S.p.A., Torino (Italy).
EFFECTS OF NONLINEARITIES ON WING-STORE FLUTTER c08
G. DeFerrari, L. Chesta, O. Sensburg (Messerschmitt-Boelkow-Blohm G.m.b.H., Munich), and A. Lotze (Messerschmitt-Boelkow-Blohm G.m.b.H., Munich). *In* AGARD. Math. Modeling of Linear and Non-Linear Aircraft Struct. Jul. 1980. p. 15-32. refs. (For primary document see N80-31326 22-01)
Avail: NTIS. HC A03/MF A01

Findings from ground resonance tests and flight flutter tests are presented and an explanation for these test results is given. Calculations with linear assumptions (parameter variations) were made and the method of harmonic balance for finding these parameters was applied. It is shown that certain levels of excitation must be reached in order to make flight flutter tests reliable for establishing flutter clearance speeds. R.C.T.

N80-31329# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
AIRCRAFT ASSESSMENT AND ACCEPTANCE TESTING
May 1980. 195 p. refs. Lecture held in Gol, Norway, 5-6 Jun. 1980, in Athens, 9-10 Jun. 1980, and in Ankara, 12-13 Jun. 1980. (AGARD-LS-108; ISBN-92-835-0266-3) Avail: NTIS. HC A09/MF A01

The present state of the art of aircraft assessment and acceptance testing of production aircraft is reviewed. Emphasis is placed on the practical aspects of this technique in order to help the flight crews and organizations dealing with this activity. Flight test instrumentation methods are set forth that do not require the use of sophisticated ground and airborne instrumentation for data acquisition or large computers for data processing. Flight test techniques described illustrate ways to acquire acceptable results utilizing a minimum of instrumentation or no

instrumentation. For individual titles, see N80-31330 through N80-31341.

Avail: NTIS. HC A09/MF A01.

The test and evaluation of new weapon systems is an integral part of the total acquisition process. The major emphasis in the early development stages is placed on quantitative test and analysis to determine functional adequacy and specification compliance. Highly instrumented aircraft are used to provide data on aircraft performance, flying qualities, structural integrity, and subsystem operation. The management and test procedures used at the Air Force Flight Test Center to plan, conduct, and report on the development test and evaluation phase are presented. E.D.K.

SOME EXAMPLES OF PROCEDURES USED IN UK FOR ACCEPTANCE TESTING OF AIRCRAFT PRODUCED BY THE AIRCRAFT INDUSTRY UNDER GOVERNMENT CONTRACT c05
R. J. Poole. *In* AGARD. Aircraft Assessment and Acceptance Testing. May 1980. 6 p. refs. (For primary document see N80-31329 22-01)
Avail: NTIS. HC A09/MF A01.

The scope of the testing carried out on instrumented aircraft is illustrated in order to indicate the range of data that can be made available to bodies evaluating a production aircraft. Aircraft are flight tested to a production flight test schedule to ensure consistent handling and performance throughout the fleet and an example of the content of a schedule is presented. Tests include measurement of aerodynamic loading and inertia loading of the airframe structure, measurement of the aircraft stability and control characteristics, measurement of thrust and lift boundaries, takeoff, landing, climb, cruise, and descent performance, and determination of engine handling characteristics. E.D.K.

A REVIEW OF FLIGHT TEST INSTRUMENTATION SYSTEMS FOR ACCEPTANCE TESTING OF THE PRODUCTION AIRCRAFT c06
Claude Robert. *In* AGARD. Aircraft Assessment and Acceptance Testing. May 1980. 3 p. (For primary document see N80-31329 22-01)
Avail: NTIS. HC A09/MF A01.

A definition is given of flight test instrumentation. Two cases considered are that the aircraft is fitted with a crash recording system and that no special recording means are available on the aircraft. A general description of present accident recording systems is presented. E.D.K.

N80-31334# Air Force Flight Test Center, Edwards AFB, Calif.
PERFORMANCE TESTING PRODUCTION AIRLINES c05
Roger C. Crane. *In* AGARD. Aircraft Assessment and Acceptance Testing. May 1980. 27 p. refs. (For primary document see N80-31329 22-01)
Avail: NTIS. HC A09/MF A01.

A discussion of basic performance testing and data analysis concepts along with pretest information requirements are presented. Ground tests such as instrumentation calibrations, installed static thrust calibrations, and airplane gross weight and center of gravity checks are outlined. Flight tests which enable static source position error determination, as well as an assessment of takeoff, cruise, acceleration, and turning performance are discussed. Also described are tests that enable assessments of the engine handling characteristics of the airplane. The presentation and analysis of the data acquired during each type of tests are also outlined with emphasis on using test day data as opposed to test day data corrected to standard day conditions. FLIGHT RESEARCH TECHNIQUES UTILIZING REMOTELY PILOTED RESEARCH VEHICLES c05
R. Dale Reed. *In* AGARD. Aircraft Assessment and Acceptance Testing. May 1980. 15 p. refs. (For primary document see N80-31329 22-01)
Avail: NTIS. HC A09/MF A01.

The use of the remotely piloted research vehicle (RPRV) in aeronautical research is surveyed. The flight test experience that has been acquired with several types of RPRV's including those with a pilot in the loop is emphasized. The approaches utilized range from the simplest and least expensive of vehicles, such as the Minisnuffler, to the sophisticated highly maneuverable aircraft technology (HiMAT) RPRV. The advantages and disadvantages of RPRV's are discussed, as well as safety considerations. The ground rules set early in a program can profoundly affect program cost effectiveness and timeliness. QUALITATIVE ARMAMENT SUBSYSTEM ASSESSMENT c05
Lawrence P. Colburn. *In* AGARD. Aircraft Assessment and Acceptance Testing. May 1980. 16 p. refs. (For primary document see N80-31329 22-01)
Avail: NTIS. HC A09/MF A01.

A qualitative approach to armament subsystem tests, the objectives which can be achieved, and analysis methods for the major aircraft weapon systems are addressed. It is concluded that a qualitative evaluation of the armament subsystem can provide the basis for determining the operational effectiveness and suitability of the system for procurement. A substantial amount of information may be gathered to evaluate a weapon system

without extensive or sophisticated instrumentation. Minimal aircraft and weapon range instrumentation requirements are detailed. M.G.

ELECTRO-MAGNETIC COMPATIBILITY **c32**
Henry Maidment *In* AGARD Aircraft Assessment and Acceptance Testing May 1980 6 p refs (For primary document see N80-31329 22-01)
Avail: NTIS HC A09/MF A01

The historical background to the growth in problems of electromagnetic compatibility (EMC) in UK Military aircraft is reviewed and the present approach for minimizing these problems during development is discussed. The importance of using representative aircraft for final EMC assessments is stressed, and the methods of approach in planning and executing such tests are also outlined. The present equipment qualification procedures are based on assumptions regarding the electromagnetic fields present within the airframe, and the nature of the coupling mechanisms. These cannot be measured with any certainty in representative aircraft. Thus EMC assessments rely on practical tests. Avionics systems critical to flight safety, and systems vital to mission effectiveness require test methods that provide a measure of the safety and performance margins available to account for variations that occur in production and service use. Some proven methods are available, notably for detonator circuits, but in most other areas further work is required. Encouraging process has been made in the use of current probes for the measurement of interfering signals on critical signal lines, in conjunction with complementary test house procedures, as a means for obtaining the safety margins required in flight and engine control systems. Performance margins for mission systems using digital techniques are difficult to determine, and there is a need for improved test techniques. The present EMC qualification tests for equipment in the laboratory do not guarantee freedom from interference when installed, and the results are limited in value for correlating with aircraft tests. M.G.

CHECKING OF COMMUNICATIONS AND RADIO NAVIGATION SYSTEMS **c32**
Henry Maidment *In* AGARD Aircraft Assessment and Acceptance Testing May 1980 24 p refs (For primary document see N80-31329 22-01)
Avail: NTIS HC A09/MF A01

The testing of aircraft communications and radio navigation systems is addressed. Limited assessments need to take account of variations in ground station performance, and uncertainty regarding radio wave propagation conditions. Antenna performance can vary markedly in different aircraft to affect the radial coverage of all systems, or the accuracy achieved by direction finding equipment. Aircraft transmitting antenna characteristics can be quantified for a relatively modest outlay on ground station equipment, and subjective communications quality assessments can be enhanced by using suitable yet inexpensive voice recorders that are also useful for noting observed navigation data for subsequent analysis. An accompanying aircraft of known performance can provide a comparative basis for the assessment of range performance and provide the means for checking air to air modes. Test objectives should be related to the intended operational use of the aircraft, but need to be interpreted into schedules for use over standard test routes, that have the widest application for all classes of aircraft. An example is given of a possible schedule of tests and the form of analysis that might apply. M.G.

PERFORMANCE OF NAVIGATION SYSTEMS **c04**
Karlheinz Hurrass *In* AGARD Aircraft Assessment and Acceptance Testing May 1980 18 p refs (For primary document see N80-31329 22-01)
Avail: NTIS HC A09/MF A01

The radio navigation systems of VHF omnidirectional range/distance measuring equipment (VOR/DME) and the tactical air navigation system, as well as Doppler navigation and inertial navigation are described to show in which way and how far they can be used. Their error behavior is described especially and in detail. It is suggested that by combining various navigation systems, navigation accuracy can be greatly increased. One integrated system is dealt with and explained with the aid of flight tests. The system consists of a simple dead-reckoning system aided by DME distance measurements. Both systems are integrated by emans of a Kalman filter. The dead-reckoning system uses heading, true air speed, and an estimated velocity of the wind. The DME-interrogator is constantly switched over to frequencies of different ground stations (multiple DME). M.G.

AN APPROACH TO THE LIFE CYCLE ANALYSIS OF AIRCRAFT TURBINE ENGINES **c07**
J. R. Nelson *In* AGARD The Appl. of Design to Cost and Life Cycle Cost to Aircraft Eng. May 1980 27 p refs (For primary document see N80-31342 22-01)
Avail: NTIS HC A08/MF A01

A methodology derived from historical data for life cycle analysis of aircraft turbine engines is described and applied at the engine subsystem and aircraft systems levels. The methodology enables the weapon system planner to acquire early visibility of cost magnitudes, proportions, and trends associated with a new engine's life cycle, and to identify drivers that increase cost and can lower capability. The procedure followed was to develop a theoretical framework for each phase of the life cycle; collect and analyze data for each phase; develop parametric cost estimating relationships (CERs) for each phase; use the CERs in examples to ascertain behavior and obtain insights into cost magnitudes, proportions, and trends, and to identify cost drivers and their effects; and examine commercial experience for cost data and operational and maintenance practices. A.R.H.

DESIGN TO LIFE CYCLE COSTS INTERACTION OF ENGINE AND AIRCRAFT **c07**
E. J. Jones *In* AGARD The Appl. of Design to Cost and Life Cycle Cost to Aircraft Eng. May 1980 15 p (For primary document see N80-31342 22-01)
Avail: NTIS HC A08/MF A01

The distribution of life cycle costs for a typical combat aircraft between airframe, avionics and engine is discussed. Distribution of costs for the aircraft between development, production, initial support and operation and support is compared with the distribution for the engine. The effect of fleet size and service life upon the life cycle costs are indicated. The large commitment of life cycle costs early in the conceptual and feasibility phase of the program is indicated. The choice of engine is an example of this early commitment. The relative effect of the choice of single or twin engine installation of a derated engine or the use of an existing engine upon the engine life cycle costs, and the interaction with aircraft costs is discussed. The severe operating conditions for the engine of a combat aircraft are reviewed. Reduced support costs are not expected to give a large fold return on extra engine development investment. A.R.H.

PROGRESS ON THE US AIR FORCE APPROACH FOR THE PRACTICAL MANAGEMENT OF ENGINE LIFE CYCLE COSTS **c07**

Richard E. Steere, Edward G. Koepnick, and Robert A. Dean *In* AGARD The Appl. of Design to Cost and Life Cycle Cost to Aircraft Eng. May 1980 10 p refs (For primary document see N80-31342 22-01)

Avail: NTIS HC A08/MF A01

Efforts to more effectively influence the life cycle costs of newly acquired gas turbine power plants are reviewed. A combination of technical and business practice initiatives was undertaken or planned across the entire life cycle spectrum, i.e., from first entry with the exploratory development program through the decision to phase the product out of the active inventory. The status of technical and management activities is addressed and various business concepts and strategies being studied by the U.S. Air Force which complement the earlier initiatives as they impact engine life cycle costs are presented. The role of the USAF Propulsion System Program Office as the continuing focal point for these life cycle efforts is discussed. The ideas presented are not new as they have been employed successfully at one time or another on an individual basis in the development and support of military and commercial gas turbine power plants. What is new, is the systems management view of the life cycle process and what can be done practically today vs tomorrow to enhance engine life cycle costs in an integrated fashion. A.R.H.

LOGISTICS FORECASTING FOR ACHIEVING LOW LIFE CYCLE COST **c81**

G. Walker *In* AGARD The Appl. of Design to Cost and Life Cycle Cost to Aircraft Eng. May 1980 25 p refs (For primary document see N80-31342 22-01)

Avail: NTIS HC A08/MF A01

The on condition maintenance concept (OCM) provides the potential for reduced life cycle costs (LCC) by fully utilizing potential parts life and reducing maintenance frequency. With the advent of OCM logistics requirements are heavily influenced by wearout characteristics and usage severity. In such cases more sophisticated forecasting methods are required which realistically represent the dynamics of the logistics system inherent in such a maintenance philosophy. If efficient logistics management is to be attained, such forecasting tools should also provide the capability to perform tradeoff studies on the cost effectiveness of alternative maintenance or logistics systems. The use of modelling methods which are proving practical in forecasting and tradeoff analyses and therefore in establishing an optimum logistics and support environment is explored. Methods discussed include the consideration of wearout characteristics where components exhibit an age related replacement rate, and also replacement of components which may have a specified maximum life in terms of operating cycles or mission severity. The use of engine history recorders and parts tracking systems and their impact on achieving optimum LCC is also discussed. A.R.H.

THE APPLICATION OF DESIGN TO COST AT ROLLS-ROYCE **c07**

R. J. Symon and K. J. Dangerfield *In* AGARD The Appl. of Design to Cost and Life Cycle Cost to Aircraft Eng. May 1980 17 p (For primary document see N80-31342 22-01)

Avail: NTIS HC A08/MF A01

Experience in evolving and applying a formal design to cost discipline is described in chronological order of the main events which occurred during the last five years with brief reference to the previous period. A new type of department was created to face the principal problem, that control of costs requires interactive links between the management disciplines at all levels. The way in which this group fits into the existing organization to ensure that effective cost control becomes part of the established routines is discussed. Comments are made on the nature of cost and its fundamental difference from the other parameters which the designer has traditionally managed. Conclusions likely to apply to any commercial manufacturing company are suggested and comments made regarding the future responsibility of engineers in determining the financial success of the companies for which they work. Complementary roles for management and financial accountants to support the new responsibilities of the engineers are also indicated. A.R.H.

PHASE 2 AND 3 WIND TUNNEL TESTS OF THE J-97 POWERED, EXTERNAL AUGMENTOR V/STOL MODEL

D. B. Garland and J. L. Harris Mar. 1980 174 p refs (Contract NASw-2797)

(NASA-CR-163578; DHC-DND-80-1) Avail: NTIS HC A08/MF A01 CSCL 01A

Static and forward speed tests were made in a 40 multiplied by 80 foot wind tunnel of a large-scale, ejector-powered V/STOL aircraft model. Modifications were made to the model following earlier tests primarily to improve longitudinal acceleration capability during transition from hovering to wingborne flight. A rearward deflection of the fuselage augmentor thrust vector was shown to be beneficial in this regard. Other augmentor modifications were tested, notably the removal of both endplates, which improved acceleration performance at the higher transition speeds. The model tests again demonstrated minimal interference of the fuselage augmentor on aerodynamic lift. A flapped canard surface also showed negligible influence on the performance of the wing and of the fuselage augmentor. T.M.

INFLUENCE OF MISTUNING ON BLADE TORSIONAL FLUTTER

A. V. Srinivasan Aug. 1980 55 p refs
(Contract NAS3-21603)
(NASA-CR-165137; R80-914545-16) Avail: NTIS HC A04/MF A01 CSCL 01A

An analytical technique for the prediction of fan blade flutter was evaluated by utilizing first stage fan flutter data from tests on an advanced high performance engine. The formulation includes both aerodynamic and mechanical coupling among all the blades of the assembly. Mistuning is accounted for in the analysis so that individual blade inertias, frequencies, or damping can be considered. Airfoil stability was predicted by calculating a flutter determinant, the eigenvalues of which indicate the extent of susceptibility to flutter. When blade to blade differences in frequencies are considered, a stable system is predicted for the test points examined. For a tuned system, it was found that torsional flutter can be predicted at a limited number of interblade phase angles. Examination of these phase angles indicated that they were 'close' to the condition of acoustic resonance. For the range of Mach numbers and reduced frequencies considered, the so called subcritical flutter cannot be predicted. The essential influence of mechanical coupling among the blades is to change the frequencies of the system with little or no change in damping; however, aerodynamic coupling together with mechanical coupling could change not only frequencies, but also damping in the system, with a trend toward instability. A.R.H.

AN ASYMPTOTIC UNSTEADY LIFTING-LINE THEORY WITH ENERGETICS AND OPTIMUM MOTION OF THRUST-PRODUCING LIFTING SURFACES Final Report

Ali Reza Ahmadi Sep. 1980 345 p refs
(Grant NGR-22-009-818)
(NASA-CR-163526; MIT-80-2) Avail: NTIS HC A15/MF A01 CSCL 01A

A low frequency usteady lifting line theory was developed for a harmonically oscillating wing of large aspect ratio. This wing was assumed to be chordwise rigid but completely flexible in the span direction. The theory was developed by use of the method of matched asymptotic expansions which reduces the problem from a singular integral equation to quadrature. The wing displacements were prescribed and the pressure field, airolads and unsteady induced downwash were obtained in closed form. The influence of reduced frequency aspect ratio, planform shape and mode of oscillation on wing aerodynamics was demonstrated through numerical examples. Compared with lifting surface theory computation time was reduced significantly. R.C.T.

COMPUTATION OF SPANWISE DISTRIBUTION OF CIRCULATION AND LIFT COEFFICIENT FOR FLAPPED WINGS OF ARBITRARY PLANFORM Final Report

Kenneth Razak Aug. 1980 61 p refs
(Contract NAS1-15249)
(NASA-CR-159329) Avail: NTIS HC A04/MF A01 CSCL 01A

The question of the effect of distribution and magnitude of spanwise circulation and shed vorticity from an airplane wing on the distribution pattern of agricultural products distributed from an airplane was studied. The first step in an analysis of this question is the determination of the actual distribution of lift along an airplane wing, from which the pattern of shed vorticity can be determined. A procedure is developed to calculate the span loading for flapped and unflapped wings of arbitrary aspect ratio and taper ratio. The procedure was programmed on a small programmable calculator, the Hewlett Packard HP-97, and also was programmed in BASIC language. They could be used to explore the variations in span loading that can be secured by variable flap deflections or the effect of flying at varying air speeds at different airplane gross weights. Either an absolute evaluation of span loading can be secured or comparative span loading can be evaluated to determine their effect on swath width and swath distribution pattern. The programs are intended to assist the user in evaluating the effect of a given spanload distribution. J.M.S.

BASIC STUDIES OF WING-BODY INTERFERENCE AT HIGH ANGLES OF ATTACK AND SUPERSONIC SPEEDS Final Report, 1 Jun. 1978 - 31 May 1979

Goetz H. Klopfer and Jack N. Nielsen Oct. 1979 82 p refs
(Contract N00014-78-C-0490; RR0141184)
(AD-A087134; NEAR-TR-206; ONR-CR-215-263-1) Avail: NTIS HC A05/MF A01 CSCL 20/4

The problem of computing the steady inviscid supersonic flows about thin wings having sharp subsonic leading edges and leading edge separation is solved in this paper. Both wings alone or wings in the presence of the body are considered. To obtain an efficient procedure the steady Euler equations are used as the basic governing equations as opposed to the more complicated Navier-Stokes equation. The viscous effects, important near the sharp leading edges, are simulated by a Kutta condition applied at the leading edges of the wings. The rest of the flow field is essentially controlled by the inviscid equations. The equations, written in conservation form in generalized curvilinear coordinates, are approximated by MacCormack's second-order accurate predictor-corrector algorithm. The flow tangency conditions at the body surface are satisfied by Abbett's scheme and the outer bow-shock position by the Rankine-Hugoniot jump relations. Internal shock waves or tangentially discontinuities are captured. The slip surface emanating from the leading edge of the sharp wing excited nonlinear instabilities in the MacCormack's scheme, which were stabilized by special flow dependent fourth order damping terms. THE TREATMENT OF THE SONIC LINE AND OF SHOCKS IN A FINITE ELEMENT APPROACH TO TRANSONIC FLOW COMPUTATIONS Interim Report, Oct. - Dec. 1979
Karl G. Guderley Wright-Patterson AFB, Ohio AFWAL Feb. 1980 41 p refs
(Grant AF-AFOSR-3524-78; AF Proj. 2304)
(AD-A087740; UDR-TR-80-32; AFWAL-TR-80-3046) Avail: NTIS HC A03/MF A01 CSCL 20/4

Even if one uses the same shape functions throughout in a finite element computation of transonic flow fields, one must, for reasons of stability, apply the weights differently in the subsonic and supersonic regions. In the present report this aspect is accepted without further discussion. It is necessary, in addition, to impose special conditions at the sonic line and at the line where one returns from supersonic to subsonic speeds. These conditions are first explored by means of a semidiscretization. (The differential operators are discretized with respect to the direction normal to the streamlines, but not with respect to the streamline direction.) The resulting system of ordinary differential equations has singular points, whose position is related to the transition from one regime to the other. These singularities are compatible with weak solutions of the problems. (Finite difference and finite element solutions are realizations of the concept of weak equality.) But from the physical point of view these singularities are not admissible, at least not in the transition from a subsonic to a supersonic speed. One thus obtains the requirements that at the sonic line the partial differential equation be satisfied in the strong sense. GRA

RANGES AND CRITICAL VALUES OF ADVANCE RATIO FOR BLADE/VORTEX INTERSECTION PATTERNS OF A HELICOPTER ROTOR
L. R. Lucassen Jul. 1979 31 p refs Presented at 5th European Rotorcraft and Powered Lift Aircraft Forum, Amsterdam, 5-7 Sep. 1979
(NPL-MP-79030-U) Avail: NTIS HC A03/MF A01

The free vortices trailing from the tip of helicopter rotor blades lead to large changes in induced velocity and local angle of attack, resulting in peaks in aerodynamic loading. For a single rotor in forward flight an analysis was performed on the geometry of blade/vortex intersection, while an undistorted, in-plane wake is assumed. This showed the existence of seven ranges of advance ratio, each range being characterized by a different blade/vortex intersection pattern. These ranges are separated by six critical advance ratios, which are functions only of the ratio between the number of rotor blades and the serial number index of the preceding blade or tip vortex. The lowest critical advance ratio is in agreement with data published on the position of a ripple in the power required curves for level flight, as measured for several helicopter types. Author (ESA)

DESIGN OF A CALCULATION METHOD FOR THREE DIMENSIONAL TURBULENT BOUNDARY LAYERS
J. P. F. Lindhout and B. vandenBerg 29 Nov. 1979 14 p refs Presented at the 3d GAMM Conf. on Numerical Methods in Fluid Mech., Cologne, 10-12 Oct. 1979
(Contract NIVR-1820)
(NLR-MP-79036-U) Avail: NTIS HC A02/MF A01

An engineering method is presented to compute the three dimensional laminar and turbulent boundary layer flow over nondevelopable surfaces. Turbulence phenomena are described by a simple eddy viscosity model. The method was organized to enhance its user oriented properties. The organization and the numerics are discussed in the framework of relational diagrams which elucidate the relations between information sets and processes. Results are shown for the laminar flow over a flat plate with an attached cylinder and for the turbulent flow over the root section of an aircraft wing. Author (ESA)

CALCULATIONS BY A FIRST ORDER THEORY OF SUPERSONIC FLOW AROUND DELTA WINGS
S. G. Hedman 1980 22 p refs
(Contract FMV-F-INK-11-12-93490)
(FFA-TN-AU-810) Avail: NTIS HC A02/MF A01

Preliminary calculations of delta wings in supersonic flow were made with a method based on theoretical work of Oswatitsch and Sun. The flow field is computed with acoustic theory for an image wing in the characteristic space. Following that, the real wing's coordinates in physical space are calculated. The planform of the image wing must be modified until the corresponding real wing has obtained the wanted shape. The theory is of first order accuracy expressed in the characteristic variables. Traces of the characteristics in physical space and bow shock waves were found for cases with wings with and without incidence. As the wing disturbances increase it becomes more difficult to give to the real wing the wanted shape. The possible practical use of the method is probably limited to slender wings at small incidences. Author (ESA)

CONTRIBUTION TO THE STUDY OF SUPERSONIC LAMINAR SEPARATION: UTILIZATION AND IMPROVEMENTS IN INTEGRAL METHODS OF CALCULATION Ph.D. Thesis - Lille Univ.
Gilles About 1980 90 p refs In FRENCH; ENGLISH summary Report will also be announced as translation (ESA-TT-662)
(ONERA-NT-1980-1; ISSN-0078-3781) Avail: NTIS HC A05/MF A01

Calculations were performed on supersonic layer separation phenomena by solving coupled perfect fluid equations and integral form boundary layer equations. Three types of improvements are suggested: definition of similitude profiles approximated by a simple analytical representation and the use of a second order boundary layer formulation proposed by Crocco, adaptation of Le Balleur's numerical method and its application to separated and reattaching flow on a compression ramp or under shock wave reflection conditions; and determination of three parameter velocity profiles able to take sublaminar layers into account and their utilization in a three moment integral method as suggested by Crocco. AN INVESTIGATION OF SCALE EFFECTS ON THE TRANSONIC FLOW OVER SWEPT WINGS. PART 1: MEASUREMENTS ON A MODEL OF A TRANSPORT-AIRCRAFT CONFIGURATION
D. J. Weeks London Aeronautical Research Council Nov. 1976 126 p refs Supersedes RAE-TR-76158; ARC-37486 (ARC-R/M-3842-Pt-1; BR74033; RAE-TR-76158; ARC-37486) Avail: NTIS HC A07/MF A01; HMSO £14 PHI

Measurements of forces and wing pressures at Mach numbers 0.70, 0.79 and 0.85, and at Reynolds numbers in the range 1.7 million to 13.6 million, on a half model of a transport-aircraft-type wing-body combination, were analyzed to show the effects of changes of Reynolds number and transition position on the transonic flows over the upper surface of the wing at high incidence. Each of the three Mach numbers provides a different example of flow development and form of scale effect. Author (ESA)

JET INTERFERENCE ON SUPERCRITICAL WINGS. PART 1: EXPERIMENTS ON A TWO-DIMENSIONAL WING. PART 2: EXPERIMENTS ON A SWEPT WING
J. A. Bagley and A. G. Kurn London Aeronautical Research Council Jan. 1977 105 p refs Supersedes RAE-TM-77007; RAE-TM-77008; ARC-37279; ARC-37281
(ARC-R/M-3845; BR74032; RAE-TR-77007; RAE-TR-77008; ARC-37279; ARC-37281) Avail: NTIS HC A06/MF A01; HMSO £15 PHI

Wind tunnel tests were made to investigate the influence of the jet from several different nozzles on the pressure distribution on adjacent wing panels with supercritical profiles. An existing unswept wing panel was used for one test; a 25 deg swept wing panel was used for the other and additional measurements were made with pylons fitted to two of the nozzles. The nozzle shapes and their location relative to the wing were chosen to represent a modern airbus configuration with fan engines. The results indicate that, in the cruise configuration, the influence of the jet is fairly small, and in most cases it simply reinforces certain features of the pressure distribution measured without jet blowing. WIND TUNNEL MEASUREMENT OF LATERAL AERODYNAMIC DERIVATIVES USING A NEW OSCILLATORY RIG, WITH RESULTS AND COMPARISONS FOR THE GNAT AIRCRAFT
C. O. OLeary London Aeronautical Research Council Oct. 1977 45 p refs Supersedes RAE-TR-77159; ARC-37724
(ARC-R/M-3847; BR74569; RAE-TR-77159; ARC-37724) Avail: NTIS HC A03/MF A01; HMSO £10 PHI

The investigation of aircraft handling characteristics at high angle of attack and high subsonic speeds is hampered by the lack of accurate data on aerodynamic derivatives. The development of a rig and method of test for the measurement of oscillatory lateral aerodynamic derivatives under these conditions is described. Tests were made on a 0.16 scale model of a Gnat T Mk 1 aircraft and the results compared with those from wind tunnel static tests, flight tests and estimates. Agreement with the other data is reasonably close except in the case of some cross damping derivatives. The accuracy of measurement of derivatives due to rate of roll should be improved by a proposed design of the excitation system. Author (ESA)

MEASUREMENTS OF PRESSURE DISTRIBUTIONS AND PRESSURE DRAGS AT ZERO INCIDENCE ON BOTH BLUNT AND SHARP AXISYMMETRIC FOREBODIES AT A MACH NUMBER OF 3
L. C. Ward London Aeronautical Research Council Nov. 1976 33 p refs Supersedes RAE-TR-76160; ARC-37355
(ARC-R/M-3849; BR74568; RAE-TR-76160; ARC-37355) Avail: NTIS HC A03/MF A01; HMSO £8 PHI

Surface pressure distrubutions measured on a number of axisymmetric forebodies at zero incidence and a Mach number of 3 are presented. Integrated pressure drags are compared with the theoretical drags of sharp cones having the same forebody fineness ratios, showing that significant drag reductions can be achieved at this Mach number by the suitable use of nose blunting, leading also to an increase of usable volume in the forebody. Results are compared with published data for determining the pressure drag of spherically blunted cones. Author (ESA)

A BRIEF INVESTIGATION OF THE TWO-DIMENSIONALITY OF THE FLOW OVER AN AIRFOIL IN THE 8 FOOT BY 6 FOOT TRANSONIC WIND TUNNEL
P. H. Cook and M. A. McDonald London HMSO Dec. 1979 20 p refs
(RAE-TM-Aero-1828; BR72384) Avail: NTIS HC A02/MF A01

Oil flow on the surface and pitot pressure measurements in the wake of a 0.762 m chord airfoil in a 8 ft x 6 ft tunnel indicate that there is no significant spanwise convergence or divergence of the flow within the boundary layer and wake of the model. The measurements were made at subsonic conditions where no regions of separated flow existed on the model, but where significant subsonic drag creep had previously been measured. Author (ESA)

A NUMERICAL METHOD FOR THE CALCULATION OF LAMINAR INCOMPRESSIBLE BOUNDARY LAYERS WITH STRONG VISCOUS-INVISCID INTERACTION
A. E. P. Veldman 7 Mar. 1979 49 p refs
(NLR-TR-79023-U) Avail: NTIS HC A03/MF A01

A method for the calculation of boundary layers with strong viscous inviscid interaction is presented. The method differs from the classical methods for solving boundary layer equation, through the use of an interactive boundary condition which replaces the usually prescribed pressure. This boundary condition describes how the outer potential flow reacts on the presence of the boundary layer. The method is demonstrated on two problems: a boundary layer with a separation bubble and the flow near the trailing edge of a flat plate. Author (ESA)

AN ANALYSIS OF THE FUTURE REQUIREMENTS FOR MATERIALS HANDLING EQUIPMENT IN THE MILITARY AIRLIFT COMMAND
Christopher Carson and Charles D. Munson Jun. 1980 107 p refs
(AD-A087094; AFIT-LSSR-35-80) Avail: NTIS HC A06/MF A01 CSCL 15/5

Civilian wide-bodied aircraft are presently used to augment the Military Airlift Command's airlift capability. Many analysts believe that this wide-body usage will increase in the future. However, even today, the basic 463L materials handling equipment system (e.g., K-loaders) cannot accommodate civilian wide-bodies. Cargo loader adapters and modifications have proven infeasible, necessitating the use of elevators for loading/unloading operations. Therefore, the purpose of this study was to examine whether the United States Air Force should continue to write specifications around the present K-loaders, or initiate acquisition of a cargo loader capable of interfacing with both military aircraft and civilian wide-bodied aircraft. The examination of these two decision alternatives involved three main phases: (1) a forecast of the future U.S. wide-body and narrow-body market, (2) a determination of Military Airlift Command's future loader requirements based on predicted changes in cargo activity, and (3) a net present value analysis of system costs built on various policies for loader replacement. After the results of these phases were obtained, the authors concluded that the Air Force should continue to acquire, operate, and maintain its present K-loader system. GRA

CRITICAL INTERFACES BETWEEN ENVIRONMENT AND ORGANISM IN CLASS A MISHAPS: A RETROSPECTIVE ANALYSIS Final Report, 30 Aug. - 27 Dec. 1978
Stan R. Santilli Jun. 1980 44 p refs
(AF Proj. 7930)
(AD-A087341; SAM-TR-80-5) Avail: NTIS HC A03/MF A01 CSCL 01/2

Aircraft mishap prevention efforts in the past have been extremely successful. Since 1970 the mishap rate decrease has leveled off. Most experts agree, however, that it can be further reduced. This study focuses on the human factors aspects that

have consistently played a prominent role in mishap causation but only recently have received significant scrutiny. The approach taken in this study has as its premise that both the environment and the organism bring with them a certain degree of mishap potential and that a mishap occurs as a result of the additive effects, or critical interfaces, of the two. Determining these critical interfaces by retrospective analysis of past mishaps is the method used here, the immediate goal being to identify more clearly the root cause of human factors mishaps. Recommendations are offered for future efforts to avoid these critical interfaces or to decrease the mishap potential inherent in the environment and the organism. GRA

COMPUTER SIMULATION OF EJECTION SEAT PERFORMANCE AND PRELIMINARY CORRELATION WITH EMPIRICAL DATA Final Technical Report, 1 Oct. 1977 - 1 Feb. 1979
Lanny A. Jines Apr. 1980 78 p refs
(AF Proj. 2402)
(AD-A087275; AFFDL-TR-79-3150) Avail: NTIS HC A05/MF A01 CSCL 01/3

The comparison of six-degree-of-freedom computer program modeling ejection seat performance to empirical data from ejection seat track tests is discussed. The computer subroutines model the ejection seat components which generate forces on the seat and crewperson combination during ejection. The resulting motion described in terms of trajectory parameters, as well as acceleration time histories on the ejectee is correlated with measured data from recent Air Force track test programs in which ejection seat performance was determined. MEDICAL AND TOXICOLOGICAL FACTORS IN AIRCRAFT ACCIDENTS
William R. Kirkham Apr. 1980 12 p refs Presented at the 14th Ann. Southern Methodist Univ. Air Law Symp., Dallas, 6-8 Mar. 1980
(AD-A087690; FAA-AM-80-6) Avail: NTIS HC A02/MF A01 CSCL 01/2

A number of factors operating within pilots may impair their ability to operate aircraft in a safe manner, thus accounting for some of the 83 to 87 percent of pilot 'causes' of general aviation accidents. Aircraft accident investigators should be attuned to characteristics of the accident, witness statements, and autopsy and laboratory findings that may suggest partial or complete incapacitation in the pilot. Incapacitation may be brought on by a medical condition which may be revealed at autopsy or be inferred only from medical history. Spatial disorientation is a subjective evaluation only and a form of incapacitation rated as the third most frequent 'cause' of fatal general aviation accidents. Lack of oxygen--hypoxia--is a constant threat to incapacitate in aircraft operating at high altitudes. Toxicological factors such as alcohol, drugs, and gases (e.g., carbon monoxide) should always be sought in fatal aircraft accidents by obtaining blood, urine and other specimens for laboratory analyses. Aerial application pilots may be incapacitated by the poisonous materials they apply, especially the cholinesterase-inhibiting insecticides. The finding of therapeutic drugs in the blood or other specimens from accident victims, or of tablets, pills, etc., at the scene, may point to underlying medical conditions that may impair pilot performance. The author discusses these principles and illustrates them briefly with cases to make accident investigators and others aware of the importance of medical and toxicological factors in aircraft accidents. DEVELOPMENT OF ADVANCED AVIONICS SYSTEMS APPLICABLE TO TERMINAL-CONFIGURED VEHICLES Final Report, Oct. 1978 - Jan. 1980
R. L. Heimbold, H. P. Lee, and M. F. Leffler Sep. 1980 105 p refs
(Contract NAS1-15546)
(NASA-CR-3280; LR-29326) Avail: NTIS HC A06/MF A01 CSCL 01D

A technique to add the time constraint to the automatic descent feature of the existing L-1011 aircraft Flight Management System (FMS) was developed. Software modifications were incorporated in the FMS computer program and the results checked by lab simulation and on a series of eleven test flights. An arrival time dispersion (2 sigma) of 19 seconds was achieved. The 4 D descent technique can be integrated with the time-based metering method of air traffic control. Substantial reductions in delays at today's busy airports should result. S.F.

IN-FLIGHT EVALUATION OF A SEVERE WEATHER AVOIDANCE SYSTEM FOR AIRCRAFT Final Report
Robert K. Baum and Timothy J. Seymour May 1980 128 p refs
(Contract FAA/ARD-740)
(AD-A087426; AFWAL-TR-80-3022) Avail: NTIS HC A07/MF A01 CSCL 01/2

Since there is increased interest in severe weather avoidance systems to augment conventional radar, a joint flight program was undertaken to evaluate the Ryan Stormscope as a thunderstorm avoidance tool. Comparisons were made between Stormscope electrical activity areas and precipitation contours from both on-board and ground weather radar displays. Strongest correlation between radar and Stormscope was found in regions of high precipitation gradients. Comparisons were also made between Stormscope and a ground-based Lightning Detection and Ranging System (LDAR) to determine range and azimuth accuracy of the electrical activity displayed on Stormscope. Because of inherent differences among these systems (i.e., type and rate of data acquisition), corresponding groups of electrical activity areas were compared. Items compared were group area ratios, group overlap areas and group centroid locations. In general, Stormscope groups were larger than corresponding LDAR groups (150% on the average). Additionally, Stormscope group centroid locations differed an average of 15 NM in range and 11 deg in azimuth from those on the LDAR system. This margin of error is acceptable for in-flight thunderstorm avoidance. GRA

(AD-A087488; AFGL-TR-80-0107; SR-1) Avail: NTIS
HC A02/MF A01 CSCL 17/9

Analysis of corona losses on a proposed balloon-supported Loran antenna indicated the planned design could not be operated at full voltage because losses would far exceed the available power. This study, and a comparison study of expected corona loss on the operational antenna, pointed the way to a successful design. Special top-loader-tethers were procured, and essential hardware was built to implement the design. Electrical constants were measured in a launch test, after which interface hardware was produced for an operational test that was carried out at Anniston, Alabama. GRA

A SIMULATION INVESTIGATION ON THE FEASIBILITY OF CURVED APPROACHES UNDER MICROWAVE LANDING SYSTEM (MLS) GUIDANCE
L. J. J. Erkelens 20 Sep. 1978 101 p refs Revised
(Contract RB-RLD-1978-2.4)
(NLR-TR-78035-U) Avail: NTIS HC A06/MF A01

A flight simulator was used to investigate the utility of seven laterally curved approaches with various turn angles and final intercept altitudes, executed with a B-747 aircraft. Three weather situations were included, with winds of 15 m/sec and wind shears of 0.17 m sec/m. A minimum cloud base of 30.5 m was used. A flight director operating in the instrument landing system tracking mode and supplied with minor modifications in the roll bar drive was used as primary guidance instrument. Additional provisions were made to enable the pilot to monitor the approach. It was found that curved approaches with turn angles up to 180 deg can be carried out safely provided that the turn completion altitude is not much less than 305 m. Special provisions are needed with respect to the autopilot/flight director drive to achieve accurate tracking on the curved segment in strong wind conditions. Author (ESA)

FLOW VISUALIZATION STUDY OF THE HiMAT RPRV
Dale J. Lorincz Feb. 1980 73 p refs Original contains color illustrations
(Contract NAS4-2616)
(NASA-CR-163094; NOR-80-128) Avail: NTIS
HC A04/MF A01 CSCL 01C

Water tunnel studies were performed to qualitatively define the flow field of the highly maneuverable aircraft technology remotely piloted research vehicle (HiMAT RPRV). Particular emphasis was placed on defining the vortex flows generated at high angles of attack. The flow visualization tests were conducted in the Northrop water tunnel using a 1/15 scale model of the HiMAT RPRV. Flow visualization photographs were obtained for angles of attack up to 40 deg and sideslip angles up to 5 deg. The HiMAT model was investigated in detail to determine the canard and wing vortex flow field development, vortex paths, and vortex breakdown characteristics as a function of angle of attack and sideslip. The presence of the canard caused the wing vortex to form further outboard and delayed the breakdown of the wing vortex to higher angles of attack. An increase in leading edge camber of the maneuver configuration delayed both the formation and the breakdown of the wing and canard vortices. Additional tests showed that the canard vortex was sensitive to variations in inlet mass flow ratio and canard flap deflection angle. T.M.

BIFILAR ANALYSIS STUDY, VOLUME 1
W. Miao and T. Mouzakis Aug. 1980 89 p refs
(Contract NAS1-15612)
(NASA-CR-159227; SER-510035-Vol-1) Avail: NTIS
HC A05/MF A01 CSCL 01C

A coupled rotor/bifilar/airframe analysis was developed and utilized to study the dynamic characteristics of the centrifugally tuned, rotor-hub-mounted, bifilar vibration absorber. The analysis contains the major components that impact the bifilar absorber performance, namely, an elastic rotor with hover aerodynamics, a flexible fuselage, and nonlinear individual degrees of freedom for each bifilar mass. Airspeed, rotor speed, bifilar mass and tuning variations are considered. The performance of the bifilar absorber is shown to be a function of its basic parameters: dynamic mass, damping and tuning, as well as the impedance of the rotor hub. The effect of the dissimilar responses of the individual bifilar masses which are caused by tolerance induced mass, damping and tuning variations is also examined. T.M.

EVALUATION OF LAMINAR FLOW CONTROL SYSTEM CONCEPTS FOR SUBSONIC COMMERCIAL TRANSPORT AIRCRAFT Summary Report
Sep. 1980 100 p refs
(Contract NAS1-14631)
(NASA-CR-159254; LG80ER0149) Avail: NTIS HC A05/MF A01 CSCL 01C

A study was conducted to evaluate alternatives in the design of laminar flow control (LFC) subsonic commercial transport aircraft for operation in the 1980's period. Analyses were conducted to select mission parameters and define optimum aircraft configurational parameters for the selected mission, defined by a passenger payload of 400 and a design range of 12,038 km (6500 n mi). The baseline aircraft developed for this mission was used as a vehicle for the evaluation and development of alternative LFC system concepts. Alternatives were evaluated in the areas of aerodynamics structures, materials, LFC systems, leading-edge region cleaning and integration of auxiliary systems. Based on these evaluations, concept in each area were selected for further development and testing and ultimate incorporation in the final study aircraft. Relative to a similarly-optimized advanced technology turbulent transport, the final LFC configuration is approximately equal in direct operating cost but provides decreases of 8.2% in gross weight and 21.7% in fuel consumption. WING PROFILE DESIGN OF THE WORLD CHAMPIONSHIP SAIL PLANE SB 11
K. H. Horstmann and A. Quast May 1980 9 p Transl. into ENGLISH from DFVLR-Nachr. (West Germany), Nov. 1979 p 19-20 Original language document announced as A80-13181 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-75829) Avail: NTIS HC A02/MF A01 CSCL 01C

A glider capable of climbing while circling in an updraft at low speed with a great mount of lift while gliding to the next updraft at high speed and with minimal altitude loss was designed. The wing profile design alleviates several problems and leaves no gap between wind and flap. A constant thickness flap eliminates the need for a flexible contour section which in turn reduces control effort. The conventional method of banking with ailerons is retained. Improved performance is demonstrated. S.J.

PROGRESS REPORT 3 OF COOPERATIVE PROGRAM FOR DESIGN, FABRICATION, AND TESTING OF HIGH MODULUS COMPOSITE HELICOPTER SHAFTING Final Report, 1 Jan. 1975 - 30 Jun. 1979
Charles C. Wright (AARADCOM, Dover, N.J.) and Donald J. Baker Jun. 1980 139 p refs
(DA Proj. 1T1-62105-A-331)
(NASA-TM-82272; AD-A086849; AD-E400434; ARLCD-TR-79028) Avail: NTIS HC A07/MF A01 CSCL 11/4

This report describes the third phase of work, the objective of which was to overcome the excessive brittleness of the previously developed UH-1 helicopter tail rotor drive shaft design which demonstrated a shaft train weight savings of 53.1% over the current 2024-T3 aluminum shaft train. A materials impact program demonstrated exceptionally noteworthy performance of two woven constructions containing E-glass and PRD 49-III (designation later changed to KEVLAR 49) fibers in an epoxy resin matrix. Thermoplastic matrices and PRD 49-III fiber provided impact resistance at low weight which was superior to composites having the same fiber in a thermoset resin matrix. A design, fabrication, and test program showed that shaft impact resistance could be improved over the previously developed graphite composite design at a cost in shaft train rate savings. The shaft train weight savings of the most impact tolerant construction was 4.0% over the current aluminum shaft train. Alternating plies of graphite and glass appear to provide substantially greater tube impact durability than that provided by hybridization of the two fibers into one tape wound to a ply design equivalent in strength and stiffness to that of the alternating ply design. Recommendations were made to continue research work to exploit the potential for more impact-durable structures through the use of KEVLAR 49 fiber, woven structures, thermoplastic matrices and THORNEL 50-S/KEVLAR 49 blends with thermoset matrices. REMOTELY PILOTED SEAPLANE FOR ANTISUBMARINE WARFARE Final Report
C. Joseph Martin and Basil Papadales, Jr. Jul. 1980 27 p refs Presented at the Advan. Concepts Workshop in ASW Weapon Systems, San Diego, Calif., 7-9 Aug. 1979
(NF41421091)
(AD-A086932; DTNSRDC-80/078; DTNSRDC-Aero-1267) Avail: NTIS HC A03/MF A01 CSCL 01/3

The remotely piloted seaplane (RPS) for antisubmarine warfare (ASW) is a small, relatively inexpensive, unmanned water-based aircraft that provides excellent time-on-station performance, tactical flexibility, and energy efficiency. In the 1980's, command, control, and communications (C3) technology will be available which will permit a seaplane to be designed with no crew on board. Such a vehicle would be capable of performing military ASW operations in open ocean areas while taking full advantage of its waterborne capability. The removal of a crew from the seaplane has a substantial impact on the aircraft design. A RPS having a 1200 n mi radius of action and 72 hr time-on-station would weigh only 34,800 lb (15,764 kgm) and would incorporate a 5300 lb (2400 kg) ASW payload. GRA

DETERMINATION OF THE CHARACTER OF THE LATERAL-DIRECTIONAL MOTION OF AN AIRBORNE TOWED VEHICLE
H. George Baroff 30 Apr. 1980 30 p refs
(WF11124704)
(AD-A087445; NADC-80037-60) Avail: NTIS HC A03/MF A01 CSCL 20/4

This report presents the derivation of the lateral directional equations of motion of an airborne towed vehicle. Herein it is assumed that the tow cable is stable and is attached to the vehicle at other than its center of gravity. In addition to

customary airborne vehicle equations of motion, the lateral rotation rate of the cable attachment point on the vehicle is described as a function of cable length. Components of cable tension are included in the equations. Determinations of the character of the lateral directional motion of a HTM-11 and a modified HTM-11 towed vehicles employing the developed equations of motion are discussed. GRA

The component data handbook has been developed to aid users of the aircraft hydraulic system dynamic analysis computer programs HSFR, SSFAN, and HYTRAN in selecting input data. The handbook provides brief descriptions of the general usage components modeled by these computer programs, tabulates the necessary input data for each program and catalogs typical data trends or actual input data of components that have been simulated. HELICOPTER-SHIP QUALIFICATION TESTING
L. T. Renirie and T. Hoekstra 3 Jul. 1979 16 p refs Presented at 5th European Rotorcraft and Powered Lift Aircraft Forum, Amsterdam, 4-7 Sep., 1979
(NLR-MP-79027-U) Avail: NTIS HC A02/MF A01

A test method was developed for establishing limits for helicopter takeoff and landing imposed by turbulence and flight deck motion. An onboard recorder monitors the helicopter engine parameters, collective pitch lever position, pedal position, radar altitude, vertical and lateral acceleration, and instant of takeoff and landing. Onboard ship, relative wind speed and direction, pitching and rolling angles, and vertical and lateral acceleration are recorded. To quantify the human factors in controlling the helicopter a pilot rating technique is applied. It was found that operational limits for the helicopter in terms of relative wind speed and direction can be established straightforwardly. With respect to ship motion, it was found satisfactory to use the 2 sigma value of motion parameters as a representative measure to define limits. Wind tunnel tests of ship models are described. SIGNIFICANCE OF A ROTOR BLADE FAILURE FOR FLEET OPERATION, INSPECTION, MAINTENANCE, DESIGN AND CERTIFICATION
R. J. H. Wanhill, E. A. B. deGraaf, and A. A. M. Delil Sep. 1979 16 p refs Presented at 5th European Rotorcraft and Powered Lift Aircraft Forum, Amsterdam, 4-7 Sep. 1979
(NLR-MP-79021-U) Avail: NTIS HC A02/MF A01

The catastrophic fracture of a rotor blade from a large helicopter was analyzed, with essentially immediate consequences for continued fleet operation, inspection and maintenance of the same type of rotor blade. Fractography indicated that the hollow blade spar had failed by fatigue originating from one or two corrosion pits under the spar/pocket joint. The service failure investigation was reviewed to serve as an essential illustration for subsequent discussion of remedial action for similar types of rotor blades, and design aspects, philosophy and procedure. This includes the adhesive bonding system, the pressurizing gas crack detection system, rotor blade working stresses, and estimation of fatigue initiative and crack growth lives. Author (ESA)

MANEUVER SPECTRUM FATIGUE CRACK PROPAGATION IN ALUMINUM ALLOY SHEET MATERIALS
R. J. H. Wanhill 14 May 1980 34 p refs
(Contract RNLAF-Klu-RE-1977.c14)
(NLR-TR-78091-U) Avail: NTIS HC A03/MF A01

Aluminum alloy sheets of 2024-T3, 2048-T851, 7075-T6 and 7475-T761, were compared for fatigue crack propagation resistance under maneuver spectrum and constant amplitude loading. For maneuver spectrum loading 7475-T761 was superior overall, probably due to toughness of this alloy. Alloy 2024-T3 was superior for lower stress levels and lower crack growth rates with maneuver spectrum loading and for lower delta K values with constant amplitude loading, while 7475-T761 was superior for higher crack growth rates and higher stress levels with maneuver spectrum loading and for higher delta K values with constant amplitude loading. THE DESIGN OF AXISYMMETRIC COWLS FOR PODDED NACELLES FOR HIGH BY-PASS RATIO TURBOFAN ENGINES
M. J. Langley London Aeronautical Research Council May 1979 81 p refs Supersedes ARA-54; ARC-38204
(ARC-R/M-3846; BR74570; ARA-54; ARC-38204) Avail: NTIS HC A05/MF A01; HMSO £14 PHI

The design and test of forecowl profiles for a podded engine nacelle of modern proportions, with the specific aim of obtaining favorable supercritical flow development over the cowl exterior is described. Six cowl shapes were tested, exploiting the pressure distribution principle previously evolved for high speed airfoils. Features of the measured surface pressure distributions over the cowls were related to the occurrence of drag rise, from either increase of Mach number or decrease of flow ratio (spillage). The level of high speed drag performance reached by the best cowl designs tested was equivalent to or slightly better than the corresponding optimum NACA 1-series cowl, superiority at low speed being retained throughout. A STUDY OF THE USE OF BLOCKING MASSES IN REDUCING HELICOPTER CABIN NOISE
C. H. Ellen (Imperial Coll.) London HMSO Mar. 1980 23 p refs
(RAE-TM-Aero-1838; BR73588) Avail: NTIS HC A02/MF A01

A brief theoretical examination of the use of blocking masses for application to helicopter structure is presented. The effects of a periodic array of blocking masses are compared with the effect of a single blocking mass for a bending wave on a plate. The significance of the modal structure is demonstrated, and the analysis of the excitation of a membrane strip at a point between two blocking masses is used to illustrate how the energy flow varies with frequency of excitation. ANALYTIC AND EXPERIMENTAL STUDIES OF A TRUE AIRSPEED SENSOR Ph.D. Thesis
Joseph Yao-Cheng Shen 1980 203 p
Avail: Univ. Microfilms Order No. 8019959

The analysis and design of a true airspeed sensor is described. In an attempt to model the complicated fluid mechanics of the vortex precession, three dimensional, inviscid, unsteady, incompressible fluid flow was studied by using the hydrodynamical linearized stability theory. The results show that the frequency response is linearly proportional to the airspeed. The designed sensor basically consists of a vortex tube, a swirler, and a pick up system. When air passed through the swirler, a precessional flow was generated at the region before and after the sudden enlargement area. Also an audiable vortex whistle is generated. The signal is picked by the microphone and the frequency response is shown in a frequency counter. The measurement for both

closed conduit tests and wind tunnel tests were recorded. A computer program was developed for obtaining the numerical solution to the theoretical model. Computational results for various combinations of vortex tubes and swirlers have been obtained. Dissert. Abstr.

PERCEPTION OF AIRCRAFT SEPARATION WITH PILOT-PREFERRED SYMBOLOGY ON A COCKPIT DISPLAY OF TRAFFIC INFORMATION
Sharon OConnor (San Jose State Univ.), Sharon Jago (San Jose State Univ.), Daniel Baty, and Everett Palmer. Sep. 1980. 16 p. refs.
(Grant NsG-2269)
(NASA-TM-81172; A-8107) Avail: NTIS HC A02/MF A01 CSCL 01D

The concept of a cockpit display of traffic information (CDTI) was developed for use in later full mission simulator evaluations of the CDTI concept. Pilots chose their preferred method of displaying air traffic information for several variables. Variables included: type of background, update rate, update type, predictor type, and history type. Each pilot designed a display he felt would be most useful in flight operations. After a series of test trials, each pilot was given the opportunity to modify the display for the experimental task. For a second day of testing, they repeated the experimental task using their display as well as displays chosen by other pilots. Results indicated a variety of individual preferences in symbology and differences in the accuracy of judgments. Pilots indicated concern for clutter of the display, relationship of the displayed symbology to physical reality, and a need to perceive the relative motion of the intruder aircraft. Analysis of data indicated that pilots were able to improve their performance with practice. R.K.G.

COST ANALYSIS OF COMPOSITE FAN BLADE MANUFACTURING PROCESSES. Final Report
T. S. Stelson and C. F. Barth. Jun. 1980. 87 p. refs.
(Contract NAS3-21352)
(NASA-CR-159876; TRW-ER-8064) Avail: NTIS HC A05/MF A01 CSCL 21E

The relative manufacturing costs were estimated for large high technology fan blades prepared by advanced composite fabrication methods using seven candidate materials/process systems. These systems were identified as laminated resin matrix composite, filament wound resin matrix composite, superhybrid solid laminate, superhybrid spar/shell, metal matrix composite, metal matrix composite with a spar and shell, and hollow titanium. The costs were calculated utilizing analytical process models and all cost data are presented as normalized relative values where 100 was the cost of a conventionally forged solid titanium fan blade whose geometry corresponded to a size typical of 42 blades per disc. Four costs were calculated for each of the seven candidate systems to relate the variation of cost on blade size. Geometries typical of blade designs at 24, 30, 36 and 42 blades per disc were used. The impact of individual process yield factors on costs was also assessed as well as effects of process parameters, raw materials, labor rates and consumable items. A.R.H.

REVERSE THRUST PERFORMANCE OF THE QCSEE VARIABLE PITCH TURBOFAN ENGINE
N. E. Samanich, D. C. Reemsnyder, and H. E. Blodmer. 1980. 57 p. refs. Presented at the Aerospace Congr., Los Angeles, 13-16 Oct. 1980; sponsored by Am. Soc. of Automotive Engr.
(NASA-TM-81558; E-519) Avail: NTIS HC A04/MF A01 CSCL 21E

Results of steady state reverse and forward to reverse thrust transient performance tests are presented. The original quiet, clean, short haul, experimental engine four segment variable fan nozzle was retested in reverse and compared with a continuous, 30 deg half angle conical exlet. Data indicated that the significantly more stable, higher pressure recovery flow with the fixed 30 deg exlet resulted in lower engine vibrations, lower fan blade stress, and approximately a 20 percent improvement in reverse thrust. Objective reverse thrust of 35 percent of takeoff thrust was reached. Thrust response of less than 1.5 sec was achieved for the approach and the trakeoff to reverse thrust transients. Author

ADVANCED TECHNOLOGY COMPONENTS FOR MODEL GTP305-2 AIRCRAFT AUXILIARY POWER SYSTEM. Final Report, 6 May 1975 - 15 Jul. 1979
James R. Kidwell and Gerold D. Large. Wright-Patterson AFB, Ohio. AFWAL. Feb. 1980. 538 p.
(Contract F33615-75-C-2016; AF Proj. 3145)
(AD-A087838; AFAPL-TR-79-2106) Avail: NTIS HC A23/MF A01. CSCL 10/2
The GTP305-2 Advanced APU is a single shaft, all shaft power engine incorporating an axial-centrifugal compressor, a reverse flow annular combustor and a radial-axial turbine. Cycle analyses indicated a 10 percent high pressure compressor flow increase improved matching characteristics with the low pressure compressor. The combustion system is a reverse flow annular combustor with an air-assist/airblast fuel injection system. The radial-axial turbine stage is characterized by an integrally cast turbine rotor and a cast exhaust duct assembly. The Integrated Components Assembly (ICA) rig consists of the combustor and turbines with a dummy mass on the shaft to simulate the compressor. ICA testing was conducted to establish component performance at design operating conditions. ICA and cold air aerodynamic testing of the turbine stage and cooling flow effects, indicates design efficiency goals were exceeded. ICA test results, cold-air testing and combustion system parameters were input to the cycle model. Room temperature strain-control LCF tests were performed and results analyzed on a Weibull distribution. Data analysis indicated LCF life improvement was obtained through HIP and heat treatment. GRA

DESIGN OF AN ADAPTIVE CONTROL SYSTEM FOR THE EBF/STOL AIRCRAFT WITH PROVISIONS FOR EIGENVALUE AND EIGENVECTOR SELECTION. Ph.D. Thesis
Jan W. Crane. 1980. 103 p.
Avail: Univ. Microfilms Order No. 8020202
The design of an adaptive controller that is characterized by the ability to provide the designer with a means of selecting the closed-loop eigenvalues and shape each eigenvector is presented. The method generates the necessary constraints between the attainable eigenvalues and their eigenvectors. A least squares solution for the feedback gains is obtained from the remaining equations. The application of the procedure to the design of model following, state decoupling, and trajectory following controllers is accomplished by specifying the eigenvalues and eigenvectors of the final system. Also included in the controller is an on-line identifier for providing up to date information about the system and a control effector failure detector. The procedure has been applied to the design of controllers for the EBF/STOL aircraft. State decoupling and trajectory following controllers are designed and simulated. The simulation is performed without identification and with full knowledge of the system. A final simulation of the state decoupling controller is performed with the system identifier and the failure detector. Dissert. Abstr.

GUST RESPONSE ANALYSIS BY MODAL DECOMPOSITION OF THE GUST IMPINGEMENT DISTRIBUTION. Ph.D. Thesis
Frederick David Eichenbaum. 1980. 187 p.
Avail: Univ. Microfilms Order No. 8018148
The mode impingement method which achieves a radical improvement in computational efficiency over the current panel method of multi-dimensional (2-D and 3-D) gust response analysis, is described. The mode impingement method employs an orthogonal decomposition of the gust impingement distribution to reduce a large number of statistically interdependent panel inputs to a small number of statistically independent impingement patterns or gust modes. Since the normalized gust modes are slowly varying functions of frequency, orthogonal decomposition need be performed only at the chosen interpolation frequencies

for which aerodynamic input data are furnished. Modal accuracy is then maintained throughout the interpolation interval by simple interpolation procedures. The small deficit in local gust amplitude resulting from exclusion of the higher modes is eliminated by a compensating adjustment in the local amplitude of the included gust modes. Results are compared with corresponding dynamic response flight test measurements and with alternative analysis techniques. Dissert. Abstr.

EFFECTS OF ROTOR PARAMETER VARIATIONS ON HANDLING QUALITIES OF UNAUGMENTED HELICOPTERS IN SIMULATED TERRAIN FLIGHT
Peter D. Talbot, Daniel D. Dugan, Robert T. N. Chen, and Ronald M. Gerdes. Aug. 1980. 88 p. refs.
(NASA-TM-81190; A-8158) Avail: NTIS. HC A05/MF A01. CSCL 01C

A coordinated analysis and ground simulator experiment was performed to investigate the effects on single rotor helicopter handling qualities of systematic variations in the main rotor hinge restraint, hub hinge offset, pitch-flap coupling, and blade lock number. Teetering rotor, articulated rotor, and hingeless rotor helicopters were evaluated by research pilots in special low level flying tasks involving obstacle avoidance at 60 to 100 knots airspeed. The results of the experiment are in the form of pilot ratings, pilot commentary, and some objective performance measures. Criteria for damping and sensitivity are reexamined when combined with the additional factors of cross coupling due to pitch and roll rates, pitch coupling with collective pitch, and longitudinal static stability. Ratings obtained with and without motion are compared. Acceptable flying qualities were obtained within each rotor type by suitable adjustment of the hub parameters, however, pure teetering rotors were found to lack control power for the tasks. A limit for the coupling parameter L sub q/L sub p of 0.35 is suggested. Author

A SIMULATOR STUDY OF CONTROL AND DISPLAY AUGMENTATIONS FOR HELICOPTERS. Final Report.
J. C. Adamson, Gerardus J. Born, and Theodore A. Dukes. Jan. 1980. 104 p. refs.
(Contract NAS2-9437)
(NASA-CR-163451; AD-A087201; MAE-1428) Avail: NTIS. HC A06/MF A01. CSCL 01/4

A fixed-based simulator study of a decelerating approach to hover on instruments was performed with five different control augmentation systems ranging from damping feedbacks to attitude command with heading-hold. On a CRT display the environment was simulated by the view of landing pad and the horizon. Superimposed on this image was all flight information needed, together with special symbology for self-contained landing aid based on airborne measurements only; there were a total of four display augmentation levels. Among other findings, the statistically significant differences in data obtained with six test pilots suggest that a relatively inexpensive addition to the display (i.e., quickening of an error rate vector with short term attitude information) makes up for the difference between rate command and attitude command control systems. A quantitative objective measure of improvements was found to suggest the major findings of the report. GRA

WESSEX MODERNIZATION: A PRELIMINARY SIMULATION STUDY
Christopher R. Guy. Apr. 1979. 42 p. refs.
(AD-A087799; ARL/Aero-Note-391) Avail: NTIS. HC A03/MF A01. CSCL 01/3

A preliminary simulation study for a modernized Wessex helicopter, proposed for use by the RAN, is presented. The study uses mathematical models of the Wessex Mk31B aerodynamics/kinematics and modified Sea King Mk50 flight control system to simulate the flight dynamic behavior of the modernized Wessex. Results indicate that good flight performance can be obtained provided system parameters are chosen correctly. GRA

(AD-A087621; TASC-TR-612-3; ONR-CR-215-237-3F) Avail: NTIS. HC A09/MF A01. CSCL 01/3

This report extends, applies, and validates the aircraft stability and control methodologies developed by TASC and reported in ONR-CR-215-237-2. These methodologies enable the prediction of airframe stability boundaries, control and power difficulties, and stability boundaries of the combined pilot, control system, and aircraft. In the realm of control system design, these methods enable the construction of digital command augmentation systems which provide precise command response over the entire flight regime while augmenting the airframe stability characteristics. The design of an air combat digital flight control system for the F-14A is described in this report, and its performance is verified by the use of a nonlinear six degree-of-freedom aircraft simulation and an air combat pilot model. Comparison of the tracking accuracy of the DFCS aircraft to that of a conventionally controlled aircraft indicates that the DFCS provides better tracking and reduces the likelihood of control-induced departure. In the realm of pilot model validation, a method of choosing the best model among those hypothesized is described and its operation demonstrated. Piloted simulation data are processed which indicate that the pilot does not change his control strategy to correspond to changes in the aircraft flight condition. GRA

THE USE OF SIMULATORS FOR TRAINING IN-FLIGHT AND EMERGENCY PROCEDURES
Edward E. Eddowes (Air Force Human Resources Lab., Williams AFB, Arizona) and Wayne L. Waag (Air Force Human Resources Lab., Williams AFB, Arizona) Jun. 1980 39 p refs
(AGARD-AG-248; ISBN-92-835-1363-0) Avail: NTIS HC A03/MF A01

The nature of pilot skills is examined and a strategy for using flight simulators to acquire and maintain such skills is suggested. Salient characteristics of state-of-the-art simulators and the visual display system capabilities they provide for training contact flying tasks are described. Research on transfer of learning from simulator to aircraft in a variety of training tasks is reviewed. The use of simulators as aircraft substitutes and their integration within an array of ground training media are compared and contrasted to illustrate the cost effectiveness potential of these two approaches. The rationale for and the characteristics of a simulator oriented emergency procedures training program which emphasizes pilot decision making skills are presented. The development of aircrew performance measurement systems for use in evaluating, refining, and documenting simulator training effectiveness is reported. An interpretation of the impact of current developments on the future use of simulators is offered and a list of conclusions provided. E.D.K.

DEVELOPMENT AND VALIDATION OF A HYBRID-COMPUTER SIMULATOR FOR A TRANSONIC CRYOGENIC WIND TUNNEL
Jerry J. Thibodeaux and S. Balakrishna (Old Dominion Univ.) Sep. 1980 84 p refs
(NASA-TP-1695; L-13691) Avail: NTIS HC A05/MF A01 CSCL 14B

A study was undertaken to model the cryogenic wind tunnel process, to validate the model by the use of experimental data from the Langley 0.3 Meter Transonic Cryogenic Tunnel, and to construct an interactive simulator of the cryogenic tunnel using the validated model. Additionally, this model was used for designing closed loop feedback control laws for regulation of temperature and pressure in the 0.3 meter cryogenic tunnel. The global mathematical model of the cryogenic tunnel that were developed consists of coupled, nonlinear differential governing equations based on an energy state concept of the physical cryogenic phenomena. Process equations and comparisons between actual tunnel responses and computer simulation predictions were examined. Also included are the control laws and simulator responses obtained using the feedback schemes for closed loop control of temperature and pressure were also included. R.C.T.

V/STOL EQUIVALENT SYSTEMS ANALYSIS Final Report, 27 Aug. 1979 - 27 May 1980
Carl G. Carpenter and John Hodgkinson Mar. 1980 225 p refs
(Contract N62269-79-C-0700)
(AD-A087283; NADC-79141-60) Avail: NTIS HC A10/MF A01 CSCL 01/3

A fixed base manned V/STOL handling qualities simulation was performed to answer questions concerning: (1) the pilot's frequency range of interest, (2) the maximum allowable mismatch between high order systems and their low order equivalents, (3) acceptability of high order appearing responses and (4) the piloting effects of phase lag at the natural frequency versus time delay. Various high or low frequency terms were added to low order attitude systems. Pilot ratings and comments showed that the pilot's frequency range of interest was 5-4.0 rad/sec; the amount of mismatch allowed was dependent on the type of high order dynamics added on the match frequency range; pilots did not accept high order appearing dynamics and; time delay is a better correlating parameter than phase lag at the configuration natural frequency. Equivalent systems analysis established criteria for the different flying qualities levels in terms of equivalent parameters. GRA

HEAT RECLAMATION FROM FLIGHT SIMULATORS: SUMMARY Final Report, 1 Sep. 1978 - Mar. 1980
P. B. Shepherd 13 Jun. 1980 17 p
(AD-A087295; USAFESA-TS-2083) Avail: NTIS HC A02/MF A01 CSCL 13/1

A survey of selected Army flight simulator facilities was performed to determine the applicability of heat recovery devices to the associated air conditioning equipment. It was concluded that there is little potential for heat recovery at nearly all of the facilities because the refrigerant used (R-22) and the operating characteristics of the chillers produce compressor discharge temperatures too low to be suitable for any purposes other than chilled air reheat for humidity control. GRA

POSSIBLE METHODS FOR REMOVING SMALL AIRBORNE PARTICLES FROM THE FLOW IN THE 5 METER PRESSURIZED LOW-SPEED WIND TUNNEL
P. J. Butterworth London HMSO Dec. 1979 26 p refs
(RAE-TM-Aero-1828; BR73902) Avail: NTIS HC A03/MF A01

Because of the size and complexity of the 5 meter wind tunnel, its use raises problems of erosion of wind-tunnel models which were not encountered with other low-speed facilities. Two methods for removal of small particles were investigated. They are the use of fine mesh fabric screens as filters, and aerodynamic separation at the corners of the tunnel circuit. The results show that particles smaller than 0.3 mm cannot be filtered out within the practicable pressure drop limitations of the tunnel circuit. However, small particles have a sufficiently high probability of striking the concave surfaces of the corner vanes that if grease or some other retentive material were applied, the particles could be quickly removed from the circuit. This latter method is being kept in reserve for the 5 meter tunnel, since physical means such as sweeping and vacuum cleaning seem to give adequate results. After lengthy shutdown for maintenance of an 8 ft x 8 ft tunnel, the lower parts of the corner vanes of that tunnel are coated with a suitable grease to remove small airborne particles. Author (ESA)

EXPLORATORY STUDIES ON THE DESIGN OF ACOUSTIC SPLITTERS FOR WIND TUNNELS
W. J. G. Trebble London HMSO Jan. 1980 31 p refs
(RAE-TM-Aero-1829; BR72353) Avail: NTIS HC A03/MF A01

The choice of geometry and materials for acoustic splitters in wind tunnels is discussed with particular reference to the requirements for modifying a 5 ft and a 24 ft wind tunnel. The optimum theoretical design of acoustic splitters is considered and practical materials to match the requirements are chosen. Experimental investigations at small scale in an aero-acoustic research rig with ducted flow are described. Attention is drawn to the need for the splitters to have a good aerodynamic profile and to the problems associated with the self-noise of the splitters when they are installed in high speed section of the tunnel circuit. MATERIALS PROCESSING IN SPACE, 1980 SCIENCE PLANNING DOCUMENT
Robert J. Naumann Aug. 1980 167 p
(NASA-TM-78297) Avail: NTIS HC A08/MF A01 CSCL 22A

The scientific aspects of the Materials Processing in Space program are described with emphasis on the major categories of interest: (1) crystal growth; (2) solidification of metals, alloys, and composites; (3) fluids and chemical processes; (4) containerless processing, glasses, and refractories; (5) ultrahigh vacuum processes; and (6) bioprocessing. An index is provided for each of these areas. The possible contributions that materials science experiments in space can make to the various disciplines are summarized, and the necessity for performing experiments in space is justified. What has been learned from previous experiments relating to space processing, current investigations, and remaining issues that require resolution are discussed. Recommendations for the future direction of the program are included. A.R.H.

(Contract NAS8-33103)
(NASA-CR-161556) Avail: NTIS HC A03/MF A01 CSCL 22A

A heat transfer model was developed that mathematically describes the heating and calculates the thermal history of a gel particle in free-fall through the furnace. The model parameters that greatly affect the calculations were found to be gel particle mass, geometry, specific heat, and furnace gas. Empirical testing of the model has commenced. The code calculations and the initial empirical testing results both indicate that the gel-to-shell transformation occurs early and rapidly in the thermal history of the gel particle, and that for current work the heat transfer rate is not a limitation in shell production. INVESTIGATIONS INTO THE ELECTRODEPOSITION OF DISPERSION LAYERS UNDER ZERO GRAVITY CONDITIONS
Josef Ehrhardt Nov. 1979 82 p refs Transl. into ENGLISH of "Studie ueber die Galvanische Abscheidung von Dispersionsschichten unter Weltraumbedingungen", Rept. BMFT-FB-W-771 Bundesmin. fuer Forschung und Technol., Dec. 1977 Original report in GERMAN previously announced as N79-30347
(ESA-TT-574; BMFT-FB-W-77-11) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany, DM 21

Spacelab experiments are proposed to investigate the behavior of particles suspended in an electrolyte during migration to the cathode and during their incorporation in the deposition layer. The precise deposition mechanism is unknown and the transport of the dispersoid to the cathode cannot be investigated under terrestrial conditions because of sedimentation and convection. A survey of the literature was made regarding deposition mechanisms, increase of strength, hardness and resistance to oxidation, improvement of the wear resistance, dry lubrication, and improvement of corrosion behavior. Design considerations for an electrolytic cell were defined to the extent that a laboratory version can be constructed. Author (ESA)

ON THE SECULAR DECREASE IN THE SEMIMAJOR AXIS OF LAGEOS ORBIT
David Parry Rubincam Jul. 1980 43 p refs Submitted for publication
(NASA-TM-80734) Avail: NTIS HC A03/MF A01 CSCL 22A

The semimajor axis of the Lageos orbit is decreasing secularly at the rate of -1.1 mm/day due to an unknown force. Nine possible mechanisms are investigated. Five of the mechanisms, resonance with the Earth's gravitational field, gravitational radiation, the Poynting-Robertson effect, transfer of spin angular momentum to the orbital angular momentum, and drag from near Earth dust are ruled out because they are too small to require unacceptable assumptions to account for the observed rate. Three other mechanisms, the Yarkovsky effect, the Schach effect, and terrestrial radiation pressure could possibly give the proper order of magnitude for the decay rate, but the characteristic signatures of these perturbations do not agree with the observed secular decrease. Atmospheric drag from a combination of charged and neutral particles is the most likely cause for the orbital decay. This mechanism explains at least 71 percent of the observed rate of decrease of the semimajor axis. Author

SAMOS 2 (1961 ALPHA 1): ORBIT DETERMINATION AND ANALYSIS AT 31:2 RESPONSE
Doreen M. C. Walker London HMSO Feb. 1980 31 p refs (RAE-TR-80022; RAE-Space-575; BR73770) Avail: NTIS HC A03/MF A01

Samos 2, 1961 alpha 1, launched on 31 January 1961, was the first satellite to enter a Sun-synchronous orbit at an inclination of 97.4 deg. The initial perigee and apogee heights were 474 km and 557 km respectively, the initial period was 94.97 min and the satellite decayed 21 October 1973 after more than 12 years in orbit. Samos 2 passed through the condition of 31:2 resonance in June 1971 and orbital parameters were determined at 22 epochs from 1974 observations using the RAE orbit refinement program, PROP, between mid April and mid September 1971. The variations of inclination and eccentricity during this time were analyzed and values for six lumped 31st order harmonic coefficients in the geopotential were obtained. These lumped harmonic coefficients were compared with those derived from the individual coefficients of order 31 and appropriate degrees, from the most recent Goddard Earth Model, GEM 10C. The decrease in inclination between launch and 1971 was examined. It is found to be caused mainly by a near resonant solar gravitational perturbation. Author (ESA)

DSCS 2, BATTERY ANOMALY INVESTIGATION SATELLITES

9437 AND 9438 Final Report
Paul Bauer and Charles Lurie 25 Apr. 1980 324 p refs
(Contract F04701-77-C-0118)
(AD-A087390; TRW-32824-AR-019-01; SD-TR-80-33) Avail: NTIS HC A14/MF A01 CSCL 10/3

This report presents a description of the anomalous behavior of the electric power subsystems of DSCS 2 satellites 9437 and 9438, and of the investigations conducted to determine the cause of the anomalies. These investigations include ground test simulations using flight-configuration batteries, component level testing, and analyses of components and systems. The investigations are described and the results discussed. The study concludes that the anomalous behavior was the result of battery cell short circuiting. The cause of the short circuiting is identified as excessive overcharge, its cause and the corrective actions taken are discussed. GRA

WORKSHOP ON SATELLITE POWER SYSTEMS (SPS) EFFECTS ON OPTICAL AND RADIO ASTRONOMY
G. M. Stokes and P. A. Ekstrom Apr. 1980 273 p refs Conf. held at Seattle, May 1979
(Contract EY-76-C-06-1830)
(CONF-7905143) Avail: NTIS HC A12/MF A01

The impacts of the satellite solar power system on astronomy are concluded to be: increased sky brightness, reducing the effective aperture of terrestrial telescopes; microwave leakage radiation causing erroneous radioastronomical signals; direct overload of radioastronomical receivers at centimeter wavelengths; and unintentional radio emissions associated with massive amounts of microwave power or with the presence of large, warm structures in orbit causing the satellites to appear as individual stationary radio sources; finally, the fixed location of the geostationary satellite orbits would result in fixed regions of the sky being unusable for observations. THE MAGNETIC TESTING OF THE X4 SPACECRAFT
D. W. S. Lodge London HMSO Dec. 1979 28 p refs
(RAE-TR-79144; RAE-Space-572; BR72759) Avail: NTIS HC A03/MF A01

The X4 spacecraft (named Miranda after launch) was tested in a magnetic test facility to confirm that the design aim of a spacecraft permanent and stray magnetic moment of less than 0.63 micro Wb.m was achieved and to establish worst case conditions. These objectives were satisfactorily met for both the integration and flight models. The flight model left the facility with a permanent moment of 0.04 micro Wb.m, negligible stray moment and symmetrical induced moments of approximately 0.2 micro Wb.m in each axis. The integration model was returned after the launch and exhibited no significant change in its magnetic properties. Tests were also carried out on satellite subsystems, in particular the experiment B, C and D package. Author (ESA)

PROCESSING OF METEOSAT ATTITUDE MEASUREMENT FLIGHT DATA AND EVALUATION OF THE PERFORMANCE OF AN ADAPTIVE FILTERING TECHNIQUE
C. R. Traas and G. Moek 18 Aug. 1978 69 p refs
(Contract ESTEC-3319/77)
(NLR-TR-78146-U) Avail: NTIS HC A04/MF A01

The attitude measurement data of the geosynchronous spacecraft Meteosat were analyzed using an adaptive recursive filtering technique. The mathematical models of spacecraft dynamics and sensors were kept very simple. Modeling errors are such that without adaptive feedback, strong divergence of the filtering process occurs. It is shown that the adaptive process stabilizes the filtering considerably. Complete error consistently, however, could not be attained in the present case. The background of this latter fact is analyzed. Author (ESA)

SPACE SHUTTLE ORBITER FLOW VISUALIZATION STUDY
Dale J. Lorincz Feb. 1980 68 p refs Original contains color illustrations
(Contract NAS4-2616)
(NASA-CR-163092; NOR-80-82) Avail: NTIS HC A04/MF A01 CSCL 22B

The vortex flows generated at subsonic speed during the final portion of atmospheric reentry were defined using a 0.01 scale model of the orbiter in a diagnostic water tunnel. Flow visualization photographs were obtained over an angle-of-attack range to 40 deg and sideslip angles up to 10 deg. The vortex flow field development, vortex path, and vortex breakdown characteristics were determined as a function of angle-of-attack at zero sideslip. Vortex flows were found to develop on the highly swept glove, on the wing, and on the upper surface of the fuselage. No significant asymmetries were observed at zero sideslip in the water tunnel tests. The sensitivity of the upper surface vortex flow fields to variations in sideslip angle was also studied. The vortex formed on the glove remained very stable in position above the wing up through the 10 deg of sideslip tested. There was a change in the vortex lifts under sideslip due to effective change in leading-edge sweep angles. Asymmetric flow separation occurred on the upper surface of the fuselage at small sideslip angles. The influence of vortex flow fields in sideslip on the lateral/ directional characteristics of the orbiter is discussed. A.R.H.

SPACE TRANSPORTATION SYSTEM DISCONNECT Final Report
5 Mar. 1980 145 p
(Contract NAS8-32806)
(NASA-CR-161565; ER-76300-5) Avail: NTIS
HC A07/MF A01 CSCL 22B

The use of medium duty 300 psi fluid disconnects for orbital servicing was demonstrated to be both practical and technically feasible. A prototype disconnect was designed and tested, based on criteria formulated from a survey of expected usage requirements for orbital servicing concepts. Testing involved the comparison of three seal materials (EPR, Neoprene and Teflon), and two test media (helium and Freon 21), and was conducted over a temperature range of -150 F to - 225 F. Results indicate low helium leakage (10 to the -4 power sccs) and extremely low engagement forces (56 lb sub f). Testing was also performed on a new seal design. Design concepts for a cryogenic disconnect and a high pressure disconnect were investigated. Results of an industry survey for usable orbital servicing disconnects and areas needing attention in future studies are discussed. A.R.H.

The orbital flight test (OFT) phase of the shuttle program consists of four orbital flights beginning in November 1980 and continuing through 1981. The major purpose of the OFT program is to demonstrate and verify shuttle systems and flight capabilities by satisfying the OFT requirements, is presented. The onorbit portion of the operational flight profile (OFP) for the first Space Transportation System-1 (STS-1) flight is presented. This onorbit document (volume 4) is one in a series that, taken together, will define the STS-1 OFP. This OFP onorbit document represents a combination of the STS-1 ground rules and constraints and the initialization data. The STS-1 flight activities described reflect the trajectory, consumable, crew activity, and flight requirement baseline as of May 1, 1980. Flight plans for the ascent, onorbit, and descent phases of the test flight are presented. F.O.S.

LEVEL B/C SOFTWARE GROUND NAVIGATION PROGRAM. DELTA-T PROCESSOR
Aug. 1980 45 p refs Supersedes Rept-79-FM-1
(NASA-TM-82184; JSC-16728; Rept-80-FM-34; Rept-79-FM-1) Avail: NTIS HC A03/MF A01 CSCL 22A

The Delta-T Processor (DTP) computes the instantaneous downtrack error in a specified orbiter onboard navigation state vector recovered via downlink telemetry. The downtrack error, expressed in units of time, is computed based on current incoming Earth based range and Doppler navigation tracking data and the ground selected onboard navigation state vector. The computed time difference when used to modify the timetag of the vector used for onboard navigation reduces the instantaneous downtrack error in this vector to within the threshold of the DTP, the input data, and the onboard software. This threshold is currently estimated to be approximately 2 to 4 nautical miles. The DTP is not restricted to using only onboard vectors. Any vector, either input via the manual entry device or accessible via the vector administration table, may be used. The DTP does not require that both data types be available. E.D.K.

DESIGN, FABRICATION AND TEST OF GRAPHITE/POLYIMIDE COMPOSITE JOINTS AND ATTACHMENTS FOR ADVANCED AEROSPACE VEHICLES Quarterly Technical Progress Report, 1 Oct. 1979 - 31 Jan. 1980
D. E. Skoumal 15 Feb. 1980 62 p refs
(Contract NAS1-15644)
(NASA-CR-159111; QTPR-4) Avail: NTIS HC A04/MF A01 CSCL 22B

Bonded and bolted designs are presented for each of four major attachment types. Prepreg processing problems are discussed and quality control data are given for lots 2W4604, 2W4632 and 2W4643. Preliminary design allowables test results for tension tests and compression tests of laminates are included. The final small specimen test matrix is defined and the configuration of symmetric step-lap joint specimens are shown. Finite element modeling studies of a double lap joint were performed to evaluate the number of elements required through the adhesive thickness to assess effects of various joint parameters on stress distributions. Results of finite element analyses assessing the effect of an adhesive fillet on the stress distribution in a double lap joint are examined. A.R.H.

Contract effort can be grouped under airborne and ground support instrumentation systems, rocket and balloon field programs, and evaluation testing of commercial telemetry components. Instrumentation systems developed have included pre-flight calibrators, ground-based radiometers, airborne photometers, airborne television, a PCM encoder and a commutated-umbilical ground check-out system. Rocket field programs have been involved with HIRIS, multi-E-fields, LN2 interferometers, composition technology, payload dynamics, field widened interferometers, the ECLIPSE '79 program, a post burn-out thrust experiment and an eschelle spectrometer. Balloon field programs have been concerned with an airborne photometer, the BAMM program and an extreme ultraviolet experiment. Brief mention is given to the components tested under an evaluation program concerned with such airborne components as, voltage controlled oscillators, VHF and UHF transmitters and lithium batteries.GRA

INTRODUCTION: THE CHALLENGE OF OPTIMUM INTEGRATION OF PROPULSION SYSTEMS AND LARGE SPACE STRUCTURES
Richard F. Carlisle *In* NASA. Lewis Research Center Large Space Systems/Low-Thrust Propulsion Technol. Jul. 1980 p 1-8 (For primary document see N80-31449 22-20)
Avail: NTIS HC A15/MF A01 CSCL 21H

A functional matrix of possible propulsion system characteristics for a spacecraft for deployable and assembled spacecraft structures shows that either electric propulsion or low thrust chemical propulsion systems could provide the propulsion required. The trade-off considerations of a single propulsion engine or multiengines are outlined and it is shown that a single point engine is bounded by some upper limit of thrust for assembled spacecraft. The matrix also shows several additional functions that can be provided to the spacecraft if a propulsion system is an integral part of the spacecraft. A review of all of the functions that can be provided for a spacecraft by an integral propulsion system may result in the inclusion of the propulsion for several functions even if no single function were mandatory. Propulsion interface issues for each combination of engines are identified. A.R.H.

Avail: NTIS HC A15/MF A01 CSCL 21H

The advanced electric propulsion program is directed towards lowering the specific impulse and increasing the thrust per unit of ion thruster systems. In addition, electrothermal and electromagnetic propulsion technologies are being developed to attempt to fill the gap between the conventional ion thruster and chemical rocket systems. Most of these new concepts are exagenous and are represented by rail accelerators, ablative Teflon thrusters, MPD arcs, Free Radicals, etc. Endogenous systems such as metallic hydrogen offer great promise and are also being pursued. Avail: NTIS HC A15/MF A01 CSCL 21H

The space transportation system (STS) will be the principal means of launching USAF spacecraft beginning in the 1980's. Since it is manned and reusable it provides new opportunities for unique approaches for cost effective utilization of its capabilities. The STS also places additional requirements and constraints on advanced spacecraft deployment systems that did not previously exist for expandable launch vehicles. To fully utilize these new capabilities designers must be prepared by having cost effective technologies available. Advanced propulsion technology that would provide flexibility, performance, and economic benefits to future Air Force missions was identified. Both electric and chemical propulsion systems are discussed. An LO2/LH2 stage with a torus LO2 tank and 500 lbf pump fed engine is high on the list of propulsion technology. A.R.H.

Avail: NTIS HC A15/MF A01 CSCL 21H

Low thrust chemical (hydrogen-oxygen) propulsion systems configured specifically for low acceleration orbit transfer of large space systems were studied in order to provide the required additional data to better compare new, low thrust chemical propulsion systems with other propulsion approaches such as advanced electric systems. Study results indicate that it is cost-effective and least risk to combine the low thrust OTV and stowed spacecraft in a single 65 K shuttle. Mission analysis indicates that there are 25 such missions, starting in 1987. Multiple shuttles (LSS in one, OTV in another) result in a 20% increase in LSS (SBR) diameter over single shuttle launches. Synthesis and optimization of the LSS characteristics and OTV capability resulted in determination of the optimum thrust-to-weight and thrust level. For the space based radar with radial truss arms (center thrust application), the optimum thrust-to-weight (maximum) is 0.1, giving a thrust of 2000 lb. For the annular truss (edge-on thrust application) the structure is not as sensitive, and thrust of 1000 lb appears optimum. For the geoplatform, optimum T/W is .15 (3000 lb thrust). The effects of LSS structure material, weight distribution, and unit area density were evaluated, as were the OTV engine thrust transient and number of burns. A.R.H.

Avail: NTIS HC A15/MF A01 CSCL 21H

Seven classes of large space structures were identified and idealized into simple geometric shapes which could be easily modelled. Scaling laws were generated which allowed the seven

ideal structures to be continuously scaled as to size and mass properties over their respective size ranges. Relevant sources of disturbances were determined and their effects on LSS were compared. These disturbances were applied over the range of scaling parameters to generate control force and torque requirements. Important auxiliary propulsion system (APS) characteristics were identified and an APS characteristic sensitivity matrix was established. A.R.H.

EFFECT OF ORBITAL TRANSFER LOADS ON LARGE PLATFORMS
Joseph E. Walz, Harold G. Bush, Walter L. Heard, Jr., and John J. Rehder *In* NASA. Lewis Research Center Large Space Systems/Low-Thrust Propulsion Technol. Jul. 1980 p 143-155 refs (For primary document see N80-31449 22-20)
Avail: NTIS HC A15/MF A01 CSCL 21H

A preliminary automated structural sizing procedure suitable for conceptual design and early tradeoff studies of large truss platforms configured for shuttle transportation to LEO is discussed as well as some orbital transfer design considerations. Platforms that are sized to withstand orbital transfer loads for the LEO to GEO maneuver are compared to platforms sized only for LEO application. It is concluded that for platforms supporting low mass distributed payloads, platform and strut frequency requirements are strong design drivers for LEO applications. The struts are found to be extremely slender, thinswalled, and of small diameter. If full advantage is to be taken of these minimum mass designs, a manufacturing capability must be developed for long straight struts. For platforms that are to be transferred from LEO to GEO in a deployed state, the orbital transfer loads become design drivers. However, even for an initial thrust-to-weight ratio equal to 0.1, a platform on the order of 100 m diameter appears packageable with its OTV in one shuttle flight, and larger platforms appear possible at lower thrust-to-weight ratios. A.R.H.

INTEGRATED ANALYSIS OF LARGE SPACE SYSTEMS c66
Joseph P. Young *In* NASA. Lewis Research Center Large Space Systems/Low-Thrust Propulsion Technol. Jul. 1980 p 179-192 (For primary document see N80-31449 22-20)
Avail: NTIS HC A15/MF A01 CSCL 12B

Based on the belief that actual flight hardware development of large space systems will necessitate a formalized method of integrating the various engineering discipline analyses, an efficient highly user oriented software system capable of performing interdisciplinary design analyses with tolerable solution turnaround time is planned. Specific analysis capability goals were set forth with initial emphasis given to sequential and quasi-static thermal/structural analysis and fully coupled structural/control system analysis. Subsequently, the IAC would be expanded to include a fully coupled thermal/structural/control system, electromagnetic radiation, and optical performance analyses. A.R.H.

INTEGRATED ANALYSIS CAPABILITY FOR LARGE SPACE SYSTEMS c66
Robert G. Vos *In* NASA. Lewis Research Center Large Space Systems/Low-Thrust Propulsion Technol. Jul. 1980 p 193-202 (For primary document see N80-31449 22-20)
(Contract NAS5-25767)
Avail: NTIS HC A15/MF A01 CSCL 12B

The development of an integrated analysis computer program capable of performing the conceptual/preliminary structural system design analysis of large space systems is addressed. The integrated analysis capability (IAC) specifications include thermal/structural/controls integration, an emphasis on existing software and interactive graphics and I/O, a project size capability of 1 to 50 users (1 to 5 users concurrent), and the use of the FORTRAN '77 language. The advantages of the DISCOS and NASTRAN computer programs to the IAC are outlined and recommendations for other programs are made. Barriers to the development of the system arising from the interdisciplinary data flow are defined. M.G.

CONTROLS FOR LSS c66
Fernando Tolivar *In* NASA. Lewis Research Center Large Space Systems/Low-Thrust Propulsion Technol. Jul. 1980 p 203-217 (For primary document see N80-31449 22-20)
Avail: NTIS HC A15/MF A01 CSCL 21H

An overiew of control development for large space structures (LSS) is presented addressing the activities of LSS modeling for control synthesis, technology identification and development, and performance evaluation. Specifically discussed are a 100 meter wrap rib antenna, a multiple payload science application platform, and a solar power satellite. In addition, the static shape control of flexible space structures by utilizing the Green's function is described. M.G.

ELECTRIC PROPULSION AND POWER
David C. Byers *In its* Large Space Systems/Low-Thrust Propulsion Technol. Jul. 1980 p 219-228 (For primary document see N80-31449 22-20)
Avail: NTIS HC A15/MF A01 CSCL 21H

The development of electric propulsion systems is discussed and the benefits of these systems to various space mission requirements are outlined. The characteristics and development status of 8 and 30 cm mercury ion thrusters and solar electric propulsion systems are reported. In addition the advantages of an inert gas thruster for Earth orbital missions are examined and include its capability for operation at higher values of specific impulse, the ease at which it can be integrated with space systems, and it's low pollution potential. M.G.

LOW-THRUST CHEMICAL ROCKET ENGINE STUDY
Joseph A. Mellish *In* NASA. Lewis Research Center Large Space Systems/Low-Thrust Propulsion Technol. Jul. 1980 p 237-261 (For primary document see N80-31449 22-20)
(Contract NAS3-21940)
Avail: NTIS HC A15/MF A01 CSCL 21H

Parametric data and preliminary designs on liquid rocket engines for low thrust cargo orbit-transfer-vehicles are described and those items where technology is required to enhance the

designs are identified. The results of film cooling studies to establish the upper chamber pressure limit are given. The study showed that regen cooling with RP-1 was not feasible over the entire thrust and chamber pressure ranges. The thermal data showed that the RP-1 bulk temperature exceeded the study coking temperature limit of 1010 R. Based upon the results presented, O2/H2 and O2/CH4 regen engine systems and O2/H2 film cooled engines were selected for further study in the system analysis. Six engine design concepts are examined. M.G.

LOW-THRUST CHEMICAL PROPULSION
James M. Shoji *In* NASA. Lewis Research Center Large Space Systems/Low-Thrust Propulsion Technol. Jul. 1980 p 263-286 (For primary document see N80-31449 22-20)
Avail: NTIS HC A15/MF A01 CSCL 21H

Results from investigations leading to the definition of low thrust chemical engine concepts are described. From the thrust chamber cooling analyses, regenerative/radiation-cooled LO2/H2 thrust chambers offered the largest thrust and chamber pressure operational envelope primarily due to the superior cooling capability of hydrogen and its low critical pressure. Regenerative/radiation-cooled LO2/CH4 offered the next largest operational envelope. The maximum chamber pressure for film/radiation-cooling was significantly lower than for regenerative/radiation-cooling. As in regeneration-cooling, LO2/H2 thrust chambers achieved the highest maximum chamber pressure, LO2/CH4 film/radiation-cooling was found not feasible and LO2/RP-1 film/radiation-cooling was extremely limited. In the engine cycle/configuration evaluation, the engine cycle matrix was defined through the incorporation of the heat transfer results. Engine cycle limits were established with the fuel-cell power cycle achieving the highest chamber pressure; however, the fuel cell system weights were excessive. The staged combustion cycle achieved the next highest chamber pressure but the preburner operational feasibility was in question. M.G.

(Contract F04611-79-C-0007)
Avail: NTIS HC A15/MF A01 CSCL 21H

The use of solar energy to heat propellant for application to Earth orbital/planetary propulsion systems is of interest because of its performance capabilities. The achievable specific impulse values are approximately double those delivered by a chemical rocket system, and the thrust is at least an order of magnitude greater than that produced by a mercury bombardment ion propulsion thruster. The primary advantage the solar heater thruster has over a mercury ion bombardment system is that its significantly higher thrust permits a marked reduction in mission trip time. The development of the space transportation system, offers the opportunity to utilize the full performance potential of the solar rocket. The requirements for transfer from low Earth orbit (LEO) to geosynchronous equatorial orbit (GEO) was examined as the return trip, GEO to LEO, both with and without payload. Payload weights considered ranged from 2000 to 100,000 pounds. The performance of the solar rocket was compared with that provided by LO2-LH2, N2O4-MMH, and mercury ion bombardment systems. A.R.H.

AN IMPROVED SYNTHESIS OF 2,4,8,10-TETROXASPIRO (5.5) UNDECANE Patent Application
Algirdas C. Poshkus, inventor (to NASA) (National Academy of Sciences - National Research Council, Washington, D.C.) Filed 3 Sep. 1980 10 p Sponsored by NASA
(NASA-Case-ARC-11243-2; US-Patent-Appl-SN-183707) Avail: NTIS HC A02/MF A01 CSCL 07C

Pentaerythritol can be converted to its diformal, 2,4,8,10 -tetroxaspiro (5.5) lundecane, by heating it ot a temperature within of about 110 to 150 C for a period of up to 10 minutes, in the presence of a slight excess of paraformaldehyde and of a catalytic quantity of an acid catalyst such as sulfuric acid. The reaction may be carried out in two steps, by forming first the monoformal, then the diformal. In any case, total reaction time is about 10 minutes and yield of diformal are greater than 90 percent. Several advantages of the improved process in terms of shortened reaction times, yields labor and energy requirements, adaptability to continuous operation, and overall simplicity and convenience are discussed. The activities of the Chemical Research Projects Office at Ames Research Center, Moffett Field, California are reported. The office conducts basic and applied research in the fields of polymer chemistry, computational chemistry, polymer physics, and physical and organic chemistry. It works to identify the chemical research and technology required for solutions to problems of national urgency, synchronous with the aeronautic and space effort. It conducts interdisciplinary research on chemical problems, mainly in areas of macromolecular science and fire research. The office also acts as liaison with the engineering community and assures that relevant technology is made available to other NASA centers, agencies, and industry. Recent accomplishments are listed in this report. Activities of the three research groups, Polymer Research, Aircraft Operating and Safety, and Engineering Testing, are summarized. A complete bibliography which lists all Chemical Research Projects Office publications, contracts, grants, patents, and presentations from 1975 to 1980 is included. L.F.M.

RESEARCH STUDIES IN/NF4(+)/SALTS Final Technical Report, 1 Apr. 1977 - 31 Mar. 1980
K. O. Christe 23 May 1980 124 p refs
(Contract DAAG29-77-C-0007)
(AD-A086981; RI/RD80-157; ARO-14394.10-C) Avail: NTIS HC A06/MF A01 CSCL 07/2

This report describes the results of a 3 year program in basic research studies in NF4(-) chemistry. The mechanism of NF4(-) salt formation and decomposition was determined and the decomposition kinetics of NF4AsF6 and NF4BF4 were measured. The formation of NF3(-) salt intermediates, both in the formation and decomposition of NF4(-) salts, was established, and the NF3(-) radical cation was thoroughly characterized by ESR spectroscopy. Improved synthetic methods were developed for NF4SbF6 and its metathesis to other NF4(-) salts. A new method was developed for the synthesis of NF4(-) salts derived from polymeric Lewis acids which do not form HF soluble cesium salts. The following new NF4(-) salts were synthesized and thoroughly characterized: (NF4) 2MnF6, NF4HF2, NF4UF5O, NF4CLO4 and NF4SO3F. In addition, the novel N2F3SnF5 and N2F3SbF6 salts, which are useful burning rate modifiers in solid propellant NF3-F2 gas generator formulations, were prepared and characterized. Unsuccessful attempts were made to prepare NF4NO3, NF4ClF4O, NF4BrF4O, NF4BrO4 and NF4(-) salts of several transition metal fluoride anions. Crystal structure determinations of NF4BF4 and NF4SbF6, and the measurement of thermodynamic data on NF4BF4, NF4PF6, NF4AsF6, and NF4SbF6 are in progress. GRA

EFFECTS OF MOISTURE, RESIDUAL THERMAL CURING STRESSES AND MECHANICAL LOAD ON THE DAMAGE DEVELOPMENT IN QUASI-ISOTROPIC LAMINATES Ph.D. Thesis
Ronald Dean Kriz 1979 128 p
Avail: Univ. Microfilms Order No. 8020212

The maximum moisture absorbed in [01 + or - 45/90] sub s and [0/90/ + or - 45] sub s laminates fabricated from T300/5208 was demonstrated. Emphasis was placed on using reasonable approximations for wet, dry, and out of plane (v sub 23, G sub 23) elastic properties since these properties are required to predict the damage free stress state at the laminate edge. Classical laminate theory and a finite element model were used to predict stress states prior to the first formation of damage. Crack patterns characteristic of the laminate in a wet or dry condition were also predicted using a shear lag model. Development of edge damage was recorded and observed during the test by transferring an image of the damage from the edge surface on to a thin acetate sheet (replica technique), such that the damage imprinted on the acetate sheet could be immediately viewed on a microfiche card reader. Moisture was shown to significantly alter the interior and edge dry stress states due to swelling and a reduction of elastic properties. Dissert. Abstr.

MICROMECHANICS OF SHORT-FIBER COMPOSITE Ph.D. Thesis
Seuchi Nomura 1980 178 p
Avail: Univ. Microfilms Order No. 8019944

Various mechanical properties of multiphase short fiber composite materials were studied. Each fiber was modeled as an ellipsoidal inclusion embedded in a homogeneous matrix and was distributed unidirectionally and randomly in a transverse plane. Strain field expressions at each point of the composite were obtained by using the Green's function perturbation method and the self consistent approximation, and by making use of these expressions effective constants of the composite such as elastic moduli, thermal conductivities and thermal expansion coefficients were derived. Viscoelastic behavior and work hardening effects were also studied. Dissert. Abstr.

N80-31478 Virginia Polytechnic Inst. and State Univ., Blacksburg.
INVESTIGATION OF CONSTRAINT EFFECTS ON FLAW GROWTH IN COMPOSITE LAMINATES Ph.D. Thesis
Peter Chun-Ngok Yeung 1979 107 p
Avail: Univ. Microfilms Order No. 8020238

Results are presented for the case of a transverse flaw in an interior ply perpendicular to the loading axis. Two orientations of the flawed ply were examined (0 and 90 degrees), and two distinctly different constraint situations were studied (cross-ply constraint and biaxial constraint). Various nondestructive testing methods were employed to evaluate the material response and to determine the damage and damage growth in the specimens. These techniques include replication, ultrasonic c-scan, ultrasonic attenuation, acoustic emission, x-radiography, thermography and stiffness measurement. In-plane constraint is the principal contributor to notched strength and changes in notched strength under quasi-static loading. Through-the-thickness constraint controls the pattern and spacing of transverse cracks in the off-axis plies to form a characteristic damage state in the laminates. Out-of-plane stresses produced by contraints are influential on the growth of damage along ply interfaces, especially during cyclic loading. Dissert. Abstr.

LARC-13 ADHESIVE DEVELOPMENT Final Report, Oct. 1978 - Jun. 1980
S. G. Hill, C. H. Sheppard, and J. C. Johnson Jun. 1980 50 p refs
(Contract NAS1-15562)
(NASA-CR-159317; Rept-2-3621) Avail: NTIS HC A03/MF A01 CSCL 11A

A LARC-13 type adhesive system was developed and property data obtained that demonstrated improved thermomechanical properties superior to base LARC-13 adhesive. An improved adhesive for 589 K (600 F) use was developed by physical or chemical modification of LARC-13. The adhesive was optimized for titanium and composite bonding, and a compatible surface preparation for titanium and composite substrates was identified. The data obtained with the improved adhesive system indicated it would meet the 589 K (600 F) properties desired for application on space shuttle components. Average titanium lap shear data were: (1) 21.1 MPa (3355 psi) at RT, (2) 13.0 MPa (1881 psi) at 600 F, and (3) 16.4 MPa (2335) after aging 125 hours at 600 F and tested at 600 F. S.F.

N80-31480*# Celanese Research Co., Summit, N.J.
STUDY OF CATALYST CURED LaRC-160/CELION 6000 COMPOSITES Final Report, Jun. 1979 - Aug. 1980
Robert Edelman Sep. 1980 44 p refs
(Contract NAS1-15749)
(NASA-CR-159335) Avail: NTIS HC A03/MF A01 CSCL 11D

LaRC 160 polyimide was modified with a high temperature peroxide catalyst, USP-138, in an attempt to reduce the final cure temperature to below 316 C. This effort was directed at obtaining a material for 177 C use that would cure at similar temperatures to a high performance epoxy while still maintaining the good moisture resistance of a polymide material. Attempts to prepare a laminate made from Celion 6000 fiber and 5% catalyzed LaRC 160 resin gave a material with minimal properties after curing at 193 C. Acceptable properties were

not obtained until a final cure temperature of 260 C was used. A control laminate containing no catalyst and cured under the same conditions had only half the level of shear strength. The catalyzed LaRC 160 prepreg was also used to examine the possibility of shortening the conventional LaRC 160 cure at 316 C. Maximum properties were obtained using a 2.5% catalyzed product with a final cure temperature of 316 C held for fifteen minutes. Differences in properties between catalyzed and uncatalyzed product disappeared, however, when the cure time at 316 C was extended to 45 minutes. Author

NONLINEAR VISCOELASTIC BEHAVIOR OF A COMPOSITE MATERIAL USING A FINITE ELEMENT MICROMECHANICAL ANALYSIS Interim Report
Brent G. Schaffer and Donald F. Adams Jun. 1980 158 p refs
(Contract DAAG29-79-C-0189)
(AD-A087367; UWME-DR-001-101-1; ARO-16370.1-MS)
Avail: NTIS HC A08/MF A01 CSCL 11/4

The analysis uses an elastoplastic finite element micromechanics computer program to model a unidirectional composite subjected to any combination of longitudinal, transverse, and hygrothermal loadings. Time-dependent effects are included by means of nonlinear viscoelastic constitutive equations. The method of solution is based upon the conditions for generalized plane strain which permits a pseudo-three dimensional analysis. It also contains two failure criteria, viz., an octahedral shear stress criterion and a hydrostatic criterion. Application of load or changes in temperature or moisture are input through time-independent increments. A plotting package is also included which allows the user to obtain a total of eight different plots; octahedral shear stress and strain, maximum and minimum principal stress, in-plane shear stress, out-of-plane longitudinal stress, and normal and tangential shear stress on the fiber-matrix interface. The study demonstrates that the associated program is able to model essentially any type of stress input or hygrothermal history. GRA

STATISTICAL ANALYSIS OF STRENGTH AND LIFE OF COMPOSITE MATERIALS Final Report, 1 Apr. 1977 - 31 Oct. 1979
Pei Chi Chou, A. S. D. Wang, Robert Croman, Harry Miller, and James Alper May 1980 72 p refs
(Contract F33615-77-C-5039; AF Proj. 2307; AF Proj. 2419)
(AD-A087741; AFWAL-TR-80-4049) Avail: NTIS HC A04/MF A01 CSCL 11/4

Static strength and fatigue life of unidirectional graphite/epoxy composites are studied in terms of statistical models of fatigue degradation and residual strength. A two segment Weibull distribution for fatigue life, and a cumulative damage rule for fatigue are introduced. Experimental tests performed support the assumption that a specimen's rank in strength is equal to its rank in fatigue life. Fatigue weakens the matrix, and thus degrades the residual compression strength, and not the residual tension strength in early life. In some cases, residual tension strength initially increases. Proof tests can guarantee a minimum strength, and to a lesser extent, a minimum fatigue life. GRA

THE EFFECT OF MECHANICAL WORKING ON SiC WHISKER-REINFORCED ALUMINUM ALLOYS Final Report
Dennis M. Riggs and Peter Gillis Apr. 1980 18 p
(AD-A087565; AMMRC-TR-80-11) Avail: NTIS HC A02/MF A01 CSCL 11/4

The effects of mechanical working on SiC whisker-reinforced aluminum alloys were investigated. The effects of pressing, extruding, and rolling on whisker dispersion, L/D ratio, and orientation were determined by examination of polished cross sections using conventional optical microscopy and by examination of replicas with a transmission electron microscope. These results were correlated with the mechanical properties of the composite. It was found that mechanical working of the composites significantly degrades the whiskers, particularly the L/D ratio. Extrusion and rolling, however, do impart an orientation to the whiskers in the direction of working. It was also found that clumping observed in the unworked billets is carried through both the extrusion process and rolling. These SiC-rich areas apparently lead to the formation of porosity in the composites during working. The high level of mechanical properties found in the worked composites suggests that optimization of the secondary working parameters (in such a manner as to minimize whisker damage) may result in the realization of a truly unique structural material. GRA

SUPERCONDUCTIVITY IN FILAMENTARY EUTECTIC COMPOSITES Progress Report, 1 Jun. 1979 - 31 May 1980
Mark P. Zaitlin 1980 21 p refs
(Contract DE-AC02-78ER-04938)
(COO-4938-3) Avail: NTIS HC A02/MF A01

Electrical resistivity and magnetic susceptibility were measured as a function of temperature on samples of Nb-Th eutectic composite. Samples with Nb filament radii as small as 38A were used which is considerably less than the coherence length in Nb of approximately 380A. Surprisingly, measurements of all samples show a drop in electrical resistance near the transition temperature of bulk Nb and an unmeasurably small resistance by approximately 8K. The magnetic susceptibility showed essentially perfect diamagnetism below approximately 7K to 9K even for samples with the smallest of filament radii. This is in contradiction to theories of the proximity effect which predict a sharp decrease in the transition temperature for samples with a radius smaller than the coherence length. Some measurements in a static magnetic field were also made. DOE

PROBABILISTIC MODELS OF THE STRESS-RUPTURE OF COMPOSITE MATERIAL, PHASE 3 Progress Report, 15 Jun. 1978 - 14 Jun. 1980
S. L. Phoenix Mar. 1980 34 p refs
(Contract EY-76-S-02-4027)
(COO-4027-3) Avail: NTIS HC A03/MF A01

The development of static and time dependent models for the failure of composite materials was pursued. These models are based on the chain of bundles probability model for composite failure wherein local load sharing among nonfailed fiber elements in a bundle plays a key role. At the outset, it was believed that the static model was well developed in the literature by others, and that work on the time dependent versions could proceed. In these versions, the viscoelasticity of the matrix was to be the cause of the time effects. Unfortunately, initial studies showed the published analysis on the static case to be superficial, and a rigorous extension to the time dependent case was not possible.

The static model was thoroughly investigated. Sophisticated analytical and numerical techniques were developed to treat the static model, and these show promise of being extendable to the time dependent case. Exact analysis was performed on composites with few fibers to gain insight, and a recursive technique was developed to treat composites of larger sizes.

INELASTIC DEFORMATION IN CRYSTALLINE NONMETALLIC MATERIALS Progress Report
D. L. Kohlstedt. Apr. 1980. 46 p. refs
(Contracts DE-AS02-77ER-04441; EG-77-S-02-4441; Grant NSF DMR-76-24180)
(COO-4441-3) Avail: NTIS HC A03/MF A01

Densification of polycrystalline TiC was studied during hot-pressing and sintering of powders. Starting powders of Ti plus C, TiC, and TiC plus Ti were reacted at 1700 C to 1835 C above the melting point of Ti metal (T/sub m/ = 1675 C for Ti). The bulk C:Ti ratio was maintained in the range 0.97 to 0.6 in order to allow the possibility of producing a single phase material. All of the resulting microstructures, examined in the scanning electron microscope, contain press both along the grain boundaries and within the grains. The samples fabricated from Ti metal plus TiC contain substantially fewer pores than those produced from TiC powder alone. Debye-Scherrer X-ray diffraction analyses demonstrate that in the TiC plus Ti runs, all of the Ti is transformed to substoichiometric TiC after a few minutes at 1800 C. While sintering time and temperature have a small influence on the final density, increasing the weight percent of Ti metal added to TiC dramatically increases the final density and the hardness.

STUDY OF FIBER-MATRIX INTERFACE STRUCTURE AND INTERFACIAL DIFFUSION PHENOMENA IN COTAC-TYPE SOLIDIFICATION COMPOSITES. EFFECT ON THE THERMAL STABILITY OF THE FIBERS Ph.D. Thesis - Paris-Sud Univ.
Elvire Maroni. 1979. 102 p. refs. In FRENCH; ENGLISH summary
Report will also be announced as translation (ESA-TT-661)
(ONERA-NT-1979-11; ISSN-0078-3781) Avail: NTIS HC A06/MF A01

The fiber matrix interfacial structure of Cotac type composites was determined by electron microscopy. Interfaces were characterized using the diffusion technique. High resolution autoradiographs showed that diffusion was predominant along the fiber matrix interface. The diffusion coefficients of nickel and niobium were measured for Cotac 74 and Ni, Cr-TaC composites in order to obtain the diffusion data required to predict the high temperature stability of Cotac type composites. The high values of the activation energies for the interfacial diffusion of both nickel and niobium result from the interaction of the diffusing species with carbon. The structural stability of Cotac type composites was investigated at elevated temperatures. It is estimated from the experimental data that no degradation due either to isothermal Ostwald ripening or to thermal gradient coarsening should occur in service at high temperatures.

SYNTHESIS OF DAWSONITES Patent Application
Robert L. Altman, inventor (to NASA). Filed 14 Aug. 1980. 10 p.
(NASA-Case-ARC-113261-1; US-Patent-Appl-SN-178192)
Avail: NTIS HC A02/MF A01 CSCL 07A

Alkali metal and ammonium dawsonites are prepared by a nonaqueous process where equimolar quantities of the corresponding hydrogen carbonate and aluminum hydroxide in finely divided state are heated together to a temperature within the range of 150 to 250 C for a period of 1 to 6 hours under a carbon dioxide pressure within the range of 120 to 360 psig. Carbonates may be used instead of hydrogencarbonates. A type of dawsonite is provied that can be used in extinguishing fires caused by hot surface ignition of hydrocarbon fuels.

PHOTOASSISTED WATER-GAS SHIFT REACTION OVER PLATINIZED Ti O(2) CATALYSTS Technical Report, 1 Jan. - 31 Dec. 1980
Shinri Sato and John M. White. 15 Jul. 1980. 31 p. refs
Submitted for publication
(Contract N00014-75-C-0922; NR Proj. 056-578)
(AD-A087363; TR-15) Avail: NTIS HC A03/MF A01 CSCL 07/4

The reaction of gas phase water with CO (water-gas shift reaction) over platinized, powdered TiO2 is found to be catalytic under UV illumination. The reaction kinetics have been studied at temperatures from 0 to 60 C. At 25 C, the reaction is zero order both in CO and water when p sub CO = or > 0.3 torr and p sub H2O = or > 5 torr and the activation energy is 7.5 kcal/mole. The wavelength dependence of the reaction rate shows a cut-off near, but slightly below, the band gap of titanium oxide. The quantum efficiency of the reaction is about 0.5% at 25 C.

AN ELECTRON SPECTROSCOPIC INVESTIGATION OF THE INTERACTION OF METHANOL WITH POLYCRYSTALLINE ALUMINUM Technical Report, 1 Jan. - 21 Dec. 1980
J. W. Rogers, Jr., R. L. Hance, and J. M. White. 15 Jun. 1980. 21 p. refs. Submitted for publication
(Contract N00014-75-C-0922; NR Proj. 056-578)
(AD-A087309; TR-14) Avail: NTIS HC A02/MF A01 CSCL 07/4

X-ray and ultraviolet photoelectron spectroscopic results are reported for the interaction of CH3OH with clean polycrystalline Al in the temperature range 110-500 K. Methanol is molecularly chemisorbed at low exposure and low temperature (110 K) followed by condensation at higher exposure. The multilayers desorb beginning near 170 K and the chemisorbed layer is converted into a surface methoxide. Room temperature adsorption also leads to formation of the methoxide species which is stable to approximately 500 K, at which point it decomposes evolving CH4 and leaves the surface oxidized.

COLLISIONAL RELAXATION OF VIBRATIONAL ENERGY TRANSIENT IN THE METHYLCYCLOPROPANE SYSTEM. A VARIABLE ENCOUNTER METHOD STUDY
D. F. Kelley, T. Kasai, and B. S. Rabinovitch 1 Aug. 1980 27 p refs Submitted for publication
(Contract N00014-75-C-0690; NR Proj. 092-549)
(AD-A087802; TR-16) Avail: NTIS HC A03/MF A01 CSCL 07/3

The Variable Encounter Method has been used to study vibrational energy transients in the isomerization of methylcyclopropane to various butenes. This system was studied with reactor surface temperatures of 800 K to 1130 K and average numbers of collisions per encounter with the reactor of 5.6 and 20.0. The reaction rate was treated on the basis of total, rather than individual butene rates, because of butene product interconversion. An exponential model of energy transfer was found to give the best fit to the data with the average down step energy -delta E prime = decreasing from 1860/cm to 1415/cm with increase of temperature over the range studied. Incubation times increased from 14 to 19 collisons with increase in temperture, and these times together with valves of the conventional relative collision efficiency Beta and values of -delta E prime =, are compared with those of other molecules studied by VEM. The calculated transient population distributions and the associated sequential reaction probabilities are also displayed. GRA

CARS CONCENTRATION SENSITIVITY WITH AND WITHOUT NONRESONANT BACKGROUND SUPPRESSION Final Technical Report, 9 May 1979 - 22 Apr. 1980
Alan C. Eckbreth and Robert J. Hall Jun. 1980 71 p refs
(Contract N00014-79-C-0351)
(AD-A087557; UTRC-R80-954628-1) Avail: NTIS HC A04/MF A01 CSCL 07/4

Species detectivity is limited in conventional CARS with aligned laser polarizations by the presence of a background, nonresonant electronic contribution to the CARS signal. At low species densities, a modulated CARS spectrum results which can be used to perform concentration measurements from the spectral shape, a unique feature of CARS. When the species concentration becomes very low, the 'signal' from the specie of interest, i.e., the modulation, essentially disappears into the nonresonant background and the specie is no longer detectable. By proper orientation of the polarizations of the pump and Stokes laser fields and the CARS signal polarization analyzer, the nonresonant background can be suppressed leaving the pure CARS spectrum of the specie being probed. Unfortunately, a factor of sixteen reduction in resonant mode signal accompanies the elimination of the background. In this report, investigations of background suppression from CO in flames are described using polarization sensitive CARS with spectrally broadband Stokes waves. The studies were conducted in flat CO-air diffusion flames employing nonplanar, crossed-beam phase matching, i.e., folded BOXCARS. The relative concentration sensitivity of CARS with and without background suppression was compared at both high and low temperatures. GRA

COMBUSTION STUDIES OF COAL-IN-OIL DROPLETS Final Report, 1 Aug. 1977 - 31 Jul. 1979
C. K. Law Dec. 1979 60 p refs
(Contract DE-FG01-77ET-10660)
(DOE/ET-10660/1) Avail: NTIS HC A04/MF A01

The combustion characteristics of droplets of coal-oil mixtures (COM) were investigated both theoretically and experimentally. The agglomeration of the coal powder occurs upon complete implications regarding radiation transfer, total burning time, and particulate collection efficiency. Agglomeration is somewhat irrelevant for COM with no. 6 oil because of the small volatility differentials between coal and no. 6 oil. As a result of agglomeration, fine-crushing the coal is unnecessary unless they can be reduced to micron-sizes such that agglomerate ignition is facilitated. DOE

MECHANISTIC STUDIES RELATED TO THE METAL CATALYZED REDUCTION OF CARBON MONOXIDE TO HYDROCARBONS Progress Report, 1 Apr. 1979 - 31 Mar. 1980
Charles P. Casey Apr. 1980 11 p refs
(Contract DE-AC02-77ER-04222)
(DOE/ER-04222/3) Avail: NTIS HC A02/MF A01

The stoichiometric reactions of metal complexes which parallel probable steps in the metal catalyzed reduction of CO are being investigated. The information obtained should be useful in the design and discovery of homogeneous catalysts for the reduction of CO to hydrocarbons. It was found that the structure and kinetic stability of metal formyl compounds are very similar to metal acetyl compounds. However, metal formyl compounds are thermodynamically much less stable than metal acetyl compounds towards decarbonylation. Hydride donation reactions of metal formyl compounds were discovered. A neutral metal formyl compound discovered and its reactions were investigated. Preparation of (C5H5) Re (CO)(NO)(CH2OH), the first authentic example of a hydroxymethyl metal compound, was accomplished and studies of its reactions with acid, with base, with CO, and with H2 were begun. INTERPRETATION OF RAYLEIGH SCATTERING IN A FLAME
I. Namer, R. W. Schefer, and M. Chan Apr. 1980 26 p refs Presented at the Conf. of the Western States Sect. of the Combust. Inst., Irvine, Calif., 21 Apr. 1980
(Contract W-7405-eng-48)
(LBL-10655; CONF-800408-3) Avail: NTIS HC A03/MF A01

Typical values of correction factors as a function of degree of reaction, fuel, and equivalence ratio are calculated for an idealized one dimensional flame front. The fuels considered are

H2, CH4, C2H3, C2H6 and C2H5. Errors of up to 30% can occur in the interpretation of the Rayleigh scattering as gas density for the heavier hydrocarbon fuels due, primarily, to the presence of CO as an intermediate combustion product. Conversely, using H2 as a fuel will result in a maximum error of 3% which is within the expected experimental accuracy of a typical Rayleigh scattering system. The interpretation of Rayleigh scattering as temperature was found to have larger error than the interpretation as density. Nevertheless, when corrections are applied for charges in gas composition, Rayleigh scattering provides an excellent measure of total gas density and temperature in flames. DOE

INVESTIGATION OF SULFUR-TOLERANT CATALYSTS FOR SELECTIVE SYNTHESIS OF HYDROCARBON LIQUIDS FROM COAL-DERIVED GASES Quarterly Technical Progress Report, 18 Sep. - 18 Dec. 1979
Calvin H. Bartholomew 10 Jan. 1980 24 p refs
(Contract DE-AC01-79ET-14809)
(FE-14809-1) Avail: NTIS HC A02/MF A01

Silica-supported cobalt and iron catalysts were prepared by simple impregnation to incipient wetness with aqueous metal salt solutions. Several impregnations were necessary to ensure a uniform deposition of the metal salt, each followed by intermediate drying. After the final impregnation, the catalysts were dried. These dried samples were then bulk reduced in flowing hydrogen. The reduced catalysts were next passivated with 1% air in nitrogen and crushed to a fine powder for use. The cobalt boride on alumina catalyst was prepared under an N2 blanket in a sealed reaction vessel to avoid the formation of boron oxide. Enough alumina was used so that if all the cobalt adhered to the support 18 wt% metal loading would result. DOE

ULTRASONIC CHARACTERIZATION OF COAL LIQUEFACTION PRODUCTS Final Report, 11 Apr. 1979 - 11 Feb. 1980
Charles B. Leffert, Leo Weisman, and Diane Moore 29 Feb. 1980 75 p refs
(Contract DE-AC22-79PC-10346)
(DOE/PC-10346/1; CEEC-80-1203-1) Avail: NTIS HC A04/MF A01

The Wayne State University ultrasonic device and technique was used successfully to calibrate coal derived 0 to 45% wt% asphaltene in oil mixtures (2 wt% increments) for transmitted signal strength versus temperature (25 to 100 C). Computer aided cross plots of the transmitted signal strength versus concentration of asphaltene showed that a wide range of concentration and temperature exists where the viscosity dominated (lower temperature) sound absorption is such that a single valued number for the concentration of the asphaltene can be obtained from measurement of the sample temperature and transmitted signal strength and thus obtain a measure of the quality of the coal-derived product. It is concluded that there is an excellent expectation that the Wayne State ultrasonic device and technique could be used to simultaneously measure (on line) the suspended particle concentration as well as the quality of the coal-derived product. CROSSED MOLECULAR BEAM STUDIES OF CHEMILUMINESCENT REACTIONS Ph.D. Thesis
Carol Cuzens Kahler Apr. 1980 175 p refs
(Contract W-7405-eng-48)
(LBL-10545) Avail: NTIS HC A08/MF A01

The chemiluminescent bimolecular halogen-halogen reactions of F2 with I2, Br2, and IC1, were studied by the crossed molecular beam technique. The observed reaction thresholds of 4.2 and 5.9 kcal/mole for I2 + F2, respectively, are the same as the threshold energies for production of the stable trihalogens I2F and C1IF. A threshold of 11.3 kcal/mole was found for Br2 + F2; no threshold for Br2F was previously reported. Also described is a crossed molecular beam study of the chemiluminescent reaction of + O3 yields NO2 + O2. The cross section was found to increase with increasing collision energy. The reaction threshold was 2.1 kcal/mole. The chemiluminescence was found to increase with increasing NO temperature. This is explained by assuming the cross section varies as E sub rot sup 1.4 where E sub rot is the average rotational energy of the NO beam. DOE

HYDROGEN-TRANSFER AND CHARGE TRANSFER IN PHOTOCHEMICAL AND HIGH ENERGY RADIATION INDUCED REACTIONS: EFFECTS OF THIOLS Final Report, 1 Feb. 1960 - 31 Jan. 1979
Saul G. Cohen Mar. 1980 19 p refs
(Contract EY-76-S-02-3118)
(DOE/ER-03118/13) Avail: NTIS HC A02/MF A01

Absorption of ultraviolet or visible light, or high energy radiation, may lead to highly reactive free radicals. Thiols affect the reactions of these radicals in the following ways: (1) transfer of hydrogen from sulfur of the thiol to a substrate radical, converting the radical to a stable molecule, and the thiol to a reactive thiyl radical; and (2) transfer of hydrogen from a substrate radical or molecule to thiyl, regenerating thiol. The thiol is thus used repeatedly and a single molecule may affect the consequences of many quanta. Three effects may ensue, depending upon the system irradiated: (1) the substrate radicals may be converted by thiol-thiyl to the original molecules, and protection against radiation damage is afforded; (2) the radicals may be converted to molecules not identical with the starting materials, and in both cases damage caused by radical combination processes is prevented; and (3) product yields may be increased where the initial radicals might otherwise regenerate starting materials. DOE

AUTOMATED MULTI-SAMPLE GAS CHROMATOGRAPHIC ANALYSIS OF FOSSIL FUEL GASES
Daniel R. Rohler, Gary L. Young, and Victoria M. Franchetti 11 Jun. 1980 21 p ref
(Contract DE-AC04-76DP-00053)
(MLM-2721) Avail: NTIS HC A02/MF A01

Fully automated gas chromatographic analysis of multiple Fischer Assay retort gas samples was achieved. The system used included a commercially available microprocessor controlled gas chromatograph fitted with an inhouse designed and constructed automated gas sampling rack. This system unattended duplicate analysis of four samples and one standard; the total output of analyses per day was twice that using manual operation. Automation of the rack was achieved through microprocessor control of four time programmable contact closures which operate a set of valves and a printer for sampling, regulating, and recording manifold pressure. Accuracies and precisions using the gas chromatograph sampling rack automatically were comparable to those achieved during manual operation. DOE

APPLICATION OF LINEAR ACCELERATOR TECHNOLOGY TO THE DETECTION OF TRACE AMOUNTS OF TRANSURANICS IN WASTE BARRELS
M. R. Cates, B. W. Noel, J. T. Caldwell, W. E. Kunz, D. A. Close, L. A. Franks, and J. L. Pigg 1980 24 p refs Presented at Intern. Symp. on the Management of Alpha-Contaminated Wastes, Vienna, 2-6 Jun. 1980
(Contract W-7405-eng-36)
(LA-UR-80-1274; CONF-800611-3) Avail: NTIS HC A02/MF A01

Electron linear accelerators (linacs), as sources of photons and neutrons, can produce a significant number of fissions in transuranic isotopes contained in large barrels of waste material. Both photons and thermal neutrons were used to detect about 1 mg of plutonium in 105 kg matrices. A sequential interrogation with neutrons and photons, easily possible with linacs, can show both fertile and fissile constituents among the heavy mass isotopes. The advantages of linacs in solving existing assay problems include: (1) high available beam current; (2) variable beam current, beam energy, pulse width, and pulse repetition frequency; and (3) beam-scanning ability. They also are compatible with passive assay instruments. Their versatility makes it likely that they will remain useful as assay technology advances. DOE

STUDY OF SOLID METAL/CERAMIC REACTIONS Progress Report, 18 Jun. 1979 - 17 Mar. 1980
R. L. Mehan and M. R. Jackson. 26 Feb. 1980. 40 p. refs.
(Contract DE-AC02-79ER-10413)
(DOE/ER-10413/1) Avail: NTIS HC A03/MF A01

Ceramic-metal reactions are investigated for SiC, Si/SiC, and Si4N4 with a Ni-Cr-Al superalloy. Results from metallographic and microhardness measurements, reaction kinetics, and investigations of phase relations are presented. Considering the reaction rates of SiC and Si/SiC, the activation energy at lower temperatures (700 C and 800 C) seem similar, with the Si/SiC forming larger reaction zones than SiC. This is consistent with metallographic observations and the fact that more Si is available from Si/SiC than from the decomposition of SiC. However, as the eutectic is approached, the rate increases significantly for the Si/SiC and more so for pure Si. Because of the presence of Cr and Al in the Ni, a liquid phase may form below 900 C. DOE

LATTICE EXPANSION AS A MEASURE OF SURFACE SEGREGATION AND SOLUBILITY OF HYDROGEN IN ALPHA-FeTiH/SUB x
J. J. Reilly, J. R. Johnson, F. Reidinger, J. F. Lynch, J. Tanaka, and R. H. Wiswall. 1980. 19 p. refs. Presented at the Intern. Symp. on the Properties and Appl. of Metal Hydrides, Colorado Springs, Colo. 7 Apr. 1980
(Contract EY-76-C-02-0016)
(BNL-27523; CONF-800402-12) Avail: NTIS HC A02/MF A01

The lattice expansion of alpha-FeTiH sub x was found to be anomalously small as a function of hydrogen content. The apparent partial molar volume of hydrogen, anti V sub H, was 0.1 - (-0.1) cc/g atom (FeTiH sub - 0.03), a value much lower than the accepted range of 2.2 to 1.4 cc/g atom previously reported the hydrogen metal solutions. The behavior is attributed to preferential occupation by hydrogen of Ti rich sites produced by surface segregation effects which are known to occur in activated FeTi. The alpha/alpha - beta phase boundary is estimated to occur at an overall composition equivalent to FeTi sub approximately 0.04. At this composition approximately 85% of the total hydrogen content is estimated to be associated with surface layers approximately 100 A in depth. Unactivated FeTi (low surface area) behaved quite differently and it is clear that in the low dilution region surface segregation effects play a dominant role with respect to system behavior. DOE

NUMERICAL SIMULATION OF THE INTERACTION OF A FLAME WITH A KARMAN VORTEX STREET
I. Karasalo, A. J. Chorin, I. Namer, F. Robben, and L. Talbot. Apr. 1980. 24 p. refs. Presented at the Conf. of the Western States Sect. of the Comb. Inst., Irvine, Calif., 21 Apr. 1980
(Contract W-7405-eng-48)
(LBL-10679; CONF-800408-4) Avail: NTIS HC A02/MF A01

A numerical study of a simplified flow configuration modeling the interaction of a laminar flame with a Karman vortex street is presented. The flow is assumed to be inviscid and the flame is modeled as a line source of specific volume with a burning speed which depends on the local curvature. Complete flow fields are calculated as a function of time for various values of the Markstein parameter, vortex shedding frequency, separation and strength. rho sub u/rho sub b was 4.0 and the velocity far upstream was set at 60 cm/s for all cases. The essential features of the interaction of a flame with a vortex street are demonstrated, including a deflection of the vortex street ahead of the flame, a development of a flame brush, the deflection of the mean flame position, and the increase in the mean rate of consumption when the vortices are introduced. DOE

CATALYZED COMBUSTION OF LEAN FUEL/AIR MIXTURES
R. W. Schefer and F. Robben. Apr. 1980. 20 p. refs. Presented at 4th Workshop on Catalytic Combust., Cincinnati, 14-15 May 1980
(Contract W-7405-eng-48)
(LBL-10842; CONF-800553-1) Avail: NTIS HC A02/MF A01

The effect of catalytic surface activity on gas phase and surface reaction ignition temperatures was studied for H2, C3H8, and C2H6 air mixtures flowing over a platinum and a quartz surface. The gas phase ignition temperature is a function of catalyst surface reactivity. That is at lower temperatures the quartz surface was essentially noncatalytic and resulted in gas phase ignition temperatures up to 100 K lower than with the platinum surface. At increased surface temperatures the catalytic activity of the quartz surface approached that of the platinum and gas phase ignition temperatures were identical for both surfaces. DOE

COMPLETE BURNING AND EXTINCTION OF A CARBON PARTICLE IN AN OXIDIZING ATMOSPHERE
Moshe Matalon. May 1980. 46 p. refs.
(Contract ET-78-C-01-3084)
(FE-3084) Avail: NTIS HC A03/MF A01

The departure from an equilibrium gas phase behavior is described in order to obtain the rate of mass loss M of a pure carbon particle immersed in an oxidizing atmosphere over a wide range of Damkoehler numbers D/sub g/ (representing either the particle size or the ambient pressure). The analysis allowed a small leakage of oxygen through the flame so that M depended on the direct oxidation C - O2 as well. The structure of a thin but finite flame where the CO oxidation takes place was analyzed and its influence on M was determined. When the flame exists, it stands at a well defined distance from the particle and in particular it can be adjacent to it, this depends on the particle size and on its surface temperature. DOE

COMPUTER SIMULATION OF DISPLACEMENT CATION EXCHANGE CHROMATOGRAPHY: SEPARATION OF TRIVALENT ACTINIDES AND LANTHANIDES

C. W. Forsberg. May 1980. 84 p. refs.
(Contract W-7405-eng-26)
(ORNL/TM-6738) Avail: NTIS. HC A05/MF A01

A first generation mathematical model of displacement cation exchange chromatography (CES) was constructed. The model incorporated the following phenomena: diffusion of cations up and down the column, diffusion of cations from the bulk liquid to the resin surface, and equilibrium of cations between liquid and solid resin beads. A limited number of experiments with rare earths using DTPA as the separation agent were undertaken to increase the current understanding of the processes involved in cation exchange chromatography. The numerical computer program based on the mathematical model was written in FORTRAN IV for use on the IBM 360 series of computers. DOE

A PREDICTION MODEL FOR TURBULENT DIFFUSION FLAMES, INCLUDING NO-FORMATION

J. Janicka (Technische Hochschule, Aachen) and W. Kollmann. Sep. 1979. 17 p. refs. Presented at AGARD-PEP 54th Specialists' Meeting on Combustor Modeling, Cologne, 3-5 Oct. 1979. Submitted for publication.
(VKI-Preprint-1979-14) Avail: NTIS. HC A02/MF A01

A prediction model for turbulent diffusion flames burning gaseous fuels was developed and applied to H2-air flames. In the simplified system of chemical reactions the fast reactions are assumed to be in equilibrium whereas three-body recombinations are treated in nonequilibrium. For the H2-air flames this assumption leads to a description of the reacting system with only two variables: reaction fraction and reaction variable. Two methods of treating such a system in a turbulent flow are discussed. Two sets of equations are complemented with a modified version of the kinetic energy/dissipation rate turbulence model. The NO-formation in such flames can be calculated using the nonequilibrium values (mean values and covariances) of the O and H radicals. The results obtained with both models are compared with experiments and show good agreement. Author (ESA)

THE AUTOXIDATION OF HYDRAZINE AND ALKYL SUBSTITUTED HYDRAZINE VAPORS

J. M. Bellerby. London: HMSO. May 1980. 30 p. refs.
(PERME-Memo-92; BR74110) Avail: NTIS. HC A03/MF A01

The existing body of experimental work on the kinetics of the low temperature autoxidation of hydrazine and the alkyl substituted hydrazines, monomethylhydrazine (MMH) and unsymmetrical dimethylhydrazine (UDMH), is reviewed. In the particular case of the UDMH/O2 reaction (for which the most reliable data are available) a mechanism is put forward which involves the initial formation, by a chain process, of a hydroperoxide. This intermediate is then assumed to undergo wall reactions to give the observed major products. It is further proposed that the hydroperoxide acts as a chain branching agent in the gas phase, thereby giving rise to autocatalysis. The consequences of autocatalysis are examined and seen to account for several previously unexplained features of the kinetic data on the UDMH autoxidation. A full scheme is then proposed for this reaction which successfully accounts for the major and minor products and for the overall stoichiometry. Author (ESA)

APPLICATION OF PHYSIOCHEMICAL ANALYSIS METHODS TO FORMING STRATIFIED MATERIALS WITH HIGH TEMPERATURE ENERGY MATRICES [METHODES D'ANALYSES PHYSICO-CHIMIQUES APPLIQUEES AU MOULAGE DES STRATIFIES A MATRICE APOXY HAUTE TEMPERATURE]

Paul Hebrard. Paris, 1980. 28 p. In FRENCH. Presented at Conf. on Journees d'Etudes Intern. du Verre Textile et des Plastiques Renforces, Paris, 16-17 Apr. 1980.
(SNIAS-801-422-105) Avail: NTIS. HC A03/MF A01

The techniques permit a nonporous, completely or sufficiently polymerized homogeneous material with an optimum fiber/matrix ratio to be obtained which is free from volatile matter. Methods employed include: thermogrammetry, differential microcalorimetry, and dynamic viscoelastic analysis. Tables of results relating to specific materials are given together with a series of graphs representing the various corresponding thermal and mechanical characteristics. The use of such methods leads to a high degree of reliability in the fabriction process and to the production of materials of guaranteed quality. Author (ESA)

ION CHROMATOGRAPHY OF ANIONS. Interim Report, Jul. 1978 - Jul. 1979

Thomas B. Hoover and George D. Yager. Mar. 1980. 44 p. refs.
(PB80-184450; EPA-600/4-80-020) Avail: NTIS. HC A03/MF A01. CSCL 07D

A Dionex model 10 ion chromatograph was evaluated for the measurement of anionic species in water. The theoretical effect of hydrogen ion activity (pH) on the elution time of phosphate and arsenate was tested and emprical selectivity coefficients was determined for the major protolytic species of these acids. Calibration curves were obtained several anions by direct injection of 0.1 mL of standards. Detection limits for ions other than chloride were approximatley 0.2 micrograms independent of the method of sample introduction. For chloride the detection limit was 2 ng, by direct injection. The concentrator column permitted determination of any of the above ions at concentrations greater than to micrograms/L. GRA

FAST DIFFUSION AND ELECTROMIGRATION OF METALLIC SOLUTES IN THORIUM Ph.D. Thesis
William Nile Weins. 1980. 90 p.
Avail: Univ. Microfilms Order No. 8019675

The electrotransport and chemical diffusion of iron, cobalt, and nickel in thorium are described. The transport parameters D and Z were measured in both alpha and beta-thorium. The experimental results indicate that these solutes are fast-diffusing species in alpha-thorium. The internal friction behavior associated with these solutes in thorium was investigated. Results indicate that there are two relaxation peaks associated with each of these solutes in thorium. Experimental values of the activation energy associated with one of the relaxation peaks are coincident with the values of activation energy for diffusion and suggest that both processes are controlled by the same mechanism. Considerations of other data indicate that this mechanism involves an interstitial defect. Dissert. Abstr.

N80-31525 Polytechnic Inst. of New York.
A THEORETICAL AND EXPERIMENTAL STUDY OF THE MECHANICAL BEHAVIOR OF ALPHA-BETA TiMn ALLOYS Ph.D. Thesis
Sreeramamurthy Ankem. 1980. 248 p.
Avail: Univ. Microfilms Order No. 8019386

Elastic interactions at the Widmanstatten alpha-beta titanium alloy interfaces that rise due to compatibility requirements have been calculated for various orientations if the interface with respect to the stress axis. The stress and strain distributions in alpha-beta Ti-Mn alloys have been calculated as a function of strain, volume fraction of phases, and particle size. Near the interface, strains in beta are higher than they are away from the interface. In alpha the strains are lower near the interface. Stresses have the same behavior as the strains. The average strain in alpha is higher than the average strain in beta. The ratio of the strain in alpha, epsilon sub alpha, to the strain in beta, epsilon sub beta is minimum for a given strain near 50 volume percent of beta. This ratio increases with strain up to 25% the limit of total strain examined. The ratio decreases with decreasing particle size and uniformity of strain increases with decreasing particle size. Interface sliding was more prominent in Wid structures than equiaxed structures. Various room temperature tensile properties have been determined for both Wid. alpha and equiaxed alpha microstructures for six Ti-Mn alloys. Dissert. Abstr.

THE EFFECT OF MIXED TRANSITION-METAL DOPANTS ON THE HIGH TEMPERATURE CREEP OF POLYCRYSTALLINE ALUMINA Ph.D. Thesis
Yasuro Ikuma. 1980. 165 p.
Avail: Univ. Microfilms Order No. 8019063

High density (-99%) polycrystalline alumina doped with transition metal impurities (Fe and/or Ti, Mn + Ti, and Mg and/or Ti) was fabricated by hot pressing. Creep tests were performed on this material using a four point bend dead load technique. A range of grain sizes (5 to 300 micrometers), temperatures (1100 to 1500 C), stresses (2-17 MN/square meters and oxygen partial pressures (10 to the minus 11th power - 0.86 atm) was studied. The Mn + Ti dopant couple is by far the most effective in enhancing the creep rate of polycrystalline alumina. A creep deformation map was constructed in which constant strain rate lines were computed for variable grain sizes and impurity content. In this type of creep mapping, the range of variable over which interfacial (grain boundary) defect annihilation processes become important in diffusional creep is clearly illustrated. Dissert. Abstr.

ADHERENCE OF ION BEAM SPUTTER DEPOSITED METAL FILMS ON H-13 STEEL
Michael J. Mirtich. 1980. 17 p. refs. Presented at the 27th Natl. Am. Vacuum Soc. Symp., Detroit, 14-17 Oct. 1980.
(NASA-TM-81585; E-562) Avail: NTIS HC A02/MF A01 CSCL 11F

An electron bombardment argon ion source was used to sputter deposit 17 different metal and metal oxide films ranging in thickness from 1 to 8 micrometers on H-13 steel substrates. The film adherence to the substrate surface was measured using a tensile test apparatus. Comparisons in bond strength were made between ion beam, ion plating, and RF deposited films. A protective coating to prevent heat checking in H-13 steel dies used for aluminum die casting was studied. The results of exposing the coated substrates to temperatures up to 700 degrees are presented. R.K.G.

AMORPHOUS AND METASTABLE MICROCRYSTALLINE RAPIDLY SOLIDIFIED ALLOYS: STATUS AND POTENTIAL Final Report
Nicholas J. Grant, Carl F. Cline, Lance A. Davis, Bernard H. Kear, and Fred E. Luborsky. May 1980. 170 p. refs. Sponsored in part by NASA.
(Contract MDA903-78-C-0038)
(NASA-CR-163449; AD-A086000; NMAB-358) Avail: NTIS HC A08/MF A01 CSCL 11/6

The nature, properties, processing, and possible applications of two classes of materials are described: amorphous solids, particularly glassy metals, and metastable microcrystalline alloys. The thermodynamics and structural considerations of both amorphous and metastable metals and nonmetals are discussed in detail. The chemistry and properties of systems for which data are available also are described as are the processing limitations and methods. Application possibilities are discussed, and the report concludes with recommendations for research and development. GRA

ORGANIC METALS AND SEMICONDUCTORS: THE CHEMISTRY OF POLYACETYLENE (CH)X, AND ITS DERIVATIVES Interim Technical Report
Alan G. Macdiarmid and Alan J. Heeger. 24 Nov. 1979. 13 p. refs. Presented at the 3d Intern. Congr. of Quantum Chem., Kyoto, Japan, Oct. 1979.
(Contract N00014-75-C-0962)
(AD-A087054; TR-79-11) Avail: NTIS HC A02/MF A01 CSCL 11/9

Polyacetylene is quite remarkable in that its conductivity can be readily modified to span an extraordinarily large range. Considering possible polyacetylene derivatives, replacement of some or all of the hydrogen atoms in polyacetylene with organic

or inorganic groups, copolymerization of acetylene with other acetylenes or olefins, and the use of different dopants should lead to the development of a large new class of conducting organic polymers with electrical properties that can be controlled over the full range from insulator to semiconductor to metal. Furthermore, there is considerable potential for the possible application of a parent or doped polyacetylene to the fabrication of various types of electronic devices, solar cells, etc. GRA

30 Apr. 1980 10 p refs
(Contract N00014-75-C-0265)
(AD-A085998) Avail: NTIS HC A02/MF A01 CSCL 11/6

The resistance of an HSLA steel to hydrogen embrittlement was studied and were correlated to hydrogen diffusivity data and microstructural analysis with the observed mechanical behavior of the alloy containing internal hydrogen. The effect of microstructure on subsequent hydrogen transport in the alloy with a composition of 1.37% Mn, 0.22% Ti, 0.64% C and 0.26% Si was investigated. All specimens were solution annealed followed by quenching and aging at temperatures from 600 C to 900 C. Since the only considerable change in the microstructure for heat treatments, compared to the the as-quenched condition, is the nucleation and growth of TiC particles, it is reasonable to believe that they are responsible for the irreversible trapping. After ambient cathodic charging of hydrogen into three different titanium and carbon content iron alloys, only one showed twinning formation. For all charging times of this alloys, twins were found at or near TiC particles with the size of twins increasing as the amount of hydrogen increased. A.R.H.

Advanced aluminum alloys are to be developed that will provide major payoffs for important new aircraft, spacecraft, and missile systems in the next decade. Payoffs will result from weight savings of structural components which, in turn, lead to increased range, payload, service life, and decreased life-cycle cost. The objective of this program is to develop advanced aluminum alloys from rapidly solidified particulate that meet specific property goals. In addition, the program is to establish a metallurgical basis suitable for manufacturing scale-up and application to new weapon systems. GRA

A 316L stainless steel transpiration cooled nosetip for a high performance missile system was designed and fabricated using powder metallurgy techniques. The geometry of the nosetip was established, and permeability requirements were analytically defined. A parametric study of subscale billets determined permeability as a function of powder size and sintering temperature. Near-net-shape billets were fabricated, and machining procedures for the porous material were established. A comparison was made between the actual and calculated gas flow through the nosetip over its entire surface. Two nosetips were successfully tested in a thermal environment approximating the flight environment at the Edwards Air Force Base Rocket Propulsion Laboratory (RPL). Tests were conducted at 0 degree and 10 degree angles of attack. GRA

METALLURGICAL STUDIES OF HYDROGEN STORAGE ALLOYS Final Report
Apr. 1980 218 p refs
(Contract DE-AC02-76CH-00016)
(DOE/CS-0016/T2) Avail: NTIS HC A10/MF A01

The surface poisoning of metal hydrides by impurities in the

hydrogen used. Alloys investigated were LAN15, FeTi, and Fe Mn Ti. Gaseous impurities studied were O2, H2O, and Co. The nature of the surface structures formed, and consequently the degree of poisoning varies markedly from alloy to alloy and from impurity to impurity. A number of rate limiting reaction steps are apparent and examples of complex compound film formation, chemisorption, and possibly physisorption can be seen. Results show the hope of developing surface structures with significant resistance to impurity gases and especially the possibility of designing practical regeneration cycles. DOE

METALLURGICAL ANALYSIS AND HIGH TEMPERATURE DEGRADATION OF THE BLACK CHROME SELECTIVE ABSORBER
Carl M. Lampert. Mar. 1980. 19 p. refs. Presented at the Intern. Conf. on Met. Coatings, San Diego, Calif., 21-25 Apr., 1980. Submitted for publication.
(Contract W-7405-eng-48)
(LBL-10293; CONF-800439-6) Avail: NTIS HC A02/MF A01

A well known coating, Harshaw Chemical Company's Chromonyx was selected for detailed scrutiny of its properties and degradation modes when exposed to high temperatures. Both asplated and annealed microstructural models were presented. Technical means used in this microstructural characterization were: scanning and transmission electron microscopy, Auger depth profiling, hemispherical reflectance and energy dispersive X-ray analysis. From these results a physical metallurgical model for wavelength selective properties of the coating was developed. Thus, it was observed that black chrome degraded as Cr2O3 oxide particles grew and chromium depleted. This effect was pronounced in air and to a lesser degree in medium vacuum. Oxidation by preferential diffusion and outgassing which causes structural changes, may take place. DOE

CARBURIZATION OF AUSTENITIC ALLOYS BY GASEOUS IMPURITIES IN HELIUM
G. Y. Lai and W. R. Johnson. Mar. 1980. 48 p. refs. Submitted for publication.
(Contract DE-AT03-76ET-35300; GA Proj. 6400)
(GA-A-15790) Avail: NTIS HC A03/MF A01

Corrosion tests of Alloy 800H, Inconel Alloy 617 and Hastelloy Alloy X in helium containing various amounts of H2, CO, CH4, H2O and CO2 were conducted in a temperature range from 649 C to 1000 C for exposure time up to 10,000 hr. Four different helium environments were investigated. The results show that the carburization kinetics in low oxygen potential environments are significantly higher, approximately an order of magnitude higher at high temperatures, than those in high oxygen potential environments for all three alloys. Thermodynamic analyses indicated no significant differences in the thermodynamic carburization potential between low and high oxygen potential environments. It is believed that the enhanced carburization kinetics observed in the low oxygen potential environments were related to kinetic effects. A qualitatively mechanistic model was proposed to explain the enhanced kinetics. The present results further suggest that controlling the oxygen potential of the service environment can be an effective means of reducing carburization of alloys. DOE

PRODUCTION OF ALUMINUM-SILICON ALLOY AND AND FERROSILICON AND COMMERCIAL PURITY ALUMINUM BY THE DIRECT REDUCTION PROCESS. Interim Technical Report, 1 Jun. - 31 Aug. 1979
M. J. Bruno. Sep. 1979. 22 p.
(Contract EC-77-C-01-5089)
(CONS-5089-8; ITR-4) Avail: NTIS HC A02/MF A01

Burden materials ground to -65 mesh prior to agglomeration compared favorably to -200 mesh grinds. Ball forming agglomeration was developed for bauxite-clay-coke mixes. The balls produced had higher strength and abrasion resistance than extrusions made from the same formulations. Neutron activation analysis for Al, Si, Fe and oxygen combined with the analysis of Ti by atomic absorption and carbon by combustion provided the best analytical procedure for reactor metal samples. Continuous, steady-state operation produced significant quantities of coalesced metal alloy; individual metal yields for Al, Si, Fe and Ti ranged from 64 to 93%. The mechanical Auger minimized burden bridging during the induction heated runs. Extensive phase analyses were completed on metal product samples by optical microscope techniques, resulting in identification of phases and understanding of relationships between phases formed. DOE

INVESTIGATION OF DISPERSED IRON ALLOY CATALYST IN THE CARBON MONOXIDE-HYDROGEN SYNTHESIS REACTION. Progress Report, 1 Aug. 1979 - 31 Jul. 1980
John B. Butt and Lyle H. Schwartz. Apr. 1980. 12 p. refs.
(Contract DE-AC02-78ER-04993)
(COO-4993-2) Avail: NTIS HC A02/MF A01

A series of Fe-Ni, Fe-Co, Fe-Cu and Fe-K catalysts supported on SiO2 were prepared, characterized, and investigated with respect to activity and selectivity in CO-H2 synthesis. Several silica supported iron nitrides were also prepared and characterized. Efforts directed toward the identification of the particle sizes and phases formed upon preparation, calcination, reduction and carburization are described. It was found that the conditions of preparation strongly affect the nature of the resulting catalyst, both with respect to alloy homogeneity, metal particle size, and catalytic activity. For the Fe system in particular, standard methods of preparation via impregnation and calcination result in very large particle (ca. 80 nm) composites of smaller individual grains (ca. 10 nm). Characterization via X-ray or Moessbauer, however, reveals only the characteristic dimension of the granules and not of the composite particles. DOE

STRAIN HARDENING AND DUCTILITY OF IRON: AXISYMMETRIC vs PLANE STRAIN ELONGATION
George Langford. May 1980. 72 p. refs.
(Contract DE-AC02-76ER-04072)
(DOE/ER-04072/3) Avail: NTIS HC A04/MF A01

The strain hardening of iron at high strains in plane strain elongation (strip drawing) is shown to fall increasingly below that of drawn iron wires at true strains above 2, going through zero strain hardening at epsilon = 3.0, and becoming strongly negative thereafter, at least up to epsilon = 4.1. High resolution selected area electron diffraction was used to map the size, shape and crystallographic orientations of a group of about 50 contiguous cells centered around an incipient shear band in an edge section of a strip drawn to epsilon = 1.8. This map shows no textural instability or change in orientation associated with the shear band, although it does show substantial misorientations throughout the group of cells, the axis of these misorientations lying in the same directions as the trace of the shear band. The only instability seen in this shear band is microstructural: the slip distances in the two primary slip directions are quite anisotropic, being much longer along the trace of the shear band. DOE

STRESS-CORROSION CRACKING OF STEELS IN AMMONIA: A SURVEY WITH CONSIDERATION ON GIVEN OTEC DESIGN
R. B. Teel (Teel R. B. and Associates) ANL Mar. 1980 44 p refs
(Contract W-31-109-eng-38)
(ANL/OTEC-BCM-008) Avail: NTIS HC A03/MF A01

Carbon steel, alloy steel, and high-strength, quenched and tempered steel, when under applied or residual stress and especially when cold formed and/or welded without subsequent thermal stress relief, are subject to failure by stress-corrosion cracking (SCC) in air contaminated dry ammonia. Water as well as hydrazine when present in small amounts are effective inhibitors in an all steel system. Where water has proven effective as an inhibitor of SCC in an all steel system, it may not be adequate in a mixed metal system. With aluminum tubes, the tube sheet will either have to be solid aluminum, aluminum clad steel, or some nonconductive coating will be necessary to effectively remove the cathodic alloy from the galvanic circuit. Research is required to determine the severity of the coupling effect between dissimilar alloys in ammonia especially the possibility of accelerated SCC failures of stressed steel where the presence of an inhibitor in the ammonia may not be sufficient to override the galvanic coupling effect. A STUDY ON MECHANICAL PROPERTIES OF HEAVY ALLOYS
Eun Chung and Dong Nyung Lee London Feb. 1980 19 p refs Transl. into ENGLISH from Taehan Kunsok Hakhoe Chi (Korea), v. 17, no. 1, 1978 p 38-45 Sponsored by UK Minister of Education
(DRIC-T-5966; BR73104) Avail: NTIS HC A02/MF A01

Liquid phase sintering of four tungsten alloys was studied. Mechanical properties and hardness were examined. The compositions of the alloys were respectively: (1) 94% W-3% Ni-3% Fe, (2) 94% W-2.5% Ni-2.5% Fe-1% Co, (3) 94% W-2.5% Ni-2.5% Fe-1% Mo, (4) 94% W-2.5% Ni-2.5% Fe-1% Mn. It was found that coarsening of tungsten particles in the specimens during sintering followed the diffusion controlled growth mechanism, and that hardness decreased with increased sintering time. THE ROLE OF ELECTRON MICROSCOPY BY TRANSMISSION IN THE STUDY OF RADIATION DAMAGE IN METALS [IL RUOLO DELLA MICROSCOPIA ELETTRONICA PER TRASMISSIONE NELLO STUDIO DEI DANNI DA RADIAZIONE NEI METALLI]
G. Chevallard and D. Wenger Dec. 1979 87 p refs
(CISE-1541) Avail: NTIS HC A05/MF A01

The applications of transmission electron microscopy to the study of radiation damage in metals are discussed. The principles of this technique are reviewed and the method compared with other methods. The interpretation of the micrography contrast effects due to metal defects and the interpretation rules used to identify these defects are examined. The defect population analysis, necessary for the characterization of the microstructure before and after the irradiation, is discussed. Author (ESA)

ELECTRONIC PROPERTIES OF MATERIALS AND CORROSION PHENOMENA. A NONCONVENTIONAL APPROACH TO THE MECHANISM OF STRESS CORROSION CRACKING [PROPRIETA ELETTRONICHE DEI MATERIALI E FENOMENI DI CORROSIONE. UN APPROCCIO NON CONVENZIONALE AI MECCANISMI DI STRESS CORROSION CRACKING]
M. Martinelli and C. Ronchetti Nov. 1978 59 p refs In ITALIAN; ENGLISH summary
(CISE-N-188) Avail: NTIS HC A04/MF A01

The perturbations induced on metal free electrons by the mechanical stress state are analyzed, as well as the consequences of such perturbations on the metal-solution interface and then on the electrochemical parameters. It is found that the metal strain state, both from an elastic and a plastic standpoint, has remarkable effects on the metal fermi energy and work function and that such effects influence the redox potential of an electrode made up with the same material. A working hypothesis is formulated, where the modification of the metal electronic state is the main cause for the onset of material areas with a different electrochemical behavior. Author (ESA)

COMPARISON OF FRACTURE TOUGHNESS IN TITANIUM ALLOYS IMI 550 AND IMI 551
R. J. H. Wanhill 14 May 1980 21 p refs
(Contract NIVR-1696)
(NLR-TR-78143-U) Avail: NTIS HC A02/MF A01

Fracture toughness tests on two high strength titanium alloys, IMI 550 and 551, showed that the higher strength alloy, IMI 551, had a much lower toughness. The alloys were very similar in microstructure and fracture mechanisms. A number of model formulations for predicting fracture toughness were compared with the experimental results. This comparison indicated a number of parameters to be important, namely yield stress, elastic modulus, plane strain fracture strain, strain hardening exponent, and microvoid (dimple) diameter. The observed increase in fracture strain, dimple diameter, and fracture toughness with decreasing strength can be rationalized by voids occuring earlier during deformation and by voids initiating at many sites inactive in the lower strength material. GULF COAST MANGANESE NODULE PROCESSING PLANT LOCATION CRITERIA
Daniel Bragg Aug. 1979 167 p
(Grant NOAA-04-7-158-44105)
(PB80-182082; NOAA-80041102) Avail: NTIS HC A08/MF A01 CSCL 11F

A number of physical, economic, regulatory and attitudinal characteristics of the coastal area of five states making up the Gulf Coast region of the U.S. are examined. This effort was directed at identifying those areas suitable for further study as potential locations for onshore manganese nodule processing plants. It was concluded that: the impact of the proposed plants will be no different than that of most large process-type plants already in operation in the region; the benefits of the proposed plants should more than offset the demand for local, tax supported services. Early interaction between government and private enterprise should help assure the development of a commercially viable, environmentally compatible nodule processing industry. GRA

THE FATIGUE CRACK PROPAGATION BEHAVIOR OF SEMI-CRYSTALLINE POLYMERS Ph.D. Thesis
Philip Eric Bretz 1980 206 p
Avail: Univ. Microfilms Order No. 8019707

The effect of molecular weight (MW) and plasticizer content on the fatigue crack propagation (FCP) response of semi-crystalline polymers is evaluated. In addition, a comprehensive comparison of crack growth rates in amorphous and semi-crystalline polymers is made. Fatigue tests were performed on specimens of nylon 66 (N66) and polyacetal (PA) ranging in MW from 17,000-34,000 and 30,000-70,000, respectively. While toughness increased by 30% with MW in this range, crack growth rates decreased by a factor of 3.5 in N66 and a factor of 5 in PA. As for the effect of plasticization, crack tip blunting dominated at low water contents (< or ~ 2.5%) and reduced FCP rates, while the modulus decrement at higher moisture levels accelerated crack velocity. A comparison of crack growth rates for semi-crystalline and amorphous polymers confirmed the

superior fatigue resistance of the multi-phase materials. A positive correlation between reduced FCP rates and increased toughness was observed for semi-crystalline polymers. Fracture surface morphology was examined to ascertain the mechanisms of cyclic damage and fatigue crack propagation. Dissert. Abstr.

Fire resistant resins particularly useful for making laminates with inorganic fibers such as graphite fibers are made by condensation of an ethylenically unsaturated cyclic anhydride with bis (diaminophenyl) phosphine oxide, and by addition polymerization of the bisimide so obtained. Up to about 50%, on a molar basis, of benzophenonetetracarboxylic acid anhydride can be substituted for some of the cyclic anhydride to alter the properties of the products. Graphite cloth laminates made with these resins have shown 800 C char yields greater than 70% by weight in nitrogen. Limiting oxygen indexes of more than 10% were determined for these resins. NASA

A two year durability testing program to evaluate four commercially available ceramic materials under simulated automotive gas turbine combustor discharge conditions was conducted. Conditions included extended cyclic thermal exposures up to 2500 F and 3500 hours. Selected for evaluation were Norton NCX-34 hot pressed silicon nitride, AiResearch RBN 101 reaction bonded silicon nitride, Carborundum pressureless sintered d-siC and British Nuclear Fuels, Ltd. Retel reaction sintered silicon carbide marketed by Pure Carbon Co. These materials initially were exposed to 350 hours/1750 cycles at 1200 and 1270 C (2200 and 2500 F). Subsequent exposure to 1050, 2100, and 3500 hours were performed on the materials maintaining 50 percent of baseline strength after the initial exposure. Additional evaluations of exposed bars included dimension changes, weight changes, dye penetrant, specific damping capacity changes, scanning electron microscope fractography and X-ray diffraction. A project was undertaken to determine whether pitch-based carbon cloth could be made into an active cloth suitable for clothing protective against hazardous chemical environments. The experiments involved activating pitch-based cloth by standard methods in steam and CO2 in a laboratory reactor. Cloth with sorptivities exceeding 50% CCl4 by weight, surface areas exceeding 800 sq m/gm, and breaking strengths exceeding 5 kg per 25 mm wide strip were produced. Conditions were optimized to produce cloth of the highest area sorptivities for NARADCOM evaluation. GRA

(AD-A086941; TR-80-5) Avail: NTIS HC A02/MF A01 CSCL 11/9

Polyacetylene, (CH)x, is the simplest possible conjugated organic polymer and is therefore of special fundamental interest. It can be prepared in the form of lustrous, silvery, flexible, polycrystalline films having any desired cis/trans content by catalytic polymerization of gaseous acetylene, C2H2. The cis-rich films can be stretched easily at room temperature in excess of three times their original length with concomitant partial alignment of the (CH)x fibrils. Dark red gels of toluene in (CH)x may be prepared using a lower catalyst concentration. Highly porous, very low density, 'foam-like' (CH)x can be obtained from these gels. Both cis- and trans-(CH)x are p-type semiconductors which can be treated with a variety of p- or n-type dopants with concomitant increase in conductivity to give a series of semiconductors and ultimately, 'organic metals'. This report will be directed primarily towards a description of the more chemically oriented aspects of (CH)x and its derivatives. GRA

This work focussed upon development of ESCA, SEM/EDAX, TGA, DSC and TMA methodologies for synthetic elastomer compounds typically used in tank track pad service by the U.S. Army. The initial goal was to develop a molecular model of the failure mechanisms that lead to costly pad replacement. Exploratory measurements were conducted on fully compounded, uncured rubber, and pre- and post-service track pads. Studied also were laboratory-prepared samples involving variable matrix (SBR, EPDM and 50/50 SBR/BR) as well as zinc oxide particle shape and size. An initial data base has been accumulated with surface and thermo-mechanical analysis that could provide useful structure-property information for further research and development of engineering elastomers. The use of silicon-based, high performance ceramics offers significant potential for energy conservation in heat engine technology. In particular, three families of silicon-based engineering ceramics, the alumino silicates, the silicon nitrides, and the silicon carbides, possess unique combinations of properties which make these materials very attractive candidates for components in gas turbine, diesel, and Stirling engines. After a brief discussion of the design process with brittle materials, this paper will review some of the relevant properties of various members of each of these three families of engineering materials, as processed by a variety of routes. Some advantages and disadvantages of the major materials/process combinations will be discussed. Selected examples of applications of a variety of materials/process combinations as applied to vehicular engine technology will be presented. GRA

MELT RHEOLOGY OF BLOCK COPOLYMERS IN RELATION TO MELT STRUCTURE Final Report, 24 Sep. 1976 - 23 Mar. 1980
C. I. Chung 23 Jun. 1980 33 p refs
(Grants DAAG29-76-G-0334; DAAG29-78-G-0178)
(AD-A087484; CIC-ARO-80-1; ARO-14149.3-MS) Avail: NTIS HC A03/MF A01 CSCL 11/9
It is well known that block copolymers composed of incompatible polymers have multiphase structure, each component polymer being separated into its own phase, and their multiphase structure leads to unusual physical properties. In particular, block copolymers composed of a soft polymer as the major component and a hard polymer as the minor component can have elastomeric properties since the hard polymer blocks from different molecules segregate into hard domains dispersed in the soft matrix of the soft polymer blocks and the hard domains serve as crosslinking and reinforcement. Some block copolymers of this nature are now successfully used as thermoplastic elastomers. Block copolymers also exhibit unusual melt rheological properties notably very high viscosity and elasticity in comparison to the component homopolymers of equal molecular weight. The unusual melt rheological properties have been attributed to the remnants of the multiphase structure which persist far above the glass transition or melting points of the component polymers. GRA

(UCRL-84351; CONF-800628-1) Avail: NTIS HC A02/MF A01
The development of characterization methodology for silicone gums as well as the concomitant chemical and physical analyses of the polysiloxanes RG97, SE54 and Y3976 are discussed. Procedures for the determination of anti M/sub w/, anti M/sub n/, and MWD vinyl and phenyl contents of the gums by magnetic resonance or chromatographic techniques, and volatile content of the gums by thermogravimetric analysis are briefly addressed. A comparison of the siloxane gums indicates that the random SE54 is a high phenyl content, high molecular weight, low volatile resin of high quality. RG97 is in contrast a relatively low molecular weight, high volatile content gum that is inferior to SE54. The developmental material Y3976, which is synthesized by a different procedure, is close in properties to the SE54 gum but is somewhat lower in phenyl content. DOE

BURNING TO DETONATION TRANSITION IN POROUS BEDS OF A HIGH ENERGY PROPELLANT
R. R. Dernecker, D. Price, and H. W. Sandusky. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 1. Dec. 1979. p 51-78. refs (For primary document see N80-31565 22-28)
(Contract N00030-78-WR-82428)
Avail: Issuing Activity CSCL 21/9

In the high confinement apparatus it was demonstrated that pressurization along most of the predetonation column was mild. The region of accelerating pressure buildup, necessary for DDT, occurred shortly before a transition to detonation. This pressure buildup was associated with the propagation of compressive waves both forward and rearward in the predetonation period. The origin of the event producing these compressive waves appears to be a rapid heat release mechanism rather than a pressure buildup produced by confined burning. The predetonation column lengths observed in the high and low confinement systems are comparable at high porosities. Thus, the effect of confinement on the DDT susceptibility of this material at high porosities is small although confinement would be expected to be more important at lower porosities. E.D.K.

N80-31571 Naval Surface Weapons Center, White Oak, Md.
DEFLAGRATION TO DETONATION TRANSITION BEHAVIOR OF ALUMINIZED HMX
Donna Price and A. R. Clairmont, Jr. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 1. Dec. 1979. p 79-89. refs (For primary document see N80-31565 22-28)
Avail: Issuing Activity CSCL 21/9

The effect of fine and coarse aluminum on the transitional behavior of HMX in charges pressed to 90% theoretical minimum density was investigated. A thick walled tube with heavy end closures is instrumented with ionization probes (IP) and strain gages (SG). These serve to measure front velocities, convective ignition and detonation fronts from the IP data, and compressive fronts from the SG data. Other parameters measured were predetonation column length and two relative times to detonation, the time of discharge of the first ionization probe to time of onset of detonation and the time between the appearances of the first compressive front and onset of detonation. It was found that the aluminized charges which exhibited transition appeared to follow the same DDT mechanism as that initially proposed for 91/9 RDX/wax and that shown by pure RDX and pure HMX. Although the presence of aluminum did not change the DDT mechanism, it did slow down the transitional process increasingly as the Al content rose. All three DDT parameters show a smooth increase with increasing aluminum content. E.D.K.

COMPACTION AND THE BURNING TO DETONATION TRANSITION AT LOW CONFINEMENT
R. R. Bernecker, H. W. Sandusky, and A. R. Clairmont, Jr. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 1. Dec. 1979. p 91-116. refs (For primary document see N80-31565 22-28)
Avail: Issuing Activity CSCL 21/9

A study was made of the deflagration to detonation transition (DDT) in porous charges of propellants at low confinement using a streak camera and flash radiography. To measure density gradients quantitatively along the porous column, X-ray tracers were added to the porous columns during pressing. The propellants evaluated in this work included two friable, crosslinked double base (XLDB) propellants, VLU and VLZ, a modified double base propellant, FKM, and a nitrocellulose (NC) ball powder. The FKM and NC were in a powdered form, the VLZ was shredded and the VLU particles were cuboid. At about 56% theoretical maximum density shredded VLZ and granular FKM transited to detonation while the NC did not. The NC material showed extensive axial compaction although the density profiles along the column were the lowest of all the materials. The VLZ exhibited both axial and radial compaction which was distinctly unsymmetrical, the radiographs illustrated severe nonplanar displacement of the tracers. E.D.K.

EFFECT OF PROPELLANT CRACK BURNING ON HIGH ENERGY PROPELLANT SAFETY

K. Kim. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 1 Dec. 1979 p 121-141 refs (For primary document see N80-31565 22-28)
Avail: Issuing Activity CSCL 21/9

Selective calculations were made for burning in cracks as it pertains to solid rocket motor propellants. The possibility of obtaining pressures high enough to cause a shock to detonation transition (SDT) in propellant grains is examined. Variables effecting the crack combustion process selected for study are: crack shape, location, surface roughness, propellant deformation, ignition criterion, and burning rate. Results suggest that SDT should not occur in propellants unless the granulation of the grain is severe enough to provide large burning surface area.

A mathematical model is developed for transient combustion of an end burning, compressible, linear viscoelastic solid propellant grain confined in a one dimensional closed chamber. The time dependent analysis is capable of studying nonlinear wave propagation in both the solid and gas phases. Theoretical predictions for a family of fast burning propellants indicate (1) pulsating burning rates as well as stress waves in the propellant, (2) traveling waves in the gas phase which grow to shock strength, and (3) a burning rate excursion in which the gas velocity leaving the surface approaches the sonic condition.

A CALCULATIONAL MODEL FOR FRAGMENTATION IN VISCOELASTIC MATERIALS
S. R. Swanson. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 1 Dec. 1979 p 167-176 refs (For primary document see N80-31565 22-28)
Avail: Issuing Activity CSCL 21/9

Experimental evidence has shown that under certain combinations of stress loading and material properties, fracture in solids can occur in which a large number of particles are formed. A model of fracture for viscoelastic materials is presented that attempts to calculate the distribution of fragment size and the associated surface to volume ratio of these fragments. Calculations are made on an element basis in conjunction with a dynamic finite element code. The model assumes a statistical distribution of inherent microflaws that grow under stress according to quasistatic and dynamic crack propagation laws measured in laboratory tests. Crack interaction to form fragments is computed on a statistical basis. Calculations for a shear test geometry show formation of few fragments at low test speeds, but a significant increase in surface to volume ratios at higher velocities. These results are in good agreement with laboratory test results.

The role of shear in the initiation of burning in explosives was explored. The PBX-9404, a rigid explosive containing 96 wt% HMX, and a compliant propellant containing 50 wt% solids were subjected to pressure pulses of a few kilobars amplitude. Pressure pulses were generated by burning HMX at loading densities from 0.04 to 1.22 g/cu cm and were transmitted to the test explosive usually by a metal piston. It was shown that violet burning can be induced in the PBX-9404 by rapid compression, and by the use of steel shear rings the rate of reaction can be intensified so that a transition from burning to detonation results.

Initiation processes in granular explosives experiencing finite risetime loading, in contrast to shock loading were investigated. Ramp waves having a risetime of either 0.3 micro seconds or 0.8 micro seconds were transmitted into the explosive PBX-9404, resulting in initial waves having a peak axial stress of 5.1 GPa. The incident waves were generated in discs of a glass-ceramic, pyroceram, by planar impact of copper faced projectiles using a gas fired gun facility. Velocity interferometry was used to measure particle velocity histories after the initial wave had propagated through explosive samples having different thicknesses. For comparison, similar measurements were made for the case of shock loading to the same initial peak stress.

Avail: Issuing Activity CSCL 21/9

Monopropellant liquid propellant gun systems were developed generally along two lines, the preloaded type (so-called bulk loaded liquid propellant gun and the direct injection type (so-called regenerative type). In each of these types, the liquid

charge was brought rather rapidly up to gun operating pressure, ca. 30 to 60 kpsi, in a rise time on the order of 0.1 to 1 msec. Although hundreds of successful firings were made with both types of gun, with several different types of liquid monopropellant, in sizes up to 4 inch barrels, a few destructive explosions have taken place, all of them on startup during the rapid pressure rise associated with ignition of the gun. This almost successful test record suggests that the particular monopropellants selected are not themselves at fault, or explosions would have occurred with far greater frequency. R.C.T.

The response of solid propellant combustion to steep pressurization pulses was calculated with consideration of temperature dependent thermal properties of the solid and quasisteady gas phase. Response was calculated for a uniformly distributed gas phase reaction and for the Zeldovich heat feedback theory with variations in surface heat release, pressurization rate, and thermal properties of the solid. Regression rate excursions of two to three times the quasi-steady rate ($r = aPn$) were calculated for nominal values of propellant properties. Higher excursions were calculated for the distributed flame with assumed constant thermal properties. For pressurization rates approximating calculated DDT rates, the excursions survived at high pressures. R.C.T.

Consolidated single and double base extruded propellants and a double base ball propellant were burned in a closed bomb. The parameters studied included mode of ignition and effects of compaction density on sample combustion. Overall mass burning behavior, especially round to round reproducibility, was found to be strongly ignition dependent. Consolidation was found to reduce the average mass generation rate for the propellant samples. Surface area ratio vs. mass fraction burned plots were generated for these runs using an inverse closed bomb data reduction program. Progressive surface area development was observed for fifty percent or more of propellant mass fraction burned. Best progressivity was found for the most dense, physically strongest propellant samples. Author

IGNITION OF SOLID PROPELLANTS UNDER TRANSIENT FLOW CONDITIONS

Avi Birk and Leonard H. Caveny *In* APL The 16th JANNAF Combust. Meeting, Vol. 1 Dec. 1979 p 515-540 refs (For primary document see N80-31565 22-28)

Avail: Issuing Activity CSCL 21/9

The site and mode of convective ignition of propellant cylinders in crossflow was determined. A shock tunnel was used to provide up to 20 ms of flowing heated gas at: 1 to 2 MPa; 1600 to 2100 K; 10 to 300 m/s. Test gases were 100% N2, 10% O2/90% N2, and 50% O2/50% N2. Instrumentation included six radiation detectors, high speed shadowgraph sequences, pressure probes, and heat flux gauges. Ignition is a gas phase process. Compared to triple base propellant, single base and double base propellants ignited more rapidly in oxidizer containing flows. Flame blowoff occured for high Reynolds number (e.g., 16,000), low free stream oxidizer flows. The high heating rates accompanying boundary layer development can produce submillisecond ignition. Depending on the flow conditions first ignition occurs either at the leading edge or in the wake. R.C.T.

SHOCK TUBE IGNITION OF NITROCELLULOSE AND NITRAMINES

Arthur Cotten and Leon J. Decker *In* APL The 16th JANNAF Combust. Meeting, Vol. 1 Dec. 1979 p 541-546 refs (For primary document see N80-31565 22-28)

Avail: Issuing Activity CSCL 21/9

A reflected shock technqiue was used to study ignition of small (approximately 1 micrometer particles of NC (12.2% N), RDX and HMX by shock heated N2 at reflected shock gas temperatures (T bar) between 600-1200 K and pressures between .1-1.5 MPa. For T bar > 750 K, ignition delays were independent of pressure and were almost independent of T bar. For T < 750 K, the temperature dependence increased markedly and the nitramine delays showed an inverse pressure dependence although the NC delays remain pressure independent. The activation energy for the delays was approximately 37 Kcal/mole for HMX and 17 Kcal/mole for NC. R.C.T.

HOLOGRAPHIC OBSERVATIONS OF BLACK POWDER COMBUSTION

R. Field, P. Wartman, and J. D. Trolinger (Spectron Development Labs., Inc., Costa Mesa, Calif.) *In* APL The 16th JANNAF Combust. Meeting, Vol. 1 Dec. 1979 p 547-558 refs (For primary document see N80-31565 22-28)

(Contract DAAK10-79-M-4364)

Avail: Issuing Activity CSCL 21/9

The basic combustion behavior of black powder and other igniter materials using pulsed laser holography was investigated. The combustion of single grains of black powder was examined at ambient pressure and pressures up to 0.72 MPa (105 psi). The short pulse duration and monochromaticity of the laser radiation provided high spatial resolution in the recording of the particle field generated during the grain combustion. Particle velocities obtained from double pulsed holograms were examined. The formation of the observed particle field appears to be due in part to stripping-off of a molten reactant material from the surface of the grain by gases forming within a molten surface layer. Differences in the particle field with change in pressure were also studied. R.C.T.

Four different binders in a tapered two dimensional ammonium perchlorate (AP)-binder sandwich were investigated. Both quenched combustion techniques and cinephotomacrography of the burning samples were used to observe the deflagration process and the interaction of the diffusion flamelets with it. The four binders were tested over the 1.38 MPa (200 psi) to 13.8 MPa (2000 psi) pressure range. The scanning electron microscope was used to investigate the partially burned samples. Particular emphasis was placed on the binder layer and its residue along with the melt flow out over the oxidizer surface. It was found that a minimum binder thickness existed at 1.38 MPa beyond which deflagration could not be sustained. The binder melt flow was very important in determining the AP deflagration rate in the vicinity of the binder. R.C.T.

EFFECT OF EROSIVE BURNING ON PRESSURE AND TEMPERATURE SENSITIVITY
J. P. Renie, M. E. Barger, and J. R. Osborn *In* APL The 16th JANNAF Combust. Meeting, Vol. 2 Dec. 1979 p 153-169 refs (For primary document see N80-31588 22-28)
(Grant AF-AFOSR-3381-77)
Avail: Issuing Activity CSCL 21/9

The results of calculations of burning rate, pressure exponent and temperature sensitivity are presented for a series of monomodal ammonium perchlorate propellants. Both the oxidizer particle size and the crossflow velocity are considered as parameters. The results are obtained with the erosive burning petite ensemble model. This erosive burning model is based on the hypothesis that the erosive burning effect is due to the enhancement of the transport properties in the gas phase reaction zones caused by the presence of a turbulent boundary layer. Results indicate that burning rate, pressure exponent and temperature sensitivity may be materially changed as the cross flow velocity is increased for those propellants having an oxidizer particle size greater than a certain size. Below an oxidizer particle size of 10 microns, the results show that these combustion parameters remain unchanged as the crossflow velocity is increased. Above this oxidizer particle size, an increase in the crossflow velocity causes substantial increases in both the propellant burning rate and pressure exponent. At the same time, decreased temperature sensitivity results for increased crossflow velocities with propellants having the larger oxidizer particles. R.C.T.

AN INVESTIGATION OF THE EFFECTS OF FORMULATION PARAMETERS ON EROSIVE BURNING OF COMPOSITE PROPELLANTS
Merrill K. King *In* APL The 16th JANNAF Combust. Meeting, Vol. 2 Dec. 1979 p 171-191 refs (For primary document see N80-31588 22-28)
(Contract F49620-78-C-0016)
Avail: Issuing Activity CSCL 21/9

A series of ten composite solid propellants with systematically varied formation parameters were characterized with respect to the dependence of burning rate on pressure and product crossflow velocity over a wide range of these variables. Predictions of the erosive burning characteristics of these formulations made with a simple model based on columnar diffusion flame bending were found to agree fairly well with data except at low pressure conditions where propellant heterogeneity is relatively unimportant. A second generation, considerably more fundamental model of composite propellant combustion (with and without crossflow) which includes both the flame bending mechanism and a turbulent transport property augmentation erosive burning mechanism also yielded predictions in good agreement with data, even in the low pressure region where the first generation model failed for five of the six formulations against which it has been tested to date. The most important factor effecting the sensitivity of composite propellant burning rate to crossflow was found to be the base (no crossflow) burning rate versus pressure characteristics of the propellant, low burning rate propellants being more sensitive to crossflow. R.C.T.

ANALYSIS OF AMMONIUM PERCHLORATE COMBUSTION IN A TURBULENT FLOW
R. A. Beddini and A. K. Varma *In* APL The 16th JANNAF Combust. Meeting, Vol. 2 Dec. 1979 p 193-210 refs (For primary document see N80-31588 22-28)
(Contract F49620-78-C-0016)
Avail: Issuing Activity CSCL 21/9

The effects of turbulence on the mean reaction rate and on reaction rate correlations (combustion-turbulence interaction) was investigated with application to the erosive burning of ammonium perchlorate (AP). The analysis indicates that regions of both decreased and increased reaction rate and turbulent diffusivity can exist in the flame zone, and that the decreased reaction rate may account for the decreased burning rate (negative erosion) observed for some propellants. Fully interacting calculations were performed using a previously developed erosive burning theory and both the Beckstead-Derr-Price (BDP) and Guirao-Williams AP combustion models. The results show that: (1) although significant changes in reaction rate and turbulent diffusivity profiles are obtained, no appreciably decreased burning rate is predicted for AP using either combustion model; (2) for both normal and erosive burning, the flame height produced by the BDP model is substantially greater than that produced by the Guirao-Williams model; and (3) as a consequence of the disparate flame heights, a much greater susceptibility of AP to erosive burning is predicted with the BDP model. EFFECT OF BINDER TYPE ON ALUMINUM COMBUSTION AND ALUMINUM OXIDE FORMATION
K. J. Kraeutle, R. Reed, Jr., A. I. Atwood, and H. B. Mathes. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p 225-236. refs (For primary document see N80-31588 22-28)
Avail: Issuing Activity. CSCL 21/9

The combustion of three aluminized propellants which contained different binders was studied in a window bomb, a pipe burner, and a T-burner. The binders were chosen for their particular decomposition behavior and for their interaction with ammonium perchlorate (AP) as observed by hot-stage microscopy. The results show the influence of binder type on the burn rate, on the size distribution of residue collected after pipe burner and T-burner firings, and on the acoustic damping as measured in the T-burner at a frequency of 800 Hz. Damping rates of the propellants were calculated based on the size data of T-burner as well as pipe burner residues for comparison with measured values. Finally, the combustion of the propellants and the decomposition of their binders were observed by cinephotography. Author

The design, analyses, and test results of an integral caseless, nozzleless ignition concept for large solid propellant rocket motors is presented. An approximate 60 percent rocket motor igniter inert weight reduction for payload trade-off gain was the primary ignition concept advantage. The ignition system main charge is formed by configured motor propellant at the forward section of the motor around the igniter boss. This configured forward section, which is an integral portion of the motor propellant grain, is designed to operate as a small, low pressure nozzleless rocket motor, providing sufficient pressure and heat-flux output into the main motor propellant section to achieve reproducible motor ignition. Forward section propellant ignition is achieved by output from a relatively small, radial exhausting pyrotechnic igniter containing BKNO3 pellets. The integral caseless, nozzleless igniter concept was successfully demonstrated, and ignition concept performance and motor propellant ignition performance met design requirements. Also target weight requirements for the MX Upper Stage motor were achieved. However, potential problems in motor grain stress were encountered. M.G.

THEORETICAL DETERMINATION OF NOZZLE ADMITTANCES USING A FINITE ELEMENT METHOD
R. K. Sigman and B. T. Zinn. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p 273-286. refs (For primary document see N80-31588 22-28)
(Grant NsG-3036)
Avail: Issuing Activity. CSCL 21/9

A finite element method (FEM) is used to predict the admittances of axisymmetric nozzles. The flow in the nozzle is assumed to be isentropic and the disturbances are assumed to be small so that linear analyses apply. An approximate two dimensional compressible flow model is used to describe the steady flow in the nozzle. The propagation of acoustic disturbances is governed by the complete linear acoustic wave equation. This partial differential wave equation is transformed to an integral equation using Galerkin's method and Green's theorem is applied so that the acoustic boundary conditions can be introduced through the boundary residuals. A two dimensional finite element method using linear triangular elements is used to solve the integral acoustic equation. A one dimensional FEM is used to solve the reduced nozzle acoustic equation developed by Crocco and the solution is used to verify the sufficiency of the boundary residual formation. It is shown that agreement between predicted values of the admittance and experimental data is quite good. M.G.

ASSESSMENT OF CHAMBER PRESSURE OSCILLATIONS IN THE SHUTTLE SRB
H. B. Mathes. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p 287-304. refs (For primary document see N80-31588 22-28)
Avail: Issuing Activity. CSCL 21/9

A combustion stability analysis performed for three burn times of the shuttle solid propellant booster motor (SRB) is discussed. The results of the analysis indicated that SRB was exceptionally stable. Analysis of motor firing data shows that a low level pressure oscillation is present throughout burn. The observed oscillations, while somewhat erratic in regard to both amplitude and frequency, show a general pattern through burn that is similar for all motors investigated to date. Variations in maximum pressure amplitude and frequency occur between different motors at the same burn time. The variations between motors have been statistically treated to provide predictions of maximum pressure amplitude and maximum and minimum frequency of the first axial acoustic mode under several sets of specified conditions. The origin of the pressure oscillations, which have not exceeded 0.25 percent of the mean chamber pressure, is thought to be connected with coupling between turbulence or vortex shedding and acoustic wave motions in the motor. PRELIMINARY EXPERIMENTS ON ACOUSTIC OSCILLATIONS DRIVEN BY PERIODIC SHEDDING
R. Dunlap and R. S. Brown. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p 305-319. refs (For primary document see N80-31588 22-28)
(Contract F04701-77-C-0060)
Avail: Issuing Activity. CSCL 21/9

The flow and geometry combinations which maximize acoustic oscillations under rocket motor type flow conditions are investigated. Nitrogen was injected into a chamber through a sonic choke and exhausted through a second choke at the other end.

Two restrictors were located at various axial positions along the chamber. At each location, the spacing of the two restrictors was varied and the effect on the acoustic pressure level was measured. Amplitude frequency spectra of the pressure were obtained to determine which modes were excited. In addition, hot wire anemometer measurements were made in the region between the restrictors for some flow conditions. Comparisons between the pressure and velocity spectra show increased acoustic pressure levels occur simultaneously with increased velocity oscillations. The data also show that increased acoustic pressure levels can be correlated with Strouhal Number and position of the restrictors relative to the acoustic mode shape. The results support the thesis that periodic shedding may be an important source of acoustic driving in solid rocket motors. M.G.

EXPERIMENTAL DETERMINATION OF SOLID PROPELLANT ADMITTANCES BY THE IMPEDANCE TUBE METHOD
J. D. Baum, B. R. Daniel, and B. T. Zinn. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p. 325-341. refs (For primary document see N80-31588 22-28)
(Grant AF-AFOSR-2571-73)
Avail: Issuing Activity. CSCL 21/9

The application of the modified impedance tube technique in the measurement of the admittances and response functions of burning solid propellants is addressed. The relationship between the admittance of the burning solid propellant surface and the impedance tube wave structure is utilized to determine the admittance at the propellant surface. This is accomplished by measuring the resulting acoustic wave structure and relating it to the unknown admittance by utilizing the solutions of the impedance tube wave equations. Improvements in the data acquisition and data reduction procedures are discussed. It is shown that the real part of the admittance Y sub R remains constant during the steady state burn period while gas phase losses may vary significantly during the same time period. Reproducibility of the measured quantities is established as well as the capability of this experimental technique to measure gas phase losses in the impedance tube simultaneously with the measurement of the burning solid propellant surface admittance. M.G.

DIRECT MEASUREMENTS OF ACOUSTIC ADMITTANCE USING LASER DOPPLER VELOCIMETRY
L. H. Caveny, K. L. Collins, and S. W. Cheng. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p. 343-361. refs. Sponsored by ONR and Army Ballistic Research Lab. (For primary document see N80-31588 22-28)
Avail: Issuing Activity. CSCL 21/9

Research was directed at making measurements of velocities in propane/air and solid propellant flames using laser Doppler velocimetry (LDV) instrumentation. Combustors were developed to impose a controlled periodic pressure disturbance on burning solid propellants and to excite a propane/air flame. A tracking system was developed to maintain the LDV control volume at a fixed position above the regressing propellant surface. The research demonstrated double base and composite propellants and for alumina seeded propane/air flames. The simultaneous velocity and pressure measurements were used to obtain acoustic admittances. Author

ROTATING VALVE FOR VELOCITY COMBUSTION RESPONSE MEASUREMENTS
R. S. Brown, R. C. Waugh, and V. L. Kelly. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p. 363-384. refs (For primary document see N80-31588 22-28)
(Contract F49620-77-C-0048)
Avail: Issuing Activity. CSCL 21/9

The dual valve approach for measuring velocity coupled characteristics in greater detail is investigated. A mathematical analysis of the transient ballistics was developed. The solution of the transient mass, momentum, and energy equations incorporates both linear and nonlinear velocity coupling, as well as pressure coupling, particle damping, flow turning, and nozzle losses in the analysis. Parametric studies were made by using the nonlinear velocity coupling model. The results show the interaction of mean velocity magnitude, threshold velocity, and amplitude of the velocity oscillation on the predicted pressure oscillations. An experimental apparatus was constructed and its performance under controlled cold flow conditions was compared with predictions. Agreement between predicted and experimental behavior was demonstrated under pressure coupled conditions. In the velocity coupled mode, the cold flow tests showed that control of the phase angle between the two valves is important to ensure proper performance of the apparatus. E.D.K.

INVESTIGATION OF THREE VELOCITY COUPLED T-BURNER DESIGN
Steven L. Folkman and Kenneth J. Wanlass. *In* APL. The 16th Jannaf Combust. Meeting, Vol. 2. Dec. 1979. p. 385-398. refs (For primary document see N80-31588 22-28)
Avail: Issuing Activity. CSCL 21/9

An experimental investigation was conducted to compare various techniques of measuring the linear velocity coupled response of a solid propellant. Three velocity coupled T-burner designs were investigated: (1) a center vented T-burner, (2) a second mode T-burner, and (3) a flared end T-burner. Two basic propellants were utilized in testing, an aluminized PBAN propellant and an aluminized HTPB propellant. The primary intent of the investigation was to compare the nominal values of velocity coupled response and their dispersions in the three configurations. The flared end T-burner design exhibited considerably less data scatter than the center vented design. The nominal values of velocity coupled response calculated from the center vent and the flared end design are very comparable. Harmonic content in the flared end T-burner was lower compared to the center vent design. The second model T-burner gave a large amount of data scatter and does not appear to be a promising design. E.D.K.

STUDIES OF MOTOR INSTABILITY PROBLEMS
R. O. Hessler. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p. 399-428. refs (For primary document see N80-31588 22-28)
Avail: Issuing Activity. CSCL 21/9

Each of the three motors discussed was predicted to be stable by comfortable margins in the lower longitudinal modes. Two of the motors exhibited spontaneous oscillations in the axial modes. Data analysis of these motors indicated that the longitudinal modes were indeed stable and that the oscillations were driven by vortexes caused by flow over discontinuities in the propellant geometry. In each motor when the grain discontinuity was removed the oscillations were eliminated. These studies led to statement of a steady state solution to the cavity wave equation. This solution predicts finite amplitude oscillations in stable motors in response to combustion, flow, or external oscillatory inputs. A method of predicting the frequency and strength of flow periodicities is also presented. A single motor from a third project responded to what was considered a small charge pulse with a rapid growth to large amplitudes and a mean pressure increase. Analysis of the data indicates that the response was appreciably different from the basis of linear theory. E.D.K.

L*-INSTABILITY IN DUCTED ROCKET FUEL GENERATORS
B. D. Goracke and M. K. King. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p. 451-460. refs. (For primary document see N80-31588 22-28)
Avail: Issuing Activity. CSCL 21/9

Studies have shown that a fuel throttling capability enhances the performance of a ducted rocket, while necessitating fuel rich gas generator operation at low pressure. Two fuel rich formulations were tested at low pressure and observed to exhibit oscillations much lower in frequency than those commonly observed with conventional propellants. A model was postulated and the theory confirmed that the oscillations were L* in nature and satisfactorily predicted L* pressure boundaries and frequency. E.D.K.

DEVELOPMENT OF A PHOTON CORRELATION LASER VELOCIMETER FOR USE IN TURBULENT MIXING REGION MEASUREMENTS
G. D. Catalano, H. E. Wright, and A. Cornuto. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p. 461-469. refs. Prepared in cooperation with Air Force Inst. of Technology. (For primary document see N80-31588 22-28)
Avail: Issuing Activity. CSCL 21/9

A laser velocimeter using a photon correlation processing scheme was developed for use in obtaining reliable information in turbulent mixing regions. Quantities measured in this investigation include mean velocities and turbulent intensities. Measurements were made in a rectangular nozzle free jet flow both with the laser velocimeter and with a hot-wire anemometer. The Mach number at the exit plane of the nozzle was varied from 0.2 to 0.8. The laser velocimeter obtained mean velocity data was found to correspond quite closely to the information obtained by using the hot-wire. The turbulent intensities were found to be much more difficult to measure using the laser velocimeter. Author

Avail: Issuing Activity. CSCL 21/9

Results of coherent anti-Stokes Raman scattering (CARS) measurements made in a bluff-body-stabilized flame with turbulent and recirculating flow characteristics similar to those in many practical combustion systems are presented. The CARS system design is based upon a single-mode, ruby laser, oscillator amplifier combination operating at a repetition rate of 1 Hz and a ruby pumped, near infrared, broad band, dye, laser. Three types of CARS measurements are presents: (1) single pulse Q-branch spectra of N2 captured with an optical multichannel analyzer (OMA); (2) single pulse N2 and O2 number densities obtained by wide band integration of all Q branch lines; and (3) N2 spectra obtained by stepping a monochromator while exciting the medium with a broad band Stokes beam. Temperatures are estimated by comparing scanned N2 spectra with computer generated spectra. Axial and radial profile measurements of temperature, O2 concentration, and N2 concentration are presented. The results of CARS radial temperature measurements at a single axial location are compared with corresponding thermocouple data. The OMA spectra suggest that it is feasible to obtain single pulse measurements of temperture, N2 concentration, and O2 concentration at any location in the bluff-body-stabilized flame. E.D.K.

INVESTIGATION OF THE FEASIBILITY OF CARS MEASUREMENTS IN SCRAMJET COMBUSTION
J. A. Shirley, D. C. Eckbreth, and R. J. Hall. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p. 487-509. refs. (For primary document see N80-31588 22-28)
(Contract NAS1-15491)
Avail: Issuing Activity. CSCL 21/9

Results are presented of analytical and experimental investigations to determine the feasibility of using coherent anti-Stokes Raman spectroscopy (CARS) to measure temperature and species concentrations in supersonic combustion experiments. Experimental CARS spectra of O2 and H2 in a laboratory flat H2 - air diffusion flame are presented. Temperatures deduced from both species generally agree with radiation corrected thermocouple measurements. Oxygen concentrations were determined from the shape of the experimental spectra. Measured H2 CARS signal magnitudes are in good agreement with analytical predictions based on H2 concentration profiles determined from spontaneous Raman scattering. Based on these results, CARS diagnostics appear to be feasible if problems associated with the supersonic flow are not too severe. Author

COMPARISON OF THERMOCOUPLE, GAS SAMPLING, AND RAMAN MEASURED TEMPERATURES IN AN AFTERBURNING TURBOJET ENGINE PLUME
W. M. Roquemore and P. P. Yancy. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p. 511-527. refs. Prepared in cooperation with Dayton Univ. Research Inst. (For primary document see N80-31588 22-28)
(Contract F33615-77-C-2019; AF Proj. 3048)
Avail: Issuing Activity. CSCL 21/9

The results of plume temperature measurements made with three different probes, a Pt 13% Rh-Pt thermocouple probe, a gas sampling probe, and a spontaneous Raman scattering optical probe are desribed. Thermocouple measurements were corrected for radiation and recovery. A combination gas sampling and pressure probe was used to measure carbon dioxide, carbon monoxide, and total hydrocarbon concentrations and total gas stream pressures. Temperatures were calculated from the concentration measurements. Raman scattering measurements were made in a near-backscattering geometry using a pulsed nitrogen gas laser, a computer controlled SPEX double spectrometer, and an 8850 RCA photomultiplier tube with EGG/ORTEC time gated current integration detection apparatus. Raman temperatures were determined by fitting calculated spectra to the experimental spectra of the nitrogen gas in the plume. The temperatures measured by the Raman, gas-sampling, and thermocouple techniques were in agreement within the experimental error of about 5 percent except at maximum engine power where the thermocouple deviated by about 10 percent. MEAN DROPLET DIAMETER RESULTING FROM ATOMIZATION OF A TRANSVERSE LIQUID JET IN A SUPERSONIC AIR STREAM
J. A. Schetz, A. S. Nejad, and A. K. Jakubowski. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p 541-555. refs. Sponsored by AFOSR. (For primary document see N80-31588 22-28)
Avail: Issuing Activity. CSCL 21/9

The feasibility of routine measurements of the mean droplet diameter in the spray resulting from normal injection of liquid jets into a supersonic airstream under density conditions in a blow-down wind tunnel employing the diffractively scattered light technique was investigated. Studies of the effects of injector diameter, jet/free stream dynamic pressure ratios, and location in the jet plume on the mean droplet diameter were conducted. The diffractively scattered light technique is capable of measuring the mean droplet diameter in the spray with good experimental accuracy if great care is exercised in the selection and use of all optical components. The mean droplet size is on the order of 10 microns for injectors of the order of 1.3 mm. The mean droplet diameter has an inverse relation with respect to jet/free stream dynamic pressure ratio, a direct relation with the orifice diameter and decreases as the measurement station moves farther downstream from injector orifice and the smallest droplets are always found near the windward edge of the spray plume. E.D.K.

REDUCTION OF COMBUSTION EFFICIENCY ASSOCIATED WITH LIQUID PHASE DROP DECOMPOSITION
M. Gerstein and P. Roy Choudhury. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p 557-568. ref. (For primary document see N80-31588 22-28)
(Grant AF-AFOSR-3354-77)
Avail: Issuing Activity. CSCL 21/9

The inefficiency of droplet evaporation due to liquid phase pyrolysis at higher pressures results in a nonlinear form of diameter squared relationship. Under such a condition, a coupling between evaporation and liquid phase pyrolysis can cause a large reduction in the combustion efficiency of an advanced airbreathing propulsion system using either a commercial fuel blend or a synthetic fuel. The degradation in combustion efficiency can be minimized by accelerating the initial evaporation process before significant pyrolysis can take place and the concentration of the residue can increase. E.D.K.

HIGH DENSITY FUELS DESIGN CONSIDERATIONS FOR COMBUSTORS AND COMBUSTION ASSESSORIES IN SUBSONIC CRUISE MISSILE PROPULSION SYSTEMS
J. D. Cohen and J. S. Hoffman. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p 569-578. refs. (For primary document see N80-31588 22-28)
Avail: Issuing Activity. CSCL 21/9

High density fuels show significant promise for increasing the range of volume limited aircraft. For weapons systems such as the current generation of subsonic cruise missiles, small aircraft are employed, propelled by air breathing turbine engines. It can be forecasted that the range of these craft will be nearly proportional to volumetric energy content of the proposed fuels, provided the fuels can be delivered and burned efficiently, and provided the impact on size and weight of the missile can be minimized. The impact of dense fuel use on combustion system design considerations is explored. E.D.K.

EFFECT OF GRAZING FLOW ON THE NONLINEAR ACOUSTIC BEHAVIOR OF HELMHOLTZ RESONATORS
A. S. Hersh. *In* APL. The 16th JANNAF Combust. Meeting, Vol. 2. Dec. 1979. p 579-603. refs. (For primary document see N80-31588 22-28)
(Contract NAS3-19745)
Avail: Issuing Activity. CSCL 21/9

A semi empirical fluid mechanical model is derived of the acoustic behavior of thin walled single orifice Helmholtz resonators in a grazing flow environment. The model assumes that the flow field incident to a resonator orifice consists of a spherical sound particle velocity field superimposed upon a mean grazing flow. The incident and cavity sound fields are connected in terms of an orifice discharge coefficient whose values are determined experimentally using the two microphone method. With regard to its application to rocket motor interiors, the most important finding of this study is that the acoustic impedance of Helmholtz resonators is affected by grazing flow when the product of the amplitude of the sound pressure incident to the resonator orifice and the rocket motor interior mean grazing flow speed are less than 0.5. For values greater than 0.5, the acoustic impedance is independent of the grazing flow. E.D.K.

Using the most recent mechanisms and rate constants for the chemistry of the H2/F2/O2 molecular system, detailed modeling studies of stability data have shown that these data are explainable with reasonable accuracy. This same chemistry model was also used to explain the variation in performance of a H2/F2 pulsed chemical laser with added O2. The results show that although there is some gain in laser performance by operating at low O2 concentrations, the inverse linear dependence on O2 concentration rules out any dramatic increase in performance. The potential and incentives required for supplying hydrogen and syngas feedstocks to the U.S. chemical industry from coal gasification systems were evaluated. Future hydrogen and syngas demand for chemical manufacture was estimated by geographic area and projected economics for hydrogen and syngas manufacture was estimated with geographic area of manufacture and plant size as parameters. Natural gas, oil and coal feedstocks were considered. Problem areas presently affecting the commercial feasibility of coal gasification discussed include the impact of potential process improvements, factors involved in financing coal gasification plants, regulatory barriers affecting coal gasification, coal mining/transportation, air quality regulations, and competitive feedstock pricing barriers. The potential for making coal gasification the least costly H2 and syngas supply option. Options to stimulate coal gasification system development are discussed. A.R.H.

Experimental electrolysis cells using various platinum catalyzed carbon electrodes were tested. When operated at 200 mA/sq cm current density using 50 w/o acid at 50 C and 1 atm, a reference cell required 1.22 volts and degraded rapidly. After several improvements were incorporated into electrodes and the test cell configuration, a later cell required only 0.77 volts under identical operating conditions. At a lower current density, 100 mA/sq cm, the cell required only 0.63 volts. Kinetic studies on metal electrodes, measurements of temperature effects on electrode kinetics, investigations of electrocatalytic activities of metal electrodes over a wide range of acid concentrations, cyclic voltametric studies and evaluation of alternate catalysts were also conducted. From diffusivity experiments, a cation exchange membrane material, P-4010, exhibited an excellent diffusion coefficient, more than two orders of magnitude lower than that of rubber. Ionic resistivity measurements of eight materials showed that microporous rubber had the lowest resistivity. A.R.H.

(AD-A087221; AFIT-LSSR-5-80) Avail: NTIS. HC A05/MF A01. CSCL 15/5

The purpose of this thesis is to examine the possible conversion in the CONUS from JP-4 turbine fuel to JP-8. While many studies have been conducted to analyze the effects of the conversion on aircraft and support systems there has been little work done to analyze the effects on the facilities in which the fuel is stored and transported. This thesis examines the effects of conversion on the fuel bulk storage tanks and on the piping and pumping system used to transport the fuel. Where appropriate, recommendations have been made concerning the modifications necessary to these facilities to counter any detrimental effects associated with the conversion. GRA

A generalized reactor design was presented for a low temperature, coal conversion method, where coal was slurried in an 83 wt % zinc chloride methanol melt and allowed to react at moderate conditions of 275 deg C and 600 psi hydrogen. In the reactor, the slurried melt flowed downward in plug flow on the order of 1 foot per minute through a distance of 15 feet. Liquid mass-transfer studies with the model were undertaken to examine specific effects of zinc chloride in a viscous medium, in order to determine the rate-limiting step in the overall hydrogen absorption rate. The absorption rate can be expressed in terms of a resistance-in-series model. The use of zinc chloride introduces no new effects and the chemical reaction rate of the coal particle is controlling. DOE

REFINING AND UPGRADING OF SYNFUELS FROM COAL AND OIL SHALES BY ADVANCED CATALYTIC PROCESSES. Quarterly Report, Oct. - Dec. 1979
R. F. Sullivan and D. J. Orear. Jan. 1980. 43 p. refs.
(Contract EX-76-C-01-2315)
(FE-2315-48) Avail: NTIS. HC A03/MF A01

Current pilot plant results are presented for processing of H-Coal whole process product derived from Illinois No. 6 coal first, hydrotreating of the whole oil and, second, extinction recycle hydrocracking of the hydrotreated product. The 250F+ portion of severely hydrotreated Illinois H-Coal whole process product meets the jet fuel specifications for aromatics content, smoke, freeze, and flash points and almost meets the current specification for gravity and end point. The yield of 250F+ product is 90.4LV% based on feed. The diesel fuel oxidation stability of 300F+ hydrotreated products is excellent, even without additives. A large batch of low aromatic, denitrified Illinois H-Coal whole process product was prepared for downstream hydrocracking. In this preparation roughly 2100 SCF/bbl of hydrogen was consumed by the oil. The whole product from this hydrotreater was then cracked in an extinction recycle hydrocracker to make a 350F product. In this hydrocracking step, an additional 800 SCF/bbl of hydrogen was consumed by the oil. DOE

PIPELINE GAS FROM COAL: HYDROGENATION (IGT HYDROGASIFICATION PROCESS). Interim Report, 1 Jul.

1977 - 30 Jun. 1978
May 1980 384 p refs
(Contracts EX-76-C-01-2434; EF-77-C-01-2434; E(49-18)-2434; Proj 9000)
(FE-2434-33a; IR-2) Avail: NTIS HC A17/MF A01

Tests were conducted to acquire data with bituminous coal at high carbon conversions and to obtain data at high char conversions with high char throughputs. Tests were conducted to determine whether the major modifications recently incorporated would facilitate optimum operating conditions and clinker-free operation. Tests were conducted to optimize reactor operation by improving char conversion, increasing the temperature in the steam-oxygen gasifier to 1800 F, and continuing to reduce the steam-to-char ratios. Test were initiated to achieve a lower steam-to-char ratio and a significantly lower superficial gas velocity in the steam-oxygen gasifier. DOE

MOLTEN SALT COAL GASIFICATION PROCESS DEVELOPMENT UNIT. Quarterly Technical Progress Report, Jul - Sep. 1979
M. H. Slater 19 Oct. 1979 31 p
(Contract EF-77-C-03-1429)
(SAN-1429-56; QTPR-14) Avail: NTIS HC A03/MF A01

The design construction, and operation of a process development unit (PDU) which will convert 1 ton of coal per hour into low-Btu gas is presented. Details were complete and all parts were fabricated for the melt withdrawal system modifications designed to increase the reliability of the system. The fabrication of pressure-rated gas burners for the melt withdrawal system was initiated. These heaters operate over the entire pressure range of PDU testing; i.e., from one atmosphere through 20 atmospheres. DOE

(Contract W-7405-eng-26)
(ORNL/TM-7346) Avail: NTIS HC A04/MF A01

Health and environmental-effects studies of alternate fossil fuels technologies were conducted. Sets of sample differing in some systematic manner (e.g., coal-, shale-, and petroleum-derived counterparts; processing history; etc.) were brought to the attention of investigators expert in various biological and chemical tests systems. The result is a series of matrix experiments whereby various groups apply a variety of tests to given sets of samples. The matrix program provides a convenient source of useful samples and guidance on sample characteristics and data gaps in exchange for results of the individual investigations. DOE

PITTSBURGH ENERGY TECHNOLOGY CENTER HYDROGASIFICATION PROCESS: CONCEPTUAL COMMERCIAL SCALE PLANT DESIGN
28 Dec. 1979 115 p refs
(Contract DE-AC21-78MC-08484)
(DOE/MC-08484/T1) Avail: NTIS HC A06/MF A01

Hydrogasification pilot plant tests at various H2 coal ratios and coal throughputs or North Dakota lignite, Illinois No. 6 and a Western sub-bituminous coal were reviewed. Additional testing at higher H2 coal ratios confirmed that greater coal throughputs were possible. Conceptual commercial scale plant designs based on the North Dakota lignite and the Illinois No. 6 coal showed total plant investment figures of $1668 MM and $1998 MM for the two coals, respectively. Gas costs based on the Unitity Finance Method of calculation yielded costs ranging from $4.91/MM Btu and $5.26/MM Btu for lignite at $5.00 and $8.00 per ton. Corresponding figures for the Illinois No. 6 coal were gas costs of $6.08 to $6.73 for coal costs of $20 and $30 per ton, respectively. Gas cost sensitivity analyses are performed. Further study of the process is warranted. DOE

A data base to optimize the design of the HYGAS process. Test 83 operations was established and post run inspection was conducted to determine the operating behavior of washed Kentucky coal under process conditions. After smooth, continuous solids transfer could not be established through the 339 line from the high temperature reactor to the steam/oxygen gasifier, the test was terminated. Several holes and a crack found in solids transfer line 339 during the post run inspection were the source of these difficulties. Test 84 was the second test of a new series with Western Kentucky coal, and the objectives were the same as those of Test 83. The reactor operated in a self sustained mode for 215 hours, during which 317 tons of pretreated char were fed to the gasifier. Three steady state periods totaling 83.5 hours, were selected for detailed analysis. Routine maintenance and major turnaround work in preparation for test 85 was started. DOE

COAL GASIFICATION PILOT PLANT SUPPORT STUDIES. Quarterly Report, 1 Apr. - 30 Jun. 1979
Jan. 1980 162 p refs
(Contract ET-78-C-01-2806)
(FE-2806-5) Avail: NTIS HC A08/MF A01

Improving pilot plant operation, achieving expected conversion, and effecting cost savings are discussed. Projects are classified into four tasks as follows: (1) studies of gasification reactions for improving the performance of coal gasification reactors; (2) studies of fluidized bed reactors in coal gasification processes; (3) studies to improve the processing techniques of product and waste gases from coal gasification; and (4) studies to improve methods of feed preparation for coal gasification. Each task is further divided into a number of subtasks dealing with specific aspects of the task. The objectives of the subtasks

and their technical progress during the last quarter (April 1 through June 30, 1979) are presented. DOE

ADVANCED DEVELOPMENT OF A SHORT-RESIDENCE-TIME HYDROGASIFIER. Annual Technical Progress Report
21 Jan. 1980. 153 p. refs.
(Contract ET-78-C-01-3125)
(FE-3125-12) Avail: NTIS. HC A08/MF A01

Relocation and modification of the subscale hydrogasifier test facility to accommodate longer duration testing was accomplished. A joint decision was made to scale the previously planned 1/4-TPH system to a nominal 3/4-TPH system. The required adjustments were primarily in the form of line size changes which were implemented during the installation of the process piping. Additional modifications to the reactor train support structure and handling capability were made to accommodate the larger reactor pressure vessel, having an 11.75 in. inside diameter. Facility modifications are planned to provide capability for simulated recycle gas feed, and provide for more representative sampling for improved material balances. DOE

DESIGN, ENGINEERING AND EVALUATION OF REFRACTORY LINERS FOR SLAGGING GASIFIERS. Quarterly Technical Progress Report, 1 Oct. - 31 Dec. 1979
R. F. Firestone, C. Hales, and M. J. Greaves. Jan. 1980. 27 p. Prepared in cooperation with McKee (Davy) Corp., Cleveland.
(Contract ET-78-C-01-2785)
(IITRI-M-6043-5, QTPR-5) Avail: NTIS. HC A03/MF A01

Temperatures in slagging gasifiers are in the 2500 F to 3300 F range which limits the materials which can be used. In addition the combination of high pressure (up to 1500 psi) with water vapor and the presence of carbon monoxide and hydrogen can present corrosion problems for refractories. Low iron, high alumina refractories are the presently preferred materials for coal gasification plants. The atmospheres and other conditions found in vessels used in coal gasification require the use of dense and insulating high Al_2O_3 refractory shapes and castables. Low SiO_2 and low Fe_2O_3 refractories are necessary to resist steam and CO. In processes that involves molten carbonates or where slag may run down walls, fused cast Al_2O_3 is used to avoid corrosion and erosion. Considerable research is required to establish optimum refractory systems and design methods for slagging coal gasifiers. DOE

RESEARCH AND DEVELOPMENT OF AN ADVANCED PROCESS FOR CONVERSION OF COAL TO SYNTHETIC GASOLINE AND OTHER DISTILLATE MOTOR FUELS. Final Report
D. C. Succop and F. E. Wynne. Mar. 1980. 98 p.
(Contract EX-76-C-01-1800)
(FE-1800-45) Avail: NTIS. HC A05/MF A01

The conversion of coal to synthetic gasoline and other distillate motor fuels, by delayed coking of a coal/petroleum resid slurry with an associated displacement of petroleum residual to the fluid catalytic cracking unit was studied. The cooking process met or exceeded technical and economic predictions. Ambient pressure coking experiments with two different coal slurries demonstrated synergistic increases in C3(+) distillate yield and product quality. Slurry viscosity measurements and heater fouling tests indicated only slightly pseudo-plastic slurry behavior and no unusual pumping resistance of pressure drop in slurry heaters. However, above 814 F rapid coking and heater fouling was experienced. Laboratory hydrogen transfer mechanism studies led to the conclusion that no C-C transfer occurred during coking. The process appears to be that of general H-H scrambling, perhaps promoted by the presence of a metal reactor and/or coal mineral matter functioning as a catalyst. DOE

CHEMISTRY OF LIGNITE LIQUEFACTION. Quarterly Report, Jul. - Sep. 1978
Virgil I. Stenberg, Richard Baltisberger, Kenneth J. Kalbunde, Neil F. Woolsey, Donald Severson, and Max Souby. Oct. 1978. 82 p. refs.
(Contract EX-76-C-01-2211)
(FE-2211-11) Avail: NTIS. HC A05/MF A01

Various results related to the liquefaction of lignite are reported. The structural chemical analysis of oxygen and nitrogen compounds in coal liquids is facilitated by acetylation. Solvent refined lignite and solvent refined coal were hydrogenated using a variety of catalysts. The resulting liquids were fractionated by distillation and examined by mass spectroscopy and nuclear magnetic resonance. Model compounds were reduced using carbon monoxide-water or hydrogen using various catalysts (among others fly ash) in an effort aimed at reducing the severity of coal liquefaction conditions. Electron transfer from thermally activated magnesium oxide powder to nitrobenzene and adsorbed carbon monoxide was also studied. DOE

HYDROGEN PRODUCTION FROM THE SOLAR BASED LASL CADMIUM CYCLE
C. F. V. Mason, M. G. Bowman, and R. G. Behrens. 1980. 6 p. refs. Presented at the 15th Intersoc. Energy Conversion Eng. Conf., Seattle, 18-22 Aug. 1980.
(Contract W-7405-eng-36)
(LA-UR-80-1400; CONF-800806-2) Avail: NTIS. HC A02/MF A01

A thermochemical H_2 cycle is presented where the high temperature step can be powered by a solar heat source. The cycle consists of three reactions: the thermal decomposition of CdO and $CdCO_3$ and the oxidation of Cd using water and CO_2 to form $CdCO_3$ and H_2. Experimental data is presented which indicates that CdO(g) is less stable than previously thought. Kinetic studies of the H_2 producing reaction show both Pd and NH_4Cl to be good catalysts. NH_4Cl, although introducing more possibilities for side reactions, appears to be the better catalyst. Drying studies on $CdCO_3$ show that water retention problems are minimal. DOE

LIQUID FUELS FROM BIOMASS: CATALYSTS AND REACTION CONDITIONS
Manu Seth, Sabri Ergun, Ted Vermeulen, and Roger Djafar. Apr. 1980. 72 p. refs
(Contract W-7405-eng-48)
(LBL-9789) Avail: NTIS. HC A04/MF A01

The use of alpha-phellandrene as a hydrogen transfer agent in wood liquefaction was studied at 200 C. No significant thermally promoted hydrogen transfer occurred under these conditions. Dilute sulfuric acid was added to test the possibility of hydride transfer from alpha-phellandrene to wood. Extensive solvent alkylation of the wood occurred in the presence of up to 2 wt % of sulfuric acid. Addition of palladium as a hydrogenation catalyst resulted in lower overall conversion based on the toluene-insoluble residue obtained, and in lowered levels of solvent alkylation. Several inorganic salts were tested as catalytic additives for wood liquefaction at 250 C in the presence of tetralin as a possible hydrogen donor. No hydrogen transfer from the solvent was observed. Of the additives tested, nickel chloride, sodium carbonate, and ferric chloride resulted in wood conversions greater than or equal to those obtained in the absence of an additive. DOE

N80-31647# Battelle Columbus Labs., Ohio.
ECONOMIC EVALUATION OF THE MIT PROCESS FOR MANUFACTURE OF ETHANOL
D. M. Jenkins and T. S. Reddy. 28 Jun. 1979. 32 p. refs
(Contract ET-78-X-01-3992)
(DSE-3992-T1) Avail: NTIS. HC A03/MF A01

Conceptual process designs were developed for two cases, Case A which was based on the experimental data obtained to date, and Case B which hypothesized the suppression of acid byproducts. Economic estimates may be slightly on the low side since they did not consider feedstock storage nor working capital requirements. The manufacturing costs for Case A appeared to be comparable to those of the manufacture of ethanol from corn. The plant size used for this analysis was 1500 ton/day corn stover. This is considered to be a realistic size. The conceptual plants make about 27 million gal/yr ethanol in Case A and 41 million gal/yr in Case B. DOE

N80-31648# Midwest Research Inst., Golden, Colo. Solar Energy Research Inst.
SURVEY OF BIOMASS GASIFICATION. VOLUME 3: CURRENT TECHNOLOGY AND RESEARCH
Apr. 1980. 302 p. refs. 3 Vol.
(Contract EG-77-C-01-4042)
(SERI/TR-33-239-Vol-3) Avail: NTIS. HC A14/MF A01

This survey of biomass gasification was written to areas of gasification that are ready for commercialization now and those areas in which further research and development will be most productive. Consideration is given to: a survey of gasifier types; a directory of current manufacturers of gasifiers and gasifier development programs; and a sampling of gasification research and development programs and their unique features. Air gasification for the conversion of existing gas/oil boiler systems to biomass feedstocks is compared with the price of installing new biomass combustion equipment. Chapter 12 treats gas conditioning as a necessary adjunct to all but close-coupled gasifiers, in which the product is promptly burned. Synthesis gas processes for conversion to methanol, ammonia, gasoline, or methane are evaluated technically and economically. DOE

N80-31649# Dynatech R/D Co., Cambridge, Mass.
PEAT BIOGASIFICATION DEVELOPMENT PROGRAM
Quarterly Progress Report, 1 Oct. - 31 Dec. 1979
1979. 28 p. refs
(Contract DE-AC01-79ET-14696)
(DOE/ET/14696-T1) Avail: NTIS. HC A03/MF A01

The effects of different alkalis, temperatures, and oxygen partial pressures on the solubility of peat organic material were determined. Multi-stage pretreatment was investigated by pretreating the effluent from previous NaOH pretreatment cooks. Bacteria from three inoculation sources are being grown anaerobically on a growth medium containing a standard nutrient medium and one of twelve aromatic compounds. The concentration of aromatic compound is increased gradually to acclimate the bacteria to compounds which may result from peat pretreatment. A preliminary design for a full scale peat biogasification plant developed. The plant is designed to produce 75 millions SCFD of pipeline quality methane. Major segments of the plant are concerned with the transport, handling, pretreatment, and fermenting of the aqueous peat slurry, and the purification of the resulting methane gas. R.K.G.

N80-31650# Solar Turbines International, San Diego, Calif. Applied Sciences Div.
AUTOMOTIVE STORAGE OF HYDROGEN USING MODIFIED MAGNESIUM HYDRIDES. Final Report, Mar. 1976 - Mar. 1978
D. A. Rohy, J. F. Nachman, A. N. Hammer, and T. E. Duffy. 1979. 82 p. refs
(Contract EY-76-C-03-1167)
(SAN-1167-1) Avail: NTIS. HC A05/MF A01

Due to the relative stability of MgH2, modifications of the MgMH/sub x/ (M = metal ion) were made to decrease the dissociation temperature while retaining high hydrogen capacity. This parameter is crucial since vehicle exhaust will supply the thermal energy to dissociate the hydride in an automobile. Hydride dissociation temperature (T/sub D/) should be 200 C to ensure uninterrupted fuel flow at all driving and idle conditions. Alloys comprised of Mg, Cu and Ni came closest to meeting the dissociation temperature goal. Dissociation temperature, hydrogen capacity and material cost are reported for each alloy tested in this program. DOE

N80-31651# General Atomic Co., San Diego, Calif.
HYDROGEN PRODUCTION BY THE GA SULFUR-IODINE PROCESS
G. E. Besenbruch, K. H. McCorkle, J. H. Norman, D. R. OKeefe, J. R. Schuster, P. W. Trester, and M. Yoshimoto (Idemitsu Kosan Co., Ltd., Tokyo). May 1980. 17 p. Presented at the 3d World Hydrogen Energy Conf., Tokyo, 23 Jun. 1980
(Contract DE-AC02-80ET-26225; Proj. 3260)
(GA-A-15777-Rev; CONF-800616-6-Rev) Avail: NTIS. HC A02/MF A01

The progress of the overall total development effort of the General Atomic (GA) sulfur-iodine thermochemical water splitting cycle over the last two years is summarized. The major accomplishments were significant improvements in the chemistry of the process; development, review, and revision of an engineering flow sheet, resulting in a thermal process efficiency of 47%; screening, identification, and testing of potential materials-of-construction for the corrosive process fluids; small-scale demonstration of the cycle in a closed loop under recycle conditions; installation of bench-scale equipment and demonstration of parts of the processing in this system; and development of a conceptual, preliminary flowsheet for the GA sulfur-iodine cycle driven by solar energy. Thermochemical water splitting by the sulfur-iodine cycle is a feasible process. Thermal efficiencies in the range of 50% are achievable. DOE

N80-31652# California Univ., Livermore. Lawrence Livermore Lab.
GASIFICATION OF COAL WITH SOLAR ENERGY
William R. Aiman and David W. Gregg. Jun. 1980. 28 p. refs. Presented at 88th Natl. Meeting of the AIChE Conf., Philadelphia, 8-12 Jun. 1980
(Contract W-7405-eng-48)
(UCRL-84458; CONF-800610-8) Avail: NTIS. HC A03/MF A01

Coal reactors are adaptable to solar-energy facilities. Two advantages make solar coal gasification attractive economically: synthesis gas (a nitrogen-free product) can be produced without pure oxygen and only half as much coal is required. Solar energy is available 8 hours per day; therefore, post-gasification processing units must be oversized and equipped for rapid startup and shutdown. This disadvantage is balanced by the 50 percent

reduction cost for coal and coal pretreatment equipment and in the sulfur content of the product gas. A moving bed reactor, a fluidized bed reactor, a closed-loop, heat-transfer-fluid reactor, and an open-loop, heat-transfer-fluid reactor are discussed. The expected performance of a moving-bed gasifier yields products with an energy content 25 percent higher than the initial coal compared to 17 percent higher for a fixed-bed gasifier. DOE

N80-31653# Gulf Research and Development Co., Pittsburgh, Pa. Chemical and Minerals Div.
UNDERGROUND GASIFICATION FOR STEEPLY DIPPING COAL BEDS. RAWLINS TEST NO. 1
1980 29 p Prepared in cooperation with TRW Energy Systems Planning Div., McLean, Va.
(SAN-13108-35; Rept-624RL106) Avail: NTIS HC A03/MF A01

The first US field test of gasification for a steeply dipping coal seam was recently completed. A 23 ft thick coal bed dipping at 63 was used to test the feasibility of using underground coal gasification techniques to extract energy from steeply dipping coal beds. The coal was ignited at a vertical depth of 400 ft utilizing a directionally drilled process well pair. The test was designed to investigate the effects of water/air injection, steam/air injection, and steam/oxygen injection. According to plan approximately 1200 tons of coal were utilized during the test. The heating value of the product gas initially climbed to approximately 180 Btu/SCF and as expected, gradually declined to the 120 to 130 Btu/SCF range. A five day steam/oxygen blown experiment was conducted subsequent to the steam/air phase. As expected steam/oxygen injection easily doubled the product gas heating value to the 240 to 260 Btu/SCF range. DOE

INSTRUMENTATION AND PROCESS CONTROL DEVELOPMENT FOR IN SITU COAL GASIFICATION Quarterly Report, 1 Dec. 1979 - 31 Mar. 1980
Robert E. Glass, ed. Jun. 1980 26 p refs
(Contract DE-AC04-76DP-00789)
(SAND-80-1025) Avail: NTIS HC A03/MF A01

The Hanna 4B thermal data was analyzed with respect to the fundamental controlling mechanisms in in situ coal gasification. Two of the concerns center on: (1) the behavior of the reservoir with respect to varying permeability zones and (2) mechanisms of initial cavity growth during forward gasification. In an attempt to deal with these concerns, two specific areas of interest are being pursued: (1) a reservoir model with variable permeability; and (2) a structural model of the coal seam using the finite element program ADINA. While these models remain in the development stage, initial results indicate that the approaches being used will yield useful results when completed. DOE

N80-31656# Brigham Young Univ., Provo, Utah. Dept. of Chemical Engineering.
MIXING AND GASIFICATION OF COAL IN ENTRAINED FLOW SYSTEMS. VOLUME 2: USER'S MANUAL FOR A COMPUTER PROGRAM FOR 1-DIMENSIONAL COAL COMBUSTION OR GASIFICATION (1-DICOG) Final Report
L. Douglas Smoot and Philip J. Smith 31 Aug. 1979 215 p refs Sponsored in part by Electric Power Research Inst.
(Contract EF-77-S-01-2666)
(FE-2666-F-Vol-2) Avail: NTIS HC A10/MF A01

A one dimensional, steady state model describing pulverized coal combustion and gasification is presented. Emphasis was placed on the description of the coal reaction processes and gas particle interactions, one dimensional fluid mechanics and particle-particle, particle-wall radiation. Moisture vaporization from the coal particles, multistep coal pyrolysis, and heterogeneous char oxidation by multiple oxidizers were modeled for polydispersed coal particle size or types. Although the formation was one dimensional, mixing rates of primary and secondary streams and recirculation within the reactor were accounted for as specified input. The resulting model predicted thermal, chemical and physical histories for both the gaseous and particle phases. Gas-particle interactions accounted for appropriate diffusion and kinetic rates. Gas phase reactions were assumed to be in local chemical equilibrium. The solution technique used predictor-corrector methods for integration of the ordinary nonlinear differential equations which were coupled with a number of auxiliary algebraic equations. DOE

RECENT COAL-OIL MIXTURE COMBUSTION TESTS AT PETC
Y. S. Pan, G. T. Bellas, M. P. Mathur, J. I. Joubert, and D. Bienstock Jun. 1980 38 p refs
(DOE/PETC-TR-80/5) Avail: NTIS HC A03/MF A01

Coal-oil mixture combustion tests with coal concentration of up to 50 percent were successfully conducted in a 700 horsepower watertube boiler designed originally for oil firing. A 500 h duration test with coal-oil mixture containing 40 percent coal was completed. No derating of the boiler occurred, carbon-conversion efficiencies were above 98 percent, and boiler efficiencies were the same as when firing No. 6 fuel oil. All combustion tests were conducted with No. 6 fuel oil mixed with Pittsburgh Seam coal pulverized to a coal particle size of 90 percent minus 200 mesh. Test results relating to boiler performance, pollutant emissions, ash deposition, and corrosion, erosion, and fouling behavior are presented. DOE

TAGGANTS IN EXPLOSIVES
Apr. 1980 270 p refs
(PB80-192719; OTA-ISC-116; LC-80-600070) Avail: NTIS HC A12/MF A01 CSCL 19A

Issues surrounding a proposal to require that commercial explosives and gunpowders carry 'identification taggants' and/or 'detection taggants' as an aid to law enforcement are examined. Four major questions are addressed: (1) it reviews the program to develop such taggants and addresses the question of whether taggants would work; (2) it assesses whether taggants might create a safety hazard; (3) the cost of a taggant program is calculated, and (4) the likely value of such a program to law enforcement is assessed. SEISMIC STABILITY OF BLOCK STRUCTURES Ph.D. Thesis
Richard Luttrell Furgerson 1980 120 p
Avail: Univ. Microfilms Order No. 8018779

When studying earthquake damage reinforced concrete or concrete masonry structures, it was observed that the mechanisms of failure are often simple ones; the vulnerable connections between structural components degrade under stress allowing the major substructures to separate, lose support, and topple. This type of failure is said to result from kinetic instability. For the purpose of analysis, structures with degraded connections are modeled as assemblages of rigid substructures with only friction acting between them. A statistical analysis of data from experiments on concrete masonry members gives an asymptotic Coulomb law describing this friction which is included in the model equations of motion. The equations of motion for a simple shear wall floor slab assemblage subjected to simulated earthquake loading are solved numerically. The result shows a surprisingly well defined relation between the maximum amplitude of excitation, the natural frequency of the structure, and a numerically valued hazard from kinetic instability. When presented graphically, the result allows a designer to assess hazard from kinetic structural instability by inspection. Dissert. Abstr.

DEVELOPMENT AND EVALUATION OF THE EPOXY REPAIR METHOD FOR REINFORCED CONCRETE FLEXURAL MEMBERS Ph.D. Thesis
Sak Kongsuwan 1980 232 p
Avail: Univ. Microfilms Order No. 8021117

Repair procedures were developed based on both the evaluation of the past epoxy repair methods and the pilot study in this research. Fifteen reinforced concrete beams were failed in flexure to produce failures ranging from light to heavily damaged. The damaged beams were repaired using the methods developed and tested. It was concluded that it is possible to repair failed reinforced concrete beams (particularly in flexure) by using the developed repair method. The loading capacity of a repaired beam was verified both experimentally and theoretically as being restorable to approximately the same level as of the original beam regardless of the type and degree of failure. The durability of repaired beams, subjected to cycle loading, is somewhat less than the durability of the original beams. The decrease of durability of the repaired beams is attributed by the softening of steel, the amount of epoxy present in the concrete, and the presence of microcracks. Repaired beams which were failed by one cycle loading were found to behave identically to the original undamaged beams. Dissert. Abstr.

US COAST GUARD LIGHTWEIGHT FIRE-FIGHTING MODULE Final Report
15 May 1980 117 p
(Contract NAS8-31977)
(NASA-CR-161552; NREC-1296-1) Avail: NTIS HC A06/MF A01 CSCL 13B

The U.S. Coast Guard Fire-fighting Module developed for the purpose of fighting fires in harbors and on ships is described. The module can be lifted by a dockside crane or helicopter and placed on the deck of a patrol boat or cutter for transportation to the scene of the fire. At the fire the module can be set up and put in operation by a crew of two in approximately fifteen minutes. Once in operation the module will deliver water to two fire nozzles at a pressure of 150 psi and a flow rate of 2000 gpm. Sufficient fuel is carried in the module for three hours of continuous operation. A record of the development of the fire fighting module is also presented. L.F.M.

UNDISTURBED SAMPLING AND CYCLIC LOAD TESTING OF SANDS

Sukhmander Singh, H. Bolton Seed, and Clarence K. Chan. Dec. 1979. 147 p. refs.

(Contracts DACW39-77-M-0859; DACW39-78-M-2016)

(AD-A087298; UCB/EERC-79/33) Avail: NTIS HC A07/MF A01 CSCL 08/13

The influence of sampling disturbance on the cyclic strength characteristics of sands was evaluated. Sampling types studied include block sampling by advance trimming and sampling, push-tube sampling and a freezing technique. It is shown that block sampling caused minimal density changes and provides a very high quality sample. The push-tube sampling method caused density changes and the less resistant structure of virgin soil deposits underwent pronounced density changes. It is further indicated that if the confining pressure is maintained and drainage is not impeded the volume changes during freezing are insignificant and the cyclic strength characteristics are not altered. It is concluded that the influence of disturbance due to sampling handling requires careful interpretation in evaluating the significance of cyclic load test data. R.K.G.

GRAVITATIONAL CONVECTION OF SUBCOOLED He 1 AND THE TRANSITION INTO SUPERFLUID He 2 AT ATMOSPHERIC PRESSURE

S. Caspi. Jun. 1980. 7 p. refs. Presented at the 8th Intern. Cryogenic Eng. Conf., Genoa, 3-6 Jun. 1980

(Contract W-7405-eng-48)

(LBL-10928; CONF-800631-2) Avail: NTIS HC A02/MF A01

The propagation velocity of the He 2-He 1 interface at 1 atm was measured in a large experimental cryostat. During cooldown, He 2 at the lambda temperature propagates up and down in a gravitational field with an interface velocity V/sub b/ which depends on the He 1 temperature T/sub infinity/. For T/sub infinity/ = 4K, V/sub b/ = 0.1 mm/sec and for T/sub infinity/ = 2.2 K, V/sub B/ = 2 mm/sec. During warm up, He-1 propagated with an interface velocity V/sub b/ > 30 mm/sec that was measured as low bound only. A mathematical model gives a temperature dependent interface thickness in the range 0.0002 approximately equals delta < 0.4 mm. DOE

MEASUREMENT AND CORRELATION ANALYSIS PLAN FOR CONCRETE TIE AND FASTENER PERFORMANCE ANALYSIS Interim Report, Oct. - Dec. 1979

F. E. Dean, H. D. Harrison, R. H. Prause, E. T. Selig, and D. McMahon. Nov. 1979. 206 p. refs. Prepared in cooperation with Massachusetts Univ., Amherst

(Contract DOT-FR-8164)

(PB80-183882; FRA/ORD-79/51) Avail: NTIS HC A10/MF A01 CSCL 13F

An experiment plan and a correlation methodology through which the long term performance of concrete tie track will be evaluated are presented. The experiment plan defines test segments, instrumentation, and measurement procedures for a comprehensive evaluation, over a two year period, of three concrete tie test sections and one wood tie control section, all of which are installed on revenue service track. This evaluation is to be correlated with similar track performance data from the Faculty for Accelerated Service Testing (FAST). Formats for FAST data to be requested from the Transportation Test Center are summarized. Finally, the methods of direct comparison, regression and analytical simulation, by which track performance at FAST and on the revenue service will be compared, are defined. GRA

SEISMIC RESPONSE OF LIGHT ATTACHMENTS TO

BUILDINGS
Roberto Villaverde and Nathan M. Newmark Feb. 1980 442 p refs Sponsored in part by Consejo Nacional de Ciencia y Tecnologia
(Grants NSF ENV-75-08456; NSF ENV-77-07190)
(PB80-1185028; UILU-ENG-80-7006;
Structural-Research-Ser-469; NSF/RA-800035) Avail: NTIS HC A19/MF A01 CSCL 13M

An approximate simple method for predicting the response of secondary systems attached to buildings subjected to earthquakes is presented. Secondary systems comprise a variety of attachments to the floors and walls of large and complex buildings which because of their different characteristic and functions, are not considered part of the structures which support them. The method is based on the premise that interaction between a primary and secondary system can be accounted for by analyzing the interconnected system constructed by such primary and secondary system. The response spectrum method is used to determine the maximum response of the assembled system, and analytical expressions are derived for each step. Comparative studies indicate that this approximate procedure provides a convenient alternative method for the rational seismic design of secondary systems. GRA

AN ANALYSIS OF BURST COMMUNICATION IN TIME DIVISION MULTIPLE ACCESS SYSTEMS Ph.D. Thesis
Christopher Hughes Morton 1980 516 p
Avail: Univ. Microfilms Order No. 8018588

Burst communication performance is quantified through analysis of three fundamental, interrelated aspects of the problem: proper carrier synchronization structures for the burst mode and their statistical performance, the associated structure and error probability performance of the detection circuitry, and the definition of useful measures of burst communication quality. MAP interval estimation theory is used to obtain generalized carrier estimation structures for digitally modulated signals corrupted by passage through a channel exhibiting both linear filtering and nonlinear distortion as well as the presence of Gaussian noise. For M-ary PSK signal sets, special attention is paid to low and high SNR approximations of the optimum structure, their use in the burst mode, and their relationship to supressed carrier tracking loops currently in practical use. Using the method of weighted residuals (Generalized Galerkin Method), an approximate theory of generating both acquisition and steady-state statistics of candidate synchronizers containing N-pole loop filters, is set forth. Dissert. Abstr.

DETECTION OF WEAK SIGNALS IN NON-GAUSSIAN NOISE Ph.D. Thesis
Ning Hsing Lu 1980 222 p
Avail: Univ. Microfilms Order No. 8019355

A class of detectors to test for the presence or absence of weak signals in additive non-Gaussian noise is considered. A locally optimum detector (LOD), is derived in the Neyman-Pearson sense as a model of generalized likelihood ratio under a condition such that the signal is weak compared to the additive noise perturbation. The LOD is comprised of a zero-memory nonlinearity (ZMNL) followed by a matched filter, matched to the signal, or its correlator equivalent. The asymptotic detection performance of the LOD under non-Gaussian, Gaussian, and Cauchy conditions are derived and compared. An adaptive threshold detector (ATD) for the detection of weak signals in additive noise of unknown power level is next discussed. The ATD consists of a LOD, a noise level estimator, and a decision device. The detection threshold is made adaptive according to the information provided by the noise-level estimator in order to keep a fixed false alarm probability. Finally, a suboptimum detector (SOD) and an adaptive detector are proposed for the detection of weak signals in non-Gaussian noise. In contrast to the LOD, the SOD is relatively easy to implement and is shown to perform well for a wide range of underlying noise distributions. Dissert. Abstr.

APPLICATION OF THE CHIRPED Z-TRANSFORM TO PROCESSING FREQUENCY HOPPING SPREAD SPECTRUM SIGNALS Ph.D. Thesis
Sultan Mahmood 1980 175 p
Avail: Univ. Microfilms Order No. 8019014

Charge coupled device/chirped Z transform (CCD/CZT) oriented detection schemes for a frequency-hopped spread spectrum (FHSS) signal in the presence of white Gaussian noise and radio frequency interference are derived. For the case when an FHSS signal is corrupted by white Gaussian noise, the frequency-hopped complex exponents representing a binary symbol are assumed to have partial coherence. The optimum receiver structures are derived from the likelihood ratio for the received waveform samples in the frequency domain. The FH signal itself is divided into time and frequency chips. Signal processing proceeds on a time chip basis. The signal from a time chip is sampled, transformed via the CZT to yield the spectrum in various frequency chips and then correlation is performed. Expressions are derived for the probability of correct detection (P sub D) for both single and double threshold detectors when the FHSS signal is degraded by white Gaussian noise alone and by noise together with jamming. Performance of the detectors is shown in terms of plots of P sub D against various parameters. Dissert. Abstr.

N80-31681 Auburn Univ., Ala.
AN ANALYSIS OF RADOME-INDUCED RADAR POINTING ERROR Ph.D. Thesis
David Gilbert Burks 1980 205 p
Avail: Univ. Microfilms Order No. 8015412

The effect of a tangent ogive radome on the pointing accuracy of a monopulse radar that employs an aperture antenna is analyzed. The radar is assumed to be operating in the receive mode and the incident fields at the antenna are found by a ray tracing procedure. Rays that enter the antenna aperture by direct transmission through the radome and by single reflection from the radome interior are considered. The theory of monopulse radar and the transmission and reflection properties of planar dielectric slabs are presented first to form a background for the radome analysis. Two orthogonal polarization states which can be combined to produce an arbitrarily polarized incident field are considered. The antenna can be scanned in two angular directions and radar pointing error is presented for both these angles as a function of antenna scan angle and polarization of the incident field. A comparison of two different radome wall designs is made in order to both illustrate the analytical techniques and to show the engineering tradeoffs in radome design. Dissert. Abstr.

CRYSTAL PALACE BAND 2 TESTS: COMPARISON OF TRANSMITTED POLARIZATIONS
J. H. Causebrook Jul. 1980 11 p refs
(BBC-RD-1980/7) Avail: BBC, Kingswood Warren, Tadsworth, Surrey, Engl.

A transmitter was tested, to examine the relative merits of different polarizations for Band 2 fm radio broadcasts. The tests allowed for reception at roof top level, in cars, and on portables.

The relative amounts of multi-path were assessed. It is concluded that in heavily built up areas, as well as in other types of area, there is a significant advantage for car radios and portables in transmitting a vertical component. If this is added to a present horizontally polarized transmission with equal power (3 dB more transmitter power) the effective increase in signal for these receivers is 5 to 7 dB, while stereo reception on fixed horizontal aerials is not significantly affected. R.C.T.

VIDEO DISTRIBUTION SYSTEM COST MODEL Final Report
I. Gershkoff, J. Kent Haspert, and B. Morgenstern. Jul. 1980. 225 p.
(Contract NAS5-25401)
(NASA-CR-160020; Publ-1358-01-3-2238) Avail: NTIS HC A10/MF A01 CSCL 17B

A cost model that can be used to systematically identify the costs of procuring and operating satellite linked communications systems is described. The user defines a network configuration by specifying the location of each participating site, the interconnection requirements, and the transmission paths available for the uplink (studio to satellite), downlink (satellite to audience), and voice talkback (between audience and studio) segments of the network. The model uses this information to calculate the least expensive signal distribution path for each participating site. Cost estimates are broken downy by capital, installation, lease, operations and maintenance. The design of the model permits flexibility in specifying network and cost structure. T.M.

The Moving Target Detector (MTD), developed by MIT's Lincoln Lab., under contract to the Federal Aviation Administration (FAA), was designed as an improved video processor for use with the Airport Surveillance Radars within the Automated Radar Terminal System (ARTS) 3 automated Air Traffic Control (ATC) system. This device interfaces between the analog radar system and the digital automatic tracking system to provide automatic target detection and false alarm regulation. In addition to range, bearing, and amplitude data, the MTD provides Doppler information on detected targets. This data is in the form of unconsolidated reports that are to be centroided and tracked to provide a primary radar data base for ATC functions. In order to evaluate the potential benefits of this MTD data on the ATC tracking operation, the present study was conducted using experimental data gathered by the FAA and Lincoln Laboratory with an FPS-18 radar at the National Aviation Facilities Engineering Center during the summer of 1975. The principal investigations focus on: development of a centroid algorithm for extracting significant target features; and using these features within the subsequent tracking function. GRA

An analytical formulation, based on the method of moments (MM) is described for solving electromagnetic problems associated with finite-length cylinders of arbitrary cross section, denoted in this report as bodies of translation (BOT). This class of bodies can be used to model structures with noncircular cross sections such as wings, fins, and aircraft fuselages. The theoretical development parallels in part the MM formulation developed earlier by Mautz and Harrington for bodies of revolution (BOR). Like the latter approach, a modal expansion is used to describe the unknown surface currents on the BOT. The present analysis has been developed to treat the far-field radiation and scattering from a BOT excited by active antennas or illuminated by a plane wave of arbitrary polarization and angle of incidence. In addition, the electric and magnetic near-field components are determined in the vicinity of active and passive apertures (slots). Using the Schelkunoff equivalence theorem, the aperture-coupled fields within a BOT are also obtained. The formulation has been implemented by a computer algorithm and validated using accepted data in the literature. GRA

RADIATION AND SCATTERING FROM BODIES OF TRANSLATION. VOLUME 2: USER'S MANUAL, COMPUTER PROGRAM DOCUMENTATION Final Technical Report, 26 Sep. 1977 - 26 Jul. 1979
L. N. Medgyesi-Mitschang and J. M. Putnam. Griffiss AFB, N.Y. RADC. Apr. 1980. 126 p. 3 Vol.
(Contract F30602-77-C-0233; AF Proj. 2338)
(AD-A087403; RADC-TR-80-142-Vol-2) Avail: NTIS HC A07/MF A01 CSCL 20/14

A hierarchy of computer programs implementing the method of moments for bodies of translation (MM/BOT) is described. The algorithm treats the far-field radiation and scattering from finite-length open cylinders of arbitrary cross section as well as the near fields and aperture-coupled fields for rectangular apertures on such bodies. The theoretical development underlying the algorithm is described in Volume 1. The structure of the computer algorithm is such that no a priori knowledge of the method of moments technique or detailed FORTRAN experience are

presupposed for the user. A set of carefully drawn example problems illustrates all the options of the algorithm. For more detailed understanding of the workings of the codes, special cross referencing to the equations in Volume 1 is provided. For additional clarity, comment statements are liberally interspersed in the code listings, summarized in the present volume. GRA

EQUATORIAL SCINTILLATION OF SATELLITE SIGNALS AT UHF AND L-BAND FOR TWO DIFFERENT ELEVATION ANGLES Technical Report, 1 Jan. 1979 - May 1980
M. R. Paulson 1 May 1980 185 p refs
(RR0320801)
(AD-A087404; NOSC/TR-543) Avail: NTIS
HC A09/MF A01 CSCL 20/14

An investigation of the equatorial scintillation of satellite signals at uhf and L-band for 10 and 50 degree elevation angles is reported. Diurnal and seasonal variations of scintillation, as well as solar cycle dependence, are given. The occurrence and intensity of scintillations are compared for the two frequencies and for the two elevation angles. A number of fade duration distributions for fades greater than 6 and greater than 12 dB below the undisturbed signal are shown for each frequency and each satellite. A periodicity in the occurrence of scintillation is reported and is attributed to the gravitation field of the Moon. It is proposed that the Moon's gravity affects the occurrence and intensity of equatorial scintillation by modulating the velocity of the zonal winds at ionospheric heights. GRA

HC A03/MF A01 CSCL 17/9

Recently there has been much interest expressed to determine the ability of millimeter wave radar to perform target acquisition during degraded visibility conditions. In this regard, one of the primary issues of concern has been the potential of high-explosive artillery barrages to obscure the battlefield from millimeter wave radar systems. To address this issue 95 GHz millimeter wave radar measurements were conducted during the Dusty Infrared Test 2 (DIRT 2). This test was held at White Sands Missile Range, NM, 18-28 July 1979. Millimeter wave transmission and backscatter measurements were performed during singular live firings and static detonations of 155 mm and 105 mm high-explosive artillery rounds in addition to static detonations of C-4 explosives. A brief description of the millimeter wave portion of the test and instrumentation is given. The data along with some preliminary conclusions are presented. GRA

ASSESSMENT OF FREQUENCY SELECTIVE FADING ON DCS TRANSMISSION SYSTEM PERFORMANCE.
David R. Smith and John L. Osterholz Aug. 1979 56 p refs
(AD-A087794; AD-E100356; DCEC-EP-5-79; Rept-1) Avail: NTIS HC A04/MF A01 CSCL 17/2

Recent reassessments of digital LOS transmission systems indicate that transmission is affected by more than power fading alone. Tests showed that extensive inband amplitude and phase distortion occur during even relatively shallow fades. To facilitate the study of these phenomena, a hybrid computer simulation of the AN/FRC-DCS Digital Radio was developed, and is described in this EP. GRA

HC A04/MF A01 CSCL 17/2

Several proposed routing algorithms for store and forward communication networks, including one currently in operation in the ARPANET, route messages along shortest paths computed by using some set of link lengths. When these lengths depend on current traffic conditions as they must in an adaptive algorithm, dynamic behavior questions such as stability convergence, and speed of convergence are of interest. This paper is the first attempt to analyze systematically these issues. It is shown that minimum queuing delay path algorithms tend to exhibit violent oscillatory behavior in the absence of a damping mechanism. The oscillations can be damped by means of several types of schemes, two of which are analyzed in this paper. In the first scheme a constant bias is added to the queuing delay

thereby providing a preference towards paths with a small number of links. In the second scheme the effects of several past routings are averaged as, for example, when the link lengths are computed and communicated asynchronously throughout the network. GRA

PSEUDONOISE SPREAD-SPRETRUM SYSTEMS FOR MILITARY COMMUNICATIONS
Don J. Torrieri Dec. 1979 27 p refs
(DA Proj. 1S2-63749-D-462)
(AD-A087701; CM/CCM-79-9) Avail: NTIS HC A03/MF A01 CSCL 17/2

The basic characteristics of various pseudonoise spread-spectrum systems are discussed with emphasis on direct-sequence modulation. A necessary condition is derived for the concealment of a pseudonoise waveform from detection. The condition establishes a lower bound for the pseudonoise code length. The bit error probability in the presence of various types of interference is determined. It is shown that if the total bandwidth and the word duration are fixed, the potential improvement in performance due to error-correction coding is partially counterbalanced by the resulting decrease in processing gain. Methods of reducing the mutual interference in a network of pseudonoise systems are examined. Jamming strategies, acquisition techniques, and hybrid frequency-hopping pseudonoise systems are discussed. Differences in the error rate performance between frequency-hopping systems and pseudonoise systems are illustrated. GRA

EVALUATION OF LOSSES IN MICROSTRIP ANTENNA MATERIALS Interim Report
Y. T. Lo, W. F. Richards, and J. E. Brewer Griffiss AFB, N.Y. RADC Apr. 1980 60 p refs
(Contract F19628-78-C-0025; AF Proj. 2305)
(AD-A087476; RADC-TR-80-85; IR-3) Avail: NTIS HC A04/MF A01 CSCL 09/5

A microstrip antenna consists of a conducting patch etched on a dielectric substrate over a ground plane. To evaluate the antenna efficiency, one must know the losses in the material. The dielectric loss is specified by its loss tangent and the copper by its conductivity (or equivalently by its skin-depth at a given frequency). Usually, they can be determined separately with well-known experimental procedures. However, for the copper-cladded material used in microstrip antennas, the surfaces of both the dielectric slab and copper (20) plates are deliberately roughened and filled with bonding agent in-between for mechanical strength. In this case, the separate measurements for the two materials become meaningless. Many measurements were conducted in this manner, and in most cases good consistent results were obtained. The loss parameters so determined resulted in theoretically computed antenna impedance characteristics in nearly perfect agreement with the measured results. However, the inconsistency in a few other cases suggests that there may be a significant amount of inhomogeneity in the manufacturing process in the material from one part to the other, or from batch to batch. A THEORETICAL STUDY OF DIELECTRIC-FILLED EDGE-SLOT ANTENNAS Final Report, 1 Jun. 1979 - 31 May 1980
Dipak L. Sengupta Jul. 1980 7 p refs
(Contract DAAG29-79-C-0096)
(AD-A087482; ARO-14808.4-EL) Avail: NTIS HC A02/MF A01 CSCL 09/5

A theory has been developed for the dielectric filled edge slot (DFES) antennas. It clearly brings out the effects of various parameters on the performance of the antenna, and can be used for the design of such antennas under a variety of conditions. In addition to the theory of DFES antennas, the following accomplishments were realized: (a) the equivalent circuit of DFES antennas and (b) the equivalent parameters for the tuning posts in a radial waveguide. The techniques used and the results obtained may be applied to other antennas, e.g., to probe-fed patch antennas tuned by metallic posts. GRA

PERFORMANCE CHARACTERISTICS OF LEAKY COAXIAL CABLES Final Technical Report, Nov. 1977 - Jun. 1979
James L. Mason Griffiss AFB, N.Y. RADC Apr. 1980 171 p refs
(Contract F19628-77-C-0249; AF Proj. 4600)
(AD-A087475; RADC-TR-79-340) Avail: NTIS HC A08/MF A01 CSCL 17/9

This work deals with guided radar and reports on the experiments and analysis that were performed to obtain information on the function of leaky coaxial cables used as radio frequency intrusion sensors. Four subjects were investigated: (1) environmental effects on the leaky coaxial cable and the guided radar system, (2) use of Doppler shift caused by an intruder to determine the velocity and direction of the intruder, (3) target identification, classification and signature, and (4) a single leaky coaxial cable intrusion detection system. The most important environmental factor was moisture, either rain or snow. Results have demonstrated that the velocity of a target moving longitudinally between the leaky cable sensors can be measured, based on the Doppler shift in the return signal. Rudimentary target classification has been demonstrated based on a defined target signature--the log-magnitude of the Fourier transform of the target vector. A single cable intrusion detection system was investigated which incorporated a modulation technique which allowed the intruder to be located. GRA

HIGH RESOLUTION DIGITAL RADAR IMAGING OF ROTATING OBJECTS Ph.D. Thesis
Yeh-Hua Peter Chuan Jun. 1980 269 p refs
(Contract F33615-76-C-1203; DARPA Order 3119)
(AD-A087510; USCIPI-970) Avail: NTIS HC A12/MF A01 CSCL 17/9

This dissertation is devoted to the imaging aspect of the problem of obtaining high resolution images of practical radar targets with digital processing techniques. The motion compensation aspect of the problem is also briefly described. A multi-frequency stepped (MFS) radar is assumed and the Fourier transform relationship between the data (dimensioned in aspect angle and signal frequency) and the target reflectivity function is derived in both 2-D and 3-D forms. Assuming that the data

is available for 360 deg aspect angle and using wideband radar, a coherent digital processing method is developed which will give the best possible resolution. Such a situation occurs when the target makes a complete turn. It is found that for such an imaging system the resolution is inversely proportional to the mean carrier frequency if such frequency is large compared to the signal bandwidth. In the case when the data is undersampled in range or aspect angle or both, a modified coherent digital signal processing technique is described that will get around such difficulty. It is found that the modified processing method gives poorer resolution but is better than either the mixed processing method or the incoherent processing method. The latter two processing techniques are also described in this dissertation. Experimental results are also presented and problems with real targets such as shadowing, glint, and scintillation are discussed. GRA

WAVE PROPAGATION IN A dc SUPERCONDUCTING CABLE. PART 1: ANALYSIS
Pritindra Chowdhuri and Mary-Anne Mahaffy 1980 9 p refs Presented at the IEEE PES Summer Meeting, Minneapolis, Jul. 1980
(Contract W-7405-eng-36)
(LA-UR-80-125; CONF-800722-1) Avail: NTIS HC A02/MF A01

A dc superconducting cable design consisting of four concentric metallic cylinders, of which two carry the load current and two comprise the cryogenic enclosure, is considered. When a transient voltage is impressed across such a cable, the major dielectric may not be fully stressed to its design value, and unwanted voltage stresses may develop across other parts of the cable. The surge voltage propagation characteristics of a four conductor dc superconducting cable for a step function input voltage is analyzed. This analysis, although mainly directed to superconducting cables, is also applicable to other multiconductor transmission lines. DOE

WAVE PROPAGATION IN A dc SUPERCONDUCTING CABLE. PART 2: PARAMETRIC EFFECTS
P. Chowdhuri and M. Mahaffy 1980 9 p refs Presented at IEEE PES Summer Meeting, Minneapolis, Jul. 1980
(Contract W-7405-eng-36)
(LA-UR-80-126; CONF-800722-2) Avail: NTIS HC A02/MF A01

Wave propagation in several designs, of dc superconducting cables are studied. The dc conventional cables are also included for the purpose of comparison. For a multiconductor cable system, undesirable transient voltages may develop across parts that are not designed to withstand high voltages. The effects of several parameters such as voltage rating, number of conductors, conductor resistances, Earth resistivity, terminal grounding resistances of the grounded conductors at the origin and dielectric constants were studied. Voltage rating, conductor resistances, and terminal grounding resistances seem to influence the transient performance of a multiconductor cable significantly. The effect of finite Earth resistivity is insignificant. DOE

(FUB-10-1979) Avail: NTIS HC A05/MF A01

General procedures for out of service verification in a 2500 km radio link in the presence of propagation anomalies due to rain of multipath are studied. It is shown that the out of service situation may be verified if the out of service probability function is known, and this function is examined for the cases of cross polarization attenuation and of uniform attenuation and depolarization. A FORTRAN program was written to perform the estimation. The out of service verification in the presence of selective attenuation due to multiple path and depolarization is discussed, including the evaluation of the space diversity effects on the out of service probability. DEVELOPMENT OF COST 202 PROJECT: NUMERICAL LOCAL NETWORKS FOR TELECOMMUNICATIONS [STATO DI SVILUPPO DEL PROGETTO COST 202: RETI LOCALI NUMERICHE PER TELECOMUNICAZIONI]
Nicola Accarino, Maurizio Decina (Istituto di Comunicazioni Elettriche, Rome), Roberto Montemuro, Claudio Rossi, and Francesco Villani Jun. 1979 9 p refs In ITALIAN
(FUB-14-1979) Avail: NTIS HC A02/MF A01

The COST 202 project is defined as a three-year research project studying digital techniques employable within the next 30 years in local networks. The participation of several European nations is mentioned. The main areas of the project which were agreed upon, are the evolution of local networks, signalization in local networks, and transmission on existing lines. The preliminary research activities undertaken by the Italian group are detailed, including 64 kbits numerical telephony, new services in circuit or packet switching up to 64 kbit/s telemetry, access to local networks, transmission interfaces, and terminal architecture. CAPACITY OPTIMIZATION OF A RESERVE NETWORK USED FOR REROUTING DAMAGED SERVICE BLOCKS [OTTIMIZZAZIONE DELLE CAPACITA' DI UNA RETE DI RISERVA IMPIEGATA PER IL REISTRADAMENTO DEI BLOCCHI DI ESERCIZIO IN AVARIA]
Gaetone Bonaventura (Stato dei Servizi Telefonici), Ugo Mocci, and Giacomo Ravaioli May 1979 10 p refs In ITALIAN Presented at 27th Intern. Conv. on Commun., Genoa, 9-12 Oct. 1979
(FUB-18-1979) Avail: NTIS HC A02/MF A01

The use of a standby network is an effective method for the rerouting of groups of circuits when a fault occurs on a transmission medium in a long distance network. Two problems are considered: to find a minimum cost standby network able

to reroute all the interrupted groups, at least when only one block at a time is defective, and to find the largest part of the in-service network that can still be protected meeting a prescribed bound on the cost of the standby network. The influences of different choices of rerouting criteria and of network structure are examined using a computer program. Author (ESA)

A PROCEDURE FOR SATISFYING IN AN OPTIMAL WAY TIME VARYING CIRCUIT REQUIREMENTS [UNA PROCEDURA PER IL SODDISFACIMENTO OTTIMO DI RICHIESTE DI CIRCUITI VARIABILI NEL TEMPO]
Francesco Mazzarella, Ugo Mocci, Giacomo Ravaioli, and Sandra Spedaletti. May 1979. 9 p. refs. In ITALIAN. Presented at 27th Intern. Conv. on Commun., Genoa, 9-12 Oct. 1979
(FUB-19-1979) Avail: NTIS. HC A02/MF A01

The problem of satisfying at minimum cost, time-varying circuit requirements between centers of a telecommunication network is considered. The overall procedure works in two phases. In the first, one of the requirements are routed through the network, and the circuit number of each link is computed. In the second phase, an optimal plan of installation is determined. The procedure was implemented with a computer program. Author (ESA)

(FUB-22-1979) Avail: NTIS. HC A03/MF A01

The anisotropy and polarization of centimeter waves propagating through rain was studied as a function of meteorological parameters such as the drop diameter distribution, the drop temperature, the rain intensity profile through the wave path, and the distribution of the axial ellipsoidal drop symmetry orientation. A block diagram of the computer program for the determination of the joint probability density function of the attenuation and anisotropy is presented with numerical example. The effects of the parameters under discussion are discussed. Author (ESA)

(Contract ESA-3208/77-F-HGE(SC))
(ESA-CR(P)-1313-Vol-3) Avail: NTIS. HC A04/MF A01

The attenuation in shadow zones caused by several obstacles was measured. The statistical reception improvement obtained using space diversity by means of two antennas and two receptors on the same automobile was evaluated. It was found that in all cases a distinct improvement may be expected from a system of diversity reception. Measurements were made using a circularly polarized receiving antenna, resulting in a 3 dB improvement for the received signal. Author (ESA)

HYBRID FAULT DIAGNOSIS IN DIGITAL SYSTEMS Ph.D. Thesis
Sivanarayana Malleia 1980 139 p
Avail: Univ. Microfilms Order No. 8020265

A systematic approach to fault diagnosis which considers the presence in a system of not only permanent faults, but also intermittent faults was developed. An analysis model of systems for relating tests and faults is presented which encompasses most of the existing models in the literature. To consider combinations of permanent and intermittent faults, the concept of a hybrid fault situation is introduced. A strategy is developed for the diagnosis of hybrid fault situations, and then, the resulting necessary and sufficient conditions on the test-fault interrelationships are derived. Lower bounds are determined on the hybrid fault diagnosability of a system in terms of its permanent fault diagnosability. These bounds establish that test sets with the same permanent fault diagnosing capability may have significantly different hybrid fault diagnosing capabilities. Hence, for efficient testing of a system, the choice of the tests to be applied to the system must, in general, be influenced by hybrid fault diagnosis considerations. Dissert. Abstr.

DIGITAL DEMODULATOR Patent Application
Thomas A. Shull, inventor (to NASA) Filed 18 Jul. 1980 9 p (NASA-Case-LAR-12659-1; US-Patent-Appl-SN-171928) Avail: NTIS HC A02/MF A01 CSCL 09C

A digital demodulator for converting pulse code modulated (PCM) data from phase-shift key (PSK) to non-return-to-zero (NRZ-L) and to bio phase (BiO-L) is described. The demodulator is composed of standard integrated logic circuits. The key to the demodulation function is a pair of cross coupled one shot multivibrators which, with a flip-flop produce the NRZ-L. In order to generate BiO-L, the PSK carrier is constrained to be 2 to the n times the data bit rate. If NRZ-L is all that is required, the circuitry is greatly simplified and the 2 to the n times bit rate constraint can be removed from the carrier. A flip-flop, an OR gate, an AND gate, and a binary counter generate the bit rate clock BTCK for the NRZ-L. The remainder of the circuitry is for converting the NRZ-L and BTCK into BiO-L. NASA

CAPACITORS FOR AIRCRAFT HIGH POWER Final Report, May 1975 - Oct. 1979
Robert D. Parker Apr. 1980 260 p
(Contract F33615-75-C-2021; AF Proj. 3145)
(AD-A087427; AFWAL-TR-80-2037) Avail: NTIS HC A12/MF A01 CSCL 09/1

This report describes an exploratory program conducted to develop reliable lightweight pulse discharge capacitors for airborne application. The specific duty was a 1 minute burst every 2 hours, and both low (50pps) and high (300pps) repetition rate service was to be considered. The energy density goals were 400 to 1100 J/kg with a 20 microsec capacitor current pulse width. A five layer polysulfone/kraft paper dielectric was selected for high rate service, while polyvinylidene fluoride/kraft paper was chosen for the low rate service. Both mineral oil and dioctylphthalate fluids were used. Tension controlled winding was used to eliminate failure producing folds. Reduced temperature drying further reduced wrinkles. Special filtration, purification, and cleaning produced very high resistivity fluids free from particles. A highly instrumented test bay accurately simulated a pulse forming network environment and allowed detailed and accurate testing. The best single section high rate results were 550 J/kg at 100,000 - 1,000,000 shot life at double the specified duty, while the best low rate results were slightly higher. Case weight minimization was stuided, and three prototype lightweight cases were built. Several techniques for smoothing rough capacitor foils were examined, and a flame technique was selected as being most easily implemented. Problems of terminating extended foils were examined, and a flame-spray method selected as most practical. GRA

NON-PERIODIC HELIX TWT STUDY Final Report
May 1980 53 p refs
(Contract N00173-76-C-0194)
(AD-A087413) Avail: NTIS HC A04/MF A01 CSCL 09/1

The purpose of this contract was to determine the feasibility of using various techniques to increase the operating voltages and peak power levels of helix type traveling-wave tubes. An oscillation suppression technique has been proposed which has application at high voltages and high frequencies. Based on a theoretical analysis of loading in transmission lines, calculations have been made which predict the presence of stopbands. Cold tests were performed which verified the accuracy of these calculations. A tube was built and tested. The test results indicate that the modes exist as predicted in cold test. Further testing is required to determine whether or not the stopband exists for hot test operation. GRA

(BDX-613-2302) Avail: NTIS HC A02/MF A01

A system flexible enough to meet present and future work requirements was developed. The Component Locator System usually is referred to as a Work Director. The Work Director shows the exact location for installing the wire on the pointed wiring board (PWB) and codes the Cable Scanner for the correct wire. The Cable Scanner then provides an audible signal when the operator touches the correct wire. This combination of Component Locator System and Cable Scanner eliminates the following operations: marking wires for identification; sorting marked wires when attaching to connectors; electrically checking wire number versus pin number; identifying wires by markings when installing them in the PWB; and determining the proper PWB hole location from a visual aid. INFRARED ABSORPTION SPECTRUM OF FREE CARRIER IN POLAR SEMICONDUCTORS Progress Report, 1 Jul. 1979 -30 Jun. 1980
B. Jensen. Feb. 1980. 11 p. refs.
(Contract DE-AC02-79ER-10444)
(DOE/ER-10444/1) Avail: NTIS HC A02/MF A01

The Drude Zener Theory of the absorption of high frequency radiation by free carriers was extended into the quantum region in terms of a frequency dependent relaxation time which predicts the dc mobility in the quasiclassical limit. Numerical calculations of the frequency and concentration dependent electron scattering rate were completed for InP, InAs, Ga(0.47)In(0.53)As, and previous results for GaAs extended to high carrier concentrations. Calculated results for GaAs are in good agreement with experimental measurements of the mobility which are found to be independent of a wide variety of conditions of material preparation. This indicates that disagreement with previous theoretical calculations was not due to compensation. Calculations for ZnSe and further investigation of the modification of the optical constants by the presence of an intense laser field and by a static magnetic field are currently planned. DOE

ATMOSPHERIC ELECTRICITY INTERACTIONS WITH AIRCRAFT: AN OVERVIEW
Gary A. DuBro. *In* AGARD Atmospheric Elec.-Aircraft Interaction. May 1980. 11p. refs. (For primary document see N80-31743 22-33)
Avail: NTIS HC A11/MF A01

Concern for the vulnerability of aircraft flight-critical and

mission-critical avionics to atmospheric electricity hazards has increased over the last fifteen years. The major hazards of concern are lightning and static electrification. Two primary factors have contributed to a potentially increased threat to new generation aircraft: (1) increasingly widespread use of sensitive microelectronics in flight-critical and mission-critical electronic and electrical systems; and (2) the reduced electromagnetic shielding afforded by many advanced structural materials. A description of the atmospheric electricity interaction with aircraft and the manner in which it impacts the aircraft avionics is summarized. Key areas of pertinent research and development are identified and the present state of the art in each of these key areas is presented. E.D.K.

MODELS FOR ASSESSING HAZARDS DUE TO LIGHTNING
P. F. Little *In* AGARD Atmospheric Elec.-Aircraft Interaction May 1980 14 p refs Sponsored by the UK Ministry of Defence (For primary document see N80-31743 22-33)
Avail: NTIS HC A11/MF A01

The characteristics of lightning current pulses and the radiated fields produced by lightning are summarized. The transmission line model of the ground flash is considered and the derivation of the parameters of the line from the physical processes taking place is treated in various degrees of approximation. Changes in the shape of the current pulse occur as the return stroke is propagating and the implications of these changes in waveform are discussed. The transition from leader channel to return stroke channel may be regarded as a shock front and this aspect is explored also in respect of the leader advance. The coupling of fields and currents due to lightning into the aircraft when it forms part of the return stroke channel and when it is close to an independent stroke is considered in the light of these physical models. LIGHTNING TEST CRITERIA FOR AIRCRAFT AVIONICS SYSTEMS
Don W. Clifford *In* AGARD Atmospheric Elec.-Aircraft Interaction May 1980 12 p refs (For primary document see N80-31743 22-33)
Avail: NTIS HC A11/MF A01

The evolutionary history of the test criteria for lightning testing of aerospace systems and avionics equipment is presented along with a summary of the salient features and the rationale for selection of the parameters specified in the documents. Test criteria are set forth in terms of the various current and voltage waveforms to be used in lightning tests. The simulation waveforms are based upon statistical summaries of the natural lightning environment. Modern tests criteria documents account for the dynamic nature of the lightning interaction with aircraft by using the zonal concept to more accurately identify the threat to specific systems and equipment. Test techniques can affect simulated lightning test results and the modern criteria documents include recommended practices for achieving accurate and consistent results. Some predictions of future changes in the criteria documents are made on the basis of information about the lightning threat based upon recent measurements of natural lightning. E.D.K.

THE COUPLING OF LIGHTNING FIELDS INTO AIRCRAFT AND CABLES
P. F. Little *In* AGARD Atmospheric Elec.-Aircraft Interaction May 1980 14 p refs Sponsored by the UK Ministry of Defence (For primary document see N80-31743 22-33)
Avail: NTIS HC A11/MF A01

The current distribution in the skin of an aircraft struck by lightning is described and the effects of airframe resonance are noted. Nearby strikes produce initially an electromagnetic pulse which is scattered by the aircraft, creating circulating currents in the skin: this process is considered. The magnetic fields at the surface diffuse into the skin, and significant currents flow on the interior after a time lag dependent on the skin resistivity. In addition, the surface fields couple directly into the interior through breaks in the conducting skin or through insulating panels. Methods of calculating the magnetic and electric fields in the interior of the aircraft are discussed, and the effects on electrical and electronic systems described. The screening of internal cabling is reviewed. Author

LIGHTNING EFFECTS ON AIRCRAFT: A COCKPIT PERSPECTIVE
J. Anderson Plumer *In* AGARD Atmospheric Elec.-Aircraft Interaction May 1980 12 p refs (For primary document see N80-31743 22-33)
Avail: NTIS HC A11/MF A01

Typical conditions in which strikes have been experienced by large and small aircraft are described, together with effects as experienced by flight crews. Most strikes have occurred when the aircraft is flying at between 3000 and 5000 meters altitude, where the outside air temperature is within 5 deg of 0 C and there exists a light to moderate amount of precipitation. Strikes to aircraft have, however, occurred at altitudes as high as 12,000 m and also when the aircraft are parked on the ground. If an aircraft approaches a highly electrified region it may actually trigger a strike, especially if the aircraft is large and causes a significant perturbation in the nearby electric field. Aircraft lightning strike mechanisms, effects to avionics and electric power systems, engine effects, and effects to personnel are addressed. M.G.

BASIC PHENOMENOLOGY OF ELECTRICAL DISCHARGES AT ATMOSPHERIC PRESSURE
Joseph Taillet *In* AGARD Atmospheric Elec.-Aircraft Interaction May 1980 19 p refs (For primary document see N80-31743 22-33)
Avail: NTIS HC A11/MF A01

The mechanism of three types of discharge induced by static charging (spark, corona, and surface streamers) is described in detail. From this mechanism, the radioelectric noise emitted by these discharges is predicted. It is concluded that sparks and surface streamers are generators of powerful radioelectric disturbances. Proper bonding eliminates sparks and specific treatments suppress surface discharges. Coronas are necessary for getting rid of the accumulated static charge. On the one hand, attention should be given to reducing as much as possible the coupling between coronas discharges and antennas of the avionic system. On the other hand, use of corona microdischarges can bring a further improvement in static noise reduction. M.G.

STATIC CHARGING EFFECTS ON AVIONIC SYSTEMS
J. E. Nanevicz *In* AGARD Atmospheric Elec.-Aircraft Interaction May 1980 15 p refs (For primary document see N80-31743 22-33)
Avail: NTIS HC A11/MF A01

The electromagnetic character of various noise sources--corona discharge, surface streamers, and spark discharges are discussed. The results of flight tests and laboratory discharge simulations are given. In general, the source data exist both as time domain waveforms and as frequency domain spectra. The differences between the noise signals generated by the different sources are discussed, and the dependence of noise levels on aircraft charging current are indicated. Results of laboratory determinations of coupling between source locations and antennas are also presented together with the results of flight test experiments conducted to verify the coupling information. Finally, the source data is combined with the coupling information to predict the equivalent noise fields to be expected at typical antenna locations on aircraft. These noise fields are compared to atmospheric noise levels to determine the degree of system performance degradation that can result from precipitation static noise. M.G.

ALLEVIATION TECHNIQUES FOR EFFECTS OF STATIC CHARGING ON AVIONICS
J. E. Nanevicz *In* AGARD Atmospheric Elec.-Aircraft Interaction May 1980 14 p refs (For primary document see N80-31743 22-33)
Avail: NTIS HC A11/MF A01

The various mechanisms by which static charging of aircraft affects avionic systems are identified, and techniques to mitigate the effects are described. Noise reduction schemes intended to eliminate aircraft charging itself are confined to the elimination of surface streamer discharges on electrically insulating frontal surfaces by coating the surface with electrically conductive material. This procedure allows the charging current to flow off the surface as rapidly as it arrives without generating noise. Another technique for eliminating surface streamer noise at the source is simply to relocate insulating materials (i.e., antenna insulating materials) to regions at the aft of the aircraft where they will not be charged by impinging precipitation particles or to install particle deflectors upstream of the dielectric surface. Successful techniques for the control of corona discharge noise involve forcing the discharge to occur from special discharging devices installed at high field regions on the aircraft where corona discharges are likely to occur naturally. The dischargers are designed to reduce the corona source intensity and to decouple the discharge source from the airframe. Practical dischargers are capable of reducing corona discharge noise by as much as 60 dB. Noise generated by sparking between sections of the metal structure can be eliminated by electrical bonding of all portions of the structure. Descriptions of techniques demonstrated by laboratory and flight tests to be successful in controlling precipitation charging interference are given. M.G.

AIRCRAFT STATIC CHARGING TESTING
Joseph Taillet *In* AGARD Atmospheric Elec.-Aircraft Interaction May 1980 7 p refs (For primary document see N80-31743 22-33)
Avail: NTIS HC A11/MF A01

A procedure is proposed for: (1) characterizing in the laboratory the effects of aircraft charging on the operation of unprotected navigation and communication systems; (2) assessing in the laboratory the validity of the protective methods; (3) checking in the factory the correct application of these methods; (4) routine testing between flights, in the field, of the good condition of the protecting devices and treated surfaces. A test method is developed which would include checking the bonding between metallic surfaces, measuring the value of surface resistance of semi-conductive coatings or resistive paints deposited over insulating substrate, simulating tribo-electric charging or charge collection separately on any surface element of the aircraft, and verifying that the coupling between dischargers and antennas is minimal. M.G.

MULTISYSTEM MODELING OF UNSTEADY LIQUID FLOW
Ph.D. Thesis
Joel Leonard Caves 1980 230 p
Avail: Univ. Microfilms Order No. 8019708

A single set of governing equations called system-independent

equations, is derived describing the conservation of mass and momentum for flow through a generalized porous conduit. Generic coefficients in the system-independent equations relate the changes in liquid and conduit properties to the variations in pressure and velocity. Supplemental system-dependent equations or laboratory experimentation can be used to quantify the coefficients for each particular flow system. The validity of the system-independent equations is shown by comparison with traditional solutions to single-system problems of transient flow in a closed conduit, an open channel, an unconfined aquifer, and a confined aquifer. Computer simulations of the classical problem involving free surface and pressurized flow in the Wettingen Tunnel and of a stream-aquifer interaction problem demonstrate the value of the system-independent equations for transient analysis of multisystem problems where the completeness, practicality, and versatility of the equations can be exploited. Dissert. Abstr.

INVESTIGATIONS OF EDDY COHERENCE IN JET FLOWS
A. J. Yule. 1980. 27 p. refs. Presented at Intern. Conf. on the Role of Coherent Structures in Modelling Turbulence and Mixing, Madrid, 25-27 Jun. 1980
(Grant NSG-7517)
(NASA-CR-163525) Avail: NTIS HC A03/MF A01 CSCL 20D

In turbulent shear flow the term coherent structures refers to eddies which are both spatially coherent, i.e., large eddies, aand also temporally coherent, i.e., they retain their identities for times which are long compared with their time scales in fixed point measurements. In transitional flows, the existence of such structures is evident from flow visualizations. In many other flows, such structures are not so evident. The reasons for the existence of these two classes of flows are discussed and attention is focused upon the more difficult flows, where coherent structures are not so evident. Techniques by which the existence (or nonexistence) of such structures in these flows can be established from point measurements, are also discussed. A major problem is shown to be the need to discriminate between real losses in eddy coherence and apparent losses in coherence introduced by phase scrambling effects which 'smear' multipoint correlations. The analysis of multiprobe time dependent data in cold and reacting round turbulent jets is described and it is shown how evidence of strong eddy coherence can be extracted from data. R.K.G.

AN EXPERIMENTAL STUDY OF MULTIPLE JET MIXING
D. Krothapalli, D. Baganoff, and K. Karamcheti. Jun. 1979. 162 p. refs.
(Grants NsG-2007; NsG-2233)
(NASA-CR-163537; SU-JIAA-TR-23) Avail: NTIS HC A08/MF A01 CSCL 20D

Measurements of an incompressible jet issuing from an array of rectangular lobes, equally spaced with their small dimensions in a line, both as a free jet, and as a confined jet, are carried out in three parts: (1) on a single rectangular free jet, (2) on the same jet in a multiple free jet configuration, and (3) on the same jet in a multiple jet configuration with confining surfaces (two parallel plates are symmetrically placed perpendicular to the long dimension of each lobe covering the entire flow field under consideration). In the case of a single rectangular free jet, the flow field of the jet is characterized by the presence of three distinct regions in the axial mean velocity decay and are referred to as potential core region, two dimensional type region, and axisymmetric type region. In the case of a multiple free jet, the flow field for downstream distance X greater than 60D (D = width of a lobe) resembles that of a jet exiting from a two dimensional nozzle with its short dimension being the long dimension of the lobe. WATER TUNNEL SIMULATION STUDY OF THE LATER STAGES OF WATER ENTRY OF CONICAL HEAD BODIES. PHASE 2: EFFECT OF THE AFTERBODY ON STEADY STATE VENTILATED CAVITIES
D. R. Stinebring and J. W. Holl. 3 Dec. 1979. 74 p. refs.
(Contract N00024-79-C-6043)
(AD-A086980; ARL/PSU-TM-79-206) Avail: NTIS HC A04/MF A01 CSCL 20/4

This report documents the second phase of the water tunnel studies that are intended to simulate the cavity running phase of water entry. The primary purpose of the investigation was to study the effect of afterbody arrangement on steady state ventilated cavities. The models utilized were 1.0 inch diameter conical nosed bodies with a 45 deg. apex angle. Three models were tested: one having a 1.0 inch diameter afterbody, one having a 0.5 inch diameter afterbody and the third having no afterbody. The cavitation number as a function of cavity length and ventilation air flow coefficient as a function of cavitation number were measured for all models. The pressure distribution was found for a wide range of cavity lengths for the model with the 1.0 inch diameter afterbody. Data for the ventilation air flow coefficient and pressure distribution are in good agreement with previous studies of similar models. An interesting result is that the model requiring the lowest ventilation air flowrate for a given cavitation number was the model with no afterbody. For most of the flow states investigated, the model with the 0.5 inch diameter afterbody required the highest flowrate. The transition between the reentrant jet and twin vortex regimes was studied briefly. At transition, the cavity would grow four or five times its original length for a slight increase in ventilation air flowrate. A cavity attrition test was conducted to simulate the decay of a cavity behind a missile. GRA

A SPLINE RELAXATION PROCEDURE FOR CALCULATING AXISYMMETRIC FLOW FIELDS ABOUT BODY/PROPELLER COMBINATIONS. 1: FROZEN VORTICITY AND POTENTIAL FLOWS
G. H. Hoffman. 14 May 1980. 49 p. refs.
(Contract N00024-79-C-6043)
(AD-A087027; ARL/PSU-TM-80-108) Avail: NTIS HC A03/MF A01 CSCL 20/4

A general numerical solution method is presented for calculating incompressible axisymmetric viscous/turbulent flow in the tail-near wake region of a body-propeller combination. The method makes use of the parabolic vorticity transport approximation in conjunction with polynomial splines to achieve sufficient accuracy in high flow gradient regions with as few grid points as possible. A sheared body fitted coordinate system is used and the numerical solution of the finite difference equations is obtained by standard line overrelaxation. This report presents the details of the method for the first phase of the work where the vorticity transport equation is omitted (frozen vorticity flow). Sample potential flow and frozen vorticity solutions are presented with no propeller present. GRA

THE PRESSURE FOOTPRINT OF A TURBULENT LAYER ON A COMPLIANT BOUNDARY. Technical Report, 1 Aug. 1979 - 31 Jul. 1980
John L. Lumley. 31 Jul. 1980. 53 p. refs.
(Contract N00014-79-C-0727)
(AD-A087296) Avail: NTIS HC A04/MF A01 CSCL 20/4

An examination was made of one way in which a compliant boundary may affect the low wavenumber pressure field measured at the surface under a turbulent boundary layer. Specifically, we assume that the low wavenumber pressure field measured at the wall results from the large scale motions in the outer part of the flow, and that these are triggered by the bursting in the

buffer layer, which is caused in its turn by secondary instabilities growing on inflectionary profiles caused by longitudinal vortices in the sub and buffer layers. The direct effect of the compliant boundary on the growth of these longitudinal vortices, using the energy method, was examined. We represent the compliant boundary by a half space filled with a linear visco-elastic medium with a single time constant. We find that the effect of the boundary is to introduce an effective slip in the boundary condition on the disturbance (the longitudinal vortices), producing a boundary condition intermediate between the inviscid boundary condition and the no-slip boundary condition. Since this boundary condition is less dissipative, the vortices are less stable, and have a higher growth rate. They might consequently be expected to grow faster and occur more frequently, if this were the only mechanism involved, resulting in a shift of the low wavenumber pressure spectrum to higher frequencies. This appears to be the opposite of observations, suggesting that other mechanisms are involved. GRA

DEVELOPMENT OF A NOZZLE TO IMPROVE THE TURNING OF SUPERSONIC COANDA JETS Final Report, 15 Jun. 1979 - 15 Mar. 1980
Paul M. Bevilaqua and John D. Lee Apr. 1980 58 p refs
Prepared in cooperation with Ohio State Univ., Columbus
(Contract F33615-79-C-3026; AF Proj. 2404)
(AD-A087709; NR80H-18; AFWAL-TR-80-3027) Avail: NTIS HC A04/MF A01 CSCL 20/4

The hypothesis that shaping the jet velocity profile improved the thrust vectoring of supersonic Coanda jets was experimentally tested. A new nozzle design procedure, based on the method of characteristics, was developed to design a nozzle which delivers an arbitrary exit velocity profile. Such a nozzle was designed for a pressure ratio of 2.5, to provide a jet matched to a circular Coanda surface with radius equal to five jet thicknesses. The thrust vectoring of this nozzle was then compared to that of a convergent divergent nozzle over a range of pressure ratios from 1.5 to 3.5. It is concluded that supersonic nozzles provide greatly improved turning of Coanda jets, and that shaping the velocity profile further improves the thrust vectoring. GRA

EXPERIMENTAL STUDY OF CHEMICALLY REACTING TURBULENT FREE SHEAR LAYERS Final Report, 23 Sep. 1976 - 30 Nov. 1978
Robert K. Gould Feb. 1980 55 p refs
(Contracts EX-76-C-01-2446; E(49-18)-2446)
(FE-2446-8) Avail: NTIS HC A04/MF A01

The model chemical reaction used to study turbulent mixing/reacting flows was the NO/O3 reaction. A novel photolysis/chemiluminescence technique was employed to measure reactant concentrations, c/sub NO/ and c/sub O3/, and a product concentration, c/sub NO2/, simultaneously at points in the flow field. From such measurements, the required statistical quantities, i.e., probability density functions and correlations of reactants and product concentrations, are obtained. These data were supplemented by measurements of the turbulence power spectra and intensity throughout the flow. The flow studied was an axisymmetric turbulent jet exhausting into a nearly stationary, uniform channel flow. Cases examined were a reacting case in which the jet contains dilute O2 in N2 and the channel flow is dilute NO in N2; and a nonreacting (but otherwise identical flow) in which a jet of N2 containing small quantities of NO and NO2 exhausts into pure N2. DOE

EXPERIMENTAL STUDY OF THE STEADY NATURAL CONVECTION IN A HORIZONTAL ANNULUS WITH IRREGULAR BOUNDARIES
R. D. Boyd 1980 66 p refs Presented at the 19th Natl. Heat Transfer Conf., Orlando, Fla., 27 Jul. 1980
(Contracts EY-76-C-04-0789; DE-AC04-76DP-00789)
(SAND-79-2354C; CONF-800723-1) Avail: NTIS HC A04/MF A01

The natural convective heat transfer across an annulus with irregular boundaries was studied using a Mach-Zehnder interferometer. The annulus was formed by an inner hexagonal cylinder and an outer concentric circular cylinder. This configuration models, in two dimensions, a liquid metal fast breeder reactor spent fuel subassembly inside a shipping container. During the test, the annulus was filled with a single gas, either neon, air, argon, krypton, or xenon, at a pressure of about 0.5 MPa. From temperature measurements, both local and mean Nusselt numbers (Nu/sub delta/) at the surface of the inner cylinder were evaluated, with mean Rayleigh number (anti Ra/sub delta/) varying from 4.54 X 10 to the 4th power to 0.915 x 10 to the 6th power (delta is the local gas width). DOE

DEMONSTRATION OF FIBER OPTIC LINK APPLICATIONS IN UTILITY PLANT MULTIPLEXED INSTRUMENT AND CONTROL SYSTEMS Final Report
W. D. Redus, G. R. Craig, and W. J. B. Oldham Jan. 1980 111 p Sponsored by EPRI
(EPRI Proj. 1173-1)
(EPRI-NP-1322) Avail: NTIS HC A06/MF A01

The application of data transmission via fiber optic cables was demonstrated for a utility plant instrumentation system. The project demonstrated that fiber optics is a viable method of transmitting I&C instrumentation. There is a cost penalty for light transmitters, receivers, and higher cable cost, which must be weighed against the advantages. The light beam and cable are essentially immune to crosstalk, electromagnetic interference, switching and transient interference, humidity, pressure, and reasonable temperature environments. There are potential handling difficulties with glass cable since a crimp or sharp bend radius will break the cable. A reasonable field-installable connector is essential. Plastic cable is very readily installed, spliced, and handled. Its major limitation is the higher transmission loss that restricts plastic cable to shorter runs of a few hundred feet. A time domain reflectometer (light beam radar) can locate cable breaks and is necessary for plant installations. Cables must be marked for distance locations. DOE

NUMERICAL CALCULATION OF THERMAL CONVECTION IN POROUS MEDIA IN TWO DIMENSIONS WITH APPLICATIONS TO NUCLEAR REPOSITORY DESIGN
D. E. Maiden May 1980 15 p refs
(Contract W-7405-eng-48)
(UCID-18700) Avail: NTIS HC A02/MF A01

A computer code HP2D was developed to calculate the effect. Transient and steady state heat and fluid flow in porous media are calculated. The code allows for anisotropy of hydraulic conductivities, temperature dependent fluid density and viscosity. A heat source and a variety of temperature and flow boundary conditions can be easily employed. The code solves two coupled governing equations. The time dependent heat transport is solved by an alternating direction implicit technique; and the steady state flow of water is solved by a Gauss-Seidel Poisson solver. A sample calculation of thermal convection about a repository is given. DOE

DATA ACQUISITION TECHNIQUES FOR EXPLOITING THE UNIQUENESS OF THE TIME-OF-FLIGHT MASS SPECTROMETER: APPLICATION TO SAMPLING PULSED GAS SYSTEMS
Kenneth A. Lincoln. Aug. 1980 15 p. refs. Presented at the Dyn. Mass Spectrometry Symp., Canterbury, England, 7-10 July 1980
(NASA-TM-81224; A-8308) Avail: NTIS HC A02/MF A01 CSCL 14B
Mass spectra are produced in most mass spectrometers by sweeping some parameter within the instrument as the sampled gases flow into the ion source. It is evident that any fluctuation in the gas during the sweep (mass scan) of the instrument causes the output spectrum to be skewed in its mass peak intensities. The time of flight mass spectrometer (TOFMS) with its fast, repetitive mode of operation produces spectra without skewing or varying instrument parameters and because all ion species are ejected from the ion source simultaneously, the spectra are inherently not skewed despite rapidly changing gas pressure or composition in the source. Methods of exploiting this feature by utilizing fast digital data acquisition systems, such as transient recorders and signal averagers which are commercially available are described. Applications of this technique are presented including TOFMS sampling of vapors produced by both pulsed and continuous laser heating of materials. E.D.K.

The laboratory breadboard optical temperature sensor based on the temperature dependent absorptive characteristics of a rare earth (europium) doped optical fiber. The principles of operation, materials characterization, fiber and optical component design, design and fabrication of an electrooptic interface unit, signal processing, and initial test results are discussed. Initial tests indicated that, after a brief warmup period, the output of the sensor was stable to approximately 1 C at room temperature or approximately + or - 0.3 percent of point (K). This exceeds the goal of 1 percent of point. Recommendations are presented for further performance improvement. L.F.M.

INVESTIGATION OF ELECTRICAL NOISE IN SELENIUM-IMMERSED THERMISTOR BOLOMETERS
John L. Tarpley and Pedro D. Sarmiento. Aug. 1980 30 p. refs.
(NASA-TM-82001) Avail: NTIS HC A03/MF A01 CSCL 14B
The selenium immersed, thermistor bolometer, IR detector failed due to spurious and escalating electrical noise outburst as a function of time at elevated temperatures during routine ground

based testing in a space simulated environment. Spectrographic analysis of failed bolometers revealed selenium pure zones in the insulating selenium arsenic (Se-As) glass film which surrounds the active sintered Mn, Ni, Co oxide flake. The selenium pure film was identified as a potentially serious failure mechanism. Significant changes were instituted in the manufacturing techniques along with more stringent process controls which eliminated the selenium pure film and successfully produced 22 study bolometers. SPACE-VARIANT PROCESSING USING PHASE CODES AND FOURIER-PLANE SAMPLING TECHNIQUES Interim Report
Rangachar Kasturi 1 Jun. 1980 158 p refs
(Grant AF-AFOSR-0076-79)
(AD-A087285; AFOSR-80-0557TR; SR-1) Avail: NTIS HC A08/MF A01 CSCL 14/5

This report discusses alternative approaches to using multiplex holography representing space-variant optical systems. The first part of the report presents the results of extensive computer simulations used in evaluating the effectiveness of Gold codes in encoding the multiple reference beams required in a sampled input/multiple reference beam realization of a space-variant system. The second part considers a totally different approach which samples the input plane and the transfer function plane. This latter approach eliminates crosstalk entirely, but requires multiple copies of the sampled input function during the playback step. The results of preliminary experiments conducted to evaluate this alternative approach for representing space-variant systems holographically are presented, including experiments verifying the coherent addition of the multiplexed holograms on playback using computer-multiplexed holograms. ADAPTATION OF A KRATKY CAMERA TO USE WITH A ONE DIMENSIONAL POSITION SENSITIVE DETECTOR
Ryong-Joon Roe, J. C. Chang, M. Fishkis, and J. J. Curro 1 Aug. 1980 34 p refs Submitted for publication
(Contract N00014-77-C-0376; NR Proj. 356-655)
(AD-A087523; TR-4) Avail: NTIS HC A03/MF A01 CSCL 14/5

A Kratky small-angle X-ray camera was modified so as to allow the use of a one dimensional position sensitive detector with it. The modification was designed in such a way that most of the calibrations, necessary for subsequent correction of the collected intensity data, can be performed with little alteration in the collimation geometry or the electronics settings. In particular, the calibration of the uniformity of detector efficiency can be performed by repeated vertical travel of the detector at a constant speed across a beam scattered from a sample. A much higher speed of data collection, with no increase in the background noise nor any loss in the angular resolution, has been achieved in comparison to a regular Kratky camera operating in step-scanning mode. The practical utility of combining the PSD with a Kratky camera for studies of isotropic samples has been demonstrated. GRA

(Contract N00014-77-C-0115; ARPA Order 2840)
(AD-A087123) Avail: NTIS HC A02/MF A01 CSCL 20/5

A new class of diatomic lasers has been developed by optical pumping. These lase on lines in the near ultraviolet and visible regions of the spectrum. Optical excitation studies show that these molecular systems have high efficiency, may be scalable to high average powers, are nondegradable, and offer promise for pumping by other excitation schemes, such as electric discharge. It is possible that one or more candidate systems in this category of lasers might be useful in generating blue-green radiation for underwater applications. Preliminary investigations with electric discharge excitation show good formation of glow dischargers in sulfur dimer vapor. Materials problems and the difficulties of high temperature discharge technology appear to be the major drawbacks in pursuing such studies further for laser action. GRA

The use of a mode-locked CO2 laser for an optically pumped near millimeter wave source has been refined and extended to the generation of pulses from C(13)H3F at 1.22mm. More refined theoretical estimates illustrate the transient nature of the conversion process in both space and time and set approximate limits on the ultimate pulse duration to be about one-half that of the pump. The implications are that one is not limited by the intrinsic linewidth in producting short pulse and that significant conversion may occur in modest distances, of order meters, suggesting quasi-compact sources for further experiments. (AD-A087522; PRRL-80-CR-23; ARO-14755.11-EL) Avail: NTIS HC A03/MF A01 CSCL 20/5

This document is the sixth semiannual report and the final report of a basic study of the modes of injection lasers. The concern is the fundamental relationship between the modal properties of diode lasers, their structure, and the nature of the electrical drive. The semiannual report features three pioneering studies: The development of an equation of state relating the laser power, spectrum, and beam profile to the input current and laser structure; the behavior of the laser on transition of threshold as the current is increased through the immediate vicinity of threshold; and the comparison of the laser spectrum under pulsed drive to excitation with a dc current. It also touches on the behavior of quarternary lasers operating at 1.2 micrometers. The report concludes with a consideration of the outstanding fundamental problem at the present time, the dynamic interaction of the laser which reduces the number of spectral lines in the coherent output of a laser as the current drive is increased. FREE-PISTON REGENERATIVE HOT GAS HYDRAULIC ENGINE Patent
Donald G. Beremand, inventor (to NASA) Issued 5 Aug. 1980 7 p Filed 12 Oct. 1978 Supersedes N79-10426 (17 - 12, p 0057)
(NASA-Case-LEW-12274-1; US-Patent-4,215,548; US-Patent-Appl-SN-950876; US-Patent-Class-60-520; US-Patent-Class-417-383) Avail: US Patent and Trademark Office CSCL 13I

A displacer piston which is driven pneumatically by a high-pressure or low-pressure gas is included in a free-piston regenerative hydraulic engine. Actuation of the displacer piston circulates the working fluid through a heater, a regenerator and a cooler. The present invention includes an inertial mass such as a piston or a hydraulic fluid column to effectively store and supply energy during portions of the cycle. Power is transmitted from the working fluid to a hydraulic fluid across a diaphragm or lightweight piston to achieve a hydraulic power out-put. The displacer piston of the present invention may be driven pneumatically, hydraulically or electromagnetically. In addition, the displacer piston and the inertial mass of the present invention may be positioned on the same side of the diaphragm member or may be separated by the diaphragm member.

AXISYMMETRIC FLOW FIELDS IN MOTORED AND FIRING SPARK-IGNITION ENGINES Ph.D. Thesis
Juan Ignacio Ramos 1980 206 p
Avail: Univ. Microfilms Order No. 8019829

The axisymmetric, turbulent flow field in both motored and firing engines was modeled by using a modified version of the k/e model which introduces the compressibility effects in the Reynolds stresses. The conservation equations were integrated along computational control-volumes and were solved by an inversion of tridiagonal matrices. A global perturbation technique was incorporated in the continuity and energy equations to accelerate the convergence of the flow field. The valve was simulated as an infinitely thin plate, which remains either fixed or for a two-stroke cycle, or moves in a specified manner for a four-stroke cycle. For the motored engine, only a single gas, namely air, was considered. Results show that characteristics of the fluid dynamical held for a firing engine are similar to those of motored engine; however, in the former case, there is a higher rate of heat transfer from the mixture to the cylinder walls. Dissert. Abstr.

LYAPUNOV STABILITY OF MULTI-MACHINE POWER SYSTEMS Ph.D. Thesis
Yuan Kuan Chen 1980 193 p
Avail: Univ. Microfilms Order No. 8019686

The stability of multi-machine power systems is investigated by means of the Decomposition-Aggregation method. The power system is decomposed into low order subsystems, each of which consist of an isolated subsystem and an interconnection. The stability of each isolated subsystem is studied using Barbasin's method in terms of its stability region and stability measures. Using these stability measures and constraints on the interconnection of the subsystems, an aggregated model of the overall system is formed. The stability criterion of the overall system can be established by examining the negative definiteness of an aggregated matrix. If this matrix is of the Metzler type and if negative diagonal quasidominance is satisfied, then the matrix is a negative definite matrix, and in turn, the stability of the overall system is guaranteed. Linear programming is utilized to determine the optimum weighting given to each subsystem in the overall Lyapunov function so that the least restrictive stability region for the overall system is obtained. Dissert. Abstr.

N80-31793 Polytechnic Inst. of New York.
AN INVESTIGATION TO MEASURE INTERPARTICLE FRICTION AND TO DETERMINE IMPORTANT MATERIAL AND ENVIRONMENTAL VARIABLES WHICH INFLUENCE THIS FRICTION Ph.D. Thesis
Jones Samuel Adeniyi 1980 171 p
Avail: Univ. Microfilms Order No. 8019382

The effects of humidity, temperature and lubricants on the frictional properties of iron, copper and graphite powders, plaster,

and Portland cement were investigated using a newly designed dynamic friction measuring apparatus. The results show that in both metal powders, friction decreased as the humidity increased. This decrease in friction reached a minimum at some optimum amount of humidity, then as the humidity increased beyond optimum value, friction increased. This optimum value of humidity is not the same for all the powders. There is very little of temperature on the friction of both iron and copper powders. The addition of mineral oil as a lubricant shows that the friction is reduced at low temperature but increased gradually to some maximum as the temperature increased above the room temperature and then dropped to a new value. In the case of plaster and Portland cement, the friction increased, with increasing humidity up to a certain maximum and then dropped again. Dissert. Abstr.

SSME TURBOPUMP BEARING ANALYTICAL STUDY Final Report
J. W. Kannel and T. Merriman 20 Aug. 1980 33 p refs
(Contract NAS8-33576)
(NASA-CR-161554) Avail: NTIS HC A03/MF A01 CSCL 13I

Three shuttle pump bearings operating under severe overspeed and shut-down conditions are evaluated. The specific parameters investigated include outer race stresses, cage stresses, cage-race drag, bearing heating, and crush loading. A quasi-dynamic version of the BASDAP computer code was utilized which involved the calculation of ball-race forces (inner and outer), contact pressures, contact dimensions, and contact angles as a function of (1) axial load, (2) radial load, and (3) centrifugal load on the bearing. Generally, radial loads on the order of 13,300 N (3000 pounds) per bearing or 26,700 N (6000 pounds) per bearing pair, could be expected to cause severe problems to any of the bearings with a 17,800 N (4000 pounds) axial load. Further, when possible temperature excursions are considered, even a load of 8900 N (2000 pounds) may be excessive. However, high momentary radial loads with a 3800 N (850 pounds) axial load would not be anticipated to cause catastrophic failure of the fuel pump bearing. M.G.

SIMULATION AND VISUALIZATION OF FACE SEAL MOTION STABILITY BY MEANS OF COMPUTER GENERATED MOVIES
I. Etsion and B. M. Auer 1980 19 p refs Proposed for presentation at the Fluid Sealing Conf., Leeuwenhorst, Holland, 1-3 Apr. 1980; sponsored by the British Hydrodynamic Research Assoc.
(NASA-TM-81581; E-554) Avail: NTIS HC A02/MF A01 CSCL 13I

A computer aided design method for mechanical face seals is described. Based on computer simulation, the actual motion of the flexibly mounted element of the seal can be visualized. This is achieved by solving the equations of motion of this element, calculating the displacements in its various degrees of freedom vs. time, and displaying the transient behavior in the form of a motion picture. Incorporating such a method in the design phase allows one to detect instabilities and to correct undesirable behavior of the seal. A theoretical background is presented. Details of the motion display technique are described, and the usefulness of the method is demonstrated by an example of a noncontacting conical face seal. M.G.

A METHODOLOGY FOR MODELING CONFINED, TEMPERATURE SENSITIVE CUSHIONING SYSTEMS
Virginia P. Kobler Jun. 1980 162 p refs
(AD-A087351; AD-E950004; DRSMI-RL-80-10) Avail: NTIS HC A08/MF A01 CSCL 13/4

A methodology for modeling the impact response of a confined cushioning system has been demonstrated. Data for modeling were acquired from test drops made with a test specimen comprised of a plywood cube (protected item) within a cleated plywood shipping container, under controlled environmental conditions, utilizing 2 inch Minicel as the cushioning system. Individual curves were developed for each temperature and drop height for both the interior box and total container system. Utilizing a stepwise regression procedure, a general model was developed for the interior box and also for the total container system. The general model permits the cushion designer to predict the impact response of a container system within drop heights of 12 to 30 inches, a temperature range of -65 F to 160 F, and a static stress range of 0.088 to 1.255 psi. THRUSTING CHARACTERISTICS OF PROPULSORS
W. S. Gearhart and E. P. Bruce 30 May 1980 33 p refs
(Contract N00024-79-C-6043)
(AD-A087281; ARL/PSU-TM-80-118) Avail: NTIS HC A03/MF A01 CSCL 13/10

The function of any propulsive system, is to provide a forward thrust along its axis. The design objective is to obtain a maximum in propulsor thrust with a minimum of shaft power while satisfying practical limits of propulsor size, shaft speed, and cavitation resistance. The generation of thrust requires that some kinetic energy be lost in the propulsive slipstream. These losses

are associated with both axial and rotational velocity components in the slipstream. In addition, the presence of rotational velocity in the slipstream results in a low pressure region in the far wake which reduces the net effective thrust generated by the propulsor. It has been the tradition of the propulsor designer to neglect the rotational effects, other than considering the kinetic energy losses, since it is assumed that the rotational component of velocity in the far wake is small. This assumption is valid for propulsors that ingest large mass flows and place a small amount of energy per unit mass in the flow. However, the trend now is toward more heavily loaded propulsors, both of the open or ducted type. Thus, a reevaluation of the relative magnitudes of the losses associated with the velocity components in the propulsive slipstream is necessary. It is the intent of this paper to evaluate, for a given shaft power, the relative losses in propulsor thrust associated with the axial and rotational velocity components in the slipstream. GRA

EXPERIMENTAL INVESTIGATION OF HYDRODYNAMIC SELF-ACTING GAS BEARINGS AT HIGH KNUDSEN NUMBERS Final Report, 1977 - 1980
Yiao-Tee Hsia and Gerald A. Domoto 1 Jul. 1980 157 p refs
(Contract N00014-75-C-0552; NR Proj. 062-491)
(AD-A087400; FR-28) Avail: NTIS HC A08/MF A01 CSCL 13/9

This investigation gives experimental confirmation of the 'slip flow' theory, developed by Burgdorfer, for modelling hydrodynamic gas bearing with clearances below 0.25 micrometers. An interferometric technique using two CW lasers is used to measure the small clearances with an 0.025 micrometer accuracy. The pitch and roll angles of the slider bearing and the surface contour of the slider are also measured interferometrically. The effects of molecular rarefaction are studied by operating the bearing in different gas media with different mean free paths. Air is used to study Knudsen numbers below 0.5 while helium is used to study Knudsen numbers above 0.5. Experimentally measured trailing edge clearances and pitch angles are compared with theoretical predictions using the 'modified' Reynolds equation with velocity slip boundary conditions. The modified Reynolds equation is solved numerically using two different numerical algorithms. Excellent agreement between experiment and theory is found for clearances as high as 1.60 micrometers to as low as 0.075 micrometers with corresponding ambient Knudsen number of 0.04 and 2.51, respectively. (AD-A087806; SRC-78-TR-27-Pt-1; AFAPL-TR-78-6-Pt-1) Avail: NTIS HC A16/MF A01 CSCL 01/3

This report describes an update of the Air Force computer programs concerned with the dynamics of high speed rotors. The new program, which replaces AFAPL/SFL Programs No. 100, 101, and 117, has the capability to perform a variety of rotordynamics analyses. These analyses include torsional vibration and bending vibration. The bending analyses consist of those for critical speeds, unbalance response, asynchronous response, and rotor stability. In addition, the program incorporates the following: a formulation based on whirl coordinates with an exact bending solution between rotor modelling stations, the capability to utilize a small subset of these stations in much of the calculations, a set of bearing characteristics that depend on rotor speed and vibration frequency and that include anisotropy and damping, and an economical combination of a separate rotor analysis and the characteristics of the bearings. The report includes: an introduction to use of the program as well as a detailed user's manual, an overview of the mathematical basis of the program and a complete presentation of those mathematics. BISTABLE SOLENOID VALVE, VOLUME 1 Final Report [ELECTROVANNE BISTABLE A VERROUILLAGE]
B. Gosse 24 Jul. 1979 108 p In FRENCH
(Contract ESTEC-2946/76-NL-AK)
(MU/LR-97.091/79-Vol-1; ESA-CR(P)-1306-Vol-1) Avail: NTIS HC A06/MF A01

The specification, design, test procedures and results for a solenoid valve are presented. The bistable valve is to be used in pneumatic circuits up to 300 bars and in hydrazine circuits in aerospace applications. Total weight is less than 0.25 kg. Pressure drop is less than 0.1 bar for 10 g/s hydrazine flow or 1 g/s nitrogen flow. A position detection device based on hall effect cells is included. The test results show that the design is appropiate for space use. Comments are made on the admissible pressure drop at satellite life end, on the maximum opening pressure when working with liquids, and the replacement of the hall effect position detector by a shock detector device. (Contract F33615-77-C-3123; AF Proj. 2401)
(AD-A087301; FZM-657-Vol-1; AFFDL-TR-79-3118-Vol-1) Avail: NTIS HC A06/MF A01 CSCL 13/5

A summary is presented of an analytical methodology developed to meet USAF durability requirements. Details are given in four companion volumes. Analytical approaches that are currently used or have potential to be used to determine economic life are surveyed. Results of a structural survey of durability problems experienced at USAF ALC's are summarized. Durability critical parts criteria and economic life criteria are discussed. An analytical method to determine the crack population in a structure as a function of service-time is presented. Fastener-hole cracking is the basic form of damage analyzed.

Representations of initial quality and growth of small cracks are discussed. The effect of inspection and repair on the distribution of cracks is included. GRA

APPLICATION OF NONDESTRUCTIVE GAMMA-RAY AND NEUTRON TECHNIQUES FOR THE SAFEGUARDING OF IRRADIATED FUEL MATERIALS
J. R. Phillips, J. K. Halbig, D. M. Lee, S. E. Beach, T. R. Bement, E. Dermendjiev, C. R. Hatcher, K. Kaieda, and E. C. Medina. May 1980. 89 p. refs.
(Contract W-7405-eng-36)
(LA-8212) Avail: NTIS. HC A05/MF A01

Nondestructive gamma ray and neutron techniques were used to characterize the irradiation exposures of irradiated fuel assemblies. Techniques for the rapid measurement of the axial activity profiles of fuel assemblies were developed using ion chambers and Be(gamma, n) detectors. Detailed measurements using high resolution gamma ray spectrometry and passive neutron techniques were correlated with operator declared values of cooling times and burnup. DOE

A NEW METHOD FOR THE SOLUTION OF ANISOTROPIC THIN PLATE BENDING PROBLEMS. Ph.D. Thesis
Benjamin Chin-wen Wu. 1980. 137 p.
Avail: Univ. Microfilms. Order No. 8020753

The indirect boundary integral method which uses the Green's function of a clamped circular plate of isotropic material was modified to solve an isotropic thin plate problem. Three major modifications introduced are (1) the set of fictitious moments are replaced by an additional set of fictitious forces, and the entire set of fictitious forces is located outside of the embedded contour; (2) the numerical integration is replaced by a simple summing process; and (3) the Green's function for a clamped circular plate is replaced by the Green's function of an infinite plate. With these modifications, significant improvements in solution accuracy and computing efficiency have been achieved. The second order singularity difficulties associated with free edges are avoided, and due to the simplicity of the new method, the computing costs are reduced by about sixty percent. Since the Green's functions for orthotropic and anisotropic infinite plates are also available, the new method is readily extended to orthotropic and anisotropic thin plate bending problems. Dissert. Abstr.

N80-31814 Idaho Univ., Moscow.
ELASTIC-PLASTIC FRACTURE ANALYSIS OF TYPE 304 STAINLESS STEEL FLAT-PLATE AND PIPE SECTIONS CONTAINING SURFACE FLAWS. Ph.D. Thesis
Walter Graham Reuter. 1980. 376 p.
Avail: Univ. Microfilms. Order No. 8019794

Thirty-six (36) flat-plate specimens, each containing a surface flaw of either rectangular, triangular, or ellipsoidal configuration, were tested to instability. Data collected consisted of load, cross head displacement, crack-opening displacement, strain gage, acoustic emission, reflective photoelasticity, stop-action photography, and motion pictures. Analytical techniques were developed to predict conditions for initiation of subcritical crack growth, for the defect to penetrate the 6.4 mm(0.25 in.) wall thickness, and for instability. The capabilities of the analytical techniques are compared with test results obtained from nine (9) pipe

best copy available

specimens. The pipe specimens contained triangular-shaped surface flaws that were oriented with the defect length in the axial direction. The pipe specimens were hydrostatically loaded until the defect penetrated the wall thickness. Based on test results of this program it is possible to accurately predict from flat-plate specimen tests the conditions required for a defect to penetrate the wall thickness of a pipe. Dissert. Abstr.

DYNAMIC BUCKLING OF INELASTIC SPHERICAL SHELLS Ph.D. Thesis
Glen Eugene Funk 1980 359 p
Avail: Univ. Microfilms Order No. 8020960

The dynamic inelastic buckling of the complete spherical shell having mechanical properties characterized by a strain rate potential is investigated. Both bilinear elastic-plastic and Ramberg-Osgood uniaxial stress-strain relationships are considered. A minimum principle is employed to develop the equations of perturbed motion in functional form. In addition to the quadratic terms, cubic and quartic terms are retained in the functional to observe the magnitude of motion at which these terms become significant. An unloading criterion is developed and a generalized deflection measure is introduced. A first order difference formulation is employed to solve the system of equations. Numerical results obtained for initial velocity or impulse loading indicate that motions can become unstable prior to the critical time indicated by the quasibifurcation criterion. The results are attributed to the variation of the perturbed motion stress-strain relations with time arising from the equal biaxial stress state associated with the unperturbed motion. Dissert. Abstr.

CRITICAL EXCITATIONS FOR LINEAR AND NONLINEAR STRUCTURAL SYSTEMS Ph.D. Thesis
Aristodimos J. Philippacopoulos 1980 74 p
Avail: Univ. Microfilms Order No. 8019409

Seismic assessment of structures is discussed. The basis for this assessment lies in the concept of the critical excitation which is generated by combining a properly selected set of recorded ground motions together with a maximization procedure. It is a site as well as system dependent excitation. Both 'linear' and 'nonlinear' were considered. For the nonlinear case a linearization technique based on the concept of equivalent linearization was employed. 'Critical response spectra' were constructed by generating critical excitations for a range of spectral frequencies. Finally a 'simulated critical excitation' was generated in order to extend the concept of critical excitation. This means that a single input may be employed for all the design variables of a particular structure. From the applications it is concluded that the seismic assessment of structures based on critical excitations leads to results which are conservative to a certain degree. However this conservatism is fully justifiable for 'socially or economically important structures', which generally require high confidence level of reliability for their seismic assessment. Dissert. Abstr.

N80-31817 Michigan State Univ., East Lansing.
ELASTIC BUCKLING OF ARCHES BY FINITE ELEMENT METHOD Ph.D. Thesis
Jose Gregorio Lange 1980 186 p
Avail: Univ. Microfilms Order No. 8020717

The elastic buckling load of arches were computed by representing an arch by beam finite elements curved in one plane but deformable in three dimensional space. The equilibrium equation was obtained from the first variation of the potential energy. To avoid dealing with nonlinear equations, an estimate of the buckling load was obtained by assuming that the displacement increased linearly with the applied load until buckling occurs. A computer program was prepared for the implementation of the linear equilibrium solution and the buckling load solutions. Numerical results were obtained involving arc ribs with in-plane and out-of-plane behavior. The types of buckling problems considered are: in-plane, out-of-plane, tilted loads, and the effect of out-of-plane horizontal loads on the inplane buckling load. Results indicate that while a small out-of-plane horizontal load may have little effect on the inplane buckling load, the latter decreases rapidly with increases in the horizontal load. Dissert. Abstr.

FURTHER EXPERIMENTAL STUDIES ON VIBRATIONS AND BUCKLING OF ECCENTRICALLY LOADED STIFFENED CYLINDRICAL SHELLS
J. Singer and Y. Segal Dec. 1978 46 p refs
(TAE-331) Avail: NTIS HC A03/MF A01

A method for detection of load eccentricity of stringer-cylindrical shells from vibration tests developed earlier was applied to shells with prescribed load eccentricity. Seven shells with outward or zero load eccentricity were tested and analyzed. In the tests, the shells were vibrated at different load levels and finally buckled. The experimental and theoretical results verify the methods of load eccentricity identification and buckling load prediction and extend their applicability. Author

ON THE UTILITY OF PLANE STRAIN APPROXIMATIONS FOR OBLIQUE IMPACT COMPUTATIONS
J. A. Zukas, G. H. Jonas, and J. J. Misey Oct. 1979 39 p refs
(DA Proj. 1L1-62618-AH-80)
(AD-A081120; ARBRL-MR-02969) Avail: NTIS HC A03/MF A01 CSCL 20/11

The feasibility of using the plane strain mode of a 2D code in lieu of a 3D code for this oblique kinetic energy penetration problem was determined. First, a comparison in a normal impact problems was made between the axisymmetric and the plane strain modes of the two dimensional HELP code. A volumetric relationship was given for the kinetic energy and the axial momentum of the projectile, but data scaling for other variables of the projectile and those of the target were not determined. Next, HELP in the plane strain mode was utilized to solve a long rod impact at 60 deg. obliquity and the results were compared with experimental data. The oblique impact problem was also modeled with a three dimensional version of the EPIC code. A comparison of rod loss penetration depth, and penetrator and target profiles revealed very good agreement, at early times when the penetrator density was greater than that of the target. A.R.H.

DESIGN AND ANALYSIS OF A STIFFENED COMPOSITE FUSELAGE PANEL
J. N. Dickson and S. B. Biggers Aug. 1980 51 p refs
(Contract NAS1-15949)
(NASA-CR-159302; LG80ER0137) Avail: NTIS HC A04/MF A01 CSCL 20L

The design and analysis of stiffened composite panel that is representative of the fuselage structure of existing wide bodied aircraft is discussed. The panel is a minimum weight design, based on the current level of technology and realistic loads and criteria. Several different stiffener configurations were investigated in the optimization process. The final configuration is an all graphite/epoxy J-stiffened design in which the skin between adjacent stiffeners is permitted to buckle under design loads. Fail safe concepts typically employed in metallic fuselage structure have been incorporated in the design. A conservative approach has been used with regard to structural details such as skin/frame and stringer/frame attachments and other areas where sufficient design data was not available. M.G.

LOCAL APPROACH TO PROBLEMS OF FATIGUE CRACK GROWTH
H. Fuhring 1979 11 p refs Transl. into ENGLISH from Sitzung des Arbeitskreises Betriebsfestigkeit (Stuttgart), 1979 p 509-518
(ICAF-1143) Avail: NTIS HC A02/MF A01

Fatigue fracture mechanics attempts to express crack growth as a function of local quantity, either the cyclic strain variation or the range of the stress intensity factor above the crack opening level, so that the damage is reduced to a few pure fatigue mechanisms. This approach to crack growth problems permits the introduction of data resulting from any confirmed knowledge of material behavior (environmental effects, hardening, softening,

three dimensional plasticity effects, etc.). Fundamental studies interpreting the role of crack closure on crack growth are reviewed. These consider constant amplitude crack tip stress and strain states as well as crack surface displacements under variable amplitude loading. A computer program was developed for calculating the load sequences and for deriving the N curve. Predictions using only basic structural and material data vary by a factor of plus or minus 2 compared with experiments. A.R.H.

DYNAMIC FRACTURE ANALYSIS: A TRANSLATING-SINGULARITY FINITE ELEMENT PROCEDURE. Interim Report
Satya N. Atluri and T. Nishioka. Jun. 1980. 10 p. refs. Submitted for publication.
(Contract N00014-78-C-0636; NR Proj. 064-610)
(AD-A087226; GIT-CACM-SNA-2; TR-6) Avail: NTIS HC A02/MF A01 CSCL 20/11

In this paper an efficient finite element method, which accounts for the translating singularities near the tip of a dynamically propagating crack, is presented. Two aspects of analyses of dynamic fracture, namely, (1) determination of dynamic stress intensity factors from given crack velocity history; and (2) determination of crack velocity history (and arrest) from given dynamic fracture toughness versus crack velocity data are considered. Results are presented and discussed for wedge loaded rectangular, as well as tapered, double cantilever beam specimens. GRA

NEW GENERAL AND COMPLEMENTARY ENERGY THEOREMS, FINITE STRAIN, RATE-SENSITIVE INELASTICITY, AND FINITE ELEMENTS: SOME COMPUTATIONAL STUDIES. Interim Report
Satya N. Atluri and H. Murakawa. 1980. 20 p. Submitted for publication.
(Contract N00014-78-C-0636; NR Proj. 064-610)
(AD-A087227; GIT-CACM-SNA-23; TR-7) Avail: NTIS HC A02/MF A01 CSCL 20/11

General variational theorems for the rate problems of rate-dependent finite strain inelasticity, in terms of the appropriate rates of the first and second Piola-Kirchhoff stress tensors, the symmetrized Biot-Lure stress tensor, and their conjugate measures of strain-rate are discussed. Certain new rate-complementary-energy principles, involving the rate of spin and the rate of the symmetrized Biot-Lure stress tensor as variables, are stated for finite strain analysis of rate-sensitive materials, such as those exhibiting elasto-visco-plastic and creep behavior. Uniqueness and stability criteria for those inelastic solids, using the finite element counterparts of the new complementary energy rate principles, are discussed. Computational studies, using the complementary energy methods, discussed herein include: (1) bifurcation necking and post-buckling analyses of initially perfect elasto-plastic bars and (2) post-buckling and large-deformation analyses of thin elastic plates under inplane compression and transverse bending loads. GRA

FATIGUE BEHAVIOR OF ADHESIVELY BONDED JOINTS, VOLUME 1. Final Technical Report, Jul. 1976 - Apr. 1980
John Romanko and W. G. Knauss. Wright-Patterson AFB, Ohio AFML. Apr. 1980. 193 p. refs. 2 Vol.
(Contract F33615-76-C-5220; AF Proj. 7340)
(AD-A087280; AFWAL-TR-80-4037-Vol-1) Avail: NTIS HC A09/MF A01 CSCL 11/1

The fatigue behavior of adhesively bonded aluminum joints was investigated analytically and experimentally. Stress distributions in the adhesive interlayer were calculated to guide planning of the joint tests and the interpretation of the test results. Finite element stress analyses were conducted using a linear elastic, and a three element linear viscoelastic model for the adhesive behavior. Thick adherend lap shear specimens of the model joint configuration were fabricated and tested. These specimens were instrumented and subjected to sinusoidal fatigue tests at several frequencies, humidities and temperatures. Certain tests were interrupted at various stages and the specimens examined for fatigue damage. Damage was found to initiate in the calculated high stress regions, and to propagate with further load cycling. Observations and recommendations resulting from the investigation are included in this final report. GRA

ON CRACK PROPAGATION ALONG CRYSTALLOGRAPHIC SLIP BANDS
K. S. Chan and D. A. Koss. Jun. 1980. 8 p. refs. Presented at the Acta/Scripta Metallurgica Conf. on Dislocation Modeling, Gainesville, Fla., 22-27 Jun. 1980.
(Contract N00014-76-C-0037)
(AD-A087128; TR-13) Avail: NTIS HC A02/MF A01 CSCL 20/11

The influence of the crystallography of slip (fcc, hcp, and bcc) on crack propagation along planar slip bands is examined

for two different inclined-crack configurations. If a crack propagates along a slip band and the Burger:s vector of slip within that band is contained in the plane of the crack, (i.e., coplanar slip), then non-coplanar slip is hindered and large normal stresses develop near the crack-tip even for inclined cracks. The magnitude of these normal stresses is largest for basal plane cracking in a hcp material. However, the calculations show that the magnitude of the plastic constraint factor even for an inclined crack in fcc and bcc alloys fracturing along crystallographic slip bands is also large and comparable to a mode I crack in a polycrystalline material. The combination of the intense shear caused by the planar slip and the large normal stresses should result in easy crack propagation across individual grains and could result in a susceptibility to hydrogen embrittlement. HC A03/MF A01 CSCL 11/6

The deformation response of polycrystalline AA2024-T4 to cyclic loading has been determined by conventional and double crystal diffractometry. These studies show a preferential work hardening near the surface compared to the bulk. The defect distribution as a function of depth was also investigated as a function of the fraction of fatigue life. From these studies, it was determined that the remaining fatigue life could be predicted by determining the average ratio beta/beta* where beta is the linewidth at any number of fatigue cycles and beta* is the critical linewidth at fracture. Current studies have shown these predictions to be valid for tests where the stress amplitude is held constant for the entire test. A few tests have also been performed where the loading sequence is more complicated. In these tests, the X-ray predictive method was found to be far more accurate than conventional methods. GRA

HC A03/MF A01 CSCL 11/4

A finite-element analysis is carried out for small-amplitude free vibration of laminated, anisotropic, rectangular plates having arbitrary boundary conditions, finite thickness-shear moduli, rotatory inertia, and bimodulus action (different elastic properties depending upon whether the fiber-direction strain is tensile or compressive). The element has five degrees of freedom, three displacements and two slope functions, per node. An exact closed-form solution is also presented for the special case of freely supported single layer orthotropic and two layer, cross-ply plates. This provides benchmarks to evaluate the validity of the finite-element analysis. Both solutions are compared with numerical results existing in the literature for special cases (all for ordinary, not bimodulus, materials) and good agreement is obtained. GRA

THERMAL BENDING OF THICK RECTANGULAR PLATES OF BIMODULUS COMPOSITE MATERIAL
J. N. Reddy, C. W. Bert, Y. S. Hsu, and V. S. Reddy Jun. 1980 32 p refs
(Contract N00014-78-C-0647; NR Proj. 064-609)
(AD-A087425; OU-AMNE-80-9) Avail: NTIS
HC A03/MF A01 CSCL 11/4

Closed-form and finite-element solutions are presented for thermal bending and stretching of laminated composite plates. The material of each layer is assumed to be elastically and thermoelastically orthotropic and bimodular, i.e., having different properties depending upon whether the fiber-direction normal strain is tensile or compressive. The formulations are based on the thermoelastic version of the Whitney-Pagano laminated plate theory, which includes thickness shear deformations. Numerical results are obtained for deflections and neutral-surface positions associated with normal strains in both of the in-plane coordinates. The closed-form and finite-element results are found to be in good agreement. GRA

DETACHMENT OF AN ELASTIC MATRIX FROM A RIGID SPHERICAL INCLUSION
A. N. Gent 1 Jul. 1980 23 p refs
(Contract N00014-76-C-0408; NR Proj. 092-555)
(AD-A087414; TR-8) Avail: NTIS HC A02/MF A01 CSCL 11/1

An approximate theoretical treatment is given for detachment of an elastomer from a rigid spherical inclusion by a tensile stress applied to the elastomeric matrix. The inclusion is assumed to have an initially debonded patch on its surface and the conditions for growth of the patch are derived from fracture energy considerations. Catastrophic debonding is predicted to occur at a critical applied stress when the initial debond is small. The strain energy dissipated as result of this detachment, and hence the mechanical hysteresis, are also evaluated. When a reasonable value is adopted for Young's modulus (E) of the elastomeric matrix, it is found that detachment from small inclusions, of less than abut 0.1 mm in diameter, will not occur, even when the level of adhesion is relatively low. Instead, rupture of the matrix near the inclusion becomes the preferred mode of failure at an applied stress given approximately by E/2. For still smaller inclusions, of less than about 1 micrometer in diameter, rupture of the matrix becomes increasingly difficult, due to the increasing importance of a surface energy term. These considerations account for the general features of reinforcement of elastomers. GRA

NUMERICAL MODELING OF DYNAMIC PROPAGATION IN FINITE BODIES, BY MOVING SINGULAR ELEMENTS. PART 1: FORMULATION Interim Report
T. Nishioka and S. N. Atluri Jun. 1980 28 p refs
(Contract N00014-78-C-0636; NR Proj. 064-610)
(AD-A087395; GIT-CACM-SNA-24-Pt-1; TR-8) Avail: NTIS

HC A03/MF A01 CSCL 20/11

An efficient numerical (finite element) method is presented for the dynamic analysis of rapidly propagating cracks in finite bodies, of arbitrary shape, wherein linear-elastic material behavior and two dimensional conditions prevail. Procedures to embed analytical asymptotic solutions for singularities in stresses/strains near the propagating crack-tip, to account for the spatial movement of these singularities along with the crack-tip, and to directly compute the dynamic stress-intensity factor, are presented. GRA

THERMOELASTICITY OF CIRCULAR CYLINDRICAL SHELLS LAMINATED OF BIMODULUS COMPOSITE MATERIALS

Y. S. Hsu, J. N. Reddy, and C. W. Bert. Jul. 1980. 38 p. refs.
(Contract N00014-78-C-0647)
(AD-A087429; OU-AMNE-80-14) Avail: NTIS
HC A03/MF A01 CSCL 11/4

Closed-form and finite-element solutions are presented for the thermoelastic behavior of laminated composite shells. The material of each layer is assumed to be thermoelastically orthotropic and bimodular, i.e., having different properties depending upon whether the fiber-direction normal strain is tensile or compressive. The formulations are based on the thermoelastic generalization of Dong and Tso's laminated shell theory, which includes thickness shear deformations. The finite element used here has five degrees of freedom per node (three displacements and two bending slopes). Numerical results are presented for deflections and the positions of the neutral surfaces associated with bending along both coordinate directions. The closed-form and finite-element results are found to be in good agreement. GRA

AN EXPERIMENTAL WEIGHT FUNCTION METHOD FOR STRESS INTENSITY FACTOR CALIBRATION. M.S. Thesis. Interim Report, Jan. - Oct. 1979

Dan Bar-Tikva. Apr. 1980. 93 p. refs.
(AF Proj. 2307)
(AD-A087846; AFWAL-TR-80-4001) Avail: NTIS
HC A05/MF A01 CSCL 20/11

The weight function procedure allows one to convert stress intensity factors K and crack displacement information obtained for one crack configuration and loading into the stress intensity factor solution for the same geometry and another loading. The feasibility of using the weight function idea for a two dimensional case with experimental results is demonstrated in this work. Mode 1 stress intensity factor K1 measurements obtained by a laser interferometric technique and crack mouth opening displacement measurements were taken for an edge cracked strip subjected to four point bending. These results were used to construct (numerically) a weight function with the aid of a computer program written for this purpose. Results of K1 for the same geometry with two different loading configurations, uniform tension and three point bending (with two different length to width ratios) were computed. These results agree favorably with the known solution and demonstrate that a set of experiments for a single loading can accurately predict the stress intensity factor for any other loading configuration of the same geometry. The advantage of the weight function method would be particularly important if these loading configurations are difficult or impossible to reproduce in the laboratory. GRA

THERMOELASTIC BUCKLING OF PLATES IN A CYLINDRICAL GEOMETRY AGAINST AN ELASTIC BACK SUPPORT

L. D. Simmons (Portland Univ.) and R. W. Wierman. 1980. 17 p. refs. Presented at the Intern. Conf. on Thermal Stresses in Mater. and Struct. in Severe Thermal Environments, Blacksburg, Va., 19 Mar. 1980.
(Contract EY-76-C-14-2170)
(HEDL-SA-2066-FP; CONF-800360-1) Avail: NTIS
HC A02/MF A01

A plate which is fixed at its edges to a strong edge support structure will develop large compressive stresses when heated from ambient temperature more rapidly than the support structure. Determining the response of the plate to this situation requires stability analysis to ascertain whether the plate might buckle, or whether the constrained thermal expansion will lead to compressive stresses exceeding the yield point because it did not buckle. A special case, in which the plate is curved slightly into a cylindrical shape and the convex face of the plate is against a supporting surface, is considered. DOE

CRACK PROPAGATION IN HASTELLOY X

T. Weerasooriya and J. P. Strizak. May 1980. 39 p. refs.
(Contract W-7405-eng-26)
(ORNL/TM-7255) Avail: NTIS HC A03/MF A01

The fatigue and creep crack growth rates of Hastelloy X were examined both in air and impure helium. Creep crack growth rate is higher in air and impure helium at 650 C. Initial creep crack growth from the original sharp fatigue crack is by an intergranular mode of fracture. As the cracking accelerates at higher stress intensities, growth is by a mixed mode of both intergranular and transgranular fracture. Fatigue crack growth rate increases with increasing temperature and decreasing frequency for the image of stress intensities reported in the literature and is lower in impure helium than in air. DOE

PLASTICITY UNDER COMBINED STRESS LOADING

Mark L. Wilkins and John E. Reaugh (Science Applications, Inc., San Leandro, Calif.). 8 Feb. 1980. 8 p. refs. Presented at the ASME Pressure Vessels and Piping Technol. Conf., San Francisco, 12-15 Aug. 1980. Submitted for publication.
(Contract W-7405-eng-48)
(UCRL-83322; CONF-800804-1) Avail: NTIS
HC A02/MF A01

The stress-strain fields occurring in pressure vessels and pipes are, in general, combinations of tension and shear. Material specimens tested separately in simple tension and simple shear provide experimental data on the flow stress and failure conditions for these two limiting cases. Computer simulations of tension and torsion tests corresponding to experiments on aluminum 6061-T651 are presented. Aluminum is used as a first step for developing a method to study the plasticity and ductile fracture of reactor grade steel under combined stresses. It is noted that the flow stress differs for plastic flow in tension compared to torsion. A general flow-stress model is derived from the experiments. DOE

REMOTE MEASUREMENT OF CRACK GROWTH IN DOUBLE CANTILEVER BEAM (DCB) SPECIMENS

H. P. vanLeeuwen, L. Schra, and A. M. Otter. 1979. 62 p. refs.
(NLR-TR-79006-U) Avail: NTIS HC A04/MF A01

A method is suggested to determine crack length and load or load line crack opening displacement by measuring beam separation and free end rotation on extensions to the free ends of a double cantilever beam specimen. Application of the method to specimens with real stress crack corrosion cracks gave large discrepancies between crack lengths derived from calibration data for slits and crack lengths measured by direct observation of the specimen surface. Also, on the basis of a few calibration runs made on a specimen with a real crack, it is concluded that the calibration curves for specimens with slits may differ appreciably from those for specimens with real cracks. A discrepancy was noted between the relations of free end rotation to cract length observed between a specimen which was left to cract freely and a specimen which was recalibrated repeatedly during the test. ANALYSIS OF AXIALLY LOADED STRINGER STIFFENED CIRCULAR CYLINDERS

Aake Samuelson and Peter Vestergren 1979 64 p refs

(Contract FMV-F-FL-82223-78-002-21-001)

(FFA-TN-HU-2134) Avail: NTIS HC A04/MF A01

The available methods of analysis for the different possible modes of buckling of circular cylinders are summarized. It is concluded that densely stiffened cylinders behave in a way similar to that of an unstiffened shell and the methods of analysis available yield resonably good agreement with test results. In sparsely stiffened cylinders the lower buckling load is governed by the behavior of the shell plate between the stiffeners. Recommendations for design calculations of different types of stiffened cylinders are given. Author (ESA)

BUCKLING OF CYLINDERS WITH LONGITUDINAL STIFFENERS SUBJECTED TO AXIAL COMPRESSION Final Report. M.S. Thesis - Royal Inst. of Technology, Stockholm

Hans Groth 1979 90 p refs

(Contract FMV-F-FL-82223-78-174-21-001)

(FFA-TN-HU-2184) Avail: NTIS HC A05/MF A01

The cylinders were designed to buckle in the local buckling region in accordance with the theory for curved panels. This theory was supposed to give the best agreement with test results, but theories for plane plates were also compared to the test results. Eight, twelve, and twenty stringers were used and the end fixtures simulated nearly clamped elastic boundary conditions. The stringers could be considered as heavy. The specimens were not geometrically perfect. The purpose of the tests was to examine the buckling behavior of sparsely stringer stiffened cylinders manufactured with regular workshop tolerances. It was found that most of the available theories are suitable only for the unstiffened cylinder or the general instability cylinders. The only theory that is found for sparsely stiffened cylinders seems to be column theory, which gives an overly conservative design since the influence from the shell is not taken into account. EVALUATION AND COMPARISON OF NONDESTRUCTIVE SERVICE INSPECTION METHODS

E. A. B. deGraaf and P. DeRijk 17 Apr. 1979 10 p refs Presented at 9th World Conf. on Nondestructive Testing, Melbourne, Nov. 1979

(NLR-MP-79005-U) Avail: NTIS HC A02/MF A01

Fatigue cracks in 102 aluminum alloy specimens were inspected with eddy currents, ultrasonics, X-rays, and penetrants. The specimens were then corroded and the inspections repeated. Inspection results were verified by fractographic examination of the opened up fatigue cracks. It was found that: (1) excepting the use of penetrant before corrosion, long cracks were missed upon the application of five nondestructive testing (NDT) techniques both before and after corrosion under laboratory conditions; (2) inspection efficiency is governed by crack depth rather than crack length; (3) four out of five NDT techniques applied indicated a theshold length for crack detection; 4) for all the NDT methods the scatter with regard to accuracy increased with decreasing crack length; (5) although these techniques underestimated crack length, eddy current and ultrasonic inspections achieved the same accuracy both before and after corrosion; (6) the accuracy of penetrant inspection decreased significantly after corrosion;(7) sensitivity and probability of detection of all five NDT techniques decreased significantly after corrosion; and (8) before corrosion penetrant is the most reliable, sensitive, and accurate inspection method. After corrosion penetrant remains the most sensitive, but eddy current is more reliable. Author (ESA)

FLIGHT SIMULATION FATIGUE CRACK PROPAGATION IN 7010 AND 7075 ALUMINUM ALLOY PLATE

R. J. H. Wanhill, W. G. J. tHart, and L. Schra May 1979 20 p refs

(NLR-MP-79019-U) Avail: NTIS HC A02/MF A01

The fatigue crack propagation resistances of 7010-T7651, 7010-T73651 and 7075-T7351 thick plate were compared for flight simulation (gust spectrum) loading conditions. The 7075-T7351 was slightly superior, and it was shown that this superiority was not essentially due to the higher fracture thoughness of this alloy. The influence of specimen thickness on the crack propagation resistance was significant. Thinner specimens gave longer crack propagation lives, generally lower crack propagation rates, and generally longer delays in crack growth following severe flights. Author (ESA)

THEORY AND CALCULATION OF VIBRATING STRUCTURES

Roger Valid 1980 58 p refs In FRENCH; ENGLISH summary Presented at CEA/EDF Conf. on Vibrations des Struct. dans le Domaine Ind., Jouy-en-Josas, France, 15-19 Oct. 1979 Report will also be announced as translation (ESA-TT-663)

(ONERA-P-1980-1) Avail: NTIS HC A04/MF A01

Finite element methods, linear vibration theory and the calculation of geometrically nonlinear structures are covered. Finite element methods are developed in a simple manner from the displacement method. Details are given about the most commonly used elements. The theory of linear vibrations is treated for the discrete case. Its variational properties are, however, recalled for both discrete and continuous cases. Formulas describing the response to various excitations (transient, harmonic, periodic, and random) are given. Variational form methods for calculating structures with geometrical nonlinearities are presented together with the algorithms most commonly used for arbitrary excitations. The stability of dynamic systems is introduced. Author (ESA)

FRACTURE CONTROL PRACTICES FOR METAL STRUCTURES
H. I. McHenry and S. T. Rolfe (Kansas Univ., Lawrence) Jan. 1980 115 p refs Sponsored in part by Naval Ship Research and Development Center
(PB80-185648; NBSIR-79-1623) Avail: NTIS HC A06/MF A01 CSCL 13M

Fracture control practices are the engineering procedures and requirements that contribute to the prevention of fracture in metal structures. These practices are identified as the elements of fracture control and each element is defined and described. The systematic application of these practices to the prevention of fracture in a particular structure is accomplished by either the code approach or the performance specification approach to fracture control. In these two approaches, the consideration given to each of the elements of fracture control is discussed and illustrated with examples for specific types of structures. Selected practices that may be of use in Naval systems are discussed. GRA

EVALUATING SOIL MOISTURE AND TEXTURAL RELATIONSHIPS USING REGRESSION ANALYSIS Progress Report, Jan. - Jun. 1979
Melvin B. Satterwhite May 1980 35 p refs
(DA Proj. 4A1-61102-B-52C)
(AD-A087371; ETL-0226) Avail: NTIS HC A03/MF A01 CSCL 08/13

Soil moisture and textural conditions are described for 179 soil samples from an arid to semiarid climate. Stepwise multiple regression analysis of these data produced four regression equations that related (1) the percent sand and clay and (2) the percent fines, with the percent soil water held at 0.33 bar (FC) and the 15 bar (WP) potentials. Evaluation of these equations showed no differences between the estimates at the 0.33 bar potential using either the percent sand and clay or the percent fines. Better estimates for the WP were obtained when the percent sand and clay were used instead of the percent fines. The differences between the estimated soil moisture at FC or WP varied less than 30 percent from the measured soil moisture values for 161 (90 percent) of the 179 soil samples. The differences between the estimated and the measured soil moisture values were not significant at the 95 percent level of confidence. The regression equations provide a method by which the potential percent soil water held at the FC or WP can be estimated from soil textural data. The accuracy and precision of the results of applying these equations to soils of other areas has not been determined. It would seem, however, that they would be applicable in those instances where only general working estimates are needed. GRA

INORGANIC GEOCHEMISTRY OF DEVONIAN SHALES IN SOUTHERN WEST VIRGINIA: GEOGRAPHIC AND STRATIGRAPHIC TRENDS
Michael Ed Hohn, Ronald W. Neal, and J. J. Renton Apr. 1980 41 p refs
(Contract EY-76-C-05-5199)
(DOE-METC/5199/7) Avail: NTIS HC A03/MF A01

Samples of cuttings from twenty-one wells and a core from a single well in southern West Virginia were analyzed for major and minor elements: silicon, aluminum, iron, magnesium, calcium, sodium, titanium, phosphorus, manganese, sulfur, zinc, and strontium. Stratigraphic and geographic controls on elemental abundances were studied through canonical correlations, factor analyses, and trend surface analysis. The most abundant elements, silicon and aluminum, show gradual trends through the stratigraphic column of most wells, with silicon increasing and aluminum decreasing upsection. Other elements such as calcium, sulfur, and titanium change abruptly in abundance at certain stratigraphic boundaries. Important geographic trends run east-west: for instance, one can see an increase in sulfur and a decrease in titanium to the west; and a decrease in silicon from the east to the central part of the study area, then an increase further west. DOE

STATE ESTIMATION AND ABSOLUTE IMAGE REGISTRATION FOR GEOSYNCHRONOUS SATELLITES

Richard S. Nankervis, David W. Koch, and Henry M. Sielski (Computer Sciences Corp.) May 1980 16 p refs Presented at the Conf. of the Am. Congr. on Surv. and Mapping and Am. Soc. of Phot., St. Louis, 9-14 Mar. 1980
(Contract NAS5-24350)
(NASA-TM-80712) Avail: NTIS HC A02/MF A01 CSCL 14E

Spacecraft state estimation and the absolute registration of Earth images acquired by cameras onboard geosynchronous satellites are described. The basic data type of the procedure consists of line and element numbers of image points called landmarks whose geodetic coordinates, relative to United States Geodetic Survey topographic maps, are known. A conventional least squares process is used to estimate navigational parameters and camera pointing biases from observed minus computed landmark line and element numbers. These estimated parameters along with orbit and attitude dynamic models are used to register images, using an automated grey level correlation technique, inside the span represented by the landmark data. In addition, the dynamic models can be employed to register images outside of the data span in a near real time mode. An important application of this mode is in support of meteorological studies where rapid data reduction is required for the rapid tracking and predicting of dynamic phenomena. Author

SIMPLIFIED GROUNDWATER FLOW MODELING: AN APPLICATION OF KALMAN FILTER BASED IDENTIFICATION

K. D. Pimentel, J. V. Candy, S. G. Azevedo, and T. A. Doerr May 1980 13 p refs Presented at the Intern. Federation of Inform. Process. Working Conf. on Simulation and Environ., Bangor, Wales, 18-20 Sep. 1979
(Contract W-7405-eng-48)
(UCRL-82649; CONF-7909138-1) Avail: NTIS HC A02/MF A01

Groundwater contaminant transport models are needed in risk assessments for licensing and regulating long-term nuclear waste repositories. Groundwater flow rather than contaminant transport was considered because the flow problem is more simple. A pump-drawdown test is modeled with a reduced-order set of ordinary differential equations obtained by differencing the partial differential equation. The accuracy of the reduced model was determined by comparing it with the analytic solution for the drawdown test. An accuracy requirement of 2 percent error which was established at the single observation well and a model with only 21 states which was established satisfied that criterion. That model was used in an extended Kalman filter with synthesized measurement data from one observation well to identify transmissivity within 1 percent error and storage coefficient within 10 percent error. Several statistical tests used to assess the performance of the estimator/identifier found it to be satisfactory for this application. DOE

LANDSAT DATA AS A BASIS FOR REGIONAL ENVIRONMENTAL ASSESSMENT WITHIN THE COLUMBIA PLATEAU

L. S. Leonhart and J. G. Stephan (Battelle Pacific Northwest Labs., Richland, Wash.) May 1980 19 p Presented at the 6th Can. Symp. on Remote Sensing, Halifax, Canada, 21-23 May 1980
(Contract DE-AC06-77RL-01030)
(RHO-BWI-SA-43; CONF-800577-1) Avail: NTIS HC A02/MF A01

An environmental assessment is being performed in conjunction with siting a radioactive waste terminal-storage facility within the federally operated Hanford Site in south-central Washington. Initial assessments involved classification of four contiguous LANDSAT scenes recorded over the region and about 300 high-altitude (U-2) photographs. The resulting mosaic was segregated into ten land-cover classes. The classified land-cover data were then machine-integrated with digital irrigation well-location data. The resulting groundwater multi-source data product was required by hydrologists to segregate potential artificial recharge areas from artificial groundwater discharge areas. Related studies employed LANDSAT data and aerial imagery to identify linear structures and other geologic features which may have a significant bearing on the tectonic and/or hydrological setting of the Columbia Plateau. SENSORS FOR REMOTE SENSING [SENSORI PER TELERILEVAMENTO]

E. M. Bastida, F. Gardossi, A. Sona, F. Svelto, and V. Svelto Jan. 1979 53 p refs In ITALIAN; ENGLISH summary
(CISE-N-190) Avail: NTIS HC A04/MF A01

The most important remote sensing methods are discussed. Particular attention is devoted to the sensors, defined as the components transforming the electromagnetic information into

usable data. Photographic methods, radar and microwave methods, and applications of infrared and laser radiation are included.

A STUDY OF LANDSAT MULTISPECTRAL SCANNER DATA TAPES
A. H. Benny London HMSO Feb. 1980 37 p refs
(RAE-TR-80018; RAE-Space-574; BR/3767) Avail: NTIS HC A03/MF A01

A detailed study is described of a number of computer compatible magnetic tapes containing LANDSAT multi-spectral scanner (MSS) data. The differences between raw and corrected data tapes are shown along with the conversion process. It also shows the differences between the existing and a new form of corrected data tape. A computer program was written to enable raw data desirable for certain computer analyses to be obtained from the existing stocks of corrected data tapes. Author (ESA)

COMPARATIVE EXPERIMENTAL STUDY ON THE USE OF ORIGINAL AND COMPRESSED MULTISPECTRAL LANDSAT DATA FOR APPLIED RESEARCH
Klaus A. Ulbricht Feb. 1980 81 p refs Original contains color illustrations
(Contract ESTEC-3569/78-NL-HP(SC))
(DFVLR-FB-80-03; ESA-CR(P)-1343) Avail: NTIS HC A05/MF A01

Parts of two multispectral LANDSAT scenes, compressed by ratio 6.4 to 1, were investigated to determine the effect of the compression on the image contents. The LANDSAT image of the Bayuda desert in Sudan was submitted to supervised maximum likelihood classification before and after compression of data as a function of the rejection class parameter sigma. Different approaches as to the use of circular or rectangular training areas for classification on original and compressed scene served to investigate the influence of compression on image contents. Partitioning of classified image is given on a percentage basis as a function of sigma. Three dimensional clusters of spectral channels and histograms show the influence of compression. The heavy population of blue green algae on LANDSAT scene of the baltic of August 7, 1975, was another example used to test the influence of data compression. Three dimensional clusters of grey values of spectral channels of the investigated area and histograms show influence of compression. The effects of compression on partitioning of classified scences, are displayed in several tables and figures. Author (ESA)

SIMULATION OF RESERVOIR AND LAKE SEDIMENTATION Project Completion Report, Jul. 1973 - Jun. 1975
William M. Merrill Apr. 1980 158 p refs
(Contract DI-14-31-0001-4085)
(PB80-182801; CONTRIB-215; W80-05010; OWRT-B-036-KAN(1)) Avail: NTIS HC A08/MF A01 CSCL 08H

Two lakes were used to develop a model of reservoir sedimentation and two computer programs to simulate it. Basis for the model is a statement of general relationships formulated to describe sedimentation in shallow marine basins, modified to apply to relatively small freshwater bodies. In its modified form, the statement serves as foundation for quantitative and semiquantitative expressions that are translated into algorithms to simulate reservoir processes. The model and programs are appropriate only for reservoirs established on alluvial streams in which an essentially unlimited supply of sediment, 90 percent or more of which is silt and clay and at least 30 percent of which is clay of two microns or less, can be assured. GRA

SOLAR DOMESTIC HOT WATER SYSTEM, A COMPARATIVE STUDY AND STORAGE TANK INVESTIGATION Ph.D. Thesis
Marvin Francis Young 1980 291 p
Avail: Univ. Microfilms Order No. 8019006

A computer program was developed to simulate five typical solar domestic hot water systems which included both thermosyphon and pumped designs that were assembled and tested. Numerical simulations of these systems were verified by comparison to experimental results. Predicted thermal performance, i.e., collector inlet and outlet temperatures, and auxiliary energy requirements were found to be in excellent agreement with experiments. The computer program was then used to predict the long term annual performance of the various systems at 14 different locations throughout California. Load size and load distribution were also varied. Economic analyses were performed on each system with the goal of identifying the most economical system at each location under a prescribed load (gallons/day) size and distribution pattern (time of day for hot water use). It was found that in almost all cases the two tank thermosyphon system was the most cost effective system for all locations, load sizes and distributions and shows promise of being the most widely used solar domestic hot water system.

COGENERATION TECHNOLOGY ALTERNATIVES STUDY (CTAS). VOLUME 3: ENERGY CONVERSION SYSTEM CHARACTERISTICS Final Report
Jan. 1980 283 p refs
(Contracts DEN3-30; EC-77-A-31-1062)
(NASA-CR-159761; DOE/NASA/0030-80/3-Vol-3; UTC-FCR-1333-Vol-3) Avail: NTIS HC A13/MF A01 CSCL 10B

Six current and thirty-six advanced energy conversion systems were defined and combined with appropriate balance of plant equipment. Twenty-six industrial processes were selected from among the high energy consuming industries to serve as a frame work for the study. Each conversion system was analyzed as a cogenerator with each industrial plant. Fuel consumption, costs, and environmental intrusion were evaluated and compared to corresponding traditional values. The advanced energy conversion technologies indicated reduced fuel consumption, costs, and emissions. Fuel energy savings of 10 to 25 percent were predicted compared to traditional on site furnaces and utility electricity. With the variety of industrial requirements, each advanced technology had attractive applications. Fuel cells indicated the greatest fuel energy savings and emission reductions. Gas turbines and combined cycles indicated high overall annual savings. Steam turbines and gas turbines produced high estimated returns.

In some applications, diesels were most efficient. The advanced technologies used coal derived fuels, or coal with advanced fluid bed combustion or on site gasifications. Data and information for both current and advanced energy conversion technology are presented. Schematic and physical descriptions, performance data, equipment cost estimates, and predicted emissions are included. Technical developments which are needed to achieve commercialization in the 1985-2000 period are identified. R.K.G.

COGENERATION TECHNOLOGY ALTERNATIVES STUDY (CTAS). VOLUME 3: INDUSTRIAL PROCESSES Final Report
W. B. Palmer, H. E. Gerlaugh, and R. R. Priestley. Apr. 1980. 478 p. Sponsored by DOE.
(Contract DEN3-31)
(NASA-CR-159767; DOE/NASA/0031-80/3-Vol-3; GE80ET0104-Vol-3) Avail: NTIS HC A21/MF A01 CSCL 10B

Cogenerating electric power and process heat in single energy conversion systems rather than separately in utility plants and in process boilers is examined in terms of cost savings. The use of various advanced energy conversion systems are examined and compared with each other and with current technology systems for their savings in fuel energy, costs, and emissions in individual plants and on a national level. About fifty industrial processes from the target energy consuming sectors were used as a basis for matching a similar number of energy conversion systems that are considered as candidate which can be made available by the 1985 to 2000 time period. The sectors considered included food, textiles, lumber, paper, chemicals, petroleum, glass, and primary metals. The energy conversion systems included steam and gas turbines, diesels, thermionics, stirling, closed cycle and steam injected gas turbines, and fuel cells. Fuels considered were coal, both coal and petroleum based residual and distillate liquid fuels, and low Btu gas obtained through the on site gasification of coal. An attempt was made to use consistent assumptions and a consistent set of ground rules specified by NASA for determining performance and cost. Data and narrative descriptions of the industrial processes are given. R.K.G.

SILICON SOLAR CELL FABRICATION TECHNOLOGY Final Report
O. M. Stafsudd. 15 May 1980. 37 p. refs. Sponsored by NASA and DOE. Prepared for JPL.
(Contract JPL-954902)
(NASA-CR-163394; JPL-9950-386; DOE/JPL-954902) Avail: NTIS HC A03/MF A01 CSCL 10A

Device fabrication and photoconductive lifetime decay measurements were used to characterize single and polycrystalline silicon substracts. The device characterization of the processed materials was done by spectral response measurements and absolute quantum efficiency at a single wavelength. The results were then reduced to yield the diffusion length of the various samples. The photoconductive lifetime decay method was implemented in order to determine the minority carrier lifetime in unprocessed wafers. T.M.

SOLAR ENERGY SYSTEM ECONOMIC EVALUATION FOR ELCAM-TEMPE, TEMPE, ARIZONA AND ELCAM-SAN DIEGO, SAN DIEGO, CALIFORNIA Final Report
Jun. 1980. 102 p. refs. Prepared for DOE.
(Contract NAS8-32036)
(NASA-CR-161492) Avail: NTIS HC A06/MF A01 CSCL 10A

The long term economic performance of the solar energy system at its installation site is analyzed and four additional locations selected to demonstrate the viability of the design over a broad range of environmental and economic conditions. The economic analysis of the solar energy systems that were installed at Tempe, Arizona and San Diego, California, is developed for these and four other sites typical of a wide range of environmental and economic conditions in the continental United States. This analysis is accomplished based on the technical and economic models in the f Chart design procedure with inputs based on the characteristics of the installed system and local conditions. The results are expressed in terms of the economic parameters of present worth of system cost over a projected twenty year life: life cycle savings; year of positive savings; and year of payback for the optimized solar energy system at each of the analysis sites. The sensitivity of the economic evaluation to uncertainties in constituent system and economic variables is also investigated. The results demonstrate that the solar energy system is economically viable at all of the sites for which the analysis was conducted. R.K.G.

DEVELOPMENT OF A MODEL AND COMPUTER CODE TO DESCRIBE SOLAR GRADE SILICON PRODUCTION PROCESSES Final Report, 21 Sep. 1977 - 30 Sep. 1979
R. K. Gould and R. Srivastava. Dec. 1979. 126 p. refs. Sponsored in part by DOE.
(Contract JPL-954862)
(NASA-CR-163515; AeroChem-TP-392; JPL-954862-79/8) Avail: NTIS HC A07/MF A01 CSCL 10A

Two computer codes were developed for describing flow reactors in which high purity, solar grade silicon is produced via reduction of gaseous silicon halides. The first is the CHEMPART code, an axisymmetric, marching code which treats two phase flows with models describing detailed gas-phase chemical kinetics, particle formation, and particle growth. It can be used to described flow reactors in which reactants, mix, react, and form a particulate phase. Detailed radial gas-phase composition, temperature, velocity, and particle size distribution profiles are computed. Also, deposition of heat, momentum, and mass (either particulate or vapor) on reactor walls is described. The second code is a modified version of the GENMIX boundary layer code which is used to compute rates of heat, momentum, and mass transfer to the reactor walls. This code lacks the detailed chemical kinetics and particle handling features of the CHEMPART code but has the virtue of running much more rapidly than CHEMPART, while treating the phenomena occurring in the boundary layer in more detail. L.F.M.

SILICON HALIDE-ALKALI METAL FLAMES AS A SOURCE OF SOLAR GRADE SILICON Final Report
D. B. Olson, W. J. Miller, and R. K. Gould. Jan. 1980. 75 p. refs. Sponsored in part by DOE.
(Contract JPL-954777)
(NASA-CR-163514; Aerochem-TP-395; JPL-954777-80/8) Avail: NTIS HC A04/MF A01 CSCL 10A

The feasibility of using continuous high-temperature reactions of alkali metals and silicon halides to produce silicon in large quantities and of suitable purity for use in the production of photovoltaic solar cells was demonstrated. Low pressure experiments were performed demonstrating the production of free silicon and providing experience with the construction of reactant vapor generators. Further experiments at higher reagent flow rates were performed in a low temperature flow tube configuration with co-axial injection of reagents and relatively pure silicon was produced. A high temperature graphite flow tube was built and continuous separation of Si from NaCl was demonstrated. A larger scaled well stirred reactor was built. Experiments were performed to investigate the compatability of graphite based reactor materials of construction with sodium. At 1100 to 1200 K none of these materials were found to be suitable. At 1700 K the graphites performed well with little damage except to coatings of pyrolytic graphite and silicon carbide which were damaged. L.F.M.

SMALL SOLAR ELECTRIC SYSTEM COMPONENTS DEMONSTRATION Final Report
Aug. 1980. 123 p. Original contains color illustrations.
(Contract JPL-955279)
(NASA-CR-163513) Avail: NTIS HC A06/MF A01 CSCL 10A

The design and testing of high temperature thermal storage modules (TSM) are reported. The test goals were to demonstrate the thermocline propagation in the TSM, to measure the steepness of the thermocline, and to measure the effectiveness of the

TSM when used in a Brayton system. In addition, a high temperature valve suitable for switching the TSM at temperatures to 1700 F is described and tested. Test results confirm the existence of a sharp thermocline under design conditions. The thermal profile was steeper than expected and was insensitive to air density over the range of the test conditions. Experiments were performed which simulated the airflow of a small Brayton engine, 20 KWe, having a pair of thermal storage modules acting as efficient recuperators. Low pressure losses, averaging 12 inches of water, and high effectiveness, 93% for a 15 minute switching cycle, were measured. The insulation surrounding the ceramic core limited thermal losses to approximately 1 KWt. The hot valve was operated over 100 cycles and performed well at temperatures up to 1700 F. M.G.

PILOT LINE REPORT: DEVELOPMENT OF A HIGH EFFICIENCY THIN SILICON SOLAR CELL
G. Storti, J. Culik, and C. Wrigley Jul. 1980 55 p refs Prepared for JPL
(Contract JPL-954883)
(NASA-CR-163522; SX/115/PL-2) Avail: NTIS HC A04/MF A01 CSCL 10A

Alternate processing technologies were developed and introduced into the pilot line with a resulting increase in the efficiency of the thin cells. The introduction of an aluminum paste alloy technique for the formation of a back surface field represents a significant advance over previous techniques. The fabrication and results for quantities in excess of 2000 2 cm x 2 cm thin cells and 1000 5 cm x 5 cm thin cells are described. Substantial improvement in performance and yield of the thin cells were obtained. The overall yield of the 2 cm x 2 cm pilot line was better than 38%, while the best lot yield was greater than 51%. The average power density of the 2 cm x 2 cm cells was approximately 16.8 mW/sq cm with an average AMO (at 25 C) efficiency of 12.4%. The lot yield of the 5 cm x 5 cm pilot line improved from only 7% at the beginning of the operation to better than 17% as experience was gained. The average 5 cm x 5 cm thin cell had an AMO efficiency (at 25 C) of 11.5%. A.R.H.

SOLAR ENERGY SYSTEM DEMONSTRATION PROJECT AT WILMINGTON SWIM SCHOOL, NEW CASTLE, DELAWARE Final Report
Jul. 1980 94 p Sponsored by NASA
(Contract EM-78-F-01-5190)
(NASA-CR-161538) Avail: NTIS HC A05/MF A01 CSCL 10A

A solar energy system located at the Wilmington Swim School, New Castle, Delaware is described. The system was designed for a 40 percent heating and a 30 percent hot water solar contribution serving the heat loads in the following order: space heat - new addition, domestic water - entire facility, and pool heating - entire facility. On a cost basis for 2920 hours of operation, the heat reclaimed would cost $969.66 annually if provided by gas at 3.79 per million Btu's. At 5.5 centers per kwh, heat recovery costs of $481.80 percent a net savings of $487.86 annually. L.F.M.

The computer code for the detailed analytical model of the MK-2 stacks is described. An ERC proprietary matrix is incorporated in the stacks. The mechanical behavior of the stack during thermal cycles under compression was determined. A 5 cell stack of the MK-2 design was fabricated and tested. Designs for the next three stacks were selected and component fabrication initiated. A 3 cell stack which verified the use of wet assembly and a new acid fill procedure were fabricated and tested. Components for the 2 kW test facility were received or fabricated and construction of the facility is underway. The definition of fuel and water is used in a study of the fuel conditioning subsystem. Kinetic data on several catalysts, both crushed and pellets, was obtained in the differential reactor. A preliminary definition of the equipment requirements for treating tap and recovered water was developed. S.J.

A QUANTITATIVE EVALUATION OF CLOSED-CYCLE OCEAN THERMAL ENERGY CONVERSION (OTEC) TECHNOLOGY IN CENTRAL STATION APPLICATIONS
E. C. Gritton, R. Y. Pei, J. Aroesty, M. M. Balaban, C. Gazley, R. W. Hess, and W. H. Krase May 1980 137 p refs
(Contract DE-AC01-79PE-70078)
(R-2595-DOE) Avail: NTIS HC A07/MF A01

An evaluation of a closed cycle Ocean Thermal Energy Conversion (OTEC) system for delivery of electric power to the United States is presented. Performance and costs of complete commercial OTEC systems are analyzed at the system level using inputs from component analyses and thermal resource data in the Gulf of Mexico. Such sites could feed the Gulf Coast from the west coast of Florida to the New Orleans area. By exploiting the temperature difference between warm surface waters and cold water from the depths to operate a thermodynamic cycle to generate electricity, OTEC acts as a heat engine that taps the surface waters of tropical and subtropical oceans as a heat source and the cold water originating in the polar regions as a heat sink. Results of the engineering analysis indicate that the system and platform appear to be within the state-of-the-art. L.F.M.

J. D. Harkness 21 Dec. 1978 17 p
(NASA Order S-53742-AG)
(NASA-CR-160016; WQEC/C-78-416) Avail: NTIS HC A02/MF A01 CSCL 10C

Five cells provided by NASA's Goddard Space Flight Center were evaluated at room temperature and pressure (25 C plus or minus 2 C) with discharges at the 2 hour rate. Measurements of the cell containers following test, indicated an average increase of .006 inches at the plate thickness. Average end of charge voltages and pressures, and capacity output in ampere hours were determined. Three cells exceeded the voltage requirements of 1.52 volts during both c/10 charges at 20 C. All cells exceeded the voltage requirement of 1.52 volts during the 0 C overcharge test, although their end charges were below 1.50 volts. The pressure requirement of 65 psia was exceeded by both pressure transducer cells during c/10 charges at 25 C and 20 C and also during the 0 C overcharge test. The cells with pressure transducers reached a pressure of 20 psia before reaching the voltage limit of 1.550 volts during the pressure versus capacity test, and exhibited a pressure decay of 2 psia during the last 30 minutes of the 1 hour open circuit stand. Average capacity was 51.3 ampere hours. A.R.H.

SATELLITE POWER SYSTEMS (SPS) CONCEPT DEFINITION STUDY. VOLUME 4: TRANSPORTATION ANALYSIS Final

Report
G. M. Hanley. Washington NASA Sep. 1980 270 p refs
(Contract NAS8-32475)
(NASA-CR-3321; SSD-79-0010-4-Vol-4) Avail: NTIS
HC A12/MF A01 CSCL 10A

Transportation system elements were synthesized and evaluated on the basis of their potential to satisfy overall satellite (SPS) transportation requirements and of their sensitivities, interfaces, and impact on the SPS. Additional analyses and investigations were conducted to further define transportation system concepts that will be needed for the developmental and operational phases of an SPS program. To accomplish these objectives, transportation systems such as shuttle and its derivatives have been identified; new heavy lift launch vehicle concepts, cargo and personnel orbital transfer vehicles and intra-orbit transfer vehicle concepts have been evaluated. To a limited degree, the program implications of their operations and costs were assessed. The results of these analyses have been integrated into other elements of the overall SPS concept definition studies. T.M.

HIGH ENERGY DENSITY COMPOSITE FLYWHEEL PROGRAM Final Report, Jun. 1976 - May 1980
A. D. Sapowith, A. L. Gurson, and J. A. McElman 30 May 1980 155 p refs
(Contract DAAG53-75-C-0269)
(AD-A087076; AVSD-0170-80-RR) Avail: NTIS
HC A08/MF A01 CSCL 11/4

A bi-directional composite flywheel was instrumented with strain gages and tested to destruction. The flywheel was designed to exhibit constant stress in both radial and circumferential directions for all radial positions. Strain gage data verified this design. The burst speed was 38,741 rpm representing a specific energy level of 32.3 Wh/lb. The flywheel was constructed of Kevlar composite, had an outside diameter of 19.5 in., an axial thickness of 1.5 in. and weighed 18.6 lbs. Premature failure was initiated at the inside diameter by excessive pressure exerted by a metal hub. A polyacrylate hub design, with test data, is presented to solve this problem. GRA

(AD-A086992; DELET-TR-78-0558-1F) Avail: NTIS
HC A04/MF A01 CSCL 10/3

A comparative study of thionyl chloride electrolytes containing LiAlCl4, Li2B10Cl10, or Li2B12Cl12 has been carried out by monitoring LiCl film growth on lithium samples stored in these electrolytes and by evaluating the startup and measuring the capacity of anode limited lithium/thionyl chloride cells. The film growth on lithium samples was monitored by galvanostatic pulse polarization, by weight gain analysis, and by examination under the scanning electron microscope. The film growth rate on lithium in Li2B10Cl10/SOCl2 was found to be comparable to that in pure SOCl2, about one tenth of that found in LiAlCl4/SOCl2. Storage for longer periods of time or higher temperatures caused thicker films to form. The polyhedral borate electrolyte produced smooth films on lithium with widely scattered crystals, instead of closely packed crystals as in LiAlCl4/SOCl2. Lithium/thionyl chloride cells containing Li2B10 Cl10/SOCl2 started without delay at -20 C, even after prolonged storage at elevated temperature. The polyhedral borate electrolyte also reduced self discharge by local cell reduction of the solvent against cell hardware connected to the anode. GRA

SOLAR ENERGY APPLICATIONS FOR DWELLING; MODELLING AND SIMULATION PART Final Report
Ove Joergensen 1980 109 p
(EUR-6681/I-EN) Avail: NTIS (US Sales Only)
HC A06/MF A01; DOE Depository Libraries

Methods developed within the EC countries are presented and compared. The methods were used to predict the performance of three different solar heating systems: a domestic hot water system, a pure house heating system, and a combined system. Three different sets of weather data were used: Carpentras, Hamburg, and Ireland. The comparisons were undertaken on three different timebases: yearly, monthly, and hourly. A sensitivity analysis was formed on different parameters by different programs. DOE

HC A07/MF A01 CSCL 10/1

Due to recent needs expressed by the Air Force, a review and evaluation of the methods of analysis for passive solar energy systems was conducted. The methods of analysis evaluated were those that could be worked without the use of computers or programmable calculators. A selection model was designed to systematically and objectively evaluate the methods. The selection model was a variation of a scoring model and based on six criteria. The criteria were: performance, economics, flexibility, implementation, usability, and computing devices. Of the methods evaluated, the Passive Solar Design Handbook was the recommended method of analysis to be used in the Air Force. The method was written by the Los Alamos Scientific Laboratory for the Department of Energy. This method was comprehensive yet simple to use and understand. GRA

BASIC RESEARCH NEEDS AND PRIORITIES IN SOLAR ENERGY. VOLUME 1: EXECUTIVE SUMMARY. TECHNOLOGY CROSSCUTS FOR DOE
T. S. Jayadev, ed. and David Roessner, ed. Jan. 1980 49 p refs
(Contract EG-77-C-01-4042)
(SERI/TR-351-358-Vol-1) Avail: NTIS HC A03/MF A01

Priorities for basic research important to the future development of solar energy are presented. More than 120 leading scientists who were engaged in or knowledgeable of solar related research were surveyed. The scientific disciplines included in the report were chemistry, biology, materials sciences, engineering and mathematics, and the social and behavioral sciences. Each discipline was subdivided into two to five topical areas and,

within each topical area, research needs were described and ranked according to the priorities suggested in the survey. Three categories of priority were established: Crucial, important, and needed. A narrative accompanying the description of research needs in each topical area discusses the importance of research in the area for solar energy development and presents the bases for the priority rankings recommended. DOE

SITES FOR WIND-POWER INSTALLATIONS: PHYSICAL MODELING OF THE INFLUENCE OF HILLS, RIDGES AND COMPLEX TERRAIN ON WIND SPEED AND TURBULENCE. PART 1: EXECUTIVE SUMMARY
R. N. Meroney, V. A. Sandborn, R. J. B. Bouwmeester, H. C. Chien, and M. Rider Jun. 1978 102 p refs
(Contract EY-77-S-06-2438)
(RLO-2438-78/1) Avail: NTIS HC A06/MF A01

Wind tunnel model measurements were performed to study the influence of topography profile, surface roughness and stratification on the suitability of various combinations of these variables for wind power sites. For the range of examined cases (large turbulence integral scales with respect to surface feature scales) the flow is dominated by inviscid dynamics. Detailed tables of velocity, turbulence intensity, pressure, spectra, etc., were prepared to guide numerical model design and experimental rule of thumb constrictions. Cases include hill slopes, neutral and stratified flows, two and three dimensional symmetric ridges, six alternate hill and escarpment shapes, and a variety of windward versus leeward slope combinations to evaluate ridge separation characteristics. DOE

SITES FOR WIND-POWER INSTALLATIONS: WIND CHARACTERISTICS OVER RIDGES, PART 2 Final Report
R. J. B. Bouwmeester, R. N. Meroney, and V. A. Sandborn Jun. 1978 122 p refs
(Contract EY-77-S-06-2438)
(RLO-2438-78/2) Avail: NTIS HC A06/MF A01

A wind tunnel study of the flow field over triangular shaped and sinusoidal shaped ridge models with varying upwind and downwind slopes under various thermal stratification conditions was conducted. A simple technique was developed to predict the velocity amplification profile above a ridge crest for an arbitrary ridge slope. Largest speedups were measured for the steepest symmetrical ridge which did not cause flow separation. Criteria for flow separation over ridges are provided in this report. Applicability of the results for ridges with finite width is discussed. DOE

LOW COST SOLAR CELLS BASED ON AMORPHOUS SILICON ELECTRODEPOSITED FROM ORGANIC SOLVENTS Final Technical Report, 1 Sep. 1978 - 31 Aug. 1979
F. A. Kroeger 1979 34 p
(Contract EY-76-S-03-0113-040)
(SAN-0113/40-3) Avail: NTIS HC A03/MF A01

A variety of silicon compounds were chosen for electrolysis experiments. These compounds are dissolved in non aqueous solvents. Where the conductivity of the solutions is low, supporting electrolytes were added. The electrolysis was carried out using silicon nickel, conducting glass, stainless-steel or copper cathodes, graphite, platinum or silicon anodes and saturated calomel or Ag/AgCl as reference electrodes. The silicon coatings obtained by electrolysis vary in color. Energy dispersive X-ray analysis in the scanning electron microscope indicated the coatings to contain large concentrations of silicon; infrared absorption and reflection studied showed bands characteristics of SiO, SiCl or SiF vibrations, and thus indicates the presence of these elements in the films. No SiH bands were observed. Doping reagents were added to the electrolyte and a-Si coatings doped with phosphorous or boron were obtained. These were tested by hot point probe for the thermoelectric carrier type. The electrical resistance of the coatings was determined by measuring the potential drop when the electrolysis was interrupted as a function of films thickness. DOE

PHYSICAL MODELS OF THIN FILM POLYCRYSTALLINE SOLAR CELLS BASED ON MEASURED GRAIN-BOUNDARY AND ELECTRONIC PARAMETER PROPERTIES Quarterly Report
Fredrik A. Lindholm, J. G. Fossum, P. A. Holloway, and A. Neugroschel Dec. 1979 40 p refs
(Contract EG-77-C-01-4042)
(DSE-4042-T37) Avail: NTIS HC A03/MF A01

Models were developed for recombination currents in polysilicon pn-junction solar cells. Several analytic approximations, were used and checked ultimately for self-consistency with the results of the analysis. The models were defined such that their parameters can be related directly to measurements, and the models were hence useful in interpreting experimental results. They also can be used to study, in a systematic way, cell-design modifications to improve the efficiency, e.g., grain-boundary passivation techniques. DOE

INVESTIGATION OF LEARNING AND EXPERIENCE CURVES
Frank Krawiec, John Thornton, and Michael Edesess Apr. 1980 193 p refs
(Contract EG-77-C-01-4042)
(SERI/TR-353-459) Avail: NTIS HC A09/MF A01

The applicability of learning and experience curves for predicting future costs of solar technologies is assessed, and the major test case is the production economics of heliostats. Alternative methods for estimating cost reductions in systems manufacture are discussed, and procedures for using learning and experience curves to predict costs are outlined. Because adequate production data often do not exist, production histories of analogous products/processes are analyzed and learning and aggregated cost curves for these surrogates estimated. If the surrogate learning curves apply, they can be used to estimate solar technology costs. However, an approach that combines a neoclassical production function with a learning by doing hypothesis is needed to yield a cost relation compatible with the historical learning curve and the traditional cost function of economic theory. DOE

ABSORPTION REFRIGERATION MACHINE DRIVEN BY SOLAR HEAT Final Report
C. Keizer and S. H. Liem 1980 101 p refs
(EUR-6748-EN) Avail: NTIS (US Sales Only) HC A06/MF A01; DOE Depository Libraries

A mathematical model of a single and a two stage solar absorption regrigeration system is developed in which data of collectors and weather data can be implicated. The influence of the generator, the absorber efficiencies, and the cooling temperature on the coefficient of performance (COP) of a singe and two stage absorption refrigeration process are investigated. For low generator temperatures the absorber efficiency has more influence on COP than the generator efficiency. Only spectral selective double window and high performance collectors can be used for air cooled solar absorption refrigeration systems at an evaporator temperature of -5 C. It is concluded that a water cooled solar absorption refrigeration system in combination with a solar tapwater installation for household use can be achieved with 6 to 8 square meters high performance collector area. DOE

ENERGY ANALYSIS OF GEOTHERMAL-ELECTRIC SYSTEMS
Robert A. Herendeen and Randall Plant Dec. 1979 215 p refs
(Contract ET-78-S-02-5085)
(COO-5085-4) Avail: NTIS HC A10/MF A01

Standard energy analysis was applied to 4 types of geothermal-electric technologies: liquid dominated, hot dry rock, geopressure, and vapor dominated. It was found that all are net energy producers. Expected uncertainties are not large enough to threaten this conclusion. Vapor dominated, the only technol-

ogy in current commercial use to produce electricity in the US, has the highest energy ratio (13 - - 4). These results for energy ratio are equal to or less than some from other workers. In the case of liquid dominated, environmental control technology has a considerable energy requirement. DOE

N80-31916# Midwest Research Inst., Golden, Colo. Solar Energy Research Inst.
EFFECT OF CIRCUMSOLAR RADIATION ON PERFORMANCE OF FOCUSING COLLECTORS
Paul Bendt and Ari Rabl. Apr. 1980. 58 p. refs.
(Contract EG-77-C-01-4042)
(SERI/TR-34-093) Avail: NTIS. HC A04/MF A01

Circumsolar data are used to develop fast computational procedures for calculating the effect of circumsolar radiation on both the instantaneous and the long term average performance of focusing collectors. For predictions of long term average performance, a standard synthetic circumsolar scan has been developed that describes the brightness distribution of the solar disk (limb darkening) and of the circumsolar region. The radiation intercepted by a receiver is calculated separately for the solar portion and for the circumsolar portion of this standard Sun shape, and these two contributions are then weighted according to the long term average circumsolar ratio for the location and period under study. DOE

N80-31917# Midwest Research Inst., Golden, Colo. Solar Energy Research Inst.
OPTICAL ANALYSIS OF POINT FOCUS PARABOLIC RADIATION CONCENTRATORS
Paul Bendt and Ari Rabl. Apr. 1980. 39 p. refs.
(Contract EG-77-C-01-4042)
(SERI/TR-631-336) Avail: NTIS. HC A03/MF A01

A simple formalism is developed for analyzing the optical performance of point focus parabolic radiation concentrators. To account for off axis aberrations of the parabola, an angular acceptance function is defined as that fraction of a beam of parallel radiation incident on the aperture which would reach the receiver if the optics were perfect. The radiation intercepted by the receiver of a real concentrator is obtained as a convolution of angular acceptance function, of optical error distribution, and of angular brightness distribution of the radiation source. Losses resulting from absorption in the reflector or reflection at the receiver are treated by a multiplicative factor rho alpha where rho equals reflectance of the reflector and alpha equals absorptance of the receiver. For numerical calculations, this method is more accurate and less time consuming than the ray tracing method. In many cases, there are acceptable approximations whereby the results can be obtained by reading a graph or evaluating a simple curve fit. DOE

N80-31918# Sandia Labs., Albuquerque, N. Mex. Thermal Subsystems Div.
THERMAL ENERGY STORAGE FOR SOLAR THERMAL APPLICATIONS PROGRAM. Progress Report, Oct. 1979 - Mar. 1980

ALUMINUM-SILVER ALLOY FILMS FOR SOLAR REFLECTORS
R. D. Adams, C. W. Nordin, and K. D. Masterson. 1980. 14 p. refs. Presented at the Intern. Conf. on Met. Coatings, San Diego, Calif., 21 Apr. 1980. Prepared in cooperation with Midwest Research Inst., Golden, Colo.
(Contract DE-AC04-76DP-03533)
(REP-3021; CONF-800439-5) Avail: NTIS. HC A02/MF A01

Films of aluminum silver alloys were formed using triode sputtering. Films with a wide variety of composition were produced and evaluated. Films deposited at low substrate temperatures had a high specular reflectance. At higher temperatures two phase alloys formed which had rough low reflecting surfaces. DOE

N80-31920# Boeing Co., Seattle, Wash.
SOLAR PROJECT DESCRIPTION FOR SIR GALAHAD COMPANY, SINGLE FAMILY RESIDENCE, VIRGINIA BEACH, VIRGINIA
20 Jul. 1979. 51 p.
(Contracts EX-76-A-29-1020; HUD-H-2372)
(SOLAR/1028-79/50) Avail: NTIS. HC A04/MF A01

A solar energy system designed to provide solar energy for space heating and domestic hot water heating is described. Solar energy is collected by an array of double glazed flat plate collectors with a gross area of 640 square feet. Solar energy is transferred from the collector array to a 1500 gallon above ground storage tank. Water is used as the heat collection, transfer and storage medium. Freeze protection is provided by means of circulation of hot water from storage through the collectors. Space heating demands are met by circulating hot water from storage through air heating coils in an air distribution system located in the house. Auxiliary space heating is provided by a heat pump and electric heater strips. Solar energy for preheating domestic hot water is provided by circulating water from the solar storage tank through a water to water heat exchanger located solar storage tank. The dwelling has been fully instrumented for performance evaluation since October 1978. Original cost estimates for provisioning and installation of the solar system are given. DOE

DUAL CURVATURE ACOUSTICALLY DAMPED CONCENTRATING COLLECTOR. Final Technical Report
G. A. Smith and R. A. Rausch. May 1980. 348 p. refs.
(Contracts EM-78-C-04-4196; DE-AC04-78CS-34196)
(DOE/CS-34196/T1) Avail: NTIS. HC A15/MF A01

The design and performance parameters of a dual curvature, concentrating solar collector are investigated. The reflector of the solar collector is achieved with a stretched film reflective surface that approximates a hyperbolic paraboloid and is capable of line focusing at concentration ratios ranging from 10 to 20X. A prototype collector was designed based on analytical and experimental component trade off activities as well as economic analyses of solar thermal heating and cooling systems incororating this type of collector. A prototype collector incorporating six 0.66 x 1.22 m (2 x 4 ft) was fabricated and subjected to a limited thermal efficiency test program. A peak efficiency of 36% at 121 C (250 F) was achieved based upon the gross aperture area. Commercialization activities were conducted, including estimated production costs of $134.44/sq m for the collector assembly (including a local suntracker and controls) and $24.33/sq m for the reflector subassembly. DOE

FEASIBILITY STUDY: FUEL CELL COGENERATION IN A WATER POLLUTION CONTROL FACILITY, VOLUME 1. Final Report
J. H. Hirschenhofer, D. B. Bailleul, L. M. Barton, R. J. Brumberg, C. E. Hannan, H. H. Fiedler, M. G. Kile, M. G. Klett, G. A. Malone, H. P. Milliron et al. Feb. 1980. 151 p. refs. Prepared in cooperation with the Bergen County Utilities Authority, Little Ferry, N.J.; Public Service Electric and Gas Co., Newark, N.J.; and United Technologies Corp., East Hartford, Conn.
(Contract DE-AC03-79ET-12431)
(DOE/ET-12431/T1-Vol-1) Avail: NTIS. HC A08/MF A01

A conceptual design study was conducted to investigate the technical and economic feasibility of a cogeneration fuel cell power plant operating in a large water pollution control facility. In this particular application, the fuel cell power plant would use methane rich digester gas from the water pollution control facility as a fuel feedstock to provide electrical and thermal energy. Several design configurations were evaluated. These configurations were comprised of combinations of options for locating the fuel cell power plant at the site, electrically connecting it with the water pollution control facility, using the rejected

power plant heat, supplying fuel to the power plant, and for ownership and operation. A configuration was selected which met institutional/regulatory constraints and provided a net cost savings to the industry and the electric utility. DOE

MATERIAL-FLOW DATA STRUCTURES AS A BASIS FOR ENERGY INFORMATION SYSTEM DESIGN
V. V. Krishnan and D. F. Cahn. Apr. 1980. 20 p. refs. Presented at 9th Mid-Yr. Meeting of the Am. Soc. for Inform. Sci., Pittsburgh, 15-17 May 1980
(Contract W-7405-eng-48)
(LBL-10248; CONF-800529-3) Avail: NTIS HC A02/MF A01

The US petroleum supply and distribution system is analyzed. Data structures conducive to information system design are developed. Quantized petroleum flows among restricted channels in the distribution net form the basis of the data structure. The resultant vectorial representations provide a direct link between conceptual models of system function and information system implementations. Simultaneously, they ease otherwise difficult problems such as data validation and error isolation. DOE

FIELD EXPERIENCE WITH SOLAR CONCENTRATING COLLECTOR CONTROL SYSTEMS
H. J. Gerwin. 1980. 4 p. ref. Presented at Joint Autom. Control Conf., San Francisco, 13 Aug. 1980
(Contract DE-AC04-76DP-00789)
(SAND-79-2044C; CONF-800805-6) Avail: NTIS HC A02/MF A01

Various types of solar concentrating collectors were tested and evaluated. Each collector type has a different control system that includes a Sun tracker sensor, fluid flow control, and safety circuits for equipment protection. The Sun tracker system sensors that were tested include shadow band, linear concentrated flux, computer driven (ephemeris), optical balance, and linear flux integration. Most of the systems evaluated were early development models and comparisons are made on the basis of field test conditions. Several fluid flow control approaches were included with the collectors. Generally, the fluid controls were designed to maintain a constant temperature by either varying the pump speed or a control valve. The safety circuits were designed to operate on signals such as overtemperature, insufficient fluid flow, and overtravel. Component failures and corrective actions are also discussed. DOE

SCRAM: A FAST COMPUTATIONAL MODEL FOR THE OPTICAL PERFORMANCE OF POINT FOCUS SOLAR CENTRAL RECEIVER SYSTEMS
Kenneth D. Bergeron and Clement J. Chiang. Apr. 1980. 41 p. refs.
(Contract DE-AC04-76DP-00789)
(SAND-80-0433; TID-4500-R67-UC62) Avail: NTIS HC A03/MF A01

A mathematical approximation procedure, designated Sandia Central Receiver Approximation Model is described. A computational procedure which allows the user to define the heliostat field boundaries and tower height arbitrarily, generating a model for optical field performance, including shadowing, blocking, cosine, losses, and atmospheric attenuation, and which requires only a polynomial evaluation for each set of Sun angles was developed. One reason that the accuracy in field performance predictions is higher than that of the generating function for the model is that much of the error in the generating function is due to an oscillatory behavior associated with a moire pattern in the optical response of the heliostat field. DOE

N80-31926# Midwest Research Inst., Golden, Colo.
ANALYTICAL MODELING OF LINE FOCUS SOLAR COLLECTORS
John D. Wright. Apr. 1980. 8 p. refs. Presented at the Joint Autom. Control Conf., San Francisco, 13 Aug. 1980
(Contract EG-77-C-01-4042)
(SERI/TP-333-591; CONF-800805-1) Avail: NTIS HC A02/MF A01

Simplified models relating deviations in outlet temperature to changes in inlet temperature, insolation, and fluid flow rate are illustrated. The basic responses and the distributed parameter nature of line focus collectors are described. Detailed models were used to develop transfer functions and frequency response curves useful for design. DOE

SOLAR ENERGY CONVERSION THROUGH BIOPHOTOLYSIS. Annual Report, 1 Apr. 1978 - 31 Mar. 1979
J. R. Benemann, M. A. Murray, P. C. Hallenbeck, K. Miyamoto, A. G. Olafsen, D. J. Esteva, and L. V. Kochian. 1 May 1979. 236 p. refs.
(Contract EY-76-S-03-0034)
(SAN-0034-239-1-T2; AR-3) Avail: NTIS HC A11/MF A01

The state-of-the-art of biophotolysis was reviewed and a bioengineering analysis carried out. The conclusions were that practical biophotolysis systems are feasible; however, they will require, in most cases, relatively long-term research and development. The biophotolysis system developed, utilizing heterocystous blue-green algae, was demonstrated both indoors and outdoors with a model converter system using the heterocystous blue-green alga Anabaena cylindrica. Maximal light energy conversion efficiencies were 2.5 percent indoors and about 0.2 percent outdoors, averaged for periods of about two weeks. Achievement of such rates required optimization of N2 supply and culture density. A small amount of N2 in the argon gas phase used to sparge the cultures was beneficial to the stability of a long-term hydrogen-production activity. A relatively small amount of the hydrogen produced by these cultures can be ascribed to the activity of the reversible hydrogenase which was studied by nitrogenase inactivation through poisoning with tungstate. DOE

ELECTROLYSIS-BASED HYDROGEN STORAGE TECHNOLOGY
Gerald Strickland. Nov. 1979. 6 p. Presented at the ANS Meeting, San Francisco, 12 Nov. 1979
(Contract DE-AC02-76CH-00016)
(BNL-26923; CONF-791103-112) Avail: NTIS HC A02/MF A01

The major development areas deal with advanced water electrolysis systems, hydrogen storage materials and systems, and end-use applications. Work on hydrogen production deals with improving the system for KOH electrolysis, and on developing the acidic solid-polymer-electrolyte system for the electrolysis of water. The advantages of the techniques for storing hydrogen via metal hydrides and hollow glass microspheres are described. TiFe-based hydride was tested as an energy storage medium for electric energy storage, for automotive fuel, and for bulk hydrogen storage. Pairs of selected hydrides were used in tests simulating a solar-driven heat pump. The pressure-temperature characteristics of hydrides are being utilized in development of a hydrogen chemical compressor. Glass microspheres are being studied for the automotive fuel application. SUMMARY OF GUIDELINES FOR SITING WIND TURBINE GENERATORS RELATIVE TO SMALL-SCALE, TWO-DIMENSIONAL TERRAIN FEATURES. Final Report
Walter Frost and Dieter K. Nowal. Mar. 1979. 395 p. refs.

(Contracts DE-AC06-77ET-20242; EY-76-C-06-2443)
(RLO-2443-77/1) Avail: NTIS HC A17/MF A01

The terrain features considered are one or more surface roughness changes on otherwise flat terrain, shelterbelts or windbreaks, and bluff and smooth contoured hills. Estimates are given of the preferred wind turbine generators (WTG) location relative to these terrain features and of the resulting degradation in available wind power due to locating the WTG other than at the preferred site. The siting criteria are based on fluid mechanics analyses of somewhat idealized terrain geometries and prevailing atmospheric conditions. Therefore, the results presented show trends and order of magnitude effects rather than absolute values. The theoretical approach to analyzing the flow field and the reliability of the analytical assumptions for each terrain feature considered are discussed in their respective sections. DOE

FUEL CELL RESEARCH ON SECOND-GENERATION MOLTEN-CARBONATE SYSTEMS Technical Report, 1 Jul. - 30 Sep. 1979
Dec. 1979 116 p refs
(Contract DE-AC03-78ET-11276; Proj. 61021)
(SAN-11276-2) Avail: NTIS HC A06/MF A01

The development and testing of fuel cell components is discussed. Structural analysis of the cell package showed that electrolyte tile cracking caused by thermal cycling can be greatly reduced by reducing the thermal expansion difference between the cell separator plate and the electrolyte tile and by reducing the ratio of the separator plate thickness to the electrolyte tile thickness. Mechanical property measuremens were made on a variety of electrolyte tile compositions. The tile microstructure (agglomerate size and LiAlO2 distribution) strongly affected the tile strength. Carbonate compositions were identified that matched more closely the thermal expansion of the metallic cell components. Cell testing of these compositions showed good performance. A potentially cost effective method of fabricating electrolyte tiles and electrodes using the tape-casting method was demonstrated. In addition, good powder quality was achieved using the spray-drying technique for electrolyte powder preparation. DOE

DEVELOPMENT OF MOLTEN CARBONATE FUEL CELL POWER PLANT TECHNOLOGY Quarterly Technical Progress Report, 1 Oct. - 31 Dec. 1979
H. C. Healy, R. A. Sanderson, R. J. Wertheim, P. F. Farris, A. P. Mientek, R. C. Nickols, M. Katz, R. P. Iczkowski, R. R. Fredley, R. C. Stewart et al Mar. 1980 80 p
(Contract DE-AC01-79ET-15440)
(DOE/ET-15440/1; QTPR-1) Avail: NTIS HC A05/MF A01

A study baseline fuel cell system and module configuration

were established. Studies to determine user requirements and to characterize the fuel cell power block and coal gasifier subsystems were initiated. Cell stack design was initiated with completion of preliminary design requirements for the cell cathodes. Laboratory tests were also initiated to identify alternative materials for separator plates, reactant manifold seals, and electrolyte tile fillers. A mechanical tape casting technique for producing 18 x 24 inch sheets of electrolyte matrix tape was successfully demonstrated. Theoretical and experimental studies were initiated to define the effects of known sulfur contaminants on cell performance. A literature survey was initiated to identify other possible contaminants. Planning and design efforts for construction of a mobile cell test unit were initiated. The mobile unit will be used to verify the molten carbonate cell's ability to operate on gasified coal by tests at a gasifier site. DOE

ASSESSMENT OF INDUSTRIAL ENERGY CONSERVATION BY UNIT PROCESSES

Doan L. Phung, Willem vanGool, David A. Boyd, Dominique Casavant, Warren D. Devine, Jr., Heriberto Plasa, and William G. Pollard Mar. 1980 191 p

(Contract DE-AC05-76OR-00033)

(ORAU/IEA-80-4-M) Avail: NTIS HC A09/MF A01

The investment required to produce a given amount of conservation, the amount of conservation to be accomplished before costs equal those of new supply, and how a given investment should be allocated to yield the largest energy savings are questions addressed from the perspective of energy use in industrial unit operations. It was found that: a real energy minimum exists which is distinct from the process thermodynamic limit and this minimum represents the limit to conservation; cost/energy relationships for an industrial process can be described to first approximation by a single technology parameter which is characteristic of that particular technology; the technology parameter permits competing technologies to be ranked by energy saving potential for a given investment; and government investment in conservation can be allocated for greatest return using the technology parameters of, and the fractions of energy use by, each of the unit operations. Energy embodied in conservation equipment may, under certain circumstances, decrease the rate at which the benefits of conservation appear in national energy accounts. DOE

N80-31940# Battelle Columbus Labs., Ohio.

PILOT STUDY TO SELECT CANDIDATES FOR ENERGY CONSERVATION RESEARCH FOR THE CHEMICAL INDUSTRY Final Report

J. E. Burch, J. L. Otis, and R. W. Hale 15 Nov. 1979 116 p refs

(Contract W-7405-eng-92)

(DOE/TIC-11114) Avail: NTIS HC A06/MF A01

The functions and energy consumption of the various unit operations involved in several chemical processes are studied and areas where research could lead to energy-conservation options of broad utility to the chemical industry are identified. Four energy-intensive chemical processes which produce ammonia and carbon dioxide, chlorine and caustic soda, carbon black, and ethylbenzene and styrene were selected. Information was obtained from the literature on the structure of the industry sectors and the production technologies, and was used to determine material balances, process streams, temperatures, pressures, and energy requirements for the various unit operations. An energy matrix was prepared for each process, showing the function provided by and the energy involved in each unit operation or process. A variety of chemical engineers and chemists analyzed the energy matrices, flow charts, and other information for each process and made suggestions as to areas wherein research might be expected to produce energy saving results. DOE

TERRESTRIAL PHOTOVOLTAIC POWER SYSTEMS WITH SUNLIGHT CONCENTRATION

C. E. Backus and B. D. Wood Mar. 1980 191 p refs

(Contract EY-76-C-04-0789)

(SAND-80-7008) Avail: NTIS HC A09/MF A01

Experiments were conducted on the flux uniformity and spectral distribution in the concentrated sunlight under a 1.08 meter. The preliminary data from these experiments show that the short circuit currents from a cell are directly proportional to the total illumination falling on the surface of the cell and not on the uniformity of the light profile. An available gallium aluminum arsenide cell was used with a hot mirror and a silicon cell to demonstrate that the efficiency of the combined system is greater than that achievable with the use of a single cell. An algorithm for calculating the electrical and thermal performance of a linear concentrated cell array developed. This computer program, based on quasi-steady state analysis, will calculate the array temperature and electrical outputs based on the day, time, transfer fluid inlet temperature and flow rate, ambient temperature, wind speed and direction, optical characteristics of the linear concentrator and solar irradiation. DOE

OCEAN ENERGY SYSTEMS: MULTIYEAR PROGRAM PLAN
May 1980 130 p
(DOE/CS-0161) Avail: NTIS HC A07/MF A01

Specific planned activities to be conducted by the Department of Energy in connection with the Ocean Energy System Program for FY 1979 through FY 1984 are described. Program funding is presently 95 percent OTEC, with 5 percent directed toward alternate energy sources such as salinity gradients waves and currents, technical status, ocean energy systems resource requirements, issues, and a management plan are discussed. DOE

N80-31947# California Univ., Berkeley. Lawrence Berkeley Lab. Energy and Environment Div.
EFFICIENCY OF ENERGY CONVERSION IN NITINOL
Richard D. Kopa Sep. 1979 77 p refs Presented at the Nitinol Heat Engine Conf., Silver Spring, Md., 26 Sep. 1978
(Contract W-7405-eng-48)
(LBL-9750; CONF-7809211-1) Avail: NTIS HC A05/MF A01

The efficiency of the energy conversion in Nitinol was investigated experimentally. An electronically controlled Cycle Simulator subjected a single Nitinol wire element to the stress strain temperature cycles corresponding to a specific thermodynamic cycle. The test parameters, which were varied singly or in combination, included various stress levels, stress rates, percent of elongation of the wire, temperature levels, heating and cooling rates, cycling speeds, etc. Efficiency values as a function of these variables were plotted in graphs and the factors affecting efficiency are discussed. The fundamental limitation of the energy conversion efficiency is set by the inefficient type of thermodynamic cycle - namely, the isothermal cycle - to which the solid state heat engine operation is restricted. ANALYTICAL EVALUATION OF A SOLAR THERMOPHOTOVOLTAIC CONVERTER
Michael W. Edenburn May 1980 30 p refs
(Contract DE-AC04-76DP-00789)
(SAND-78-1962) Avail: NTIS HC A03/MF A01

A solar thermophotovoltaic (TPV) converter uses concentrated sunlight to heat a cavity-enclosed emitter to a few thousand degrees kelvin. The emitter illuminates photovoltaic cells with thermal radiation, and the cells convert the radiation into electricity. Emitter temperature, cell reflectance to radiation with energy below the cell's bandgap energy, and concentration ratio requirements are parametrically considered. Concentration ratio is treated in a rigorous manner to determine what concentration values can be practically achieved and what influence they have on converter performance. Important conclusions reached are that an emitter temperature of 2000 K is close to optimum and a cell reflectance value of 0.98 is required for below bandgap radiation. A secondary concentrator must be used and a primary mirror quality resulting in a 4 milliradian reflected-beam dispersion must be obtained to achieve a 24% conversion efficiency. DOE

LONG-TERM LITHIUM BATTERY TESTS, 2 Semiannual Report
Samuel C. Levy Mar. 1980 16 p refs
(Contract DE-AC04-76DP-00789)
(SAND-79-1383; SAR-2) Avail: NTIS HC A02/MF A01

Data from the second 6 month period of a 6 year test of ambient temperature lithium batteries are reported. Lithium-sulfur dioxide cells from three manufacturers and lithium-polycarbon monofluoride cells from a fourth are included. One year's storage at room temperature or below had a minor effect on capacity. Storage at 49 C resulted in a significant capacity loss. Two mechanisms were identified that may result in premature failure of cells stored at elevated temperatures: corrosion of an aluminum-to-tantalum weld in the positive terminal, and an attack on the glass-to-metal seal in the header. Continuous discharge under a pulsed load resulted in a considerable loss of capacity. A white deposit containing oxide, sulfate, and some carbonate was found in these cells at the anode-to-case contact. DOE

S. P. Mitoff Feb. 1980 345 p refs Sponsored by Electric Power Research Inst.
(EPRI Proj. 128-4; EPRI Proj. 128-5)
(EPRI-EM-1341) Avail: NTIS HC A15/MF A01

Sodium-sulfur batteries for utility load-leveling applications are considered. Safety tests demonstrated the need for a safety insert for the sodium to limit the rate sodium and sulfur could react in the event of a beta tube failure. Performance testing demonstrated a cell capacity greater than the 168 Ah design value, but the electrical resistance was approximately 30% greater than the design value. Two concepts for a 100 kWh battery module were investigated. The first uses forced-convection nitrogen cooling. The second uses liquid organic coolant and is more compact and less costly, and provides better temperature control. However, the organic coolant design introduces potential fire hazards and corrosion concerns. A model was developed and experiments were performed to characterize the performance of the resistive mat between the polysulfides and the ceramic electrolyte. Also, a new measurement of the entropy change associated with the sodium-sulfur reaction was completed. DOE

GALLIUM ARSENIDE SOLAR CELLS FOR VERY HIGH CONCENTRATION SYSTEMS: RECENT RESULTS, PROBLEMS AND EXPECTATIONS [CELLE SOLARI ALL'ARSENIURO DI GALLIO PER SISTEMI AD ALTISSIMA CONCENTRAZIONE: RISULTATI RECENTI, PROBLEMI E PROSPETTIVE]
G. Guarini Oct. 1979 12 p refs In ITALIAN Presented at Conf. on Conversione Foltovoltaica dell'Energia Solar, Milan,

18-19 Oct. 1979
(CISE-1518) Avail: NTIS HC A02/MF A01

The state-of-the-art of solar cell research for use under highly concentrated solar radiation is reviewed. The application of GaAlAs-GaAs cells, systems using thermal recovery, and research on multi-energy levels are discussed. It is concluded that high concentration systems based on GaAlAs multicolor cells with efficiency over 30% appear to be attractive and economically feasable solutions. The three junction monolithic cell (efficiency 40-45%) is an important research goal.

DESIGN OF A COST EFFECTIVE SOLAR POWERED WATER PUMP
Duane G. Chadwick Apr. 1980 44 p refs
(Contract DI-14-34-0001-8047)
(PB80-182819; UWRL/H-80-02; W80-05011; OWRT-A-036-UTAH-1) Avail: NTIS HC A03/MF A01 CSCL 13K

The basic design consists of an expanding gaseous piston confined inside a chamber which is located in series with, and between, an inlet and an outlet check valve. The gas is generated by volatilizing cyclopentane or hexane. Four variations of this basic design concept were built and evaluated. Considerations in the choice of a cost effective solar collector are also reviewed. A 70 C heat source temperature is required to operate the pump if cyclopentane is used as the volatile fluid, 90 C is required if hexane is used. The pumps have a capacity of approximately 6 liters/minute when pumped to a height of 2 meters. Two square meters of sunshine are sufficient to operate the pump.

A CONTINUATION OF BASE-LINE STUDIES FOR ENVIRONMENTALLY MONITORING SPACE TRANSPORTATION SYSTEMS (STS) AT JOHN F. KENNEDY SPACE CENTER. VOLUME 4: THREATENED AND ENDANGERED SPECIES OF THE KENNEDY SPACE CENTER. PART 1: MARINE TURTLE STUDIES Final Report, 1976 - 1979
L. M. Ehrhart Sep. 1980 417 p refs
(Contract NAS10-8986)
(NASA-CR-163122-Vol-4-Pt-1; TR-51-2-Vol-4Pt-1) Avail: NTIS HC A18/MF A01 CSCL 13B

The status of marine turtle populations in the KSC area was studied using data from previous results from ground and aerial surveillance conducted from 1976 to April 1979. During ground surveillance, various data were recorded on emergent turtles such as: species, weight, tag number (if previously tagged), time discovered, activity at discovery and the location of discovery. Observations were also made on nesting and reproductive characteristics, population estimates, immigration and emigration and growth rate of the turtles. Mortality studies were additionally made and autopsies performed on dead turtles found in the area. It is concluded that further mortality documentation should be done just prior to and just after a future space launch operation

in order to accurately assess the cause and effect relationship of such a launch on the turtle population. A.R.H.

NUMERICAL SIMULATION OF ADVECTION FOG FORMATION ON MULTI-DISPERSE AEROSOLS DUE TO COMBUSTION-RELATED POLLUTANTS Final Report
R. J. Hung and G. S. Liaw Jul. 1980 118 p refs
(Contract NAS8-31729)
(NASA-CR-161566; UAH-RR-248) Avail: NTIS HC A06/MF A01 CSCL 13B

The effects of multi-disperse distribution of the aerosol population are presented. Single component and multi-component aerosol species on the condensation/nucleation processes which affect the reduction in visibility are described. The aerosol population with a high particle concentration provided more favorable conditions for the formation of a denser fog than the aerosol population with a greater particle size distribution when the value of the mass concentration of the aerosols was kept constant. The results were used as numerical predictions of fog formation. Two dimensional observations in horizontal and vertical coordinates, together with time-dependent measurements were needed as initial values for the following physical parameters: (1)wind profiles; (2) temperature profiles; (3) humidity profiles; (4) mass concentration of aerosol particles; (5) particle size distribution of aerosols; and (6) chemical composition of aerosols. Formation and dissipation of advection fog, thus, can be forecasted numerically by introducing initial values obtained from the observations. T.M.

THE INCREASED ATTACHMENT DUE TO IONIZATION INDUCED SMOG IN EMP ENVIRONMENTS Final Report, 1 Apr. 1977 - 31 Oct. 1979
Murray Scheibe 31 Oct. 1979 37 p refs
(Contract DNA001-77-C-0224)
(AD-A087850; AD-E300859; MRC-R-532; DNA-5077F) Avail: NTIS HC A03/MF A01 CSCL 07/1

The increased electron attachment due to HNO3 production in the EMP source region is investigated. The HNO3 produced is found to be roughly linear with the total ionization up to an ionization value of about 2 x 10 to the 16th power ion pairs. Above this, the HNO3 production is less than linear. Although the attachment to HNO3 was not enough to explain the lightning strokes in the Mike shot, it can affect the field in the EMP source region. The attachment to other species via endothermic reactions which involve electrons which have been heated by the electric field was also investigated. It was concluded that only those reactions in which the energy change is small, such as the reactions with O3 and HNO2 and H2O2, hold much hope of contributing significantly to the overall attachment. The necessary experimental data for these reactions, however, is not available. GRA

REMOTE SENSING PROCEDURES FOR DETECTING AND MONITORING VARIOUS ACTIVITIES REGULATED BY THE MOBILE DISTRICT Final Report, Oct. 1976 - Sep. 1978
Horton Struve and William L. Kirk Apr. 1980 397 p refs
(AD-A087584; WES/TR/EL-80-1) Avail: NTIS HC A17/MF A01 CSCL 14/5

The objective of this study was to develop procedures for use by the U.S. Army Engineer District, Mobile, to detect and monitor activities requiring a Corps of Engineers permit pursuant to Section 404 of the Federal Water Pollution Control Act Amendments of 1972, Section 10 of the River and Harbor Act of 1899, and Section 103 of the Marine Protection, Research, and Sanctuaries Act of 1972. The detection and monitoring procedures developed in this study included three methods of acquiring remotely sensed data: satellite and aircraft borne digital scanner methods and airborne photographic methods. The two digital scanner systems investigated for the study were the LANDSAT Multispectral Scanner System and the National Aeronautics and Space Administration Modular Multispectral Scanner. The equipment and procedures used in these systems, which obtain the type of information required by the Regulatory Functions Branch, Mobile District, are described. Aerial photographic systems are described, and examples of several applications of detection and monitoring procedures involving wetlands, waterbodies, and structures are given. A summary of available remote sensing imagery from Federal and State agencies is given. GRA

ENVIRONMENTAL DATA FOR SITES IN THE NATIONAL SOLAR DATA NETWORK Progress Report, Feb. 1980
Feb. 1980 221 p
(Contract DE-AC01-79CS-30027)
(SOLAR/0010-80/02) Avail: NTIS HC A10/MF A01

The network consits of (1) sensors which measure key performance parameters at a selected site; (2) a Site Data Acquisition System (SDAS); (3) telephone transmission circuits; and (4) a Central Data Processing System (CDPS). Sensor data are collected and stored on a cassette tape in the SDAS. The CDPS collects and processes the information and performs the required computations. For the majority of parameters, raw data is collected approximately every five minutes. Solar insolation and certain other parameters, which are subject to rapid variance, are sampled every 32 seconds. The CDPS interrogates each SDAS on a daily basis and retrieves all accumulated data. At the conclusion of data retrieval, the SDAS Cassette is reset by command from the CDPS for continuing data collection. Environmental information collected at the sites for the reporting month are presented. Only those sites for which the data are found to be valid are reported. DOE

EFFECTIVE TRANSPORT VELOCITY AND PLUME ELONGATION IN NOCTURNAL VALLEY WIND FIELDS

W. E. Clements, S. Barr, and M. M. Fowler 1980 7 p refs Presented at 2nd Joint Conf. on Appl. of Air Pollution Meteorol., Am. Meteorol. Soc., New Orleans, 24-27 Mar. 1980

(Contract W-7405-eng-36)

(LA-UR-80-791; CONF-800327-8) Avail: NTIS HC A02/MF A01

Using three atmospheric tracers, the effective transport velocity and plume elongation produced by nocturnal drainage wind in three different valleys were investigated. Tracer was released in each valley in a well defined drainage wind field and sequentially sampled at downvalley locations. The effective transport velocity was determined from the elapsed time from the start of the release to the time when the plume concentration reached 10% of its peak value and the distance from the release site. The plume elongation factor was determined from the ratio of the width (time) of the plume at 10% of its peak value to the duration of the release. Mean measured winds were computed from surface wind instruments along the drainage flow path with values weighted by the estimated time the plume was in the wind field best represented by a measurement. THE FATE AND EFFECTS OF CRUDE OIL SPILLED ON SUBARCTIC PERMAFROST TERRAIN IN INTERIOR ALASKA Final Report, 1975 - 1979

L. A. Johnson, E. B. Sparrow, T. F. Jenkins, C. M. Collins, C. V. Davenport, and T. T. McFadden Mar. 1980 143 p refs

(Grant EPA-IAF-D7-0794)

(PB80-187305; EPA-600/3-80-040) Avail: NTIS HC A07/MF A01 CSCL 08L

The short and long term effects of spills of hot Prudhoe Bay crude oil on permafrost terrain in subarctic interior Alaska were studied after two experimental oil spills of 7570 liters (2000 gallons) each one in winter and one in summer, on 500 sqm test plots were made at a forest site underlain by permafrost. Oil movement, thermal regime, botanical effects, microbiological responses, permafrost impact, and composition of the oil in the soil were monitored for two years. Oil movement during the winter spill occurred within the surface moss layer beneath the snow. In the summer spill, movement of the oil was primarily below the moss in the organic soil and was more rapid, moving 30 m downslope in the first 24 hours and 41 m total through the summer. The oil in the winter spill moved only 18 m downslope in the first day and stopped. Remobilization occurred in the spring allowing the oil in the winter spill to

move an additional 17 m. The total area affected by the summer spill was nearly one and one-half times as large as the winter spill. GRA

UNIVERSITY OF WASHINGTON ELECTROSTATIC SCRUBBER TESTS: COMBINED PARTICULATE AND SO2 CONTROL Final Report, Jun. 1978 - Aug. 1979
Michael J. Pilat Nov. 1979 62 p refs
(Grant EPA-R-806035)
(PB80-182603; EPA-600/7-79-245) Avail: NTIS HC A04/MF A01 CSCL 13B

A liquor recycle system was constructed permitting the pilot plant to operate in an open or closed loop mode. All SO2 tests were run in an open loop mode using either water or Na2CO3 solution as the scrubbing liquor. Simultaneous inlet and outlet source tests using cascade impactors provided size dependent and overall mass basis particle collection efficiency data. Measured over all particle collection efficiencies were 98.99% to 99.80%, depending on scrubbing operating conditions. SO2 collection efficiencies were 8.02% to 97.41%, depending on the scrubber operating conditions, inlet SO2 concentration, and the type of scrubbing liquor used. GRA

POLLUTANTS FROM SYNTHETIC FUELS PRODUCTION: COAL GASIFICATION SCREENING TEST RESULTS
J. G. Cleland, S. K. Gangwal, C. M. Sparacino, R. M. Zweidinger, D. G. Nichols, and F. O. Mixon Aug. 1979 101 p refs
(Grant EPA-R-804979)
(PB80-182769; EPA-600/7-79-200) Avail: NTIS HC A06/MF A01 CSCL 13B

Coal gasification test runs were conducted in a semibatch, fixed bed laboratory gasifier in order to evaluate various coals and operating conditions for pollutant generation. Extensive analyses were performed for organic and inorganic compounds and trace elements in the tars and hydrocarbon oils, aqueous condensates, and reactor residues resulting from the gasification tests. Results are reported for sulfur species in the product gas stream, for consent decree pollutants contained as volatile organic compounds in the product gas, for phenol and related compounds in the aqueous condensate and tar/oil sample, and for polynuclear aromatic hydrocarbons species in the tar/oil. PHOTOCHEMICAL AEROSOL FORMATION: REACTIVE HYDROCARBON-NOx-SO2 SYSTEMS Final Report
Donald L. Fox, Harvey E. Jeffries, and Charles F. Feigley Dec. 1979 156 p refs Sponsored by Coordinating Research Council, Inc.
(PB80-187990; CRC-APRAC-CAPA-8-71) Avail: NTIS HC A08/MF A01 CSCL 07D

The results of an investigation of photochemical aerosol formation by 1-hexene, 1,7-octadiene, cyclohexene, cyclopentene, and toluene are reported. The experiments were conducted in the University of North Carolina outdoor aerosol chamber utilizing natural sunlight to activate the photochemical reactions in systems containing a single hydrocarbon, nitric oxide (NO), and nitrogen oxide (NO2). The effect of sulfur dioxide (SO2) on these systems was also determined. The chamber was operated as a batch chemical reactor with injections of the reactants made before sunrise, and the chemical and physical transformations were measured until approximately 1500 EDT. (Grant EPA-R-804811)
(PB80-188378; EPA-600/7-80-046A-Vol-1) Avail: NTIS HC A06/MF A01 CSCL 13B

An integrated fluidized-bed coal gasification reactor and acid gas removal system are described. The gasifier operates at 100 psig at up to 2000 F, and has a coal feed capacity of 50 lb/hr. The gas cleaning system contains a cyclone, a venturi scrubber, and an absorber/flash/tank/stripper system for acid gas removal. A detailed description of the plant and associated facilities, a summary of operating procedures, and results of a run for the steam oxygen gasification of a Western Kentucky No. 11 coal char are given. By following the outlined operating procedures, the plant can be brought to steady state in less than 4 hours. GRA

ATMOSPHERIC PARTICULATE ANALYSIS USING ANGULAR LIGHT SCATTERING
Mark Z. Hansen [1980] 40 p refs Submitted for publication
(NASA-TM-81112) Avail: NTIS HC A03/MF A01 CSCL 04A

Using the light scattering matrix elements measured by a polar nephelometer, a procedure for estimating the characteristics of atmospheric particulates was developed. A theoretical library data set of scattering matrices derived from Mie theory was tabulated for a range of values of the size parameter and refractive index typical of atmospheric particles. Integration over the size parameter yielded the scattering matrix elements for a variety of hypothesized particulate size distributions. A least squares curve fitting technique was used to find a best fit from the library data for the experimental measurements. This was used as a first guess for a nonlinear iterative inversion of the size distributions. A real index of 1.50 and an imaginary index of -0.005 are representative of the smoothed inversion results for the near ground level atmospheric aerosol in Tucson. Author

POLAR NEPHELOMETER FOR ATMOSPHERIC PARTICULATE STUDIES
Mark Z. Hansen and W. H. Evans [1980] 31 p refs Submitted for publication
(NASA-TM-81113) Avail: NTIS HC A03/MF A01 CSCL 04A

A polar nephelometer for use in studying atmospheric aerosols was developed. The nephelometer detects molecular scatter from air and measures scattering from very clean air using pure molecular scattering for calibration. A compact system using a folded light path with an air cooled argon laser for the light source was designed. A small, sensitive detector unit permits easy angular rotation for changing the scattering angle. A narrow detector field of view of + or - 1/4 degree of scattering along with a single wavelength of incident light is used to minimize uncertainties in the scattering theory. The system is automated for data acquisition of the scattering matrix elements over an angular range from 2 degrees to 178 degrees of scattering. Both laser output and detector sensitivity are monitored to normalize the measured light scattering. S.F.

(Contract F19628-77-C-0051; AF Proj. 2305)
(AD-A087259; RADC-TR-80-29) Avail: NTIS HC A04/MF A01 CSCL 17/2

This report describes several studies and the development of computer techniques toward improving the capability of predicting and assessing HF propagation through the ionosphere. These studies included the development of vertical electron density models which can accurately represent observed oblique and vertical ionograms. These models have been represented by a series of functions which describe the individual ionospheric layers and which are analytically integratable to yield expected ray path trajectories. A computer program has been written which incorporates these features and yields results which are two orders of magnitude faster than those available using conventional numerical ray tracing techniques. The technique has been applied to several studies including the simulation of the backscatter leading edge of oblique ionograms and the determination of HF circuit parameters for a specified ground coverage. The results are presented as a function of the change in individual ionospheric layer parameters. GRA

TIME DELAY OF TERRESTRIAL LIGHT PULSES PROPAGATING THROUGH CLOUDS TO SATELLITE SYSTEMS Final Report, 1 Apr. 1977 - 30 Sep. 1979
H. S. Stewart and L. B. Woolaver Patrick AFB, Fla. AFTAC 7 Jul. 1980 203 p refs
(Contract F08606-77-C-0024)
(AD-A087242; HSS-B-058; AFTAC-TR-80-23) Avail: NTIS HC A10/MF A01 CSCL 08/5

A method is described and applied for interpreting optically filtered all sky photographs so as to generate curves of the time dependent probability that a photon emitted by an isotropic source near the Earth's surface will reach a satellite at any elevation and azimuth in the sky. Two basic concepts are involved:

first that the probability at lambda = 0.76 microns for absorption of light by atmospheric oxygen is proportional to the square root of the dwell time of the light in the atmosphere, and second, that a time dependent reciprocity theorem exists allowing observations of the skylight incident on a ground based detector to be interpreted in terms of the probability that a photon starting at the detector can reach a satellite in the direction of the Sun. Detailed theory and operating equations were developed and appropriate equipment was built and operated. Computerized reduction of microdensitometer scans of the all sky photographs led to values of mean time delay and transmission for 125000 equal elements of solid angle in the sky. These were summed to generate the time dependent probability. Photographs made at Kennedy Space Center were used to generate delay curves for seven satellite directions on nine separate occasions. MODELLING OF EQUATORIAL PHASE AND AMPLITUDE SCINTILLATIONS FROM OGO-6 AND AE IRREGULARITY DATA Scientific Report, 1 Mar. 1978 - 28 Feb. 1979
Sunanda Basu and Santimay Basu Hanscom AFB, Mass. AFGL Nov. 1979 29 p refs
(Contract F19628-78-C-0005; AF Proj. 4643)
(AD-A087011; AFGL-TR-80-0141; SR-1) Avail: NTIS HC A03/MF A01 CSCL 04/1

The technique of modelling equatorial phase and amplitude scintillations from in situ measurements of irregularity amplitude, ambient ionization density and irregularity power spectrum is outlined. The in situ measurements do not directly provide information on irregularity layer thickness for which radar backscatter observations are utilized. The equatorial scintillation models developed from OGO-6 and AE-C in situ measurements during the two solstices are presented. Considerable differences in the longitude variation of scintillations are predicted during the two solstices. The model estimates are in good agreement with the available ground based phase and amplitude measurements. Problems associated with the use of bottomside spread-F data for transionospheric propagation modelling at VHF/UHF are also discussed. GRA

STABILITY OF BOUNDARY LAYER FLOW Final Report, 11 Sep. 1979 - 31 Jan. 1980
B. E. Freeman and L. E. Hauser Mar. 1980 89 p refs
(Contract N00173-79-C-0302)
(AD-A087028; PD-JL-80-220) Avail: NTIS HC A05/MF A01 CSCL 04/1

A technique is developed and applied for the evaluation of conditions under which marine boundary layers are unstable, and for computing the rate of growth of unstable motions. Linear perturbation equations are formulated which account for influence of wind shear, static stability, Coriolis force, turbulent diffusion, large scale convergence, and geostrophic wind on linear stability. The mean quantities can be prescribed by analytic functions or supplied as numerical tables derived either from observed/specified data or a boundary layer model. The linearized model is solved as a generalized eigenvalue problem. Related calculations with the SIGMET code are discussed, including radar properties of the marine boundary layer. GRA

QUASILINEAR SCATTERING FROM WAVES DRIVEN BY BEAM-PLASMA INSTABILITIES Interim Report
S. H. Brecht (Science Applications, Inc., McLean, Va.) and P. J. Palmadesso 21 Apr. 1980 35 p refs Sponsored by DNA
(AD-A087208; AD-E000474; NRL-MR-4203) Avail: NTIS HC A03/MF A01 CSCL 04/1

The Starfish southern conjugate rebrightening is explained by velocity diffusion perpendicular to the Earth's magnetic field line. The diffusion is caused by particle scattering off of the harmonics of ion cyclotron waves commonly called Bernstein modes. Quasilinear estimates of the wave fluctuation levels indicate that the debris streaming down the field lines will excite these waves and then be scattered by them. GRA

NONLINEAR EVOLUTION OF DIFFUSE AURORAL F REGION IONOSPHERIC IRREGULARITIES Interim Report
M. J. Keskinen (Berkeley Research Associates, Arlington, Va.), S. L. Ossakow, and B. E. McDonald 2 Jul. 1980 28 p refs Sponsored by DNA and ONR
(RR0330244)
(AD-A086998; AD-E000491; NRC-MR-4246) Avail: NTIS HC A03/MF A01 CSCL 04/1

Numerical simulations of the nonlinear evolution of the current convective instability in the diffuse aurora have been performed for conditions typical of the nighttime high latitude F region. Our results show nearly field aligned plasma irregularities developing in regions of well defined northward gradients of total electron content (TEC) and field-aligned diffuse auroral particle precipitation. In addition, we find equatorward movement of plasma enhancements and northward (poleward) movement of plasma depletions (holes). Furthermore, one dimensional spatial power spectra of the irregularities in both the north-south and east-west directions are well described by inverse laws. GRA

MAGNETOSPHERIC AND INTERPLANETARY ELECTROSTATICS: A SIMPLE BUT EXPLICIT MODEL Final Interim Report
Michael Schulz 1 Jul. 1980 10 p refs
(Contract F04701-79-C-0080)
(AD-A087110; TR-0080-5505-02-1; SD-TR-80-44) Avail: NTIS HC A02/MF A01 CSCL 04/1

This is a generalization of Dungey's 1961 model for the prototype of an 'open' magnetosphere. The magnetic-field lines are traced by superimposing a uniform B field parallel to the geomagnetic dipole axis. There results a quasi-cylindrical separatrix (the 'magnetopause') between field lines that intersect the Earth and those that do not. However, the magnetic field outside the magnetosphere can be multiplied by an arbitrary factor (positive or negative) without altering the field-line geometry. Any discontinuity in B at the 'magnetopause' is supported by azimuthal currents there. The electrostatic problem is asymptotically analogous to that of a dielectric cylinder in an asymptotically uniform electric field (which owes its origin to the solar wind in this case). It is easy to map from the asymptotic solution inward and equatorward, since the magnetic field lines are treated as electric equipotentials. The tangential component of the electric field is continuous at the magnetopause but varies between limits that correspond to the 'open' and 'closed' models of the magnetosphere, as defined by the access of interplanetary plasma. THE INVESTIGATION OF THE MAGNETOSPHERIC DYNAMICS IN CONJUNCTION WITH THE SCATHA SATELLITE OBSERVATIONS Final Report, 1 Oct. 1978 - 30 Sep. 1979
Ching-I. Meng Dec. 1979 140 p refs
(Contract N00014-72-C-4401)
(AD-A087433; AFGL-TR-80-0070) Avail: NTIS HC A07/MF A01 CSCL 08/14

This task consists of two parts. The first part concerns (a) the collection and analysis of ground based and satellite data for

the purpose of monitoring the magnetospheric conditions in support of the SCATHA satellite activity at Air Force Geophysics Laboratory, and (b) the technical support in the study of the particle and field data returned by SCATHA satellite. The second part is to analyze observations of auroral phenomena made by satellites of the USAF Defense Meteorological Satellite Program. The effort at APL/JHU for the first part of this task was majorly in the role of providing supports to the SCATHA activity and for the second part of DMSP observations was in the understanding of polar region auroral phenomena. Therefore, this final report is divided into a summary of efforts supporting SCATHA and scientific results from analyzing DMSP data. The former consists of (1) a short description of why and how the ground based magnetic data can be used in monitoring the magnetospheric conditions and (2) a list of data collected together with a guide for using these data. The latter contains (1) a list and abstracts of all scientific reports and journal articles published or submitted for publication, during this reporting period, with at least partial sponsorship attributed to AFGL, and (2) an article concerning a possible diurnal variation of the auroral oval size. QUANTITATIVE SIMULATION OF A MAGNETOSPHERIC SUBSTORM. 1: MODEL LOGIC AND OVERVIEW
M. Harel, R. A. Wolf, R. W. Spiro, P. H. Reiff, C.-K. Chen, W. J. Burke, F. J. Rich, and M. Smiddy Jan. 1980 92 p refs
(Grant NGR-44-006-137; Contract F19628-77-C-0005; Grant NSF ATM-74-21185; AF Proj. 2311)
(NASA-CR-163547; AD-A087699; AFGL-TR-80-0128; SR-2)
Avail: NTIS HC A05/MF A01 CSCL 04/1

This and the following two papers report results of the first comprehensive computer simulation of the behavior of the Earth's inner magnetosphere during a substorm type event. We have developed a self consistent quantitative model to compute electric fields, currents and the resulting plasma flow in the inner-magnetosphere/ionosphere system. Dawn-dusk electric fields show a general correlation with the east-west magnetic field perturbations. Unexpectedly, two of the passed display substantial regions of sunward plasma flow poleward of the main part of the region-1 Birkeland currents. The cross-polar-cap potential drops computed from the data represent the first effort at satellite monitoring of this important parameter during various phases of a substorm, and shown an important enhancement during the substorm. Numerical results from these first-try simulations were consistent with most of the established features of convection in the inner magnetosphere. GRA

QUANTITATIVE SIMULATION OF A MAGNETOSPHERIC SUBSTORM. 2: COMPARISON WITH OBSERVATIONS
M. Harel, R. A. Wolf, R. W. Spiro, P. H. Reiff, C.-K. Chen, W. J. Burke, F. J. Rich, and M. Smiddy Jan. 1980 81 p refs
(Grant NGR-44-006-137; Contract F19628-77-C-0005; Grants NSF ATM-74-21185; NSF ATM-79-20157; AF Proj. 2311)
(NASA-CR-163548; AD-A087700; AFGL-TR-80-0129; SR-3)
Avail: NTIS HC A05/MF A01 CSCL 04/1

Several results of computer simulation of the behavior of the inner magnetosphere during the substorm-type event of 19 September 1976 are discussed. The model predicts a modest ring-current injection, in to about L=6. The model Birkeland currents agree satisfactorily with the averaged observations of Iijima and Potemra, in terms of direction, strength and overall pattern. The model provides a useful picture of the overall magnetosphere-ionosphere current system. The model indicates that the total Joule heating during the event is about 2-3 times the increase in ring-current energy, a result that is in apparent contradiction to some previous estimates. GRA

THE INFLUENCE OF ATMOSPHERIC DYNAMICS ON OZONE AND TEMPERATURE STRUCTURE
Robert O. Olsen and Jagir S. Randhawa May 1980 43 p refs
(DA Proj. 1T0-61102-B-53A)
(AD-A087702; ERADCOM/ASL-TR-0057) Avail: NTIS HC A03/MF A01 CSCL 04/1

A two phase sounding program was undertaken at White Sands Missile Range, New Mexico, during the first week of February and June 1973 to measure upper atmosphere temperature, winds, and ozone. In situ and ground based instrumentation were used. The program was designed to investigate atmospheric transport processes occurring in the lower stratosphere and troposphere. Observations taken in January on the day following the passage of a jet stream over the station showed a large increase (30 percent) in the total ozone. Also ozone concentration increased as temperature increased at the double tropopause region. During the second phase of the study, the first week of June, the height of the tropopause moved downward approximately 3 km, from an altitude of 16 km on 1 June to 13 km on 8 June. The variations of ozone in the troposphere and temperature at tropopause altitudes corresponded with associated atmospheric circulation changes, indicating circulation influence at these altitudes. SIZE DISTRIBUTION, CHEMICAL COMPOSITION AND OPTICAL PROPERTIES OF ATMOSPHERIC DUST IN ISRAEL: A COMPARISON OF URBAN AND DESERT AEROSOLS UNDER CLEAR AND DUSTY CONDITIONS Final Report, 1 Jul. 1978 - 1 Mar. 1980
Zev Levin Feb. 1980 73 p refs
(Grant DA-ERO-78-G-087)
(AD-A087608) Avail: NTIS HC A04/MF A01 CSCL 04/1

Measurements of aerosol size distributions, chemical composition and optical properties were carried out at two locations in Israel. Tel Aviv was chosen as an urban region and Mitzpe Ramon as a desert region. The measurements indicate that the size spectra between 0.15 - 12 micrometers can be approximated by a power law type distribution. The spectra in Tel Aviv show higher concentrations and greater slopes than those from the desert. Diurnal variations between day and night are observed in the size distribution of the summertime measurements in Tel Aviv. These are believed to be related to the increase in aerosol size due to absorption of water vapor during high relative humidity periods. The chemical composition in Tel Aviv was found to strongly depend on the meteorological conditions. The optical measurements also suggest strong differences between Tel Aviv and the desert. Filter samples of atmospheric particulate matter from Tel Aviv always appeared darker than those from the desert site. Measurements of imaginary refractive index in the 0.3 to 1.7 micrometer spectral region are presented. These measurements are consistently higher by a factor of 2 to 4 in Tel Aviv as compared to simultaneous samples from the desert site. Seasonal variations have also been observed and are believed to be primarily related to temperature inversions near or at the ground during the winter months and to the effect of pollution from Southern Europe which is carried eastward by synoptic scale motion. INVESTIGATION OF MAGNETIC FIELD PHENOMENA IN THE IONOSPHERE Final Report, 1 Jul. 1976 - 30 Sep. 1979
John F. Devane and Edward A. Johnson Jan. 1980 58 p refs
(Contract F19628-76-C-0291; AF Proj. 7601)
(AD-A087526; AFGL-TR-80-0099) Avail: NTIS HC A04/MF A01 CSCL 08/14

Weston Observatory (Boston College) has maintained a geomagnetic observatory to continuously monitor changes in the geomagnetic field and to provide standards for magnetic instrumentation and to maintain a coil system in which a wide variety of magnetic instrumentation can be tested and calibrated to support AFGL RESEARCH. The observatories in Project MAGAF have been installed and maintained. The secular change in the geomagnetic field at Weston is detailed for the past six years. Modifications have been made in the network instrumentation to insure reliability and accuracy of the data digitally transmitted to Hanscom AFB. A three component magnetic observatory has been designed around the total field sensor. The reliability of the principal components of the network has been investigated and changes proposed for the remote observatories. GRA

PRELIMINARY ONE-DIMENSIONAL THERMAL ANALYSIS OF WASTE EMPLACEMENT IN TUFFS
Bruce M. Bulmer and Allen R. Lappin Apr. 1980 31 p refs
(Contract DE-AC04-76DP-00789)
(SAND-79-1265) Avail: NTIS HC A03/MF A01

One dimensional calculations of near field temperatures resulting from waste emplacement in a multiple layered tuff stratigraphy are presented. Results indicate a marked sensitivity of peak temperatures to assignment of in situ fluid pressure, geothermal heat flux, waste type, and location of waste relative to a specific stratigraphic discontinuity. Under the criterion that allowable initial power densities are limited by the occurrence of boiling at a distance of 10 m from emplaced waste, allowable power densities are calculated to range up to 150 kW/acre or more, depending upon geothermal heat flux and waste type. DOE

ODD ZONAL HARMONICS IN THE GEOPOTENTIAL FROM ANALYSIS OF 28 SATELLITE ORBITS
D. G. King-Hele, C. J. Brookes, and G. E. Cook London HMSO Feb. 1980 49 p refs
(RAE-TR-80023; RAE-Space-576; BR73771) Avail: NTIS HC A03/MF A01

The geopotential is usually expressed as an infinite series of spherical harmonics, and the odd zonal harmonics are the terms independent of longitude and antisymmetric about the equator they define the 'pear-shape' effect. The coefficient J3, J5, J7, ... of these harmonics were evaluated by analyzing the variations in eccentricity of 28 satellite orbits from near-equatorial to polar. Most of the orbits from previous determinations in 1973 are used again, but three new orbits are added, including two at inclinations between 62 and 63 deg, which have been specially observed for more than five years by the Hewitt cameras. With the help of the new orbits and revised theory, sets of J-coefficients with standard deviations about 40% lower than before were obtained. The accuracy of the longitude-averaged geoid profile is estimated as 50 cm, except at latitudes above 86 deg. The geoid profile and predicted amplitude of the oscillation in eccentricity are compared with those from other sources. Author (ESA)

MEASUREMENT, PREDICTION, AND HAZARD EVALUATION OF EARTH FISSURES AND SUBSIDENCE, SOUTH-CENTRAL ARIZONA
James K. Boling, Jr., Michael C. Carpenter, N. M. Johnson, and S. N. Davis 1980 113 p refs
(Contract DI-14-34-0001-9003; OWRT Proj. A-092-ARIZ(1))
(PB80-183908; W80-05006) Avail: NTIS HC A06/MF A01 CSCL 08G

Earth fissuring and subsidence research in south central Arizona consisted of measurement of horizontal movements of earth fissures and mapping of erosional features and hazard evaluation of earth fissures. Records will form the data base for predictive models of subsidence and earth fissuring. Bimonthly horizontal strain measurements of fissures were made over a three year period at locations near Signal Peak, Picacho Mountains,

and in Avra Valley. Fissures opened and closed repeatedly. They exhibited relatively smooth movement with occasional sudden jumps. Fissures closed during long dry periods and opened after high rainfall. GRA

ANOMALOUS SNOWFALL CAUSED BY NATURAL-DRAFT COOLING TOWERS
Randall L. Koenig. May 1980. 48 p. refs.
(Grant DE-AC03-76EV-01191)
(RAND/N-1479-DOE) Avail: NTIS. HC A03/MF A01

Tabulation of a number of aerial observations of plumes at subfreezing temperatures indicates that a cooling tower plume is likely to produce measurable snow if its temperature is colder than -13 C and the saturation deficit of the ambient air is less than 0.5 g m to the -3 power. These empirically derived criteria were tested using a numerical model of cloud microphysics that simulates the most important processes of transfer of water substance between vapor, liquid, and ice, including nucleation and development of particle-size spectra. Among the many quantities computed is the flux density of snow at the base of the plume. From this, together with average fallspeed and horizontal wind speed, the amount and pattern of snowfall at the ground was computed. Comparison of the computational results with observations of actual plumes shows that the model has skill in predicting plume behavior and strongly supports the criterion of -13 C for plume snowfall, however, the maximum snowfall depth is predicted to occur nearer the source than is observed. ATMOSPHERIC TURBULENCE SIMULATION TECHNIQUES WITH APPLICATION TO FLIGHT ANALYSIS. Final Report
Show-Tien Wang and Walter Frost. Sep. 1980. 171 p. refs.
(Contract NAS8-32692)
(NASA-CR-3309; M-302) Avail: NTIS. HC A08/MF A01. CSCL 04B

Statistical modeling of atmospheric turbulence is discussed. The statistical properties of atmospheric turbulence, in particular the probability distribution, the spectra, and the coherence are reviewed. Different atmospheric turbulence simulation models are investigated, and appropriate statistical analyses are carried out to verify their validity. The models for simulation are incorporated into a computer model of aircraft flight dynamics. Statistical results of computer simulated landings for an aircraft having characteristics of a DC-8 are reported for the different turbulence simulation techniques. The significance of various degrees of sophistication in the turbulence simulation techniques on the landing performance of the aircraft is discussed. Author

ANALYTIC MODELING OF SEVERE VORTICAL STORMS. Final Report, 9 Jul. 1979 - 8 Jul. 1980
Francis Fendell, Phillip Feldman, and George Carrier. 8 Jul. 1980. 45 p. refs.
(Contract N00014-79-C-0508)
(AD-A086919; TRW-35524-6001-UT-00) Avail: NTIS. HC A03/MF A01. CSCL 04/2

Analytic modeling of well organized convective storms was undertaken to elucidate the evolution from a moderately intense one cell vortex--characterized by low level pressure deficits on the order of one percent of atmospheric pressure--to a very intense two cell vortex--characterized by low level pressure deficits on the order of ten percent of atmospheric pressure. The physical distinction between the two stages is the insertion of a dry,

compressionally heated, nonrotating, central downdraft of originally tropopause level air in the more severe case. The quasisteady mature description of the thermohydrodynamic structure of each vortex is being developed, and then the conditions for transition from the moderately intense to the very intense vortex are to be sought. The practical motivation is to make progress toward the highly desirable, but very formidable, task of being able to anticipate which tropical storms or minimal hurricanes will evolve to supertyphoons. Description of the two cell vortex is the current challenge. In particular, the properties and location of the eye wall are sought, since the potential vortex and surface inflow subdivisions of the structure of a very intense vortex are in hand. The modeling proceeds from basic thermohydrodynamic principles. Nonessential geometric detail, as well as association of conclusions with the details of particular parameterizations, is being avoided as much as possible. GRA

OCEAN-ATMOSPHERE INTERFACE: ITS INFLUENCE ON RADIATION

Gilbert N. Plass, Terry J. Humphreys, and George W. Kattawar 22 May 1980 61 p refs Submitted for publication

(Contract N00014-80-C-0113)

(AD-A087046; TR-14) Avail: NTIS HC A04/MF A01 CSCL 20/6

The influence of the ocean atmosphere interface on the radiance distribution in both the ocean and atmosphere is investigated. At visible wavelengths in the real ocean just below the surface, the downwelling radiance is a maximum within the critical angle and drops off by one or two orders of magnitude toward the horizon. The usual explanation that this is due to the sky radiation concentrated within the critical angle and the total internal reflection of the weak upward radiance at the ocean surface at angles outside the critical angle is too simplistic. There are two other important factors: (1) the atmosphere must have sufficient optical thickness so that appreciable sky (multiple scattered) radiation develops at all angles in the downward direction; and (2) the water must have appreciable absorption so that the upwelling radiance just below the ocean surface is only a small fraction of the downwelling radiance entering the ocean. The radience distribution in a homogeneous medium is compared with that in the same medium with an atmosphere ocean interface at various depths within the medium. Most of the calculations are done for Rayleigh scattering centers, but some results are given for Mie type scattering. GRA

FRAM 1 METEOROLOGY REPORT

Eric Leavitt and Roger Andersen May 1980 61 p refs

(Contract N00014-79-C-0032)

(AD-A086983) Avail: NTIS HC A04/MF A01 CSCL 04/2

The Fram experiment was conceived as a series of studies to study the geophysics and oceanographic characteristics of the eastern Arctic. The meteorological experiment was designed to provide basic data on wind velocities for the oceanographic experiments, to measure the drag coefficient of the pack ice in the area of the camp, and to collect standard weather data and transmit it to Thule for inclusion in the synoptic network and for planning flight support operations. This report describes the experiment, the data analysis procedures and the data products which are available. The time series of half hour averages of wind speed, direction, and air temperature plus the air pressure every three hours are included as an appendix. Results of the drag coefficient calculations are also included. GRA

A DEMONSTRATION TEST OF THE MODULAR AUTOMATED WEATHER SYSTEM (MAWS) Final Report, Jan. 1977 - Jan. 1979

Donald A. Chisholm, Richard H. Lynch, James C. Weyman, and Edward B. Geisler AFSC 24 Mar. 1980 85 p refs

(AF Proj. 6670)

(AD-A087070; AFGL-TR-80-0087; AFGL-IP-285) Avail: NTIS HC A05/MF A01 CSCL 04/2

A microprocessor-based automated airfield weather observing and forecasting system called MAWS (Modular Automated Weather System) was developed to demonstrate the feasibility of modernizing many of the observing and forecasting functions performed in operational base weather stations. Scott Air Force Base, Illinois, was chosen as the demonstration site and operations were conducted from January 1977 through January 1979. Weather sensors at five observation sites around the airfields were polled several times each minute, the data transmitted over commercial, voice-grade telephone lines to a central supervisory microprocessor where the data were suitably collated, averaged and formatted for display on alpha-numeric display devices at key locations and for magnetic tape archiving for post analysis. The demonstration confirmed that modernized weather support can be largely achieved with state-of-the-art, commercially available hardware/software. Such a system would be compatible with other automation efforts in civilian weather services and other C-cubed efforts in the DOD. The advantage of spatially and temporally detailed weather information in marginal and adverse situations was documented. Sensor siting considerations were addressed in relation to specific weather elements and observational requirements. The contributions of automated met watch procedures and short-range guidance forecasts of RVR landing minima were demonstrated. Feedback on system performance and acceptability was obtained from cognizant AWS offices. GRA

ICING CHARACTERISTICS OF LOW ALTITUDE, SUPERCOOLED LAYER CLOUDS Interim Report, Feb. - Oct. 1980

Richard K. Jeck May 1980 74 p refs

(Contract DOT-FA79WAI-020)

(AD-A087137; FAA-RD80-2423) Avail: NTIS HC A04/MF A01 CSCL 04/2

A limited amount of new data has been obtained on the icing environment during initial airborne measurements aimed at developing environmental icing criteria for use in certifying helicopters for flight into icing conditions. Supercooled cloud characteristics are reported for 12 icing events encountered at temperatures from -10 C to 0 C at altitudes from 3500 to 6500 ft above the surface of Lake Erie and Lake Michigan. Recorded droplet size spectra from a Particle Measuring Systems: Axially Scattering Probe (ASSP) were used to compute droplet mass (volume) median diameter (MMD) and, in addition to a Johnson-Williams LWC Indicator, the liquid water content (LWC). A review of available historical data from 1944-1950, upon which the atmospheric icing standards of Appendix C, FAR 25 were based, reveals that data obtained from measurements of ice accretion on multidiameter cylinders are subject to a number of significant errors of both signs. These probable errors, which will continue to be evaluated, may be responsible for the conclusions that (1) the historical LWC values are generally larger than those observed in the flights described in this report, (2) the historical MMDs appear to be generally too small for all values of LWC and (3) the historical droplet size distributions are unreliable, as is acknowledged in the later historical literature. GRA

DEVELOPMENT OF THE MICROWAVE RADIATIVE TRANSFER PROGRAM FOR CLOUDY ATMOSPHERES APPLICATIONS TO DMSP SSM/T CHANNELS Final Report, 1 Jun. 1978 - 30 Sep. 1979

Kuo-Nan Liou, Paul T. Nipko, Grant C. Aufder-Haar, and Hwa-Young Yeh 30 Dec. 1979 128 p refs

(Contract F19628-78-C-0144; AF Proj. 7670)

(AD-A087434; AFGL-TR-80-0051) Avail: NTIS HC A07/MF A01 CSCL 20/13

A microwave radiative transfer program for cloudy and precipitating atmospheres applicable to the DMSP SSM/T channels has been developed. The microwave transfer program takes into account the simultaneous contributions of multiple scattering and absorption by hydrometeors and absorption due to molecular oxygen and water vapor in the atmosphere. Sensitivity analyses have been carried out to investigate the effects of the rainfall rate, cloud thickness, and cloud location on the upwelling brightness temperature over land and ocean surfaces for two

different atmospheric profiles. Over the land surface, it is shown that increasing the cloud liquid water content and cloud thickness significantly reduces the brightness temperatures for SSM/T channels 1 - 3. Over the ocean surface, however, the brightness temperatures for channels 1 - 3 are increased as the cloud liquid water content increases and reach to maximum values depending on the cloud thickness involved. Moreover, we show the importance of the cloud position and the atmospheric temperature profile on the brightness temperature values. In addition, investigation of the effects of precipitation on the temperature retrieval using both the theoretically simulated values and real SSM/T data has also been carried out on the basis of a statistical method. The hypothetical retrieval experiments reveal that the temperatures close to the surface suffer increased degradation as the rainfall rate increases. This finding is further supported by the analysis employing the real SSM/T data for a number of case studies in which temperature profiles from radiosondes are available for comparisons. GRA

ON THE DYNAMIC FORCING OF SHORT-TERM CLIMATE FLUCTUATIONS BY FEEDBACK MECHANISMS
E. R. Reiter Sep. 1979 68 p refs
(Grant NsG-5340; Contract EY-76-S-02-1340; Grant NSF ATM-78-17835)
(NASA-CR-162865; COO-1340-66) Avail: NTIS HC A04/MF A01 CSCL 04B

Various internal feedback mechanisms in the ocean atmosphere system were studied. A variability pattern of sea surface temperature with a quasibiennial oscillation (QBO) was detected off the coast of Senegal, in the Gulf of Guinea and even in the Gulf Stream as it leaves the North American continental shelf. Possible physical connections between some of these QBO's were pointed out by a hypothetical feedback model. Interaction of a QBO with the annual cycle may lead to beating frequencies resembling climatic trends of a duration of several years. DOE

Climate change on both a global regional scale is discussed. The consequences of increased levels of freon, aerosols, CO2, and heating are examined as well as the effects of deforestation of tropical regions, increased desertification, and creation of artificial lakes. Urban climate and precipitation downwind from industrial zones are included. Author (ESA)

CONVERSION OF GRID-POINT DATA INTO METEOROLOGICAL MAPS WITH A MINI-COMPUTER SYSTEM
D. Soederman and L. Winberg 1980 47 p refs
(WMO-553; WWW-PLR-37; ISBN-92-63-10553-7) Avail: NTIS HC A03/MF A01; WMO, Geneva SWFR 5

The hardware and software required for installing and operating a grid-to-map conversion system at a regional or national meteorological center are described. General information is given on system configurations to be used for the conversion, including a mini-computer and plotter, or a direct computer-to-facsimile system. The software systems required to decode and generate maps from data encoded in the World Meteorological Organization GRID/GRAF codes are discussed and the graphical conversion system in operation at the Finnish Meteorological Institute is described. ENVIRONMENTAL WIND IN BUILT-UP AREAS
D. Olivari Feb. 1980 46 p refs Presented at Symp. on Recente Evolutie in de Hoogbouw, Leuven, Belgium, 28-29 Mar. 1979
(VKI-TM-26) Avail: NTIS HC A03/MF A01

The interaction between man-made structures and surface wind was studied. The structure of atmospheric winds and the effects of wind on human comfort are reviewed and the wind flow through built up areas is examined. The experimental techniques used and results obtained are discussed. It is shown that many observed effects are not clearly understood and that the only tool available for the prediction of the wind condition at the pedestrian level for new building developments is the wind tunnel. USERS GUIDE FOR THE ANALYSIS AND INTERPRETATION OF SATELLITE IMAGERY ON THE HIGH PLAINS SUMMER CLOUD AND MESOSCALE SYSTEMS
David A. Matthews Jan. 1980 47 p refs
(PB80-175987) Avail: NTIS HC A03/MF A01 CSCL 04B

A guide to the analysis and interpretation of clouds and mesosynoptic systems observed in geosynchronous satellite imagery over the High Plains and Rocky Mountain region of the United States is presented. This guide provides examples of typical cloud types and mesoscale and synoptic scale systems. Methods used in the identification of these different phenomena are described to show the user how to interpret the information available on visible satellite imagery. Summertime convective and stratiform cases are analyzed with numerous examples of different cloud and cloud system structures. GRA

COMPARISON OF GENERALIZED ESTIMATES OF PROBABLE MAXIMUM PRECIPITATION WITH GREATEST OBSERVED RAINFALLS
John T. Riedel and Louis C. Schreiner Mar. 1980 75 p refs
(PB80-191463; NOAA-TR-NWS-25; NOAA-80050601) Avail: NTIS HC A04/MF A01 CSCL 04B

Known storms of record over the United States east of the 105th meridian and west of the Continental Divide that have point or areal rainfall depths that are ≥ 50 percent of PMP are summarized. More than 240 storms met this criteria. The storms are identified and percentages of PMP are shown on maps. Some judgement on the relative magnitude of PMP in the two large regions is given by comparison of the ratios of PMP to 100 year return period rainfall. Such ratios for 24 hours range from 4 to 6 east of the 105th meridian. For the western mountainous states, these ratios are as low as 2 in the more mountainous locations and as high as 6 in the desert and sheltered spots. GRA

Two case studies of frontal winter storms revealed a low level high speed jet moving toward the NNW, parallel to the foothills, was present ahead of both fronts; and both storms were highly complex, having a substructure of up and downdrafts oriented nearly perpendicular to the frontal surface. These storms differed in significant ways from typical high plains storms: (1) the strongest updrafts and greatest condensation rates occur in the lowest 1 to 2 km above cloud base, and (2) updrafts correspond generally to regions of high radar reflectivity factor, downdrafts to low reflectivity. ALTIMETRY DATA OVER TRENCHES AND ISLAND-ARCS

AND CONVECTION IN THE MANTLE Final Report, 1 Nov. 1979 - 31 Aug. 1980
18 Sep. 1980 26 p refs
(Contracts NCC5-11; NAGS-94)
(NASA-CR-163516) Avail: NTIS HC A03/MF A01 CSCL 08C

Transfer function techniques were developed to calculate the isostatic component of the geoid signal over trench/island arc/back arc systems. Removal of this isostatic component from geoid profiles determined by GEOS 3 radar altimetry leaves a residual geoid that can be attributed to the effect of mass inhomogeneities below the depth of compensation. Efforts are underway to extend the analysis to all the major trench/island arc systems of the world in order to provide more detailed understanding of the dynamic processes occurring beneath island arcs. SEASAT SAR COASTAL OCEAN WAVE ANALYSIS. A WAVE REFRACTION AND DIFFRACTION STUDY Final Report, Aug. 1978 - Nov. 1979
R. A. Shuchman, E. S. Kasischke, A. Klooster, and P. L. Jackson Nov. 1979 117 p refs
(Contract MO-A01-78-00-4339)
(PB80-189384; ERIM-138600-2F; NOAA-80050103) Avail: NTIS HC A06/MF A01 CSCL 08C

Analysis techniques used to exploit Seasat synthetic aperture radar (SAR) data are discussed and the Seasat SAR's capability to image gravity waves in coastal waters is evaluated. Synthetic aperture radar analysis techniques investigated were the effects of gravity wave motion on Seasat SAR focusing, geometric rectification of SAR data, use of optical Fourier transforms to obtain dominant wavelength and direction information from SAR data, and the use of digital techniques to exploit SAR data. Refraction of gravity waves in coastal waters was clearly evident, and a wave refraction model was used to predict water depths using inputs from the Seasat SAR data. GRA

COASTAL UPWELLING ECOSYSTEMS ANALYSIS. DATA REPORT 65: SEDIMENT DATA FROM SHORT CORES DURING JOINT 2 OFF PERU Data Report
Gilbert T. Rowe Oct. 1979 57 p refs
(PB80-183155; NSF/IDOE-CUEA-DR-65; NSF/IDOE-80-11) Avail: NTIS HC A04/MF A01 CSCL 08G

Data obtained from cored sediments collected during the JOINT 2 CUEA experiment off Peru are presented. The cores were obtained with gravity cores or by subsampling a vanVeen grab. The 6 centimeter diameter cores range in length from 9 to 63 centimeters. Analyses conducted on sediment material include organic carbon, organic nitrogen, percent calcium carbonate and pore water concentrations of ammonia, nitrite, nitrate, silicate and phosphate. These data were collected in an attempt to gain knowledge of the interrelationships between early diagenesis and remineralization of organic matter, bioturbation, and dissolved ion exchange between the sediments and the overlying water. A STUDY OF ESTUARINE TIDAL DISSIPATION AND BOTTOM STRESS
Richard P. Trask and Wendell S. Brown Feb. 1980 74 p refs Sponsored by NOAA
(PB80-194988; UNH-SG-166; NOAA-80050713) Avail: NTIS HC A04/MF A01 CSCL 08C

Estimates of bottom stress in a tidal estuary are made by two independent means. Net energy budget calculations provided estimates of rates of tidal energy dissipation which can be interpreted in terms of an area averaged bottom stress (energy dissipation method). A second independent estimate of an area averaged bottom stress was made using the long wave momentum and continuity equations and estimates of sea surface slope and current acceleration (dynamic inference method). Preliminary energy budget calculations made for the Great Bay Estuary, New Hampshire, showed that a two km section of the estuary exhibits anomalously large tidal energy dissipation which was assumed to be due to bottom friction. Original doc. prepared by Central Inst. of Health Resort Treatment and Physical Therapy, Moscow
(Contract NASw-3198)
(NASA-TM-76161) Avail: NTIS HC A02/MF A01 CSCL 06C

The state of hypokinesia in rats was reproduced by keeping them for 30 days in special box cages that restricted their mobility in all directions. Results show the resistance to acute hypoxic hypoxia is increased. This is linked to the considerable rise in the reduced level of corticosterone in different organs and the succinate dehydrogenase activity in the liver and brain. The letter indicated the primary oxidation of succinate, which has great importance in the adaptation of the oxidative metabolism to acute oxygen insufficiency. The use of sinusoidal modulated currents in the period of hypokinesia promotes normalization of the indices for resistance of the rats to acute hypoxia. L.F.M.

ABSORPTION OF THIAMINE AND NICOTINIC ACID IN THE RAT INTESTINE DURING FASTING AND IMMOBILIZATION STRESS
O. G. Kirilyuk and Yu. V. Khmelevskiy Jun. 1980 11 p refs Transl. into ENGLISH from Fiziol. Zh. (USSR), v. 23, no. 1, 1977 p 98-102 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by Medical Inst., Kiev
(Contract NASw-3199)
(NASA-TM-76193) Avail: NTIS HC A02/MF A01 CSCL 06C

By perfusion of isolated sections of intestine with a solution containing thiamine at a concentration of 3.1 micromole, it was established that thiamine absorption in animals fasted for 72 hours decreased by 28 percent, whereas absorption increased by 12 percent in rats after 24 hour immobilization. After immobilization, absorption of label in the intestinal mucosa increased. Na K ATPase activity in the intestinal mucosa decreased by 10 percent during fasting, and it increased with immobilization of the animals. Activity of Na K ATPase in the intestinal mucosa cells determined the absorption rate of thiamine and nicotinic acid at the level of vitamin transport through the plasma membranes of the enterocytes. Problems related to the accurate judgment of size and distance as required of pilots in flight were investigated over a two year period. The experiments covered a broad spectrum of psychophysiological issues involving the measurement of visual accommodation and its correlation with various other dependent variables. The latter included a short term memory task, physiological measures of autonomic balance, scores on a personality test of introversion extraversion, and responses to a personal inventory questionnaire. Psychophysiological issues investigated included the size distance invariance hypothesis, the moon illusion, night and empty field myopia, the dark focus and its so called Mandelbaum effect, the nature of the locus of the accommodative stimulus, and possible relationships among accommodative responses, autonomic balance, and personality. CHANGES IN BONE TISSUE UNDER CONDITIONS OF HYPOKINESIA AND IN CONNECTION WITH AGE
E. P. Podrushnyak and E. I. Suslov Jun. 1980 7 p refs Transl. into ENGLISH from Fiziol. Zh. (USSR), v. 19, no. 6, Nov. - Dec. 1973 p 841-943 Transl. was announced as N80-21971 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76154) Avail: NTIS HC A02/MF A01 CSCL 06P

X-ray micrography was used to study the optical density of the blackening of X-ray photographs made of five bones in 9 young people (ages 24 to 29) before and after strict bed rest for 16 to 37 days. Photometric studies of the X-ray film determined the relative concentration of bone structure before and after hypokinesia. In addition, the bone tissues of 25 cadavers of practically healthy individuals (aged 18 to 70) who died from injuries were investigated using X-ray structural analysis. Results show that the reaction to the state of hypokinesia is not uniform in different individuals and is quite often directly reversed. It

was established that pronounced osteoporosis can be found in a relatively short time after conditions of hypokinesia in healthy young individuals. Results show that the stabilization of the crystalline structure of hydroxyapatite, especially its crystal formation, is finished by the age of 20 to 25. From 25 to 60, the crystal lattice remains in stable condition but X-ray analysis shows a reduction in the hydroxyapatite density. A.R.H.

EFFECTS OF HIRUDIN-INDUCED ACTIVATION OF NON-ENZYMATIC FIBRINOLYSIS DURING IMMOBILIZATION STRESS

F. B. Shapiro, I. P. Baskova, L. U. Cherkesova, L. A. Lyapina, and M. D. Goldovskaya Jul. 1980 14 p refs Transl. into ENGLISH from Fiziol. Zh. SSSR (USSR), v. 64, no. 11, Nov. 1978 p 1567-1574 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by Moscow State Univ.
(Contract NASw-3199)
(NASA-TM-76189) Avail: NTIS HC A02/MF A01 CSCL 06S

The specific inhibitor of thrombin, hirudin, was used for studying the mechanism of the activating effect of ACTH and adrenalin on nonenzymatic fibrinolytic activity (NEFA), the latter characterizing the function of the anticoagulation system (ACS). Simultaneous administration of ACTH and hirudin to animals subjected to immobilization stress did not reduce the effect of ACTH on NEFA, while simultaneous administration of adrenalin and hirudin revealed a diminished effect of the former. This suggests different mechanisms of ACTH and adrenalin effects upon NEFA: the stimulating effect of norepinephrine is realized through throminogenesis followed by activation of the ACS function and by increased NEFA and therefore inhibitable by hirudin which forms an inactive complex with thrombin. In fact the stimulating effect of ACTH upon NEFA is brought about specifically by another route than thrombinogenesis and thus occurs in the presence of hirudin. Hirudin itself has no effect upon NEFA. Author

RESTORATION OF PHYSICAL PERFORMANCE CAPACITY OF ATHLETES AFTER PROLONGED RESTRICTION OF THEIR MOTOR ACTIVITY

A. D. Soldatov and V. I. Finogeyev Aug. 1980 12 p Transl. into ENGLISH from Teor. Prakt. Fiziol. Kult. (USSR), no. 5, May 1979 p 19-22 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by All-Union Scientific Research Inst. of Physical Culture
(Contract NASw-3198)
(NASA-TM-76305) Avail: NTIS HC A02/MF A01 CSCL 06P

The effects of different regimens of treatment following prolonged hypokinesia were studied in order to determine the most effective program. The types of programs considered were passive means, consisting of physical therapy; active means, consisting of athletic training; and a combined program. In the first stage of the experiment, the effects of a 10 day period of hypokinesia were studied. It was determined that the restoration programs must address the problems of: (1) increasing defense function and general tone of the body; (2) restore orthostatic stability; and (3) increase general endurance. In later stages, groups of athletes and nonathletes underwent 30 day periods of hypokinesia. Restoration was carefully monitored for groups treated with the various regimens. It was determined that the most effective treatment was a comprehensive program of passive and active therapy. Author

PHYSICAL EXERCISES ON A BICYCLE-ERGOMETER AND RUNNING TRACK TO PREVENT HYPODYNAMIA IN WORKERS OF INTELLECTUAL LABOR

V. V. Vasilyeva, Ye. N. Korableva, and V. V. Trunin Aug. 1980 7 p refs Transl. into ENGLISH from Teor. Prakt. Fiziol. Kult. (USSR), no. 10, Oct. 1979 p 34-36 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by P. F. Lesgaft State Order of Lenin and Order of the Red Banner Inst. of Physical Culture
(Contract NASw-3198)
(NASA-TM-76306) Avail: NTIS HC A02/MF A01 CSCL 06P

A program of exercises was developed and tested, consisting of a 12 minute session on a variable load bicycle ergometer and a 10-11 min. run with brief stretching and resting sessions between. Physical performance capacity was measured before, during, and after the period of the experiment and physical exams conducted. After a 4 month test period involving 30 men, aged 25-35, the program was found to be successful in increasing physical performance capacity. The PWC170 increased an average of 22 percent and maximum oxygen consumption 14 percent. Arterial pressure dropped (120/75 to 114/68), vital capacity of lungs increased by 6 percent, strength of respiratory muscles by 8.8 percent, duration of respiratory delay by 18 percent. Duration of cardiac cycles increased, stress index decreased. Cardiac contraction rate 2 minutes after work on the ergometer decreased from 118 to 102 bt/min. R.C.T.

THERAPEUTIC GYMNASTICS IN COMPREHENSIVE TREATMENT OF PATIENTS WITH GENERALIZED MYASTHENIA

R. L. Kapelovich Aug. 1980 9 p refs Transl. into ENGLISH from Vop. Kurortol., Fizioter. Lech Fiz. Kul' T. (USSR), no. 5, Sep. - Oct. 1979 p 41-45 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by I. M. Sechenov First Moscow Medical Inst.
(Contract NASW-3198)
(NASA-TM-76312) Avail: NTIS HC A02/MF A01 CSCL 06E

The technique of therapeutic gymnastics was used for patients with mayasthenia gravis to control the consequences of hypodynamia induced by the myasthenic process. It is concluded that during myasthenia, the severity of the disease is due to the affection of the cross striated musculature. The most life threatening are the disorders in respiration and swallowing, that can be intensified by forced stay in bed and immobility. It is also concluded that the use of therapeutic gymnastics in patients which myasthenia promotes efficient presurgical preparation, and in the post surgical period; prevention of pulmonary complications and normalization of respiration. Therapeutic gymnastics with regard to the severity and localization of the myasthenic disorders must be a component part of the presurgical preparation and postsurgical management of patients with generalized myasthenia. The possible use of different methods to evaluate the autonomic regulation in hygienic studies were examined. The simplest and most objective tests were selected. It is shown that the use of the optimized standards not only makes it possible to detect earlier unfavorables shifts, but also permits a quantitative characterization of the degree of impairment in the state of the organism. Precise interpretation of the observed shifts is possible. Results indicate that the standards can serve as one of the criteria for evaluating the state and can be widely used in hygienic practice. BLOOD FILLING AND FLOW IN LUNGS DURING CHANGE IN BODY POSITION IN SPACE
A. S. Pogodin and B. I. Mazhbich Aug. 1980 12 p refs Transl. into ENGLISH from Fiziol. Zh. SSSR (USSR), v. 66, no. 4, Apr. 1980 p 555-561 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by USSR Academy of Medical Sciences, Siberia
(Contract NASw-3198)
(NASA-TM-76333) Avail: NTIS HC A02/MF A01 CSCL 06P

In the horizontal position (supine and lateral), in the upright position (head up and head down) and during change of the cat body position in space, quantitative responses of regional blood volume and blood flow in the lungs (ml/100 cu cm) revealed presence of the gradient in the gravitation direction. Blood volume and blood flow of different lung portions changed qualitatively and quantitatively in different ways. These changes occurred only in the direction producing the equality of regional hydrostatical and hemodynamic loads in the lungs at either horizontal level. Author

OCCUPATIONAL CHANGES IN THE ORGAN OF HEARING AND EQUILIBRIUM IN SAILORS AND FISHERMAN
R. P. Menyakin and V. I. Poperetskaya Aug. 1980 9 p refs Transl. into ENGLISH from Vestn. Otorino-laringol. (USSR), no. 1, Jan - Feb. 1980 p 39-42 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by Vladivostok Medical Inst.
(Contract NASW-3198)
(NASA-TM-76335) Avail: NTIS HC A02/MF A01 CSCL 06P

Prophylactic examination in persons engaged in fishing industry and in sailors of ocean-going ships demonstrated occupational cochlear neuritis, resulting from the action of noise and vibration. Five hundred and fifty three sailors and fishermen working under conditions of noise were studied. A total of 233 persons 43.7% were found to be suffering from changes of the auditory analyzer typically resulting from the action of noise and vibration. The most pronounced changes of hearing were revealed in fishermen, in 44.8% of the persons examined, the percentage also being the highest among the engine room workers (63%). The incidence of cochlear neuritis in sailors of the ocean-going steamship line and in personnel of research ocean-going ships was almost equal (39.9-40%). These indices differed in the engine room workers (42-46%). Vestibular function was investigated by caloric and rotation tests with the use of electronystagmography. The data obtained point to diminution of the vestibular analyzer excitability with increase of the length of navigation service. R.C.T.

CERTAIN FEATURES OF THE COCHLEOVESTIBULAR SYNDROME IN THE RESIDUAL STAGE OF TRAUMATIC BRAIN DISEASE
M. I. Garshin and V. Ye. Volyanskiy Aug. 1980 12 p refs Transl. into ENGLISH from Vestn. Otorino-Laringol. (USSR), no. 2, Mar.-Apr. 1980 p 37-41 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prepared by Psychoneurological Clinic, Odessa
(Contract NASw-3198)
(NASA-TM-76337) Avail: NTIS HC A02/MF A01 CSCL 06E

Caloric and rotation tests were applied to the study of the vestibular analyser in 84 patients in the residual state of traumatic disease of the brain. Vestibular disturbances of different degree revealed in 79 patients were as a rule accomplished by cochlear derangement. In the majority of patients the vestibular syndrome was supratentorial with the involvement of the diencephal-hypothalmic, subcortical, and cortical levels of the brain. Vestibular dysfunction correlated with such factors as severity of the sustained craniocerebral traum, duration of the posttraumatic period, and, particularly, with the character of the residual neurological syndrome. In accordance with the latter, it is recommended that vestibular disturbances be treated in the residual period of closed craniocerebral injuries with due regard for the principal pathophysiological mechanisms of the underlying neurological syndrome. DIAGNOSIS OF LATENT FORMS OF LABYRINTHINE AFFECTIONS
V. P. Vaslilyeva Aug. 1980 10 p refs Transl. into ENGLISH from Vestn. Otorino-Laringol. (USSR), no. 3, May-Jun. 1980 p 22-27 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prepared by I.M. Sechenov First Moscow Medical Inst.
(Contract NASw-3198)
(NASA-TM-76338) Avail: NTIS HC A02/MF A01 CSCL 06E

Features and significance of individual vestibular symptoms for the diagnosis of latent labyrinthitis and limited forms of labyrinthine affections offering considerable difficulties are discussed. Vestibular symptoms are indistinct. In case of the negative fistular symptom the greatest significance is acquired by the study of posture nystagmus according to the results of electronystagmograms, changes of tonic reactions and statics, as well as data of experimental vestibular tests. The necessity of evaluation of all the vestibular symptoms from the point of view of their vector characteristics and in a complex of evidence obtained by otoneurological examination of the patient is emphasized. Delicate topic and differential diagnosis of vestibular disturbances is of great importance and significance in the choice of the conservative or surgical method of treatment. Author

TECHNIQUE OF ELECTRICAL STIMULATION OF THE VESTIBULAR ANALYZER UNDER CLINICAL CONDITIONS
S. N. Khechinashvili, B. M. Zargaryan, and K. G. Karakozov Aug. 1980 8 p refs Transl. into ENGLISH from Vestn. Otorino-laringol. (USSR), no. 5, Sep. - Oct. 1978 p 74-77 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by Tbilisi Inst. of Physician Advancement
(Contract NASw-3198)
(NASA-TM-76347) Avail: NTIS HC A02/MF A01 CSCL 06P

Vestibular reactions appear under the action of direct current (dc) on the labyrinth of man and animals. A decrease of the stimulation effect of dc on the extralabyrinthine nervous formations in the suggested method is achieved by the use of electric pulses with steep front and back parts, as well as by previous anesthetization of the skin in the electrode application area by means of novocain solution electrophoresis. For this purpose a pulse producer giving trapezoid pulses with smoothly changing fronts and duration was constructed. With the help of an interrupter it is possible to stop the current increase instantly, and stimulation is performed at the level of the pulse 'plateau'. To induce vestibular reactions under monopolar stimulation, it is necessary to apply the current twice as high as that with bipolar electrode position. The use of short pulses with steep front and back parts for electrode stimulation of the vestibular analyzer is considered to be inexpedient. Author

PHYSIOLOGICAL REACTIONS OF A PASSENGER TO TRANSPORTATION CONDITIONS
A. M. Lakshin and V. P. Novoselov Aug. 1980 8 p refs Transl. into ENGLISH from Gig. Sanit. (USSR), no. 9, Sep. 1979 p 84-85 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by USSR Ministry of Communication, Moscow
(Contract NASw-3198)
(NASA-TM-76350) Avail: NTIS HC A02/MF A01 CSCL 06S

The effect of transportation conditions on the performance capacity of a passenger were studied, in order to establish the time for his most rapid inclusion in production activity after the trip. It was concluded that the transportation conditions impair the functional condition of the passenger's organism. The restoration of the functional state to the initial level occurs mainly in the space of one day. It is shown that it is necessary to take into consideration the adaptation of the organism during transfer to another climate zone. R.C.T.

ANALYSIS AND MEASUREMENT OF HELMETED AIRCREWMAN RESPONSE RESULTING FROM BIRDSTRIKE Final Report, 1 Mar. 1977 - 31 Mar. 1979
Norman S. Phillips Wright-Patterson AFB, Ohio AMRL Jan. 1980 234 p refs
(Contract F33615-77-C-0534; AF Proj. 7231)
(AD-A087737; UDR-TR-79-56; AMRL-TR-79-75) Avail: NTIS HC A11/MF A01 CSCL 06/5

The purpose of the research was to investigate and evaluate the birdstrike phenomena in terms of injury potential. Data collected during canopy testing indicated that significant deflection could occur and cause deformation into the space occupied by the helmeted aircrewman. The traveling wave and its interaction with the helmeted head created an unusual impact environment for which evaluation criteria did not exist. In order to generate new criteria it was necessary to utilize the Articulated Total Body Model (ATBM) and incorporate within the model characteristics of the canopy, the helmet and human head and neck system. With a configuration representative of the impact phenomena, the kinetic response of the system to selected impacts could be compared with biomechanical data to infer injury. The deformation characteristics of the canopy were established by analysis of F-16 film data collected during birdstrike tests. The data indicate that the canopy deformation depth is proportional to bird kinetic energy but that canopy deformation wave speed does not increase with bird speed. The helmet stiffness characteristics were established from available drop test data. Force displacement curves were idealized for incorporation into the ATBM. These, along with canopy compliance data, were used to construct the stiffness at the canopy helmet interference. GRA

DETECTION OF MOVING TARGETS IN PERIPHERAL VISION Final Scientific Report, Jun. 1978 - Jul. 1979
Frank E. Ward Dec. 1979 26 p refs
(Grant AF-AFOSR-3647-78; AF Proj. 2313)
(AD-A082541; AFOSR-80-0211TR) Avail: NTIS HC A03/MF A01 CSCL 06/16

Human detection of a moving target is a function of target size and contrast and target velocity. Recent work in human psychophysics and animal electrophysiology has shown that visual information is processed in many channels, each specialized to detect a particular aspect of the visual stimulus. For example, the human visual system appears to contain channels sensitive to spatial frequency, or target size. It was also shown that different spatial frequencies are processed at different temporal rates.

suggesting that detection may depend upon an interaction of target size and velocity. E.D.K.

(Contract N00014-76-C-0328)
(AD-A087831; TR-4) Avail: NTIS HC A03/MF A01 CSCL 06/1

Significant progress occurred in four areas: (1) Effect of hyperoxia on reverse glycolysis: We concluded that glucose protects Escherichia coli against hyperoxia better than other intermediates later in glycolysis and in the Krebs cycle but not because of a specific inhibition of reverse glycolysis. There was no significant impairment of the three enzymes of reverse glycolysis: fructose-1,6-diphosphatase, phosphoenolpyruvate synthase, or phosphoenolpyruvate carboxykinase. (2) Effect of hyperoxia on synthesis of RNA, DNA and pyridine nucleotide coenzymes: Evidence was obtained for direct inhibition of RNA synthesis in cells poisoned by hyperoxia, while protein synthesis was not directly affected. DNA synthesis is impaired but it is not proven whether this is direct or indirect. NAD and NADH were severly decreased in cells during poisoning by hyperoxia. This decrease was prevented by niacin, but not quinolinate which is consistent with poisoning of quinolinate phosphoribosyltransferase (QPT), as previously reported. PRPP does not protect against oxygen poisoning, PRPP synthetase is not affected by hyperoxia, but PRPP accumulates in oxygen poisoned cells which is in agreement with inhibiton of QPT. (3) Relationship of thiamine to oxygen toxicity. GRA

MOLECULAR MECHANISMS OF THE EPITHELIAL TRANSPORT OF TOXIC METAL IONS, PARTICULARLY MERCURY, CADMIUM, LEAD, ARSENIC, ZINC, AND COPPER Progress Report, 1 Jan. - 31 Dec. 1979
R. H. Wasserman 1979 54 p refs
(Contract EY-76-S-02-2792)
(COO-2792-3) Avail: NTIS HC A04/MF A01

The mechanism of lead transport, and especially the particular similarities or dissimilarities between lead and calcium in this process were studied. The absorption of these metals was determined in 3 week old White Leghorn cockerels, raised on a commercial diet or on a specified diet, using in vivo ligated loop procedure. The dose administered into the loop contained 0.5 micron Ci Pb203 (and/or 0.1 micron Ci Ca47), and 0.01 mM lead acetate (and/or 1 mM CaCl2) in 0.5 ml 0.15 M NaCl, pH 6.5. It was shown that lead is rapidly taken up by the mucosal tissue, and slowly transferred into the body, whereas less calcium is retained by the tissue and the transfer of calcium is many times as effective as that for lead. They appear to respond in a similar manner to a low calcium intake and vitamin D treatment. Certain differences were, however, observed in the absorption process. Increasing luminal stable lead concentration from 0.01 to 1.00 mM Pb, significantly reduced the percentage of radiolead absorbed, but did not affect the absorption of calcium. Also, vitamin D enhanced the transfer of plasma Ca47 into the lumen but did not affect the transfer of plasma Pb203. R.C.T.

TOWARDS A BETTER UNDERSTANDING OF TEMPORARY THRESHOLD SHIFT OF HEARING
K. R. Maslen London HMSO Mar. 1980 50 p refs
(RAE-TM-FS-319; BR73973) Avail: NTIS HC A03/MF A01

It was thought that temporary threshold shift (TTS) of hearing due to exposure to noise might be more easily understood if the shifts were considered in terms of the rms pressure rather than in dB. The form is to be expected if the rate of shift of the pressure threshold were proportional to the difference between itself and the ultimate threshold were calculated and compared with a limited selection of published data. Good agreement with data for the growth of TTS in individuals was found, and moderately good agreement with recovery. Agreement with data on intermittent exposures was poor, but this may be due in part to the fact that only averaged data were found and averaging the widely disparate figures obtained for individuals may mask the true effects. It is also shown that the maximum ultimate TTS due to exposure to noise may be simply related to the mean square pressure of that noise. It is suggested that at least some facets of TTS can be simply described in terms of exponential pressure shifts. Author (ESA)

THE INFLUENCE OF VISUAL-SPATIAL ABILITY AND STUDY PROCEDURES ON MAP LEARNING SKILL Progress Report, Jun. 1978 - Jan. 1979
Cathleen Stasz and Perry W. Thorndyke Jun. 1980 40 p refs
(Contract N00014-78-C-0042; NR Proj. 157-410)
(AD-A087247; RAND/N-1501-ONR) Avail: NTIS HC A03/MF A01 CSCL 05/10

This study investigated the influence of two sources of individual differences in knowledge acquisition from maps: abilities and learning procedures. Twenty-five subjects provided verbal protocols while attempting to learn two maps. Visual spatial ability was highly correlated with recall of spatial attributes of the map and with overall learning performance, while associative memory ability was most correlated with verbal attribute recall. Subject selected procedures for encoding spatial information and assessing learning progress also distinguished the behavior of successful and less successful learners. However, subjects of high and low ability differed little in the study procedures they chose. Although both ability differences and procedure use were important contributors to performance, a direct comparison of these sources of variation suggested that abilities are most predictive of map learning. These observations led us to the following conclusions: (1) the use of effective study procedures can influence map learning performance, and (2) high ability subjects benefit more from the use of these procedures than low ability subjects. (AF Proj. 1123)
(AD-A087068; AFHRL-TR-79-44) Avail: NTIS HC A02/MF A01 CSCL 05/9

A method was developed to assess pilot performance in low altitude tactical formation (LATF) and to relate overall performance to performance on subtasks necessary to mission success. The method was used to evaluate the performance of 28 pilots assigned to an operational A-7 squadron. The method was found to provide a consistent measure of pilot performance and to reveal the importance of certain pilot skills to the LATF task. Performance ratings were obtained under routine operating conditions and under conditions of simulated combat. Differences were obtained in performance ratings under the two conditions. Implications for currency training were discussed. GRA

INDIVIDUAL DIFFERENCE RELATIONS IN PSYCHOMETRIC AND EXPERIMENTAL COGNITIVE TASKS Final Report
John B. Carroll Apr. 1980 335 p refs
(Contract N00014-77-C-0722; RR0420401; NR Proj. 150-406)
(AD-A086057; Rept-163) Avail: NTIS HC A15/MF A01 CSCL 05/10

A critical survey is made of recent literature pertaining to the possibility of measuring important dimensions of human cognitive ability through various types of simple cognitive tasks. The survey focuses on individual differences (IDs) found in cognitive tasks that have received extensive study in experimental cognitive psychology-for example, simple and choice reaction time, lexical decision, stimulus matching, probed search of short term memory, memory span, free and serial recall, simple sentence comprehension, and analogical reasoning. Questions of paramount interest were: What kinds of individual differences are observed in these tasks? Do they exhibit sufficient variance and reliability to measure stable individual characteristics that may be of relevance in personnel selection and other operational context? What are the dimensions of these IDs from a factor analytic standpoint? How are they related to those observed through more conventional psychometric tests? To what extent are they subject to the effects of practice and specific training, or related to demographic variables in such a way as to reduce their utility for operational use? Can the study of individual difference in simple cognitive tasks be valuable in the development of psychological theory: A considerable portion of the monograph is devoted to the definition and specification of 'elementary cognitive tasks' (ECTs) and to how ETCs can be administered, in experimental settings, so as optimally to reveal IDs in cognitive processes. A scheme for classifying ECTs according to basic paradigms is presented, and suggestions are made concerning procedures, including computer simulation, for conceptualizing and analyzing underlying processes. METHODS FOR COLLECTING AND ANALYZING TASK ANALYSIS DATA Final Report
A. John Eschenbrenner, Jr., Philip B. DeVries, Jr., James T. Miller, and Hendrick W. Ruck Jul. 1980 176 p refs
(Contract F33615-77-C-0076)
(AD-A087710; AFHRL-TR-79-45-1) Avail: NTIS HC A09/MF A01 CSCL 05/9

Task analysis, a critical front end activity in the Instructional System Development methodology, is the process of partitioning job tasks into their component subtasks and identifying the skills and knowledges required to support task performance. This study was initiated in response to a Request for Personnel Research generated by the Air Training Command, which noted that 'a wide range of nonstandardized task analysis procedures are in use throughout the training community.' Implementation of a standardized procedure for identifying essential subtasks and supporting skills and knowledges was expected to hold considerable potential for increasing training efficiency and reducing training costs. A simplified task analysis procedure and documentation system was specified, and a task analysis handbook was prepared. Handbook procedures were field tested at six Air Force installations. Results indicated that the handbook procedures met the design criteria of simplicity, validity, reliability, and time efficiency/cost effectiveness. The feasibility and utility of implementing a computer based task analysis data bank was assessed, and a preliminary data bank design was then developed. Additionally, two technology transfer seminars were conducted to assist Air Force personnel in applying handbook task analysis procedures. GRA

Recent developments of classical information theory by Conant and Ashby have given rise to a number of techniques by which the behavior of a complex system can be analyzed. Even in the absence of any information about the intensity of the variables measured it is possible to detect which parts of the system are closely coupled and which independent. The metrics of the variables can be mixed, nominal, ordinal, etc. and the method is particularly suited to dynamic systems. This paper discusses how the structure of the 'molecules' of behavior can be deduced from the entropies of the 'atoms', and outlines the solutions to certain methodological problems involved. Examples of the method are given from the fields of attention and skills, including the representation of the effects of practice on a 7-degree-of-freedom perceptual motor skill involving a complex man-machine interface. Further analysis and development of the technique is being carried out and will be reported subsequently. GRA

VISUAL SCENE PERCEPTION. FREQUENCY DOMAIN DATA AND MODEL PARAMETER ESTIMATION PROCEDURE

P. H. Wewerinke 15 Mar. 1979 24 p refs Presented at 15th Ann. Conf. on Manual Control, Dayton, Ohio, 20-22 Mar. 1979 Sponsored by Netherlands Agency for Aerospace Programs (NIVR)

(NLR-MP-79009-U) Avail: NTIS HC A02/MF A01

Results of a theoretical study and an accompanying experiment are presented concerning the visual scene perception process and its impact on aircraft approach performance. Visual scene characteristics were represented by the configurations involved. Their effect on approach performance and human information processing (primarily in terms of observation noise spectra and perceptual thresholds) was investigated utilizing a model of the visual scene perception process. The model is based on linear perspective geometrical cues and on relative (visual) motion cues and is combined with the optimal control model. Results are presented of an automated model matching procedure. Via a first order gradient method, a matching criterion (involving variances and frequency domain data) was minimized yielding a set of observation noise model parameter values. These values led to the perceptual thresholds associated with the visual cues involved. Author (ESA)

PROJECT FIRES. VOLUME 1: PROGRAM OVERVIEW AND SUMMARY, PHASE 1B Final Report

Fred J. Abeles May 1980 49 p refs

(Contract NAS8-32329)

(NASA-CR-161529) Avail: NTIS HC A03/MF A01 CSCL 06Q

Overall performance requirements and evaluation methods for firefighters protective equipment were established and published as the Protective Ensemble Performance Standards (PEPS). Current firefighters protective equipment was tested and evaluated against the PEPS requirements, and the preliminary design of a prototype protective ensemble was performed. In phase 1B, the design of the prototype ensemble was finalized. Prototype ensembles were fabricated and then subjected to a series of qualification tests which were based upon the PEPS requirements. Engineering drawings and purchase specifications were prepared for the new protective ensemble. Author

PROJECT FIRES. VOLUME 4: PROTOTYPE PROTECTIVE ENSEMBLE QUALIFICATION TEST REPORT, PHASE 1B Final Report

Fred J. Abeles May 1980 127 p refs

(Contract NAS8-32329)

(NASA-CR-161532) Avail: NTIS HC A07/MF A01 CSCL 06Q

The qualification testing of a prototype firefighter's protective ensemble is documented. Included are descriptions of the design requirements, the testing methods, and the test apparatus. The tests include measurements of individual subsystem characteristics in areas relating to both physical testing, such as heat, flame, impact penetration and human factors testing, such as dexterity, grip, and mobility. Also, measurements related to both physical and human factors testing of the complete ensemble, such as water protection, metabolic expenditures, and compatibility are considered. M.G.

DEVELOPMENT OF A PREPROTOTYPE VAPOR COMPRESSION DISTILLATION WATER RECOVERY SUBSYSTEM Final Report

K. L. Johnson Nov. 1978 289 p ref

(Contract NAS9-15136)

(NASA-CR-160779; LMSC-D626041) Avail: NTIS HC A13/MF A01 CSCL 06K

The activities involved in the design, development, and test of a preprototype vapor compression distillation water recovery subsystem are described. This subsystem, part of a larger regenerative life support evaluation system, is designed to recover usable water from urine, urinal rinse water, and concentrated shower and laundry brine collected from three space vehicle crewmen for a period of 180 days without resupply. Details of preliminary design and testing as well as component developments are included. Trade studies, considerations leading to concept selections, problems encountered, and test data are also presented. The rework of existing hardware, subsystem development including computer programs, assembly verification, and comprehensive baseline test results are discussed. Author

MAN-RATING OF THE NAVY/AIR FORCE OXYGEN GENERATING SYSTEM (NAOGS) Interim Report, 1 Jan. 1978 - 30 Sep. 1979
Ronald D. Holden, Arnott A. Moore, Kenneth G. Ikels, and Richard L. Miller May 1980 15 p refs
(AF Proj. 1930)
(AD-A087270; SAM-TR-80-12) Avail: NTIS HC A02/MF A01 CSCL 01/3

The Navy/Air Force Oxygen Generating System (NAOGS) program is a joint effort between the Air Force and the Naval Air Development Center to develop a two man onboard oxygen generator for tactical aircraft. One of the proposed systems is based upon reversible sorption of oxygen from aircraft engine bleed air using fluomine, a cobalt chelate. The NAOGS fluomine system was manufactured by Garrett/AiResearch Division, Torrance, California. The USAF School of Aerospace Medicine performed man-rating of the NAOGS-fluomine unit prior to flight test by the U.S. Navy. The experimental protocol at USAFSAM consisted of both unmanned and manned testing, during which the product oxygen was monitored for quantity, purity, and trace contaminant content. Man-rating consisted of actual flight simulations with 2 test subjects at four different altitudes for periods up to 2 hours while breathing the product oxygen. The NAOGS, for the most part, performed adequately during both manned and unmanned testing. The exceptions were a lower than specification oxygen production rate and a short-term drop in oxygen purity during each bed switching cycle. These shortcomings are discussed in the context of the forthcoming flight test program. GRA

ADHESIVE COATINGS FOR DH-411 HELMETS
J. C. Lazowski Jan. 1980 18 p refs
(AD-A087319; DCIEM-TC-80-C-02) Avail: NTIS HC A02/MF A01 CSCL 06/17

Helicopter helmets in the Canadian Forces are required in two interchangeable roles, white and camouflaged. At present, helmets used by members of tactical helicopter squadrons are painted green to achieve the camouflage effect. Painting and stripping of helmets are time-consuming tasks which may deteriorate the impact protection of the helmet. Two adhesive coatings, olive drab gun tape and an adhesive vinyl coating in a disruptive pattern, were evaluated to determine the effect of extremes of temperature upon the coatings and the coated helmet shell. It was found that a marked discoloration of the helmet shell occurred during seven hour exposures to 200 F when coated with olive drab gun tape. It is concluded that the adhesive vinyl coating is superior to the gun tape on the basis of appearance and discoloration of the helmet shells. GRA

DATA STRUCTURE INDEPENDENCE IN DATA BASE MANAGEMENT SYSTEMS Ph.D. Thesis
E. James Emerson 1980 224 p
Avail: Univ. Microfilms Order No. 8019396

The system that is proposed to achieve data structure independence includes three schemas: conceptual, physical and logical. The role of the conceptual schema is to represent the enterprise's data in such a way that the integrity of the data base is assured and data structure independenece is achieved. To accomplish this a relational model of data with extensions to provide for integrity assertions was selected for the conceptual schema. The conceptual schema serves as the base from which both the logical and physical schemes are derived, thereby completely isolating one from the other. The physical schema has many similarities to a CODASYL data base. It contains owner to member sets and permits them to be combined to form networks. Additionally, it contains extensions such as secondary indexes, and could be augmented with additional facitilies in the future. The logical schema has a single syntax used to define logical views for a CODASYL, Relational or IMS data model. The logical schemas are dervied from the conceptual schema using four primitive mappings. It is demonstrated that these mappings are sufficient to generate the data structures required for the three models, and the structural mappings that are required to achieve data structure independence. MULTI-MICROPROCESSOR/MULTI-MICROCOMPUTER ARCHITECTURES: THEIR MODELING AND ANALYSIS Ph.D. Thesis
Dimitris A. Protopapas 1980 199 p
Avail: Univ. Microfilms Order No. 8019410

Conditions under which a finite source queue can be

approximated by an infinite source one are presented, and a mean-wait approximation technique is developed for the computationally involved M/G/I/N queueing system. An approximation method is also developed for the generalized finite source queue, GI/G/I/N. Expressions are derived for the LST, and the variance of M/G/I/N, when service distributions are nonanalytic. Application of the Mi/Mi/I/N queueing model, is introduced. Generic micro-models are developed for the common bus multi-microprocessor/multi-microcomputer architecture. Both symmetric and asymmetric models are analyzed using the results derived for finite queues. Models are developed for traffic sharing, symmetrical or load balancing, and functionally distributed organizations, which are then analyzed using the generalized queueing approximation techniques. Performance, cost, and other merits of these organizations are compared, and conclusions are drawn. Dissert. Abstr.

MICROCOMPUTERS AND TIMESHARING Ph.D. Thesis
William Langdon Proctor 1979 277 p
Avail: Univ. Microfilms Order No. 8019853

The ability of microprocessors to support the data manipulations required by timesharing with reentrant program execution is demonstrated by evaluation of an operational prototype. Response latency due to processor loading is analyzed theoretically and empirically for an application involving dispersal of textual data to a number of concurrent users. The application is a text dialog language known as Pilot. The question of economic viability is considered by comparing cost-effectiveness of microprocessor timesharing, dedicated microprocessing and mainframe timesharing. Several recent microprocessor architectures are comparatively evaluated in relation to programming requirements of timesharing with reentrant program execution. This results in a number of observations regarding the physical structures of a central processor which significantly affect compatibility with timesharing. A computer assisted design and optimization methodology is introduced providing a means for evaluation of hardware cost functions and programming efficiency for existing and tentative architectures in the context of specific applications. Dissert. Abstr.

PROGRAMS FOR DISTRIBUTED COMPUTING: THE CALENDAR APPLICATION
Irene Greif Jul. 1980 11 p refs
(Contract N00014-75-C-0661)
(AD-A087357; MIT/LCS/TM-168) Avail: NTIS HC A02/MF A01 CSCL 09/2

The calendar application involves a wide range of issues in distributed computing, from implementation of distributed data bases to design of a user interface that will enable the user to comprehend the complex distributed environment in which he is working. This memo summarizes current status of design and implementation of calendars. Sections 2 and 3 are taken from a progress report of March 1980 and section 4 is an update to that report including current status plans. We began our design of calendar systems with the intention of focussing on implementation issues, particularly those of communication, sharing of data, and the use of forms as the standard interface among modules. To assure variety in our implementation experience, we generated alternative designs of calendars. Implementations of several of them are now underway. During later design phases we became more interested in the functionality of the calendar and its user interface. To some extent the use of forms as the communication medium shapes the human interface as well as the process to process interface. Also, some aspects of the functionality, most notably the notion of (tentative meeting) have arisen from analysis of the distributed implementation. Section 2 is a report on the functionality of the calendars we are building. Section 3 is about the distributed implementation. GRA

HANDBOOK OF PROCEDURES FOR ESTIMATING COMPUTER SYSTEM SIZING AND TIMING PARAMETERS, VOLUME 2: ADDENDUM Final Technical Report, 16 May 1979 - 15 Feb. 1980
William B. Humphrey and John N. Postak 15 Feb. 1980 175 p refs
(Contract F19628-79-C-0106)
(AD-A086140; DAI-TR-235-Vol-2; ESD-TR-80-115-Vol-2) Avail: NTIS HC A08/MF A01 CSCL 09/2

In this volume, information about selected ESD C3 Embedded Computer Systems (ECS) is presented to illustrate the types of data that could be considered in the development of computer system analogies for sizing and timing studies. Also included are a number of graphic representations of computer system sizing and timing relationships that are based on algorithms developed by various computer scientists during the past several years. Although the relationships are presented in absolute values, users are cautioned not to consider any relationship by itself. Rather, they should be considered additional possible data points in the overall evaluation of a computer system's sizing and timing parameters. Also included are two examples of the application of the procedures discussed in volume 1: a proposed revision of the Data Item Description (DID) entitled, Computer Program Timing and Sizing Data (DI-S-30568); and a list of suggestions for future work to update and improve the estimating procedures. In addition, a reference listing, an annotated bibliography, and an index are provided. GRA

IMPLEMENTING ADVANCED DATA ANALYSIS TECHNIQUES IN NEAR-REAL-TIME MATERIALS ACCOUNTING
Jack T. Markin, Alice L. Baker, and James P. Shipley 1980 10 p refs Presented at the 21st Ann. Meeting of the Inst. of Nucl. Mater. Management, Palm Beach, Fla., 30 Jun. 1980
(Contract W-7405-eng-36)
(LA-UR-80-1816; CONF-800655-10) Avail: NTIS HC A02/MF A01

Materials accounting for special nuclear material in fuel cycle facilities is implemented more efficiently by applying decision analysis methods, based on estimation and detection theory, to analyze process data for missing material. These methods are incorporated in the computer program DECANAL, which calculates sufficient statistics containing all accounting information, sets decisions thresholds, and compares these statistics to the thresholds in testing the hypothesis H sub 0 of no missing material against the alternative H sub 1 that material is missing. DECANAL output provides alarm charts indicating the likelihood of missing material and plots of statistics that estimate materials loss. This program is a useful tool for aggregating and testing materials accounting data for timely detection of missing material. DOE

THE TOUCH PAD: A VERSATILE COMPUTER INPUT DEVICE
R. S. Newton, A. V. Matthews, and T. C. Butler London HMSO Sep. 1979 14 p refs Sponsored by United Kingdom Civil Aviation Authority
(RSRE-Memo-3229; BR74691) Avail: NTIS HC A02/MF A01

A touch sensitive high resolution input device designed for interaction with displays is described. The active surface of the pad reacts to light finger pressure and transmits the finger

coordinates to the computer. By associating a marker on the screen with the coordinates, the marker may be tracked to coincide with a displayed object. Acceptance of the so identified object is made by simply lifting the finger. The active surface is formed from a rigid base carrying 128 parallel conductors overlaid by a flexible sheet carrying 128 orthogonal conductors. Separation is maintained by a slight air pressure. The electronics are controlled by an Intel 8080 microprocessor. Author (ESA)

AUTOMATIC TRANSACTION DECOMPOSITION IN A DISTRIBUTED CODASYL PROTOTYPE SYSTEM Ph.D. Thesis
Frank Germano, Jr. 1980 243 p
Avail: Univ. Microfilms Order No. 8018547

Alternative distributed database management systems (DDBMS) architectures for the distribution of CODASYL-like structures were investigated and a prototype distributed CODASYL architecture, DSEED was defined. To provide acceptable performance, the use of a high level data language beyond the DML level and beyond the set level is indicated. Towards this end, the syntax and semantics of a (FOR EACH) data language, SEEDFe, is defined. The automatic decomposition using a preprocessor of SEEDFE programs into a front end control task and subordinate back end tasks is described. A global view mechanism, coupled with this decomposition process, provides geographic transparency for the application programmer. This mechanism, whose operation is controlled by a global schema defined by data definition facilities, guides the mapping of multiple, underlying local views to a global database view. Since some sets in this global view can have owner and member records which are not collocated, the notion of a distributed set is defined and a possible implementation proposed.

MODELING A SOFTWARE ENGINEERING PROJECT MANAGEMENT SYSTEM Ph.D. Thesis
Richard Hall Thayer 1979 751 p
Avail: Univ. Microfilms Order No. 8019850

A model of a Software Engineering Project Management System was developed and then verified (or corrected) through the use of structured case studies. The major issues opinion survey identified 20 major problems in project management; 13 of the 20 were overwhelming major problems; 7 were problems of a lesser magnitude. The project management survey data (structured case studies), were also used to verify the results of the major issues opinion survey. Nine of the 20 major issues were verified as problems, two were inconclusive, and nine were not problems. As a result, six major issues concerning planning and one concerning controlling were judged conclusively as problems by both surveys. It is shown that software engineering project management has all the basic functions of any management task; that the major issues of software engineering project management can be identified and will act as road signs for research in project management; and, that various functions and activities of a development project can be identified that will improve the project manager's capability to deliver his project on time, within cost, and in response to the user's needs.

CANONICAL FORMS AND UNIFICATION Interim Report
Jean-Marie Hullot Apr. 1980 25 p refs
(Contract F49620-79-C-0099; AF Proj. 2304)
(AD-A087640; SRI/CSL-70; AFOSR-80-0506TR) Avail: NTIS HC A02/MF A01 CSCL 09/2

Fay has described a complete T-unification for equational theories T that possess a complete set of reductions as defined by Knuth and Bendix. This algorithm relies essentially on using the narrowing process defined by Lankford. This paper first studies the relations between narrowing and unification and gives a new version of Fay's algorithm. It then shows how to eliminate many redundancies in this algorithm and gives a sufficient condition for its termination. Finally, it is shown how to extend the previous results to various kinds of canonical term rewriting systems. GRA

AN APPROACH TO THE DERIVATION AND VALIDATION OF REQUIREMENTS
A. O. Ward *In* AGARD Guidance and Control Software May 1980 24 p refs (For primary document see N80-32125 22-61)
Avail: NTIS HC A10/MF A01

The problems associated with the development of requirements for guidance and control software are discussed. Ideas are suggested that will overcome these problems and a specific application of those ideas are described in terms of a methodology and associated tools. The position and contribution of requirements definition in the perspective of the overall product life cycle are examined. Two relevant viewpoints are considered: the resources needed to produce requirements; and the quality of requirements and its impact on budget. R.C.T.

LOGIC STRUCTURE FOR TESTABILITY AND FAILURE DETECTION
U. Schulz and A. Roelker *In* AGARD Guidance and Control Software May 1980 8 p (For primary document see N80-32125 22-61)
Avail: NTIS HC A10/MF A01

A concept of the logic structure for testability and failure detection of digital, modular, onboard data acquisition and control units within avionics systems were investigated. The concept was developed according to the maintenance levels within the German Air Force. The tests and failure detection were performed during operation as well as during pre- and post-flight tests without additional external special to type test equipments. The tests were totally integrated into the avionic system. R.C.T.

SOFTWARE MAINTENANCE MANAGEMENT PROCESS
William R. Bogdan *In* AGARD Guidance and Control Software May 1980 9 p (For primary document see N80-32125 22-61)
Avail: NTIS HC A10/MF A01

The management concepts utilized in developing a maintenance capability to support fleet tactical software are addressed. The tactical software being maintained is described and the kind of management planning that is essential to fleet software maintenance is presented. Software design factors are discussed that will reduce maintenance costs by making the initial software development more amenable to subsequent modification. The methodology the Navy uses to control changes to a software configuration baseline is addressed and how the Navy insures reliability of the software prior to fleet release is included. Also provided is an overview for the work breakdown structure and the organization of resources for work accomplishment. Estimating procedures are described for determining software maintenance cost. DATA SYSTEM FOR THE INFRA-RED ASTRONOMICAL SATELLITE (IRAS)
R. C. VanHoltz *In* AGARD Guidance and Control Software May 1980 21 p (For primary document see N80-32125 22-61)
Avail: NTIS HC A10/MF A01

The data system that is being developed for the Infra-Red Astronomical Satellite (IRAS) is discussed. After introducing the satellite and its objectives, the setup of the on board and the ground data system is described. The subsystem responsible for the control of the satellite, called IRAS Ground Operations, is then exposed in more detail. The tasks of this subsystem include orbit determination and prediction, real time operations, spacecraft performance evaluation and maintenance, and data preprocessing, distribution, and filing. Finally, the data system configuration control mechanism which was devised to meet the complexity and multinational setup of the system is portrayed. M.G.

ADVANCED DESIGN CONCEPTS AND PRACTICES IN THE F-16 MISSION COMPUTER SOFTWARE
Judith A. Edwards *In* AGARD Guidance and Control Software May 1980 15 p refs (For primary document see N80-32125 22-61)
Avail: NTIS HC A10/MF A01

Developments in the design of the F-16 mission computer software are discussed. Improved system performance resulted from several broad-scope software design decisions that were applied to the mission computer for the F-16 avionics system. These design decisions were made in the areas of the control and scheduling functions. The selected control concepts relied upon a table-driven system that employed only positive logic and a simplified executive. The Multicomputer configuration was a loosely coupled in an asynchronous network. Communications in the network were implemented via a standard 16-bit protocol. Data consistency was addressed in the basic interface specification as well as the detailed implementation. In general, the timing and hardware design features were hidden from the algorithms through system control approaches. In all, the flexibility and optimizations that resulted from the implementation concept have been well established through two block updates and several demonstration and research programs. M.G.

SOFTWARE FOR AN INTEGRATED FLIGHT CONTROL AND NIGHT VISION SYSTEM FOR MILITARY HELICOPTERS
P. Elzer, F. Figel, and W. Hoffman *In* AGARD Guidance and Control Software May 1980 8 p refs Sponsored by the German Federal Ministry of Defense (For primary document see N80-32125 22-61)
Avail: NTIS HC A10/MF A01

The functions and structure of an integrated digital flight control and night vision system for military helicopters is described. Its partially redundant components are connected via a serial bus. This resulted in a system with distributed processors. The software had to be structured according to the distributed character of the system and had to take into account the master-terminal principle of the bus architecture. It comprises the algorithms for flight control and handling of the night vision equipment as well as management functions for the bus, the displays, input commands, and error handling. Development of the software and integration of the system were supported by appropriate hardware aids. A special device was developed to facilitate integration of the distributed system. For this the same modular electronic components were used as for the control system. M.G.

EXECUTIVE SOFTWARE REUSABILITY FOR DISTRIBUTED AVIONICS ARCHITECTURES
R. F. Bousley *In* AGARD Guidance and Control Software May 1980 12 p refs (For primary document see N80-32125 22-61)
Avail: NTIS HC A10/MF A01

The impact of distributed microprocessor-based systems integrated (mission-oriented) avionics software is addressed. An overview is given of hardware networks and bus control mechanization issues in distributed architectures. Executive software considerations are emphasized. It appears that a functional decomposition of the executive software will help to maximize the reusability of this software since only those functional modules changed. A modularized executive, along with a firm executive/applications software interface, will allow maximum reusability of the applications software. This will minimze the impact on the integration task during mission software development. M.G.

A FAST ANALYSIS AND MODIFICATION ALGORITHM FOR COMPUTER AIDED DESIGN OF LARGE SCALE NETWORKS Ph.D. Thesis
Chin-Fu Chen 1980 240 p
Avail: Univ. Microfilms Order No. 8021067

A fast algorithm for network analysis is developed; it merges the conventional two phase approach into one process. The LU-factors (and their inverses) of a network matrix are built up through a branch by branch reconstruction of the given network. This fast algorithm, called Successive LU Decomposition or SLUD, is derived through the concept of tearing and generalized network formulation. There is no need to find the LU-factors of the whole Jacobian matrix. The computation speed for circuit analysis including the dc, ac, transient and eigenvalue problems substantially improved. For large scale networks with repetitive subnetworks the saving in computation time and memory requirement is even more significant. Based on the SLUD concept an algorithm for constitutive modifications is developed. A circuit simulation program was implemented in PL/I and several examples are presented. As compared with the conventional approach, the SLUD algorithm has demonstrated a saving of 40% in computation time for the dc analysis of a 60 branch network. Dissert. Abstr.

N80-32144 Carnegie-Mellon Univ., Pittsburgh, Pa.
PARTITIONING AND COOPERATION IN A DISTRIBUTED MULTIPROCESSOR OPERATING SYSTEM: MEDUSA Ph.D. Thesis
John Kenneth Ousterhout 1980 161 p
Avail: Univ. Microfilms Order No. 8020166

The design of Medusa, an operating system with a highly distributed control structure that runs on the Cm multimicroprocessor is analyzed. The Cm hardware is distributed, yet extremely flexible in the kinds of interprocessor communication it permits. Thus Medusa's structure arose from a consideration of two issues: partitioning and cooperation. Medusa consists of five relatively independent utilities that execute on different processors. Each utility provides one abstraction for the rest of the system and communicates with user programs and other utilities via messages. Functions are distributed between utilities at a very low abstract level. Since processors in cm are plentiful but small, all programs, including the utilities, are organized as task forces that contain several concurrent, cooperating activities. Medusa attempts to make cooperation between activities of a task force both powerful and efficient. One mechanism for this is executing all runnable activities of the task force and also executing each on a different processor. Dissert. Abstr.

APPLICATIONS OF INFORMATION THEORY TO DATA COMMUNICATION NETWORKS
Robert G. Gallager Jul. 1980 24 p refs Presented at NATO Advan. Study Inst., Norwick, England, 4-14 Aug. 1980
(Contract N00014-75-C-1183; Grant NSF ECS-79-19880; ARPA Order 3045; NR Proj. 049-383)
(AD-A087624; LIDS-P-1017) Avail: NTIS HC A02/MF A01 CSCL 09/2

The use of information theory in the study of Data Communication Networks can be roughly divided into two parts. The first deals with usual information theoretic problem of reliable and efficient transmission of information, generalized to treat multiple sources and destination. The second deals with the special problems caused by the bursty sources typical of data networks. These sources typically produce short messages interspersed with long and unpredictable intervals of silence. This makes the sources highly nonstationary over time intervals comparable to tolerable communication delays. This lecture will deal primarily with this second class of issues. GRA

ON THE TOTAL SYNTHESIS PROBLEM OF LINEAR MULTIVARIABLE CONTROL Ph.D. Thesis
Raghvendra Ramchandra Gejji 1980 204 p
Avail: Univ. Microfilms Order No. 8020961

The algebraic structure behind the basic total synthesis problem (TSP) is established. The fundamental mapping of TSP is introduced and a characterization of the solution set of TSP is given as a rational vector space. It is shown that solutions that provide for internal stability must be in a partucular subset which is a free module over a ring of fractions formed from polynomials. Coefficients are considered as the field of reals. The utility of a minimal polynomial basis in characterizing the above subset is described. The problem of subjective criteria in calculation of minimal bases is discussed, and a case study which leads to an empirical balancing rule for countering this problem is presented. Design is approached as an approximation technique using least squares methods to select, among the feasible solutions, the nearest neighbor to a specified target performance. A question arising as a result is whether control goals may be incorporated in the specified target performance. An example result on how tracking goals lead to constraints on the closed loop transfer function matrix is therefore included. A comprehensive example is included. Dissert. Abstr.

ROBUSTNESS OF MULTILOOP LINEAR FEEDBACK SYSTEMS
J. C. Doyle 31 Aug. 1979 27 p refs 2 Vol.
(Grant NG-1323; Contracts N00014-75-C-0144; E(11-1)-3070)
(NASA-CR-163450; AD-A086581) Avail: NTIS
HC A03/MF A01 CSCL 12/1

This paper presents a new approach to the analysis of robustness or sensitivity of multiloop linear feedback systems. The properties of the return difference equation are examined using the concepts of singular values, singular vectors and the spectral norm of a matrix. A number of new tools for multiloop systems are developed which are analogous to those for scalar Nyquist and Bode analysis, providing a generalization of the scalar frequency-domain notions such as stability margins and M circles. QUANTITATIVE SYNTHESIS OF UNCERTAIN MULTIPLE INPUT-OUTPUT FEEDBACK SYSTEM
Isaac M. Horowitz (Weizmann Inst. of Science, Rehovot, Israel) 31 Aug. 1979 51 p refs
(Grant AF-AFOSR-2946-76)
(AD-A087014) Avail: NTIS HC A04/MF A01 CSCL 09/2

An n input, n output plant is given with a specified range of parameter uncertainty and specified tolerances on the n to the 2nd power system response to command functions and the n to the 2nd power response to disturbance functions. It is shown how Schauder's fixed point theorem may be used to generate a variety of synthesis techniques, for a large class of such plants. The design guarantees the specifications are satisfied over the range of parameter uncertainty. An attractive property is that design execution is that of successive single loop designs, with no interaction between them and no iteration necessary. Stability over the range of parameter uncertainty is automatically included. By additional use of Schauder's theorem, these same synthesis techniques can be rigorously used for quantitative design in the same sense as above, for n x n uncertain nonlinear plants, even nonlinear time varying plants, in response to a finite number of inputs. The latter approach is sufficient. However, a scientific theory of feedback should certainly include quantitative design techniques. In this paper, it is shown how Schauder's fixed point theorem can be used to generate a variety of precise quantitative mio synthesis techniques suitable for various problem classes. GRA

COMPUTING FINITE-DIFFERENCE APPROXIMATIONS TO DERIVATIVES FOR NUMERICAL OPTIMIZATION
Philip E. Gill, Walter Murray, Michael A. Saunders, and Margaret H. Wright May 1980 27 p refs
(Contracts N00014-75-C-0267; DAAG29-79-C-0110; DE-AC03-76SF-00326; DE-AT03-76ER-72018; Grants NSF MCS-79-26009; NSF ENG-77-06761)
(AD-A087428; SU-SOL-80-6) Avail: NTIS HC A03/MF A01 CSCL 12/1

Finite-difference approximations to derivatives are useful not only in optimization algorithms, but also in other circumstances such as sensitivity analysis. In this paper we discuss methods for estimating the relative cancellation error and relative truncation error in a finite-difference approximation and propose a technique for computing the finite-difference interval so that the bounds upon the errors are balanced. We also propose a method for choosing the finite-difference interval in a quasi-Newton algorithm for unconstrained minimization that uses function values only. GRA

FINITE ELEMENT ANALYSIS OF PIPING TEES Final Report, Oct. 1979 - Jun. 1980
Antonio J. Quazon, Gordon C. Everstine, and Michael E. Golden Jun. 1980 49 p refs
(AD-A087353; DTNSRDC/CMLD-80/11) Avail: NTIS
HC A03/MF A01 CSCL 13/11

Finite element analyses were performed for a 24 in. x 24 in. x 10 in. schedule 40 carbon steel piping tee subjected to five orthogonal forces, six orthogonal moments, and internal pressure. The NASTRAN and CORTES/SA computer programs were used to compute displacements and normalized principal stresses for four finite element models. (CORTES/SA is a special purpose finite element analysis program for tee joints developed at the University of California at Berkeley.) The first three models generated were analyzed by NASTRAN, and the third and fourth models were analyzed by CORTES/SA, resulting in a total of five finite element analyses. Flexibility factors and normalized principal stresses were then compared to experimentally obtained results. One of the four models investigated was generated from actual measured geometry using GPRIME, a geometric and finite element modeling system developed at DTNSRDC. The other three models were generated from an idealized tee using the data generator contained in CORTES/SA. The generation by GPRIME of the finite element model from actual geometry was more difficult and expensive than the generation of CORTES/SA of an idealized model of the tee. In addition, the idealized model proved to be adequate when analyzed by NASTRAN. GRA

SIMULATION OF SOME AUTOREGRESSIVE MARKOVIAN SEQUENCES OF POSITIVE RANDOM VARIABLES
Peter A. W. Lewis and A. J. Lawrance Oct. 1979 29 p refs
Presented at Winter Simulation Conf., Dec. 1979
(NR Proj. 042-284; RR0000110)
(AD-A087368; NPS55-79-024) Avail: NTIS
HC A03/MF A01 CSCL 12/1

Methods for simulating dependent sequences of continuous positive valued random variables with exponential, Gamma, mixed exponential and uniform marginal distributions are given. In most cases the sequences are first order, linear autoregressive, Markovian processes. A two parameter family of this type with exponential marginals is defined and its transformation to a similar multiplicative process with uniform marginals is given. It is shown that for a subclass of this two parameter family extension to mixed exponential marginals is possible, giving a model of broad applicability for analyzing data and modelling stochastic systems. Efficient simulation of some of these schemes is discussed. GRA

ON THE NUMERICAL INTEGRATION OF TWO-POINT BOUNDARY VALUE PROBLEMS FOR STIFF SYSTEMS OF ORDINARY DIFFERENTIAL EQUATIONS
Joseph E. Flaherty and Robert E. OMalley, Jr. (Arizona Univ., Tucson) Jun. 1980 11 p refs Presented at Intern. Conf. on Boundary and Interior Layers, Dublin, 3-6 Jun. 1980
(Contract N00014-76-C-0326; Grant AF-AFOSR-0192-80; NR Proj. 041-466)
(AD-A087396; Rept-30) Avail: NTIS HC A02/MF A01 CSCL 12/1

A class of two point boundary value problems are considered for systems for the form dx = f(x, y, t, epsilon), edy = g sub 1 (x, t, epsilon) + g sub 2 (x, t, epsilon)y where the matrix g sub 2 (x, t, 0) has a hyperbolic splitting with a fixed number of stable and unstable eigenvalues. Solutions to such boundary value problems can then be expected to have boundary layer behavior near both endpoints in the limit epsilon approaches 0(+). Our analysis shows, in particular, how to determine the reduced order boundary value problem satisfied by the limiting interior solution. Orthogonal matrix methods are used to determine this reduced problem and appropriate boundary layer corrections in a computationally effective manner. Numerical experiments with model problems illustrate the possibility of multiple solutions and show how our asymptotic results can be used in combination with the COLSYS code for solving two point problems via collocation. ROBUST AND QUANTIZED WIENER FILTERS FOR p-POINT SPECTRAL CLASSES Interim Report
Leonard J. Cimini and Saleem A. Kassam 1980 7 p refs
Presented at Conf. on Inform. Sci. and Systems, Princeton, N.J., Mar. 1980 Submitted for publication
(Grant AF-AFOSR-3154-77)
(AD-A086409; AFOSR-80-0425TR) Avail: NTIS
HC A02/MF A01 CSCL 12/1

The classical solution for linear estimation of a signal in additive noise is given by the well known Wiener filter. In certain circumstances, however, it is advantageous to have a filter which is piecewise constant and which provides good performance over an entire class of signal and noise power spectral densities. First, a procedure is presented for determining the optimal piecewise constant filter. Then, for a particular class of power spectral densities, termed the p-point spectral class, the robust filter is determined. GRA

METHODS FOR LARGE-SCALE NONLINEAR OPTIMIZATION
Philip E. Gill, Walter Murray, Michael A. Saunders, and Margaret H. Wright May 1980 25 p refs Presented at the SIAM Conf. on Elec. Power Probl: The Mathematical Challenge, Seattle, Mar. 1980
(Contracts DAAG29-79-C-0110; N00014-75-C-0267; DE-AC03-76SF-00326; DE-AT03-76ER-72018)
(AD-A087555; SU-SOL-80-8; ARO-16470.13-M)
HC A02/MF A01 CSCL 12/1

The application of optimization to electrical power technology often requires the numerical solution of systems that are very large and possibly nondifferentiable. A brief survey of the state-of-the-art of numerical optimization is presented in which those methods that are directly applicable to power system problems will be highlighted. The areas of current research that are most likely to yield direct benefit to practical computation are identified. The paper concludes with a survey of available software. GRA

HC A03/MF A01 CSCL 12/1

Many practical optimization problems involve mathematical models of complex real-world phenomena. This paper discusses some aspects of modeling that influence the performance of optimization methods. Information and advice are given concerning the construction of smooth models, the transformation of an optimization problem from one category to another, scaling, formulation of constraints, and techniques for special types of models. RECURSIVE LEAST SQUARES LATTICE ALGORITHMS: A GEOMETRICAL APPROACH Final Report, Jul. - Aug. 1979
M. J. Shensa 15 Dec. 1979 20 p refs
(AD-A087566; NOSC/TR-552) Avail: NTIS
HC A02/MF A01 CSCL 12/1

Several time-recursive least squares algorithms have been developed in recent years. In this report a geometrical formalism is defined which utilizes a nested family of metric spaces indexed by the data time interval. This approach leads to a simplified derivation of the so-called recursive least squares lattices

algorithms (recursive in time and order). In particular, it is found that the resulting structure provides a single framework which encompasses an entire family of fairly complex algorithms as well as providing geometrical insight into their behavior. GRA

NONPARAMETRIC ESTIMATION OF A LIFETIME DISTRIBUTION VIA THE RENEWAL FUNCTION Ph.D. Thesis
David Charles Trindade 1980 207 p
Avail: Univ. Microfilms Order No. 8018168

A group of N systems, each system consisting of c similar components is considered. The components fail independently with a cumulative lifetime distribution function (CDF) denoted by F(t) and a nonparametric estimate of F(t) from system lifetime data is developed. Cases are considered in which only system fail times, and not the fail times of the individual components are recorded. The practical implication of this process is that after the first replacement on a system has been made, it is not possible to ascertain from the recorded system fail times whether the failure occurred on an original or replaced item. However, is is shown that there is a function called the renewal function, which can be estimated directly for this pooled process and then used to estimate the component CDF. The pooling of systems with different entry times into operation result in different current operating times, and hence progressive or multiple censoring of groups of component lifetimes. The renewal function M(t) is defined as the expected number of component renewals or replacements by time t at a single component position. The CDF F(t) can be determined from M(t) via a well known equation called the fundamental renewal function. Dissert. Abstr.

THE CAUSAL ANALYSIS OF MULTIPLE TIME SERIES: A FREQUENCY DOMAIN APPROACH USING GROUP DELAY Ph.D. Thesis
Michael Lee Deaton 1980 118 p
Avail: Univ. Microfilms Order No. 8020203

An alternative notion of causality between two processes called local causality is given and is shown to overcome the difficulties in the Wiener/Granger approach. A test for local causal relations is proposed. The main features of the new definition are that it describes causal relations between frequency components of two stochastic processes and that it uses the previously seldom used group delay function. The definition rests heavily upon the interpretation of the group delay function as a measure of the lead lag relationships between the frequency components of two stochastic processes. This interpretation has been hinted at in the literature without strict justification. A rigorous development of this interpretation is given. For describing the lead lag relationships between multivariate processes, the partial group delay function is defined and shown to have an interpretation as a lead lag indicator for frequency components of multivariate stochastic processes. Using the partial group delay function, a definition of local causality among multivariate processes is given. An estimator for the partial group delay function is proposed. Dissert. Abstr.

A BAYESIAN PROCEDURE TO COMPARE AND CHOOSE AMONG LOGISTIC REGRESSION MODELS Ph.D. Thesis
Francisco Garcia-Hernandez 1980 88 p
Avail: Univ. Microfilms Order No. 8020607

A Bayesian procedure based on the posterior odds ratio is developed. This procedure is applied to two cases of model specifications: (1) to select from a given set the best subset of explanatory variables; and (2) to select the best of two alternative sets of explanatory variables. The posterior odds ratio procedure was applied to select the best subset of a given set of explanatory variables when the dependent variable is the married woman's participation in the labor force and to compare two alternative theories that explain the participation of married women in the labor force. The results obtained in the empirical analysis are very encouraging. The procedure discriminates very well between a good model and a bad model. Dissert. Abstr.

THE APPLICATION OF CLUSTER ANALYSIS TO THE MASS APPRAISAL OF FOREST AND VACANT LAND Ph.D. Thesis
Susan Gail Stafford 1979 204 p
Avail: Univ. Microfilms Order No. 8019083

Cluster analysis, in conjunction with multiple regression techniques and discriminant analysis is used to improve the market value estimates for vacant and forest land. Sales data from three upstate New York counties were merged into one master file.

Inter-county data filters were devised to reduce any problems with inter-county variable definition incompatibility. Half of the data was clustered into several (8) small clusters. The inter-property resemblance measures were based on ten variables. Regression equations were determined of each cluster. Analysis of regression techniques were used to evaluate similarities among the regression coefficients. Clusters were combined where appropriate discriminant analysis was used to locate the clusters. The other half of the data was assigned to the appropriate cluster on the basis of the classification functions from discriminant analysis. Those properties which were initially clustered and those which were classified into the same cluster were combined. Final regression equations were computed for the three overall clusters. Dissert. Abstr.

TESTING FOR A CHANGE POINT Ph.D. Thesis

Nancy Jean Farden and L. L. Scharf Apr. 1980 181 p refs
(Contract N00014-75-C-0518)
(AD-A087111; ONR-TR-19) Avail: NTIS HC A09/MF A01 CSCL 12/2

A nonparametric procedure based on differences of averages was proposed to test for a change in the location parameter of the distribution for a sequence of independent random variables. It is assumed that at most one change may have occurred and that the point of change is an unknown parameter; the initial value of the location parameter is assumed known. A method of testing for a change point for small sample sizes which is easy to use and which will detect a change quickly was obtained. Exact critical regions were tabulated for a less than or equal to 20; the power of the tests and properties of the estimator for the change point was studied. Appropriate design of experiments for detecting change points are suggested. T.M.

BATCH SIZE EFFECTS IN THE ANALYSIS OF SIMULATION OUTPUT

Bruce Schmeise Jun. 1980 28 p refs
(Contract N00014-79-C-0832)
(AD-A087045) Avail: NTIS HC A03/MF A01 CSCL 12/1

This paper considers the effects of using fewer batches than are necessary to satisfy normality and independence assumptions. Using too few batches results in (1) correct probability of covering the mean, (2) an increase in expected half length, (3) an increase in the standard deviation of the half length, and (4) an increase in the probability of covering incorrect values of the mean (analogous to Type II error in hypothesis testing). These effects, quantified here, are shown to be small when at least eight to ten batches are used, with least effect on confidence intervals having low confidence values. With the effects of using too few batches quantified, a simulation practitioner can make the trade off between the ease of using very few batches with known independence and normality versus using a batching algorithm to squeeze some remaining information from the data. For researchers developing batching algorithms, the results are useful in selecting initial batch sizes. The results may also be useful in the context of using independent replications to establish confidence intervals on the mean. Finally, some criteria and a procedure are suggested for Monte Carlo comparison of confidence interval procedures. These suggestions are not restricted to batch mean algorithms. GRA

STOCHASTIC ORDERING AND A CLASS OF MULTIVARIATE NEW BETTER THAN USED DISTRIBUTIONS Interim Report

Emad El-Neweihi Jun. 1980 29 p refs
(Grant AF-AFOSR-3050-76; AF Proj. 2304)
(AD-A087288; AFOSR-80-0560TR) Avail: NTIS HC A03/MF A01 CSCL 12/1

A new characterization for the univariate class of new better than used (NBU) distributions in terms of stochastic ordering is introduced. A multivariage version of this characterization is then used to define a multivariate class of NBU distributions. Basic properties of this class are derived. Comparison and relationships of this new class with earlier classes are developed. Two multivariate new worse than used (NMW) classes of life distributions are defined and compared and their basic properties are studied. GRA

THE BAYESIAN APPROACH TO STATISTICS

Dennis V. Lindley May 1980 42 p refs Presented at Symp. on Recent Advances in Statistics, Lisbon, Apr. 1980
(Grant AF-AFOSR-3179-77; AF Proj. 2304)
(AD-A087836; ORC-80-9) Avail: NTIS HC A03/MF A01 CSCL 12/1

This paper discusses several topics that arise in applying Bayesian ideas to inference problems. The Bayesian paradigm is first described as an appreciation of the world through probability: probability being expressed in terms of gambles. Various justifications for this view are outlined. The role of models in the specification of probabilities is considered; together with related problems of the size and complexity of the model, robustness and goodness of fit. Some attempt is made to clarify the concept of conditioning in probability statements. The role of the second argument in a probability function is emphasized again in discussion of the likelihood principle. The relationship between the probability specification and real-world experiences is explored and a suggestion is made that zero probabilities are, in a sense, unreasonable. It is pointed out that it is unrealistic to think of probability as necessarily being defined over a sigma-field. The paper concludes with some remarks on two common objections to the Bayesian view. IS BAYESIAN ESTIMATION PROPER FOR ESTIMATING THE INDIVIDUAL'S ABILITY

Fumiko Samejima 15 Jul. 1980 153 p refs
(Contract N00014-77-C-0360; RR0420401; NR Proj. 150-402)
(AD-A087829) Avail: NTIS HC A08/MF A01 CSCL 12/1

There is a widespread belief among psychologists in the area of applied measurement that Bayesian estimation is better than the maximum likelihood estimation because of the additional information, i.e., prior. For example, many researchers in the computerized adaptive testing use Bayesian methods in the estimation of the examinee's ability. In this paper, this myth is debated theoretically, and in relation with the behavioral reality. Simulation studies are also used to show how biases caused by priors will affect the resultant estimation of the examinee's ability. GRA

ANALYSIS OF PRINCIPAL COMPONENTS IN THE SEBESTYEN DISCRIMINATION METHOD [ROLE D'ANALYSE EN COMPOSANTES PRINCIPALES DANS LA METHODE DE DISCRIMINATION DE SEBESTYEN]

Jean Pierre Thouvenin Jan. 1980 41 p refs In FRENCH; ENGLISH summary
(CNES-NT-92) Avail: NTIS HC A03/MF A01

Sebestyen's decision - discrimination method based on

principal component analysis is explained. This method is the basis of the data discrimination system for the resonance measurement experiment flown on board the ISEE 1 satellite launched by NASA in October 1977. This pattern recognition problem is fully developed. The optimal number of characteristics needed to describe a data point is determined. The point is represented in N-dimensional space where the different axes correspond to the desired characteristics. The unity of the distance between each point along each axis is then analyzed to determine if it is equal or not to the variance of the characteristic corresponding to that axis. A minimum variance defines the discrimination. Author (ESA)

A STUDY OF NONLINEAR WAVES DESCRIBED BY THE CUBIC SCHRODINGER EQUATION Ph.D. Thesis
Arthur Eugene Walstead 1980 244 p
Avail: Univ. Microfilms Order No. 8019004

A system of quasilinear evolution equations (the modulational equations) were derived for the values of the four parameters of cnoidal waves when they are slowly varying in space and time. The system is subsequently determined to be hyperbolic or elliptic, stable or unstable according to the sign of a certain coefficient pq. Riemann invariants are obtained for several limits for the stable case (pq < 0) and growth rates are obtained for several limits, including the solitary wave chain, for the unstable case (pq > 0). The dynamics of the cubic Schroedinger equation (CSE) generalized to two spatial dimensions are studied for the case pq > 0. A large class of similarity solutions with cylindrical symmetry are obtained systematically using infinitesimal transformation group techniques. The methods are adapted to obtain the symmetries of the action functional of the CSE and to deduce nine integral invariants. A numerical study of the self similar solutions reveals that they are modulationally unstable and that singularities dominate the dynamics of the CSE in two dimensions. The CSE is derived using perturbation theory for a specific problem in plasma physics - the evolution of the envelope of a near monochromatic electromagnetic wave in a cold magnetized plasma. Dissert. Abstr.

AN APPROXIMATE SOLUTION OF SINGULARLY PERTURBED NON-LINEAR PURSUIT-EVASION GAMES
N. Farber and J. Shinar Feb. 1979 86 p refs
(TAE-359) Avail: NTIS HC A05/MF A01

A methodology to obtain an approximate solution of a singularly perturbed nonlinear differential game is presented. The outcome of the game with approximate strategies, defined as extended value, is related to the saddle point value of the game. In an example of a simple pursuit-evasion game, it is shown that the proposed methodology leads to an easily implementable feedback form solution with faily accurate results. This approach seems to be attractive to analyze realistic air combat models without solving a two point boundary value problem. Author

REPEATABILITY OF SPATIAL CONFIGURATIONS DEFINED BY INTERACTION MATRICES Ph.D. Thesis
Ada Ray Corral 1980 94 p
Avail: Univ. Microfilms Order No. 8020523

The repeatability of the spatial configuration of the location points represented by a vector of estimated interaction effects was studied as a way of determining the impact of random error in the classification of locations according to the genotype by environment interaction. Also the problem of the relative gain or loss of precision in the classification when the dimension of the space of estimated location points is reduced to include only the more important dimensions as reflected in the eigenvalues of the interaction covariance matrix, together with some distributional properties of these eigenvalues are discussed. To do this, a Monte Carlo experiment was carried out using 2000 independent sets of random errors which were used to generate the estimated interaction effects. Different true configurations and different choices of lambda the number of locations, and v, the number of cultivars were used. To measure the degree to which the estimated points reproduced the true points the statistic m to the 2nd power was used; m to the 2nd power is the standardized sum of squared distances between the true location points and the corresponding estimated points after rotation and dilation. HIGH PRESSURE STUDIES TO DETERMINE THE EFFECTS OF VOLUME AND TEMPERATURE ON THE LATTICE DYNAMICS OF MOLECULAR SOLIDS: N2, CO2, CH4 Progress Report, 1 Jul. 1979 - 30 Jun. 1980
F. D. Medina May 1980 7 p refs
(Contract DE-AC02-79ER-10443)
(DOE/ER-10443/1) Avail: NTIS HC A02/MF A01

The temperature dependence of the far infrared spectrum of alpha-N2 was studied for a sample at constant volume. The two modes observed near 50 and 72/cm have frequencies which increase slightly with temperature. The integrated intensity of the mode near 50/cm remains constant with temperature, within experimental uncertainty. The Grueneisen parameter of this mode was estimated to be approximately 3. Two samples of solid CH4 of different densities were grown. Grueneisen parameters of 2.6 and 3.1 were obtained for the librational mode and one translational mode in phase 2. The former indicates an anisotropic intermolecular potential with a strong volume dependence. Changes in the spectrum indicate that the 2 to 3 phase transition involves a sudden, simultaneous tetragonal distortion of the lattice and ordering of the orientationally disordered molecules of phase 2, with a slow reorientation of the ordered molecules. STRUCTURAL ANALYSIS OF SUPERCONDUCTING BENDING MAGNETS
R. B. Meuser May 1980 6 p ref Presented at the 8th Intern. Cryogenic Eng. Conf., Genoa, 3-6 Jun. 1980
(Contract W-7405-eng-48)
(LBL-10950; CONF-800631-3) Avail: NTIS HC A02/MF A01

Mechanical stresses, displacements, and the effects of displacements upon aberrations of the magnetic field in the aperture were calculated for a class of superconducting bending magnet configurations. The analytical model employed for the coil was one in which elements are free to slide without restraint upon each other, and upon the surrounding structure. Coil configurations considered range from an idealized one in which the current density varies as cosine theta to more realistic ones consisting of regions of uniform current density. The results for the more realistic coils closely match those of the cosine theta coil. DOE

OPTICAL PROBING OF ACOUSTIC EMISSION DURING DEFORMATION OF MICROTENSILE SPECIMENS Ph.D. Thesis
William James Bruchey 1980 98 p
Avail: Univ. Microfilms Order No. 8020122

Optical interferometric techniques were adapted to detect and analyze acoustic emission signals from 304L stainless steel in order to determine the correlation between fracture surface topography and acoustic emission signals emitted by the material during plastic deformation and failure. A pneumatic load system was developed to accept an optical interferometer as the device for detecting acoustic emission signals. Microtensile specimens were fabricated which limited the zone of deformation to approximately three cubic millimeters in volume. Use of the optical probe permitted the monitoring of transient surface displacements to within fractures of a millimeter of the deforming volume. Results demonstrate that acoustic emission is a volume phenomena. For the small plastic zone size investigated, the acoustic emission counts have been minimized to the extent that signals are spatially separated in time and waveform analysis can be conducted on each of the signals. Test results show that existing models describing dislocations as the source of acoustic emission are not sufficient to describe the observed behavior. Dissert. Abstr.

A STUDY OF THE TRANSMISSION CHARACTERISTICS OF SUPPRESSOR NOZZLES
K. K. Ahuja, M. Salikuddin, R. H. Burrin, and H. E. Plumbee, Jr. Jun. 1980 263 p refs
(Contract NAS3-20797)
(NASA-CR-165133) Avail: NTIS HC A12/MF A01 CSCL 20A

The internal noise radiation characteristics for a single stream 12 lobe 24 tube suppressor nozzle, and for a dual stream 36 chute suppressor nozzle were investigated. An equivalent single round conical nozzle and an equivalent coannular nozzle system were also tested to provide a reference for the two suppressors. The technique utilized a high voltage spark discharge as a noise source within the test duct which permitted separation of the incident, reflected and transmitted signals in the time domain. These signals were then Fourier transformed to obtain the nozzle transmission coefficient and the power transfer function. These transmission parameters for the 12 lobe, 24 tube suppressor nozzle and the reference conical nozzle are presented as a function of jet Mach number, duct Mach number polar angle and temperature. Effects of simulated forward flight are also considered for this nozzle. For the dual stream, 36 chute suppressor, the transmission parameters are presented as a function of velocity ratios and temperature ratios. Possible data for the equivalent coaxial nozzle is also presented. Jet noise suppression by these nozzles is also discussed. A.R.H.

EXPERIMENTAL INVESTIGATION OF THE RADIATION OF SOUND FROM AN UNFLANGED DUCT AND A BELLMOUTH, INCLUDING THE FLOW EFFECT
Jean-Michel Ville (George Washington Univ.) and Richard J. Silcox Aug. 1980 65 p refs
(NASA-TP-1697; L-13252) Avail: NTIS HC A04/MF A01 CSCL 20A

The radiation of sound from an inlet as a function of flow velocity, frequency, duct mode structure, and inlet geometry was examined by using a spinning mode synthesizer to insure a given space-time structure inside the duct. Measurements of the radiation pattern (amplitude and phase) and of the pressure reflection coefficient were obtained over an azimuthal wave number range of 0 to 6 and a frequency range up to 5000 Hz for an unflanged duct and a bellmouth. The measured radiated field and pressure reflection coefficient without flow for the unflanged duct agree reasonably well with theory. The influence of the inlet contour appears to be very drastic near the cut-on frequency of a mode and reasonable agreement is found between the bellmouth pressure reflection coefficient and a infinite hyperboloidal inlet theory. It is also shown that the flow has a weak effect on the amplitude of the directivity factor but significantly shifts the directivity factor phase. The influence of the flow on the modulus of the pressure reflection coefficient is found to be well described by a theoretical prediction. M.G.

SPECTRAL ANALYSIS OF SOUND PROPAGATION IN STRATIFIED FLUIDS Technical Summary Report
Calvin H. Wilcox Apr. 1980 154 p refs
(Contract N00014-76-C-0276; NR Proj. 041-370)
(AD-A087735; TSR-38) Avail: NTIS HC A08/MF A01 CSCL 20/1

This paper presents a spectral analysis of the acoustic fields in stationary plane stratified fluids whose densities and sound speeds are functions of the depth. The analysis is based on families of normal mode fields that have simple physical interpretations. The acoustic field in such a fluid may be described by an acoustic potential or by the excess pressure. GRA

Electron attachment to polyatomic molecules was studied using molecular beams of variable temperature crossed with an electron of high energy resolution. Species investigated include sulfur hexafluoride, molybdenum hexafluoride, and tungsten oxide polymers. New results were obtained in sulfur hexafluoride demonstrating importance of internal energy for the dissociative attachment in molybdenum hexafluoride. Tungsten oxide vapor exhibits both monomer and dimer negative ion formation near zero energy, apparently from dissociative attachment to the trimer. GRA

RESEARCH STUDIES ON RADIATIVE COLLISIONAL PROCESSES Interim Technical Report
S. E. Harris and J. F. Young Jun. 1980 36 p
(Contract F49620-80-C-0023)
(AD-A087527; SU-GL-3147; ARO-16996.1-P) Avail: NTIS HC A03/MF A01 CSCL 20/8

A radiative collisional process is one wherein two atoms and a photon simultaneously participate. In the prototype reaction, energy is first stored in a state of some atom and an incident laser is tuned so as to satisfy the energy defect between this storage state and a selected state of a second atom. In the presence of this incident laser beam, the collision cross section may be as large as 10 to the minus 12th sq cm (i.e., corresponding to billiard ball sizes of the atoms of almost 100 A), thereby allowing rapid transfer of energy to the target species. Of particular interest, the storage species may not only be an excited state of an atom, but instead may also be the ground state of an ion. An intense laser field may then be used to rapidly transfer this energy to an excited ionic state of a second species. Such a process is termed as laser induced charge transfer. Since ground state ions are easily created and represent a means of longlived energy storage, laser induced charge transfer processes are particularly exciting for applications. GRA

COLLECTIVE ACCELERATION OF ELECTRONS USING AUTOACCELERATION PROCESSES
Thomas R. Lockner and Mashe Friedman Jul. 1980 32 p refs
(ARPA Order 3718)
(AD-A087001; AD-E000494; NRL-MR-4258) Avail: NTIS HC A03/MF A01 CSCL 20/7

A means of collectively accelerating an intense electron beam is demonstrated. A long pulse (800 ns) electron beam is propagated through cavity structures which redistributed the energy in the beam such that most of the beam energy is transferred to a short segment (6 nsec) in the tail of the bram; electrons are accelerated in a two cavity system from 200 KeV to energies of 2.4 - 3.0 MeV at a beam current of approximately 8 kA. The extension of this principle to larger number of cavities appears feasible. GRA

CRITICALITY SAFETY CONSIDERATIONS IN THE GEOLOGIC DISPOSAL OF SPENT NUCLEAR FUEL ASSEMBLIES
B. F. Gore, G. W. McNair, and S. W. Heaberlin May 1980 53 p refs
(Contract DE-AC06-76RL-01830)
(PNL-3268) Avail: NTIS HC A04/MF A01

Features of geologic disposal which hamper the demonstration that criticality cannot occur therein include possible changes of shape and form, intrusion of water as a neutron moderator, and selective leaching of spent fuel constituents. If the criticality safety of spent fuels disposal depends on burnup, independent measurements verifying the burnup should be performed prior to disposal. The status of nondestructive analysis method which might provide such verification is discussed. Calculations were performed to assess the potential for increasing the allowed size of a spent fuel disposal canister if potential water intrusion were limited by close packing the enclosed rods. Several factors were identified which severely limited the potential of this application. The theoretical limit of hexagonal close packing cannot be achieved due to fuel rod bowing. It is concluded the disposal canisters should be sized on the basis of assumed optimum moderation. DOE

FUNCTIONS OF AN ENGINEERED BARRIER SYSTEM FOR A NUCLEAR WASTE REPOSITORY IN BASALT
W. E. Coons, E. L. Moore, M. J. Smith, and J. D. Kaser Jan. 1980 35 p refs
(Contract DE-AC06-77RL-01030)
(RHO-BWI-LD-23) Avail: NTIS HC A03/MF A01

The functions of components selected for an engineered barrier system for a nuclear waste repository in basalt are defined providing a focal point for barrier material research and development by delineating the purpose and operative lifetime of each component of the engineered system. A five component system (comprised of waste form, canister, buffer, overpack, and tailored backfill) is discussed. Redundancy is provided by subsystems of physical and chemical barriers which act in concert with the geology to provide a formidable barrier to transport of hazardous materials to the biosphere. The barrier system is clarified by examples pertinent to storage in basalt, and a technical approach to barrier design and material selection is proposed. DOE

ASSUMPTIONS AND GROUND RULES USED IN NUCLEAR WASTE PROJECTIONS AND SOURCE TERM DATA
S. N. Storch and B. E. Prince Sep. 1979 137 p
(Contracts W-7405-eng-26; DE-AC06-76PL-01830)
(ONWI-24) Avail: NTIS HC A07/MF A01

Assumptions and ground rules of long term domestic commercial nuclear waste projections published by two sources are compared. Target capacity growths associated with these projections range from 183 to 570 GW(e) for the year 2000. Each study regards the once through (no recycle) fuel cycle as a reference case. Fuel cycles employing reprocessing and various recycle strategies were also considered. The studies are compared with respect to characteristics and packaging/shipment features of spent fuel and wastes generated from reprocessing and other fuel cycle activities. Issues associated with the interim storage

of spent fuel are discussed along with the characteristics and issues relating to ore mill tailings and non-fuel cycle wastes. Assumptions and limitations associated with certain computer codes (viz., ORIGEN, KWIKPLAN, WASPR, and DISFUL) employed in the four waste projection studies are also outlined. DOE

SYSTEMATIC APPROACH FOR ASSESSMENT OF ALTERNATIVE NUCLEAR WASTE MANAGEMENT STRATEGIES
Gour-Tsyh Yeh 1979 8 p refs Presented at the Symp. on the Sci. Basis for Nucl. Waste Management, Boston, 26 Nov. 1979
(Contract W-7405-eng-26)
(CONF-791112-66) Avail: NTIS HC A02/MF A01

The fate and transport of radwaste in the environment and to man was evaluated using system of flow dynamic and waste transport models for the physical environment, transfer models to biota, and dose models to man. Flow dynamic and waste transport models are included for computing spatial temporal variations of the flow field and radwaste concentration in subsurface aquifers, surface water regimes, estuaries/oceans, and the atmosphere. Transfer models are linked to flow dynamic and waste transport models to study the uptake from and to the physical environment of the waste by aquatic and terrestrial biota. Dose models are used to compute both the radwaste input to man and its effect on man. With these series of computations, the radiation dose from alternative nuclear waste management strategies can be computed. Coupled with the exposure and effect analysis, the approach should facilitate the selection of the best management methodologies among many alternatives. DOE

STATISTICAL SENSITIVITY ANALYSIS OF A SIMPLE NUCLEAR WASTE REPOSITORY MODEL
Y. Ronen, J. L. Lucius, and E. M. Blow Jun. 1980 75 p
(Contract W-7405-eng-26)
(ORNL/TM-7310) Avail: NTIS HC A04/MF A01

A preliminary step in a comprehensive sensitivity analysis of the modeling of a nuclear waste repository. The purpose of the complete analysis is to determine which modeling parameters and physical data are most important in determining key design performance criteria and then to obtain the uncertainty in the design for safety considerations. The theory for a statistical screening design methodology is developed for later use in the overall program. The theory was applied to the test case of determining the relative importance of the sensitivity of near field temperature distribution in a single level salt repository to modeling parameters. The exact values of the sensitivities to these physical and modeling parameters were then obtained using direct methods of recalculation. The sensitivity coefficients found to be important for the sample problem were thermal loading, distance between the spent fuel canisters and their radius. Other important parameters were those related to salt properties at a point of interest in the repository. DOE

PINHOLE X-RAY/CORONAGRAPH OPTICAL SYSTEMS CONCEPT DEFINITION STUDY Final Report
T. F. Zehnpfenning, S. A. Rappaport, and R. B. Wattson 12 Sep. 1980 81 p
(Contract NAS8-33697)
(NASA-CR-161567; VI-556) Avail: NTIS HC A05/MF A01 CSCL 20F

The Pinhole X-ray/Coronagraph Concept utilizes the long baselines possible in Earth orbit with the space transportation system (shuttle) to produce observations of solar X-ray emission features at extremely high spatial resolution (up to 0.1 arc second) and high energy (up to 100 keV), and also white light and UV observations of the inner and outer corona at high spatial and/or spectral resolution. An examination of various aspects of a preliminary version of the X-ray Pinhole/Coronagraph Concept is presented. For this preliminary version, the instrument package will be carried in the shuttle bay on a mounting platform and will be connected to the occulter with a deployable boom such as an Astromast. Generally, the spatial resolution, stray light levels, and minimum limb observing angles improve as the boom length increases. However, the associated engineering problems also become more serious with greater boom lengths. T.M

A VERSATILE FIBER-OPTICS SIGNAL LINK FOR EMP TESTING AND GENERAL LABORATORY APPLICATIONS Technical Memorandum, Jul. 1977 - Jul. 1978
James C. Blackburn and Robert Martin Jun. 1980 26 p refs
(AD-A087253; HDL-TM-80-5) Avail: NTIS HC A03/MF A01 CSCL 20/6

A fiber-optic analog signal link is described that was designed specifically to be used for EMP measurements. The link accepts electrical inputs in the range from millivolts to volts and converts them to optical signals which are then transmitted by optical fibers to a remote receiver. The unit is unaffected by electric fields up to hundreds of kilovolts/meter, and a bandwidth of about 130 MHz is provided; the unit has a dynamic range of approximately 30 dB. This dynamic range is extended an additional 45 dB by an internal attenuator which is commanded (by an optical fiber link) to insert a fixed attenuation in the range of 0 to 45 dB between the input connecter and transmitter. A self-calibrator is also commanded by the same link. An unusual circuit feature is the use of a single electro-optic device to perform both light-emitting diode and detector functions. GRA

SENSITIVE MEASUREMENT OF PHOTON LIFETIME AND TRUE REFLECTANCES IN AN OPTICAL CAVITY BY A

PHASE SHIFT METHOD
J. M. Herbelin, J. A. McKay, M. A. Kwok, R. H. Ueunten, and D. S. Urevig 10 Jul. 1980 23 p refs
(Contract F04701-79-C-0080)
(AD-A087248; TR-0080-5610-2; SDTR-80-48) Avail: NTIS HC A02/MF A01 CSCL 20/6

A simplified method for measuring the effective photon lifetime in an optical resonator was developed. The technique requires the passage of a modulated continuous wave laser beam through the resonator and the measurement of the resultant shift in the phase of the transmitted intensity. The method not only permits a quick and precise measurement of the mirror reflectances, but also permits these measurements to be in situ. Such an 'on the spot' evaluation capability should be extremely useful in applications ranging from the investigation of new laser systems to the development of improved optical coatings. The method is also sensitive to the effects of absorption, scattering, and transmission from elements in the cavity. Cavity losses smaller than 100 ppm were detected. GRA

TRANSMITTANCE MEASUREMENTS AT DIRT-II Final Report
Joseph A. Curcio, Kenneth M. Haught, and Michael A. Woytko 10 Jul. 1980 53 p ref
(AD-A087003; AD-E000484; NRL-MR-4260) Avail: NTIS HC A04/MF A01 CSCL 20/6

This is a report on the NRL experiments at the DIRT-II tests sponsored by the Atmospheric Sciences Laboratory at the White Sands Missile Range in July 1970. The NRL experiment was designed to measure spectral transmittance through smoke and dust clouds generated by detonations of various explosive charges and also by impact of artillery rounds. Spectral transmission data as a function of time for 0.55 micrometers, 1.06 micrometers, and 10.37 micrometers were obtained for 63 events comprised of static detonations and artillery rounds. Transmission data for 1.06 micrometers, in most cases were similar and equal to 0.55 micrometers. In dry soil conditions the 10.37 micrometers channel showed higher transmittance values than the visible channel. There are indications that 10.37 micrometers transmittance in wet soil events is lower than visible presumably because of strong liquid water absorption at the IR wavelength. GRA

N80-32213# University of Southern California, Los Angeles.
RAMAN-INDUCED KERR EFFECT STUDIES Final Report, 15 Jul. 1976 - 14 Jul. 1979
Robert W. Hellwarth 10 Jun. 1980 14 p refs
(Grant DAAG29-76-G-0295; DA Proj. 1T1-61102-BH-57)
(AD-A087410; ARO-14188.1-P) Avail: NTIS HC A02/MF A01 CSCL 20/6

The Raman-Induced Kerr Effect, developed at U.S.C. is a new form of laser spectroscopy which is beginning to find wide application as a remote diagnostic sensor of fast (picosecond to nanosecond) transient shocks, explosions, and plasma arcs. GRA

ON THE FEASIBILITY OF USING FLIR (FORWARD LOOKING INFRARED) DATA FOR CROSSWIND MEASUREMENTS
G. R. Ochs, S. F. Clifford, and Ting-i Wang White Sands Missile Range, N. Mex. Atmospheric Sciences Lab. Jun. 1980 46 p refs
(DA Proj. 1L1-62111-AH-71)
(AD-A087738; ERADCOM/ASL-CR-80-8003-1) Avail: NTIS HC A03/MF A01 CSCL 17/5

The feasibility was theoretically examined and experimentally tested for extracting crosswind information from a forward looking infrared thermal sight system (FLIR). A general solution to the problem of obtaining crosswind information from the observation of focal plane image fluctuations is obtained. Wind weighting functions are obtained for receiving apertures and detector sizes of interest for the particular case of viewing the horizon. Experimental results are presented from measurements at visible wavelengths using stationary detectors placed in the focal plane, and also from the recorded video signals obtained directly from the FLIR. These results show that under controlled conditions with a suitable scene and C sub n to the 2nd power level it is possible to obtain crosswind information from the FLIR system. GRA

COMMON APERTURE TECHNIQUES FOR IMAGING ELECTRO-OPTICAL SENSORS Final Report, Jul. 1978 - Nov. 1979
Wright-Patterson AFB, Ohio Air Force Wright Aeronautical Labs. Feb. 1980 305 p
(Contract F33615-76-C-1135; AF Proj. 2004)
(AD-A087558; Rept-79-556-C0-10; AFWAL-TR-80-1012) Avail: NTIS HC A14/MF A01 CSCL 20/6

A multispectral optical imaging system was designed and fabricated to demonstrate the feasibility of utilizing a pointable common optical aperture in conjunction with interchangeable day or night TV sensors and a thermal imaging sensor. Limited processing capability was incorporated to permit mixing of both visible and infrared video of common scenes for more effective all weather electrooptical capability. An optical configuration was established which will accommodate image sensors as well as illuminating and designating/ranging lasers. In the early phases of the program various techniques were evaluated for optimizing spectral separation, gating image intensifiers and minimizing degradation of sensor performance due to insertion of .723 and 1.06 micron laser radiation through the common aperture. Preliminary testing indicates that combining sensors achieves synergistic performance in targeting and identification. Edited monthly R D Status Reports detail the design, fabrication and integration aspects of the program. GRA

LAMINATED FRESNEL LENSES
Robert W. Jebens Apr. 1980 27 p
(Contract DE-AC04-76DP-00789)
(SAND-80-7007) Avail: NTIS HC A03/MF A01

A fabrication method for making plastic on glass laminated Fresnel lenses is discussed. These Fresnel lenses are for application in a solar photovoltaic concentrator array. This laminated Fresnel lens fabrication method consists of making a silastic rubber mold

of a master lens array. Cast acrylic Fresnel lens arrays commercially available have potential cleaning and abrasion problems, have very large thermal expansion, and have dimensional uncertainties in their manufacture. The laminated lens is dimensionally stable with low thermal expansion, has good cleaning characteristics, and is very inexpensive in materials cost. The measured transmission of such a lens on low iron glass is 80.4 percent compared with 85.1 percent for a cast acrylic lens, and the optical quality is good enough for application in the 100X to 200X concentration range. An approach to making large lens arrays (3 by 6 ft) on a commercial scale is explored. DOE

MEASUREMENT OF THE INDEX PROFILE OF OPTICAL FIBERS BY THE REFRACTION METHOD [LA MISURA DEL PROFILO D'INDICE DI FIBRE OTTICHE CON IL METODO DI RIFRAZIONE]
Ludovico Muzii Jul. 1979 24 p refs In ITALIAN
(FUB-13-1979) Avail: NTIS HC A02/MF A01

A device to measure the functional characteristics of optical fibers by the refracted near field method is described. The basic theory is reviewed and experimental results presented. The optical system using a 6300 A laser source and the measuring procedure are detailed. Errors are + or - 1 micron for the diameter, + or - 0.005 for the aperture, and + or - 0.1 for the alpha exponent. The effect of anomalous profiles on the measured results are discussed. AN EXPERIMENTAL INVESTIGATION OF THE TRAPPING AND ENERGY LOSS MECHANISMS OF INTENSE RELATIVISTIC ELECTRON RINGS IN HYDROGEN GAS AND PLASMA Ph.D. Thesis
Adrain Charles Smith, Jr. 1977 677 p
Avail: Univ. Microfilms Order No. 8020918

Gas trapping, average ring electron energetic, plasma trapping, and hollow beam cusp injection into gas and plasma were investigated using the Cornell RECE-Berta facility. Data from an axial array of magnetic probes were compared with findings from a high energy electron current monitor to show that the trapping proceeds as a relaxation process in which an initially uniform, circulating sheath of current collapses axially in 300-500 ns to form a steady state ring. Multifoil X-ray absorption spectroscopy was used to analyze the Bremsstrahlung generated by the electrons as they impinge upon a thin tungsten wire target suspended in the circulating current. Results show that the particle energy loss rates were constant functions of time and that, typically, net energy losses of about 10 percent of the initial ring energy (500 keV) were sustained by the electrons during their residence in the mirror trap. The results of electron ring trapping and confinement in neutral gas were extended to studying these processes in a presonized plasma. A set of preliminary experimental results are presented in which an annular electron beam was passed through a coaxial, non adiabatic magnetic cusp located at one end of the magnetic mirror well. Dissert. Abstr.

STARK PROFILE MEASUREMENT OF Cu REVERSAL LINES IN A DENSE PLASMA Ph.D. Thesis
Peter Scott Sincerny 1980 135 p
Avail: Univ. Microfilms Order No. 8019727

A dense plasma was produced between two copper electrodes by ionizing high pressure (850 atm) hydrogen gas with a short electrical discharge pulse. A full set of diagnostic experiment was performed to quantitatively measure the plasma evolution. The profiles of two self reversal copper resonance lines were measured as a function of the ambient hydrogen gas pressure. These lines appear at 3247 A and 3274 A. The full half width of the two lines is found to range from 52 A to 67 A. Two computer simulation codes were developed to provide quantitative details of the plasma source. The electron density responsible for the broadening of the spectral lines was determined by analyzing the results of the numerical simulations. The region of the plasma controlling the observed line profile was identified by successfully reproducing the observed line profiles on the basis of the simulation results and with an assumed line shape. The usefulness of the observed reversal line profiles for comparison with Stark theory is limited due to the superposition of the copper lines at the high electron density, thus making individual analysis difficult. Dissert. Abstr.

INTERACTION OF HIGH VOLTAGE SURFACES WITH THE SPACE PLASMA Annual Report
Harold R. Kaufman and Raymond S. Robinson May 1980 50 p refs
(Grant NsG-3196)
(NASA-CR-165131) Avail: NTIS HC A03/MF A01 CSCL 20I

High voltage solar arrays provide spacecraft power while optimizing mass and power efficiency. Operating such arrays in the space plasma environment can result in anomalously large currents being collected through insulation defects. Two thicknesses of the insulating material were tested, with no effect found due to insulator thickness. In these tests the polyimide thickness was always much less than the pinhole diameter. The pinhole area was varied over an area range of more than 30:1. It was found that the current collected was independent of the pinhole area for hole diameters from 0.35 to 2.0 mm. Two types of adhesives were tried in two different configurations. The adhesives were chosen for their extreme difference in vacuum qualifications. Neither adhesive types nor configuration made a significant difference in current collection. The temperature of the insulating material was also varied. It was found that current collection decreased with increasing temperature. Tests were conducted to see if pinhole current collection decreased with time, as was indicated by the effects of several short tests. Current was collected for over four hours while the conductor potential was held constant at 1000 volts. A smooth decrease with time was not observed, but rather a roughly constant current collection with brief surges to high values. Tests were also conducted with the simulated solar cell biased negative. The current was found to be proportional to pinhole area. R.K.G.

A MEASUREMENT OF DEUTERIUM NEUTRAL BY THE BALMER-SERIES IN THE STP-2 HIGH BETA SCREW PINCH TOKAMAK
S. Yamaguchi and K. Hirano Jun. 1980 23 p refs
(IPPJ-471) Avail: NTIS HC A02/MF A01

The Balmer-alpha and beta are measured with a calibrated spectrograph in STP-2 screw pinch Tokamak operated under the maximum toroidal field being 9.2 kg, peak plasma current 30 kA and filling pressure 5 mtorr. The electron temperature and density profiles are obtained by ruby laser Thomson scattering. It is shown that electron temperature is about 10 eV and density is of the order 10 to the 14th power cu cm. A non-cylindrical symmetric Abel-inversion technique was used to deduce the emission coefficient profiles from that of the line intensity of the Balmer's. The collisional radiative model is applied to the

rate equations to estimate the ground state population density. It is found that at 4 micron sec from the start of the discharge the deuterium neutral density may be approximately 2 x10 to the 12th power cu cm at the center of plasma and 2 x 10 to the 14th power cu cm at the periphery. These values may contain an error of about factor two. Time history of neutral deuterium density is consistent with the increase of plasma density. A.R.H.

PRELIMINARY EXPERIMENT OF NEUTRAL BEAM INJECTION HEATING IN JIPP T-2 STELLARATOR
O. Kaneko, Y. Oka, H. Okamura, T. Kunibe, and T. Kuroda Jun. 1980 25 p refs
(IPPJ-470) Avail: NTIS HC A02/MF A01

Neutral beam injection experiments are carried out in JIPP T-2, which is a hybrid device of stellarator and Tokamak. Two neutral beam injectors are equipped tangentially in the direction of co- and counter-injections. Hydrogen neutral beams of 22 Kev, 60 KW (co-injection) and 30 KW (counter-injection) are applied to the ohmically heated stellarator plasma and also to the Tokamak plasma. The bulk ion heating efficiency for co-injection is around 1.6 eV/KW in the case of stellarator and 1.9 eV/kW in the case of Tokamak, while the heating efficiencies for counter-injection are about 1.6eV/kW in both cases. The difference between the Tokamak and stellarator is considered to be caused by the enhanced orbit loss due to the helical ripples in the stellarator. Author

ELECTROMAGNETIC OSCILLATING TWO STREAM INSTABILITY OF PLASMA WAVES
C. S. Liu and V. K. Tripathi May 1980 18 p refs
(Contracts N00014-77-C-0590; DE-A505-77DP-40032)
(AD-A087732; PUB-80-178; TR-80-101) Avail: NTIS HC A02/MF A01 CSCL 20/9

Oscillating two stream instability, in which a plasma wave decays into a zero frequency electrostatic mode and two Langmuir wave sidebands has been known for some time and shown to be an important nonlinear process leading to soliton formation, plasma collapse, etc. In this paper we have investigated the electromagnetic oscillating two stream instability of electrostatic and electromagnetic plasma waves of finite wave number by which a pump wave decays into a purely growing electromagnetic mode and two sidebands, viz., Langmuir waves of shorter wavelengths. In the case of an electromagnetic pump, i.e., a laser radiation, we have studied this instability including the effect of plasma inhomogeneity and shown its importance as a source of self-generated magnetic fields in laser fusion experiments. PLASMA INSTABILITY IN ELECTRON AND POSITRON COLLIDING BEAMS IN STORAGE RING
Han S. Uhm and Chuan S. Liu (Maryland Univ., College Park) Apr. 1980 31 p refs Submitted for publication
(Contract N00014-77-C-0590)
(AD-A087733; PUB-80-180; TR-80-103; PL-80-040) Avail: NTIS HC A03/MF A01 CSCL 20/7

The filamentation instability of the electron and positron colliding beams in a storage ring are investigated within the framework of the rigid beam model and the Vlasov-Maxwell equations, and closed algebraic dispersion relations for the complex eigenfrequency omega are obtained. It is shown that the typical growth rate of instability is a substantial fraction of the electron plasma frequency omega(pe), thereby severely limiting the electron density in storage ring. Moreover, the influence of collective self-field effects on the electron and positron colliding beams in the storage ring is investigated. The analysis is carried out, distinguishing the cases, where (a) the particle motions are in a very coherent orbit, and (b) the randomness dominates the operational condition of a storage ring (e.g., the incoherent collision location by small fluctuation, etc.). In either case, it is shown that the self-fields effects play a dominant role in the stability behavior of transverse orbit or the expansion of the beam cross sections. GRA

IRREVERSIBILITY AND TRANSPORT IN THE LOWER HYBRID DRIFT INSTABILITY
J. F. Drake Mar. 1980 36 p refs
(Contracts N00014-79-C-0665; DE-AC05-79ET-53044)
(AD-A087728; PUB-80-155; TR-80-088) Avail: NTIS HC A03/MF A01 CSCL 20/9

The dynamics of electrons in a low frequency wave propagating perpendicular to a uniform magnetic field are studied and the implications of these results for transport and heating by the lower hybrid drift instability are explored. Below a threshold e phi/T(i) approximately .25-.5, all electron energy and momentum exchange with the wave are reversible and no plasma transport is possible. Above this threshold, trapping of electrons by the wave potentials takes place and causes irreversible electron heating and momentum exchange. These results imply that anomolous transport in inhomogeneous plasma with weak drifts (diamagnetic velocity less than the ion thermal velocity) may be substantially less than previously predicted. (FE-15529-2) Avail: NTIS HC A09/MF A01

Zirconia based electrode compositions are selected for inclusion in the up coming nonslagging super hot WESTF test 42. Fabrication and processing details for these materials are presented. Test results were used to rank these materials as candidates for use under the slagging hot or nonslagging super hot operating modes. Laboratory screening tests, including electrochemical and anode arc erosion tests, have continued. A comprehensive analytical model was derived which permits detailed analysis of the role of slag properties as well as electrode slag polarization on the nature of electrochemical reactions under hot slagging conditions. Anode arc erosion tests were extended to provide preliminary data on the effect of potassium carbonate/slag versus potassium sulfate/slag mixtures on the arc erosion of copper and platinum clad copper anode samples. The results indicate increased arc damage for the sulfate/slag mixture. DOE

MHD HIGH PERFORMANCE DEMONSTRATION EXPERIMENT Quarterly Progress Report, 1 Oct. - 31 Dec. 1979
Jan. 1980 44 p
(Contract ET-78-I-01-2895)
(FE-2895-7) Avail: NTIS HC A03/MF A01

The attainment of MHD performance on a sufficiently large scale to verify that the projected efficiency of the commercial MHD concept is considered. Shakedown testing of the magnet and flow train was completed and operation of the HPDE system in the Faraday power producing mode has continued. A peak power of about 18 MW was produced with a magnetic field of 2.8 T. Significant results which were obtained involved a definition of the transverse voltage characteristics, including the voltage drop near the electrode walls, and a definition of the fluid flow through the channel and diffuser. Several operational problems

were encountered including erosion of heat sink components of the burner and channel entrance and Hall potential shorting at the aft end of the channel and diffuser. Required hardware procurement and modification were initiated by the end of the quarter to solve these problems. DOE

DEVELOPMENT, CHARACTERIZATION AND EVALUATION OF MATERIALS FOR OPEN CYCLE MHD Quarterly Report, period ending Sep. 1979
J. Lambert Bates and D. D. Marchant Nov. 1979 59 p refs
(Contracts EY-76-C-06-1830; DE-AC06-76RL-01830)
(PNL-2004-12) Avail: NTIS HC A04/MF A01

The development of hafnium rare earth oxides, with demonstrated potential for MHD hot electrode, continues at a high level. Procedures for fabricating high density ceramic compacts with uniform microstructures at temperatures below 1875 K for three compositions were developed. Bars of these materials are being fabricated for testing in the Westinghouse WESTF facility. Yttrium chromites, which have also shown potential for hot electrodes, are being fabricated into test bars by a commercial supplier. These materials are being prepared for testing in ESTF. The required electrical conductivity and thermal conductivity are being measured for these electrode materials. The RFG air preheater refractory, tested in Montana State University's heat exchangers was characterized and evaluated. The potential mechanism for corrosive attack by the molten slag was identified. CONCEPTUAL DESIGN OF RST: AN rf-DRIVEN, STEADY-STATE TOKAMAK Final Report
R. Prater, D. Bhadra, L. Bikadi, R. Bourque, W. Chen, C. Chu, J. Dalessandro, R. Harvey, M. Henderson, T. Ohino et al Mar. 1980 251 p refs
(EPRI Proj. 323-3)
(EPRI-AP-1351) Avail: NTIS HC A12/MF A01

The preliminary conceptual design of a radio frequency driven, steady state Tokamak (RST), is described. The function of RST was to develop the physics and engineering bases for the development of the Tokamak as a true steady state reactor. The physics of radio frequency current drive, using a variety of electromagnetic waves, is discussed. The device made use of a novel superconducting toroidal magnetic field coil concept, in which the axial current was carried in only three return legs, and superconducting pullback coils were used to reduce the magnetic field ripple. This technique greatly increases access to the plasma. Impurity control by means of edge cooling, bundle divertor, and radio frequency wave momentum sources is discussed, as well as fueling. DOE

HYPERFUSE: A NOVEL INERTIAL CONFINEMENT SYSTEM UTILIZING HYPERVELOCITY PROJECTILES FOR FUSION ENERGY PRODUCTION AND FISSION WASTE TRANSMUTATION
Henry Makowitz, James R. Powell, and Richard Wiswall 1980 14 p refs Presented at the 2nd Intern. Conf. on Emerging Nucl. Energy Systems, Lausanne, Switzerland, 8 Apr. 1980
(Contract DE-AC02-76CH-00016)
(BNL-27784; CONF-800446-4) Avail: NTIS HC A02/MF A01

Parametric system studies of an inertial confinement fusion (ICF) reactor system to transmute fission products from an LWR economy were carried out. The ICF reactors would produce net power in addition to transmuting fission products. The particular ICF concept examined is an impact fusion approach termed HYPERFUSE, in which hypervelocity pellets, traveling on the order of 100 to 300 km/sec, collide with each other or a target block in a reactor chamber and initiate a thermonuclear reaction. The DT fusion fuel is contained in a shell of the material to be transmuted. The 14 MeV fusion neutrons released during the pellet burn cause transmutation reactions that convert the long lived fission products either to stable products or to species that decay with a short half life to a stable product. RELAXATION OF CHARGED PARTICLES INJECTED INTO A HOT PLASMA
Nils Hoernquist Mar. 1980 19 p refs
(FOA-C-20342-A2) Avail: NTIS HC A02/MF A01

Relaxation ranges and times of charged particles injected into a hot plasma are derived and compared with classical theory. Distant collisions as well as a more vigorous expression for close collisions are taken into account, revealing a significant difference for ion-ion relaxation. By using Bethe's formula for the stopping power of an energetic particle injected into a solid and redefining the ionization potential into a 'plasma potential' by dimensional arguments, an expression for the plasma case is derived and shown to be in qualitative accord with the rigorous expression for relaxation. CRYSTAL CLEAVING MACHINE Patent Application
John S. J. Benedicto and Frederick C. Hallberg, inventors (to NASA) Filed 29 Aug. 1980 19 p
(NASA-Case-GSC-12584-1; US-Patent-Appl-SN-182879) Avail: NTIS HC A02/MF A01 CSCL 20B

A machine is disclosed for cleaving hard crystals with precision and uniformity. It includes a vertical axis positioning control means for an adjustable spring tension guided hammer mechanism employed to strike an anvil and thereby generate a crystal cleaving shock wave transmitted to a cleaving blade. An underlying crystal holding fixture with horizontal position control means includes a zero reference stop face for the crystal and opposing spring loaded clamping and vertical positioning elements which are precisely guided. The crystal is restrained only to the extent that it remains in an ideal position for cleaving until the shock wave begins to propagate along a cleavage plane. Thus the shock wave forces that separate the crystal are balanced and the light restraining force used to hold the crystal allows it to splay apart with minimal shock wave damping. NASA

Various studies of the concentration of the solution around a growing crystal using interferometric techniques are reviewed. A holographic interferometric technique used in laboratory experiments shows that a simple description of the solution based on the assumption of a purely diffusive mechanism appears inadequate since the convection, effective even in reduced columns, always affects the growth. A.R.H.

FEASIBILITY OF OPEN TUBE SLIDER GROWTH OF HgCdTe FROM Te-RICH SOLUTION Interim Technical Report, Jan. 1979 - Jan. 1980

Joseph L. Schmit and John E. Boners Feb. 1980 62 p refs

(Contract F33615-77-C-5142; AF Proj. 2423)

(AD-A086342; AFWAL-TR-80-4068) Avail: NTIS HC A04/MF A01 CSCL 20/2

This report covers the feasibility demonstration of the growth of Hg1-x-CdxTe by liquid phase epitaxy from Te-rich solution at atmospheric pressure. Growth parameters are calculated from the phase diagram, measurement methods are described for determining layer thickness, uniformity, composition, and electrical properties. Substrate preparation and the growth process are described. Comparisons are made with growth from Hg-rich and HgTe-rich solutions. Layers as thin as 2 micrometers and as thick as 54 micrometers have been grown; most layers are 1 cm sq but some are 2x3 cm sq. We conclude that LPE growth is feasible from Te-rich solution at atmospheric pressure and are continuing our efforts to optimize the growth parameters and to increase the layer area. GRA

FABRICATION OF JOSEPHSON TUNNEL JUNCTIONS BY REACTIVE ION MILLING

Alan W. Kleinsasser and Robert A. Buhrman 21 Jul. 1980 12 p refs

(Contract N00014-76-C-0526)

(AD-A087448; Rept-80-3) Avail: NTIS HC A02/MF A01 CSCL 20/10

A new technique has been developed for growing high quality, ultrathin oxide layers on metal films, suitable for use as tunneling barriers in Josephson junction devices. The oxides are produced with an argon oxygen ion beam, and the rate of growth is determined by the competition between oxidation and sputtering by the ions. The oxidation technique has been applied to the fabrication of high current density submicron niobium lead alloy Josephson junctions. High quality junctions have been produced with critical current densities exceeding 100,000 amp/sq cm and having low leakage currents at voltages below the energy gap. An edge geometry has been developed, allowing in line junctions to be formed on the ion mill patterned edge of Nb film. In this way, junction width is controlled by the Nb film thickness. GRA

HIGH QUALITY SUBMICRON NIOBIUM TUNNEL JUNCTIONS WITH REACTIVE ION BEAM OXIDATION

Alan W. Kleinsasser and R. A. Buhrman 22 Jul. 1980 15 p refs

(Contract N00014-76-C-0526; NR Proj. 319-096)

(AD-A087449; Rept-80-4) Avail: NTIS HC A02/MF A01 CSCL 20/10

A new reactive ion beam oxidation technique has been applied to the fabrication of rugged, high quality niobium-lead alloy Josephson tunnel junctions. Control of critical current density over a wide range is possible, and critical current densities exceeding 1 million amp/sq cm have been obtained. In addition, a process-compatible edge geometry has been developed which allows a junction to be formed on the faceted edge of a niobium base electrode, yielding devices with areas of 10 to the minus 9th power sq cm using 1 micrometer photolithography. SURFACE DEFECTS AND THERMODYNAMICS OF CHEMISORBED LAYERS

M. G. Lagally, T.-M. Lu, and D. G. Welkie 14 Sep. 1979 35 p refs

(Contract N00014-76-C-0727; NR Proj. 392-014)

(AD-A086918) Avail: NTIS HC A03/MF A01 CSCL 07/4

Chemisorbed overlayers on single crystal surfaces can in many cases be considered as lattice gases. The general features of temperature-coverage phase diagrams resulting from attractive or repulsive adatom interactions in such systems are discussed in analogy with binary solid solutions. The effect of surface and overlayer defects on the determination of phase boundaries is considered. The use of low energy electron diffraction (LEED) to study surface defects and overlayer phase diagrams is briefly summarized. GRA

ORGANIC METALS AND SEMICONDUCTORS: THE CHEMISTRY OF POLYACETYLENE, CH(X), AND ITS DERIVATIVES Interim Technical Report

Alan G. MacDiarmid and Alan J. Heeger 21 Oct. 1979 14 p refs Presented at the Advan. Study Inst. on the Phys. and Chem. of Low Dimensional Solids, Tomar, Portugal, Aug. 1979

(Contract N00014-75-C-0962; NR Proj. 356-602)

(AD-A087102; TR-79-8) Avail: NTIS HC A02/MF A01 CSCL 07/3

Both cis- and trans-forms of polyacetylene, (CH)(x), may prepared as silvery, flexible polycrystalline, semiconducting films. The cis-films can be stretched to over three times their original length with partial alignment of the (CH)(x) fibrils. Through chemical or electrochemical doping, the electrical conductivity of the films can be increased over twelve orders of magnitude with properties ranging from insulator to semiconductor to metal. By the use of donors or acceptors, n-type or p-type polymer, respectively, is produced. Photoelectrochemical photovoltaic cells have been fabricated using (CH)(x) as the active photoelectrode. GRA

SUPERCONDUCTING TUNNELING AND TUNNELING APPLICATIONS IN HIGH Tc A15 SUPERCONDUCTORS Final Report

M. R. Beasley May 1980 39 p refs

(Contract N00014-77-C-0439)

(AD-A087125; GL-3133) Avail: NTIS HC A03/MF A01 CSCL 20/3

This program was an outgrowth of our early empirical successes in forming superconducting tunnel junctions on thin films of the high transition temperature superconductors, specifically those in the so-called A15 class such as Nb3Sn (Tlc) approximately 18 K) and V3Si (Tlc) approximately 16 K). Prior to this all attempts at tunneling in the A15 superconductors had been on bulk material and were not widely successful. Moreover such non-thin film junctions are of limited device interest. As a result of this program we now have general junction formation techniques, apparently suitable for the A15 superconductors as a class, which are being routinely used for material diagnostics and for studies of the superconducting properties of these materials. More importantly, perhaps, they appear to have important device potential. We summarized only the main results and conclusions, referring the reader to the appendix for a more comprehensive discussion. GRA

ORGANIC METALS AND SEMICONDUCTORS: POLYACETYLENE (CH)x AND ITS DERIVATIVES

Alan G. MacDiarmid and Alan J. Heeger 21 Oct. 1979 12 p refs Submitted for publication
(Contract N00014-75-C-0962; NR Proj. 356-602)
(AD-A087024; LRSM-TR-79-9) Avail: NTIS HC A02/MF A01 CSCL 07/3

Polyacetylene (CH sub x) is the simplest organic polymer. Both the cis- and trans-forms may be prepared as silvery, flexible, polycrystalline, semiconducting films. The cis-films can be stretched over three times their original length with partial alignment of the (CH) fibrils. Through chemical or electrochemical doping, the electrical conductivity of the films can be increased over twelve orders of magnitude with properties ranging from insulator to semiconductor to metal. By the use of donors or acceptors n-type or p-type polymer, respectively, is produced. When doped, the partly aligned (CH) films show marked anisotropic electrical and optical properties. Studies have shown that rectifying p-n junctions as well as Schottky barrier junctions can readily be fabricated from polyacetylene. GRA

CHARGE STORAGE, RETENTION AND ENDURANCE IN MNOS DEVICES Final Report, 10 Apr. 1977 - 13 Apr. 1980
Kurt Lehovec 13 Jun. 1980 47 p refs
(Contract DAAG29-79-C-0095; Grants DAAG29-78-G-0100; DAAG29-77-G-0123)
(AD-A087432; ARO-14744.6-EL) Avail: NTIS HC A03/MF A01 CSCL 20/12

The steady state current through the double dielectric of MNOS capacitors on p-silicon substrate was measured as function of temperature for several fixed fields in the silicon oxide of a polarity promoting hole flow from the silicon. It is shown that the availability of empty recipient trap states for holes tunneling from the silicon into the nitride controls the current. The occupancy of these trap states is governed by Frenkel-Poole detrapping at elevated temperatures and by Fowler-Nordheim tunnel emission from the traps at low temperature. Transient charging measurements support this interpretation. GRA

IMPROVEMENT IN GaAs DEVICE YIELD AND PERFORMANCE THROUGH SUBSTRATE DEFECT GETTERING Final Report, 1 Feb. 1978 - 19 Jun. 1980
T. J. Magee, J. Peng, R. Ormond, R. A. Armistead, M. Malbon (Avantek, Inc., Santa Clara, Calif.), and C. A. Evans, Jr. (C. Evans and Associates) Jun. 1980 119 p refs
(Contract N00014-78-C-0065; ARPA Order 0010; NR Proj. 243-022)
(AD-A087712; ARACOR-TR-19-3) Avail: NTIS HC A06/MF A01 CSCL 20/12

The use of mechanically produced, back surface damage as a means of gettering impurities and defects in GaAs wafers has been investigated. Comparative analyses have been done on both ion implantation and mechanical back surface damage gettering techniques. The increased thermal stability of mechanically produced damage has shown ion implantation techniques to be less effective for gettering over long anneal periods at elevated temperatures. Stress gradients produced by graded dislocation distributions produce reductions in front surface defect concentrations and effective gettering of Au and Cr at the back surfaces. Thermal stability times of back surface damage at anneal temperatures of 700-800 C is typically on the order of 2 - 3 hours, corresponding to the point at which major back surface microstructural damage is largely annealed. Increases in the thermal stability period were attained by encapsulating the back surface with an As-doped SiO2 layer. Gettering of Cr by back surface damage was also investigated at low temperatures (300 C - 400 C) for anneal periods of 10 - 300 hrs. Measurable concentrations of Cr were detected with the process characterized by an activation energy of approximately 0.88 eV and a time dependent term, exp (theta square root of t). Using the developed gettering procedures, FET structures were fabricated on VPE layers on pregettered GaAs wafers. Dramatic improvements in yield per wafer, noise figures at higher frequencies and input capacitance values were obtained on 'inscreened' wafers processed through a normal fabrication line. GRA

PROPERTIES OF SUPERCONDUCTOR-NORMAL METAL-SUPERCONDUCTOR MICROBRIDGES Ph.D. Thesis
John Michael Warlaumont 21 Jul. 1980 179 p refs
(Contract N00014-76-C-0526; NR Proj. 319-096)
(AD-A087512; Rept-80-2) Avail: NTIS HC A09/MF A01 CSCL 09/5

This thesis describes the fabrication and electrical measurement of short, high resistance (R approx. 1 ohm) superconductor-normal metal-superconductor microbridges. These small (length and width as small as 200 nm), planar structures were produced using electron beam lithography and ion beam etching. Lead-copper-lead structures were primarily studied; other materials were also briefly investigated. The small cross section of the bridges resulted in a uniform current distribution in the bridges at all temperatures, thus enabling the experimental determination of the critical current versus temperature relation for all temperatures between T sub c and 0.05 T sub c, where T sub C is the transition temperature of the electrodes. The low voltage current voltage (I-V) characteristics were studied in detail. Constant voltage steps were observed in the I-V curves for all frequencies of microwave radiation used. The high resistance of these samples permitted measurement of the I-V curves for voltages much greater than the energy gap of the electrodes. A high voltage peak in the dV/dI curves was observed, and it was speculated that this peak was due to an extra dissipation in the electrodes. In addition, the low voltage resistance was found to have a temperature dependence which agreed with the phenomenological theory of Pippard et al., a theory which attributes the extra resistance to energy dissipation in the electrodes. GRA

GRAIN BOUNDARY DISLOCATIONS IN PLANE MATCHING GRAIN BOUNDARIES
R. Schindler, J. E. Clemans, and R. W. Balluffi Aug. 1979

34 p refs
(Contract DE-AS02-78ER-05002)
(DOE/ER-05002/7) Avail: NTIS HC A03/MF A01

Secondary grain boundary dislocation structures were observed in plane matching boundaries over a relatively wide range of crystal misorientations and grain boundary orientations. Results indicate that many boundaries occurring in polycrystalline materials which have been assumed to be general boundaries in previous studies may actually have been special boundaries of the plane matching type. Also, it appears that such boundaries should be found in general polycrystalline material with a relatively high probability. R.C.T.

FUNDAMENTAL STUDIES OF GRAIN BOUNDARY PASSIVATION IN POLYCRYSTALLINE SILICON WITH APPLICATION TO IMPROVED PHOTOVOLTAIC DEVICES Final Research Report, Feb. - Dec. 1979
C. H. Seager and D. S. Ginley Feb. 1980 118 p refs
(Contract DE-AC04-76DP-00789)
(SAND-80-0879) Avail: NTIS HC A06/MF A01

Several aspects of the electrical properties of silicon grain boundaries were studied. The temperature dependence of the zero bias conductance and capacitance of single boundaries was measured and shown to be in good agreement with a simple double depletion layer/thermal emission model developed to predict the transport properties of such structures. In addition, it was shown that deconvolution of the I-V properties of some boundaries yields effective one electron densities of trapping states which are in good agreement with estimates obtained by low temperature electron emission measurements. Experiments were also performed which indicate that diffusion of atomic hydrogen into silicon grain boundaries greatly reduces this density of trapping states. In properly prepared, large grained polycrystalline samples, all measurable traces of grain boundary potential barriers can be removed to substantial penetration depths after several hours exposure to a hydrogen plasma at elevated temperatures. Initial experiments on prototype polysilicon solar cells have shown that this passivation process can improve AM1 efficiencies. DOE

GENERAL APPLICATION OF THE CRITICAL PATH METHOD TO RESOURCE CHARACTERIZATION AND PLANNING FOR UNDERGROUND COAL MINING Final Technical Report
May 1980 287 p refs
(Contract DE-AC01-79ET-11268)
(DOE/ET-11268/3) Avail: NTIS HC A13/MF A01

Application of the critical path method (CPM) to the total mine planning process is described. A commercially available CPM software package called SPRED (Solution of the Precedence Diagram) was chosen. A key prerequisite to the application of CPM was the identification of all of the activities involved in the mine planning process and the determination of all of the interrelationships that exist between them. A network format depicted all of the activities as labeled boxes in their proper logical sequence of events. Interdependencies were shown by lines connecting the related activities. Information necessary for the application of critical path scheduling techniques was produced and the data prepared in the format suitable for input to the SPRED system. DOE

DATA ELEMENT DICTIONARY: DTIC UNIFORM DATA SYSTEM

Allan Kuhn, comp. and Melissa L. Young, comp. Apr. 1980 553 p

(AD-A083800; DTICH-4185.8) Avail: NTIS HC A24/MF A01 CSCL 05/2

The dictionary standardizes the data elements and identifies the data uses that constitute the Defense Technical Information Center uniform system. These standardized data elements enable DTIC to incorporate its data banks, currently operating independently, into a uniform system. They provide the capability of standardized access to all component data bases, or any combination of them. The dictionary serves as a communication link between system designers, programmers and subject specialists. It provides a foundation for effective management of data. Detailed descriptions of the current data banks and their relationships to the planned uniform system are included. Author (GRA)

REVIEW OF DEPARTMENT OF ENERGY SPONSORED CODES AND DOCUMENTATION AVAILABLE FROM PURDUE AND LEHIGH UNIVERSITIES PROCESSES MODELING CONTRACTS

David M. Lister Apr. 1980 43 p refs

(Contract W-7405-eng-26)

(K/CSD/TM-35) Avail: NTIS HC A03/MF A01

The Purdue project had two principal objectives. The first was to construct a modular computer simulation package for the design of coal conversion systems. The second was to use this package to study general coal conversion flowsheet alternatives. Seven general codes and seven models of major components of the modified Illinois Coal Gasification Group (ICGG) process were developed. The object of the Lehigh work was to select, assemble and develop numerical algorithms implemented as computer codes for the dynamic analysis and continuous simulation of the modified ICGG coal conversion plant. Two general-purpose programs and nine models of major components of the ICGG plant were developed. A brief description of these programs and their availability and performance on the Oak Ridge IBM computer systems are presented. DOE

Research which has been underway to develop a fundamental and general theory of information flow and analysis is described. More specifically, the research attempts to: (1) identify and quantify important variables and parameters in the information flow process; (2) establish relationships among these variables; (3) apply the theory to practical situations and to examine the resulting implications; and (4) develop models, both simulation and experimental, to utilize and validate the theory. INTERNATIONAL ACCESS TO AEROSPACE INFORMATION

Apr. 1980 105 p refs In ENGLISH and FRENCH Meeting held in Athens, 17-18 Oct. 1979

(AGARD-CP-279; ISBN-92-835-0264-7) Avail: NTIS HC A06/MF A01 CSCL 05B

A review of the status of Greek organization and facilities with respect to access to aerospace information is presented. The state of European cooperation in the field and the nature of NASA's contribution is considered. Requirements and tools for international cooperation and data exchange are discussed, as well as problems in the utilization of aerospace literature and nonliterature data in aerospace research and development. For individual titles, see N80-32284 through N80-32294.

Avail: NTIS HC A06/MF A01 CSCL 05B

The NASA Scientific and Technical Information Program operations are performed by two contractor operated facilities. The NASA STI Facility, located near Baltimore, Maryland, employs about 210 people who process report literature, operate the computer complex, and provide support for software maintenance and developments. A second contractor, the Technical Information Services of the American Institute of Aeronautics and Astronautics, employs approximately 80 people in New York City and processes the open literature such as journals, magazines, and books. Features of these programs include online access via RECON, announcement services, and international document exchange. E.D.K.

STATE-OF-THE-ART OF STANDARDIZATION OF BIBLIOGRAPHIC DATA ELEMENTS
Harold Diericky *In* AGARD Intern. Access to Aerospace Inform. Apr. 1980 7 p refs (For primary document see N80-32283 22-82)
Avail: NTIS HC A06/MF A01

The current situation with regard to standardization of data elements in bibliographic records is summarized. The following areas are considered: headings, bibliographic description proper, other areas or particular attributes of the bibliographic record. International and national rules and standards of international significance are dealt with. Although the difficulty for standardization efforts to suit the different requirements of various user groups is recognized, the conclusion reached is that standardization of form and presentation of bibliographic data elements is an essential prerequisite to achieve international compatibility of bibliographic records, particularly in an automated environment. STATE-OF-THE-ART OF DATA EXCHANGE: PROBLEMS OF FORMATS AND STANDARDS
J. S. MackenzieOwen *In* AGARD Intern. Access to Aerospace Inform. Apr. 1980 5 p refs (For primary document see N80-32283 22-82)
Avail: NTIS HC A06/MF A01

The vast growth of bibliographic data services over recent years has produced many problems in the field of compatibility for data exchange. It is beginning to be understood that there exists a major gap between the library community on the one side, and the abstracting and indexing services on the other side. It is also becoming clear that any standardized format for bibliographic data exchange should be flexible enough to incorporate the diverse needs of many different users. An effort is being undertaken by UNESCO to solve these problems. The present situation, problems, and future developments in this field are described. E.D.K.

THE MANAGEMENT OF DOCUMENTS HAVING A RESTRICTED CHARACTER [LA QUESTION DES DOCUMENTS AYANT UN CARACTERE DE RESTRICTION]
J. H. Klopp *In* AGARD Intern. Access to Aerospace Inform. Apr. 1980 5 p ref In FRENCH (For primary document see N80-32283 22-82)
Avail: NTIS HC A06/MF A01

Documents containing military or industrial secrets or information reserved to the needs of the State are best managed in a manner analogous to that used for open documents, but with important security regulations imposed by a documentation center. It is preferable for a defense documentation center to create a chain of use parallel to the classic chain of use for open documents, rather than to intermingle documents. The most important advantage of the decision to create a special center

for processing classified documents is an uncontested control of the stamping, stocking, and dissemination of these documents. The importance of declassification is discussed and a table is provided showing the markings used by NATO and 14 of its member nations for the various classifications of restricted documents. Transl. by A.R.H.

FULL TEXT HANDLING: A CRITICAL REVIEW
R. P. L. Jones *In* AGARD Intern. Access to Aerospace Inform. Apr. 1980 10 p (For primary document see N80-32283 22-82)
Avail: NTIS HC A06/MF A01

The wide capabilities of full text information retrieval systems are demonstrated. The basic capabilities of such systems are described including the strengths and weaknesses that seem to be inherent in the techniques that are in use. The wider application of such systems is also described. Emphasis is placed on their capability to form a nucleus for integrated information management systems which are flexible in use and do not require programming skills to exploit them. E.D.K.

N80-32293# Max-Planck-Institut fuer Aeronomie, Katlenburg-Lindau (West Germany).
THE NUMERIC AEROSPACE DATA: PROBLEMS OF EVALUATION, HANDLING AND DISSEMINATION
G. K. Hartmann *In* AGARD Intern. Access to Aerospace Inform. Apr. 1980 10 p refs (For primary document see N80-32283 22-82)
Avail: NTIS HC A06/MF A01

In context with dissemination and handling procedures the problems being faced are to distinguish between small, medium, and large information systems. Due to the fact that most of the numeric aerospace data are nonreproducible time series data (often also space dependent) with tremendous growth rates it is becoming extremely difficult and time consuming for any scientist and information system not actively working in the specific field to evaluate, disseminate, and handle those data with a high degree of efficiency and reliability. Thus it is very likely that also in the future, numeric aerospace data exchange activities will by far dominate the pure handling activities despite any technical progress. E.D.K.

N80-32294*# Lunar and Planetary Inst., Houston, Tex.
THE ROLE OF WORLD DATA CENTERS AND THE LUNAR AND PLANETARY INSTITUTE IN THE INTERNATIONAL EXCHANGE OF LUNAR AND PLANETARY DATA
Frances B. Waranius *In* AGARD Intern. Access to Aerospace Inform. Apr. 1980 8 p refs (For primary document see N80-32283 22-82)
(Grant NSR-09-051-001)
(LPI-Contrib-382) Avail: NTIS HC A06/MF A01

The success of many lunar and planetary investigations has resulted in the accumulation of a mass of data in a myriad of formats and medias. The application of these data to comparative planetology, origin of the solar system, and potential industrial applications of space has made it necessary for scientists from many disciplines to have access to the data. The collections of these data are so diverse that it is often difficult to select what is needed based on catalog information alone. The Lunar and Planetary Institute (LPI) proposes to bring the user and the data together. As a research support organization operated by the Universities Space Research Association, the LPI through its active Visiting Scientist Program, a balanced program of study workshops and topical conferences, and organized and supervised data collections has assisted scientists, educators, and students to review, study, and obtain the data necessary to the pursuit of their research. THE GLOBAL 2000 REPORT TO THE PRESIDENT. ENTERING THE TWENTY-FIRST CENTURY, VOLUME 1
1980 55 p refs 2 Vol.
Avail: SOD HC

Probable trends in population, resources, and environment were estimated between the year 1975 and 2000. Trend projections were developed using the long term global models employed by federal agencies. It is indicated that if present trends continue, the world in 2000 will be more crowded, more polluted, less stable ecologically, and more vulnerable to disruption than the world today. Major findings and conclusions are reported. R.C.T.

N80-32296# Council on Environmental Quality, Washington, D.C.
THE GLOBAL 2000 REPORT TO THE PRESIDENT. ENTERING THE TWENTY-FIRST CENTURY. VOLUME 2: THE TECHNICAL REPORT
1980 775 p refs 2 Vol.
Avail: SOD HC

Changes in pollution, climate, technology, Earth resources, energy, and the environment until the end of the century as projected by U.S. Government agencies using their most frequently employed long term planning models and analytical tools are discussed. A sequential approach was used to obtain a measure of self consistency, coherence, and interrelationship so as to provide an integrated global model which reflects the implications if current U.S. policies remain unchanged. Each of the models used is described and other global models are examined and compared with the global model developed. A.R.H.

EXAMPLE OF A POLICY AIMED AT INCREASING THE VALUE OF SPIN-OFFS FROM SPACE TECHNOLOGY IN OTHER FIELDS [EXEMPLE D'UNE POLITIQUE DE VALORISATION DE RETOMBES TECHNOLOGIQUES SPATIALES DANS D'AUTRES DOMAINES]
Didier G. Compard Paris 1980 36 p In FRENCH Presented at Intern. Colloq. on the Econ. Effects of Space and Other Adv. Technol., Strasbourg, 28-30 Apr. 1980
(SNIAS-801-422-101) Avail: NTIS HC A03

Emphasis is given to applications derived from space systems, launching devices and ballistic motors. The underlying philosophy is presented together with the objectives sought. These applications concern energy (storage facilities, off-shore oil installations, nuclear and solar power), medicine, vehicle breaking systems, new materials, some specific technologies (extraction of metals, chemical synthesis, drilling), and safety (particularly in aeronautics. Special studies including the design and demonstration of systems for the chemical and petroleum industries, as well as software systems for ships and other proposes are also described. Some concrete examples are treated. Economics aspects are discussed together with expected developments.

A MASS REDUCTION EFFORT OF THE ELECTRIC AND HYBRID VEHICLE Final Report
Richard B. Freeman and Herbert A. Jahnle Mar. 1980 193 p refs Sponsored by NASA Prepared for JPL
(Contract JPL-955283)
(NASA-CR-163520; TCR-0513; JPL-955283-1; JPL-9950-374) Avail: NTIS HC A09/MF A01 CSCL 13F

Weight reduction, cost competitiveness, and elimination of the intrusion beam resulted from the redesign and fabrication using composite materials of the door outer panel and intrusion beam from a Chevrolet Impala. The basis of the redesign involved replacing these two steel parts with a single compression molding using the unique approach of simultaneously curing a sheet molding compound outside panel with a continuous glass fiber intrusion strap. A weight reduction of nearly 11 pounds per door was achieved. Additional weight savings are possible by taking advantage of the elimination of the intrusion beam to design thinner door structures. The parts consolidation approach allows the composite structure to be cost competitive with the original steel design for both the lower production car models and for the near to midterm production vehicles using current state of the art composite production techniques. The design, prototype fabrication, costing, material, properties and compression molding production requirements are discussed. A.R.H.

DESIGN STUDY OF STEEL V-BELT CVT FOR ELECTRIC VEHICLES Final Report
J. C. Swain, T. A. Klausing, and J. P. Wilcox Jun. 1980 131 p refs
(Contracts DEN3-116; EC-77-A-31-1044)
(NASA-CR-159845; DOE/NASA/0116-80/1) Avail: NTIS HC A07/MF A01 CSCL 13F

A continuously variable transmission (CVT) design layout was completed. The intended application was for coupling the flywheel to the driveline of a flywheel battery hybrid electric vehicle. The requirements were that the CVT accommodate flywheel speeds from 14,000 to 28,000 rpm and driveline speeds of 850 to 5000 rpm without slipping. Below 850 rpm a slipping clutch was used between the CVT and the driveline. The CVT was required to accommodate 330 ft-lb maximum torque and 100 hp maximum transient. The weighted average power was 22 hp, the maximum allowable full range shift time was 2 seconds and the required lift was 2600 hours. The resulting design utilized two steel V-belts in series to accommodate the required wide speed ratio. The size of the CVT, including the slipping clutch, was 20.6 inches long, 9.8 inches high and 13.8 inches wide. The estimated weight was 155 lb. An overall potential efficiency of 95 percent was projected for the average power condition.

RAILROAD ELECTRIFICATION IN AMERICA'S FUTURE: AN ASSESSMENT OF PROSPECTS AND IMPACTS Final Report
Ronald K. White, Irving W. Yabroff, Edward M. Dickson, R. Allen Zink, Mary E. Gray, and Albert E. Moon Jan. 1980 175 p refs
(Contracts EY-76-C-03-1176; DE-AT03-76CS-50115)
(SAN-1176-T4) Avail: NTIS HC A08/MF A01

Such considerations as the level of traffic, the relative financial health of individual railroads, the capacity of the associated supply and engineering/construction industries, and the logical connecting points at classifying yards, as well as the national interest value of creating a continuous system, are used to construct a scenario for railroad electrification that closely approximates how an electrification program might be implemented. This scenario provides for an electrified network involving 14 mainlines operated by 10 companies that could transport much of the nation's rail borne freight. Five years of planning and engineering work would be required for each link before construction could begin. With 1000 miles or less of electrified route per year, 14 years would be needed to construct the 9000 mile network. Railroad energy costs, railroad freight levels, maintenance costs, purchases and leases of rolling stock, electrification facility investments, future inflation, rate setting practices, annual depreciation, taxes, and profits are calculated.

COMPUTATIONAL ASTROPHYSICS RELATING TO THE INTERSTELLAR MEDIUM: PROBLEMS AND PROSPECTS FOR THE 1980'S
Paul R. Woodward May 1980 8 p Presented at the Conf. on Computational Astrophys., Langley AFB, Va. Feb. 1980; sponsored by NASA. Ames Research Center Submitted for publication
(Contract W-7405-eng-48)
(UCRL-84410; CONF-800236-1) Avail: NTIS HC A02/MF A01

The general goal of research on the interstellar medium is to understand the structure and dynamics of the interstellar gas. This subject is important for three reasons. First, the classic tracers of the spiral structure of galaxies are related directly to the gaseous component of galactic disks, therefore, an understanding of the dynamics of the gas is essential in interpreting observations of spiral galaxies. Second, radio continuum observations relate to the magnetic field, which is frozen into the gas under most circumstances. Hence these observations must be interpreted using magnetohydrodynamic models. Third, the initial conditions for star formation are determined by the structure and dynamics of the interstellar gas. In this way gas dynamics plays an essential role in understanding the relative numbers of binary and single stars, the formation of planetary systems, and even the evolution of the stellar content of galaxies. DOE

NUMERICAL STUDY OF ROTATING INTERSTELLAR CLOUDS: EQUILIBRIUM AND COLLAPSE Ph.D. Thesis
Michael Lester Norman Jun. 1980 231 p refs Submitted for publication
(Contract W-7405-eng-48)
(UCRL-52946) Avail: NTIS HC A11/MF A01

The equilibrium and collapse of rotating, axisymmetric, idealized interstellar gas clouds is calculated with a 2D hydrodynamics code. The hydrodynamics features an improved angular momentum advection algorithm. Angular momentum is advected consistently with mass by deriving angular momentum fluxes from mass fluxes and the local distribution of specific angular momentum. Local conservation is checked by a graph of mass versus specific angular momentum for the cloud as a whole. DOE

MINERALOGIC AND PETROLOGIC STUDIES OF LUNAR SAMPLES AND METEORITES Final Report, 1 Feb. 1979 - 31 Aug. 1980
John A. Wood 31 Aug. 1980 17 p refs
(Grant NsG-7596)
(NASA-CR-163498) Avail: NTIS HC A02/MF A01 CSCL 03B

Experimental and thermodynamic research on the pressure temperature limits of the stability of the mineral assemblages found in pristine, spinel bearing lunar highland lithologies demonstrated the likelihood that the minerals originated in the lower stratigraphic levels of the primordial crust. The phase equilibrium in silicate solid/liquid systems of planetary importance were thermochemically interpreted in order to model the early formation of the crusts and maneles of Earth and Moon sized planets. The petrography and chemical composition of coarse grained gabbro, the chemical analysis and age dating of clasts from Apollo 16 breccia, the analysis of glass particles from Apollo 16 soil samples, the study of Allende and Mokoia meteorites as a source of information about events in the solar nebula, and the hydrothermal alteration of amorphous materials were also investigated. The capabilities of a model for addressing the problem of the origin of the Earth's moon by the disruptive capture mechanism are examined as well as models of the thermal evolution of hypothetical meteorite bodies. Progress in determining the composition of stony meteorite specimens collected at the Allan Hills site during the Antarctic field exploration is reported. A.R.H.

THE INTERNATIONAL HALLEY WATCH
Jul. 1980 80 p refs
(NASA-TM-82181) Avail: NTIS HC A05/MF A01 CSCL 03B

In preparation for the 1985 to 1986 apparition of Halley's Comet, the International Halley Watch (IHW) has initiated a comprehensive program to stimulate, encourage, and coordinate scientific observation of the apparition. The observing groups with which the IHW plans to interact are discussed and the ground based observing nets are described in detail. An outline of the history of observations of Halley's Comet and a synopsis of comet properties and physics are included. E.D.K.

THE MOSAICS OF MARS: AS SEEN BY THE VIKING LANDER CAMERAS Final Report
Elliott C. Levinthal (Stanford Univ.) and Kenneth L. Jones Washington NASA Sep. 1980 79 p
(Grant NsG-7538)
(NASA-CR-3326) Avail: NTIS HC A05/MF A01 CSCL 03B

The mosaics and derivative products produced from many individual high resolution images acquired by the Viking Lander Camera Systems are described. A morning and afternoon mosaic for both cameras at the Lander 1 Chryse Planitia site, and a morning, noon, and afternoon camera pair at Utopia Planitia, the Lander 11 site. The derived products include special geometric projections of the mosaic data sets, polar stereographic (donut), stereoscopic, and orthographic. Contour maps and vertical profiles of the topography were overlaid on the mosaics from which they were derived. Sets of stereo pairs were extracted and enlarged from stereoscopic projections of the mosaics. S.F.

WHERE ARE THE ASTEROIDS? THE DESIGN OF ASTPT AND ASTID
Laurence G. Taff 15 Apr. 1980 81 p refs
(Contract F19628-80-C-0002; AF Proj. 3221)
(AD-A087422; TN-1980-24; ESD-TR-80-25) Avail: NTIS HC A05/MF A01 CSCL 03/1

The design of software to be used for the planning of minor plant planet observations and the identification of a particular asteroid when it is observed at a given time is discussed. In each case the large number of cataloged asteroids (approximately 2200) has required that the software be optimal with respect to execution speed. This is accomplished by using an approximate geocentric ecliptic position to eliminate, as quickly (in terms of CPU time) as possible, the minor planet from further consideration. In particular, using the type of analysis applicable to near-stationary artificial satellites, and carefully quantifying the nature of the approximations, an approximate geocentric ecliptic latitude and longitude are obtained in such a fashion that the computations needed for these are not only minimal but, should the actual location of the minor planet be needed, maximally used there too. The user's interaction with the software documentation of the calculations, sample outputs, and the rationale of observing asteroids are also discussed. M.G.

92 SOLAR PHYSICS

Includes solar activity, solar flares, solar radiation and sunspots.

LONGITUDINAL AND TRANSVERSE MAGNETIC FIELD PROGRAM PROCEDURE AND DETAILED SPECIFICATION FOR SIGMA 5
Caroline K. Wang Aug. 1980 91 p
(NASA-TM-78292) Avail: NTIS HC A05/MF A01 CSCL 03B

A computer program and procedure for plotting the contour of the data transferred from the Marshall Space Flight Center solar magnetography is presented. The plotted data then can be easily compared with solar data from other sources, such as the Solar Maximum Mission. From the data file for circular polarization the longitudinal program plots the contours for filtered longitudinal plot and intensity plot by choosing the positive and negative contour levels, intensity levels, and also X,Y plotting ranges which need to be used. In a similar manner the transverse program generates the transverse contour plot, azimuth plot, and intensity plot from the linear polarization data files. M.G.

SPECTRUM SYNTHESIS OF EUV SOLAR FLARE LINE PROFILES Final Report
David A. Tripp Jul. 1980 18 p refs
(Contract NAS8-33113)
(NASA-CR-161551) Avail: NTIS HC A02/MF A01 CSCL 03B

A classic double ribbon flare of importance 1B occurred at approximately 1405 UT on June 15, 1973, reached an H alpha maximum at 1413 UT, and ended at 1455 UT. The flare occurred in an old and simplifying bipolar region at N18 W32. This flare was studied due to the extensive temporal data available. A total of 136 spectra of wavelength ranges from 1100 to 3000 A were taken during the flare's duration by the Naval Research Laboratory normal incidence slit spectrograph. Using this data the nature of the solar chromosphere of a flare event as a function of time was determined. E.D.K.

SOLAR ECLIPSE (1979). PART 1: ATMOSPHERIC SCIENCES LABORATORY FIELD PROGRAM SUMMARY
Melvin G. Heaps (New Mexico State Univ., Las Cruces), Robert O. Olsen (New Mexico State Univ., Las Cruces), Warren Berning (New Mexico State Univ., Las Cruces), John Cross, and Authur Gilcrease May 1980 43 p refs
(DA Proj. 1L1-61102-B-53A)
(AD-A087318; ERADCOM/ASL-TR-0059) Avail: NTIS HC A03/MF A01 CSCL 04/1

The 26 February 1979 solar eclipse provided a unique opportunity to investigate the properties of the middle atmosphere, including the lower ionospheric D region, during a succinct day-'night'-day transition. The Atmospheric Sciences Laboratory (ASL) assisted in coordinating a multiagency field experiment program which encompassed a wide range of effort. Experiments carried out during the several day period centering on the eclipse were characterized by an unusually high degree of success. Nineteen small sounding rockets and 14 large rockets were launched without a major experimental failure. Ground based measurements provided additional information. Of particular interest to the Army is the investigation of electron attachment/detachment processes in the D region which in turn have a bearing on ELF, VLF, and HF communications, BMD radar systems,

and atmospheric deionization in the post nuclear burst atmosphere. This report is Part 1 of a series and is primarily concerned with providing a summary of the 1979 Solar Eclipse Field Program and sponsored experiments. Part 2 will provide an account of the experimental data acquired by the ASL experiments, and a subsequent Part 3 will detail the atmospheric modeling efforts using the data from the 1979 solar eclipse. DYNAMICAL PHENOMENA IN SUNSPOTS Final Report, 1 Oct. 1978 - 30 Sep. 1979
John H. Thomas, Alfred Clark, Jr., and Mark A. Schauer. 15 Feb. 1980. 83 p. refs.
(Contract F19628-77-C-0079; AF Proj. 2311)
(AD-A086010; AFGL-TR-80-0064) Avail: NTIS HC A05/MF A01 CSCL 03/2

The reflection of upward and downward propagating Alfven waves in sunspots is studied, in order to assess the possibility of cooling by Alfven waves. Wave reflection is studied by means of a three layer model of the umbral atmosphere. The results show very strong downward reflection of Alfven waves in the photosphere and low temperature, but only weak upward reflection in the convection zone. Further study of more realistic magneto-atmospheric waves (including the effects of compression and buoyancy) shows strong upward reflection in the convection zone as well as strong downward reflection in the photosphere and low chromosphere. These results tend to rule out significant sunspot cooling by waves. A study of a simple thermal model of a sunspot, based on the concept of partial inhibition of convection, shows that the inhibition mechanism can yield acceptable distributions of surface temperature. The results of this model also show that: (1) the edge of the umbra is sharp, even for deep spots; (2) deep spots produce weak bright rings, but shallow spots produce intense bright rings in conflict with observations; and (3) only a shallow surface layer of the sunspot is cool, the rest being warmer than the surroundings. Umbral oscillations in sunspots are studied and identified as a resonant response of the umbral atmosphere to forcing by oscillatory convection in the subphotosphere. The full linearized equations for magneto-atmospheric waves are solved numerically for a detailed model of the umbral atmosphere. It is suggested that the Sun's radius and surface temperature vary with the solar cycle due to the variation of total magnetic buoyancy in the convection zone over the cycle of the solar dynamo. GRA

CIRCUMSOLAR RADIATION
A. D. Watt. Apr. 1980. 283 p. refs.
(Contract DE-AC04-76DP-00789)
(SAND-80-7009) Avail: NTIS HC A13/MF A01

The development of a model which will permit estimation of circumsolar radiation based on solar and meteorological input data is discussed. The results of observations are presented including radiance characteristics and time variations of the circumsolar component at a number of locations. The characteristics of the atmosphere are presented with primary emphasis on large particles. Physical models of circumsolar radiation are developed. The model results are based on: long term average turbidity values, derived average pollen loadings, and actual monthly average sky cover values for the years shown. Regression analysis employed to determine the circumsolar values based on observed solar radiation and atmospheric parameters. The regression derived models show that fairly good agreement can be obtained between observed and calculated monthly average circumsolar ratios by simple expressions employing only the active cavity radiometer values. DOE

DATA REDUCTION AND ANALYSIS FOR THE TRW IMP-7 PLASMA WAVE EXPERIMENT Final Report
Frederick L. Scarf. 31 Oct. 1979. 5 p. refs.
(Contract NAS5-23150)
(NASA-CR-160011; Rept-22751-6011-RU-00) Avail: NTIS HC A02/MF A01 CSCL 03B

Highlights from the IMP 7 plasma wave experiment are briefly outlined. The measurements in the tail revealed great complexities involving substorms and fireballs and provided insight into the overall dynamics of the magnetosphere. The low levels of magnetic turbulence may be of significance with respect to the development of tearing mode dissipation for reconnection events. The IMP wave observations in the distant magnetosphere boundary region showed that the boundaries were quite diffuse and frequently purely defined. Finally, nearly simultaneous IMP 7 and 8 comparisons were used to achieve an understanding of shock structure and propagation. M.G.

ISOTROPIC MODULATION OF GALACTIC COSMIC RAYS
Nunzio Iucci (Rome Univ.). Oct. 1979. 16 p. refs. Presented at 16th. Intern. Cosmic Ray Conf., Kyoto, Aug. 1979.
(LPS-79-12) Avail: NTIS HC A02/MF A01

Phenomena associated with cosmic ray isotropic modulation are reviewed. Both short-term and long-term variations are considered. For the most part, neutrino monitor data is cited. Results are used to explain solar activity cycle-related modulation fluctuations. The effects of Forbush decreases as well as cosmic ray modulation produced by coronal holes are touched on. Possible modulation as a result of 27 day recurrences is postulated. Finally, the power spectra of cosmic ray intensity fluctuations are analyzed using a maximum entropy method. Author (ESA)

N80-32322# Applied Physics Lab., Johns Hopkins Univ., Laurel, Md.
INDIRECTLY FUNDED RESEARCH AND EXPLORATORY DEVELOPMENT AT THE APPLIED PHYSICS LABORATORY, FISCAL YEAR 1978 Annual Report, 1 Jan. - 31 Dec. 1978
R. W. Hart, ed. Dec. 1979. 169 p. refs.
(Contract N00024-78-C-5384)
(AD-A086948; JHU/APL/SR-79-2) Avail: NTIS HC A08/MF A01 CSCL 06/2

The report is organized in two parts. The first part summarizes the IR D work of the Research Center, which is the Division of the Laboratory devoted primarily to long term scientific research. The second part summarizes the IR D activities carried out in other, generally more applications oriented, groups of the Laboratory. GRA

SUBJECT INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 18 NUMBER 22

Typical Subject Index Listing

The subject heading is the key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The NASA accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus* (NASA SP-7050).

Recent coal-oil mixture combustion tests at PETC
[DOE/PETC-TR-80/5] N80-31658
Numerical simulation of advection fog formation on multi-disperse aerosols due to combustion-related pollutants
[NASA-CR-161566] N80-31971
Prospect of a global warming and studies of its societal impacts
[CONF-7910158-1] N80-31976
Effective transport velocity and plume elongation in nocturnal valley wind fields
[LA-UR-80-791] N80-31978
A computer program for the scattering of a pollutant
[VKI-PREPRINT-1979-4] N80-31979
Atmospheric modeling of air pollution. A bibliography with abstracts
[PB80-811623] N80-31980
Atmospheric modeling of air pollution. A bibliography with abstracts
[PB80-811631] N80-31981
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California, volume 1
[PB80-187594] N80-31982
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California. Volume 2: Appendix
[PB80-187602] N80-31983
Pollutants from synthetic fuels production: Coal gasification screening test results
[PB80-182769] N80-31986
APTI (Air Pollution Training Institute) course 450 source sampling for particulate pollutants. Student workbook
[PB80-182439] N80-31988
Anthropogenic climate changes. State-of-the-art survey
[KNMI-V-347] N80-32041
Effects of aerosols, oxides of nitrogen, and oxidants on human health
[PB80-184583] N80-32088

AIR QUALITY
Development of the Elstar (Environmental Lagrangian Simulator of Transport and Atmospheric Reactions) photochemical air quality simulation model and its evaluation relative to the LARPP (Los Angeles Reactive Pollutant Program) data base
[PB80-188139] N80-31992
Relationship between specific non-methane hydrocarbons and ozone in ambient air and their role in transportation control strategies
[PB80-184922] N80-31993

AIR SAMPLING
APTI (Air Pollution Training Institute) course 450 source sampling for particulate pollutants. Student workbook
[PB80-182439] N80-31988
Relationship between specific non-methane hydrocarbons and ozone in ambient air and their role in transportation control strategies
[PB80-184922] N80-31993

AIR TRAFFIC
Perception of aircraft separation with pilot-preferred symbology on a cockpit display of traffic information
[NASA-TM-81172] N80-31397

AIR TRAFFIC CONTROL
Development of advanced avionics systems applicable to terminal-configured vehicles
[NASA-CR-3280] N80-31375
Moving target detector data utilization investigation
[AD-A086962] N80-31687

AIR WATER INTERACTIONS
Verification of the bulk model for calculations of the overwater index of refraction structure function, (C sub N)2
[AD-A087097] N80-31997
Ocean-atmosphere interface: Its influence on radiation
[AD-A087046] N80-32028
Atmospheric marine boundary layer mixing rates in the California coastal region
[AD-A087264] N80-32033
On the dynamic forcing of short-term climate fluctuations by feedback mechanisms
[NASA-CR-162865] N80-32034

AIRBORNE EQUIPMENT
The Tornado all-weather high-speed low-level system N80-31308
Atmospheric Electricity-Aircraft Interaction
[AGARD-LS-110] N80-31743

AIRBORNE/SPACEBORNE COMPUTERS
Advanced design concepts and practices in the F-16 mission computer software N80-32135
Main computer software for the MRCA TORNADO N80-32136
Design and development of software for Sea Harrier HUDWAC N80-32138
Space shuttle applications. Part 1: Redundant computer operation. Part 2: Redundant computer software design and test N80-32140
Executive software reusability for distributed avionics architectures N80-32142

AIRCRAFT ACCIDENT INVESTIGATION
Medical and toxicological factors in aircraft accidents
[AD-A087690] N80-31373

AIRCRAFT ACCIDENTS
A review of flight test instrumentation systems for acceptance testing of the production aircraft N80-31333
Medical and toxicological factors in aircraft accidents
[AD-A087690] N80-31373
A general statistical approach for using auxiliary information in the development of an impact acceleration injury prediction model
[AD-A087810] N80-31374

AIRCRAFT APPROACH SPACING
Development of advanced avionics systems applicable to terminal-configured vehicles
[NASA-CR-3280] N80-31375

AIRCRAFT COMMUNICATION
Checking of communications and radio navigation systems N80-31340

AIRCRAFT CONFIGURATIONS
F/A-18 status report N80-31306
YAV-8B status report N80-31310

AIRCRAFT CONSTRUCTION MATERIALS
Design and analysis of a stiffened composite fuselage panel
[NASA-CR-159302] N80-31820

AIRCRAFT CONTROL
Evaluation of longitudinal characteristics including stability handling and CG range N80-31335
Design of an adaptive control system for the EBF/STOL aircraft with provisions for eigenvalue and eigenvector selection N80-31405
Validation of high angle-of-attack analysis methods
[AD-A087621] N80-31411

AIRCRAFT DESIGN
Night/adverse weather A-10 evaluator program (A-10B) N80-31307
Sabreliner 65 N80-31315
P-59 N80-31318
Some comments on the problems involved in aircraft assessment and acceptance testing N80-31330
Evaluation of laminar flow control system concepts for subsonic commercial transport aircraft
[NASA-CR-159254] N80-31384

AIRCRAFT DETECTION
Air-to-air target acquisition factors and means of improvement
[AD-A087848] N80-32095

AIRCRAFT ENGINES
The application of design to cost and life cycle cost to aircraft engines
[AGARD-LS-107] N80-31342
An approach to the life cycle analysis of aircraft turbine engines N80-31343
Design to life cycle costs interaction of engine and aircraft --- combat aircraft N80-31344
Progress on the US Air Force approach for the practical management of engine life cycle costs --- gas turbine engines N80-31345
Military engine programs with cost objectives N80-31346
Logistics forecasting for achieving low life cycle cost --- aircraft maintenance N80-31347
Reverse thrust performance of the QCSEE variable pitch turbofan engine
[NASA-TM-81556] N80-31399
An experimental evaluation of the performance deficit of an aircraft engine starter turbine
[NASA-TM-81571] N80-31400

AIRCRAFT EQUIPMENT
Qualitative armament subsystem assessment N80-31338
Electro-magnetic compatibility --- the effect of interference on aircraft systems N80-31339
Advanced technology components for model GTP305-2 aircraft auxiliary power system
[AD-A087838] N80-31403
The vulnerability of electric equipment to carbon fibers of mixed lengths: An analysis
[NASA-TM-80215] N80-31481
Capacitors for aircraft high power
[AD-A087427] N80-31734

AIRCRAFT FUELS
High density fuels design considerations for combustors and combustion assessories in subsonic cruise missile propulsion systems N80-31618

AIRCRAFT GUIDANCE
Trends in the development of software for guidance and control N80-32127
Logic structure for testability and failure detection N80-32129

AIRCRAFT HAZARDS
Atmospheric Electricity-Aircraft Interaction
[AGARD-LS-110] N80-31743
Atmospheric electricity interactions with aircraft: An overview N80-31744
Aircraft mishap experience from atmospheric electricity hazards N80-31745
Phenomenology of lightning/aircraft interaction N80-31746
Susceptibility of avionics to lightning indirect effects N80-31747
Models for assessing hazards due to lightning N80-31748
Lightning test criteria for aircraft avionics systems N80-31749
Lightning testing for aircraft avionics systems N80-31750
The coupling of lightning fields into aircraft and cables N80-31751
Protection of aircraft avionics from lightning indirect effects N80-31752
Lightning effects on aircraft: A cockpit perspective N80-31753
Basic phenomenology of electrical discharges at atmospheric pressure N80-31754
Static charging effects on avionic systems N80-31755
Alleviation techniques for effects of static charging on avionics N80-31756
Aircraft static charging testing N80-31757

AIRCRAFT HYDRAULIC SYSTEMS
Aircraft hydraulic systems dynamic analysis component data handbook
[AD-A087366] N80-31390

AIRCRAFT INDUSTRY
Society of Experimental Test Pilots Technical Review, volume 14, no. 4: 23rd Symposium Proceedings N80-31305
The Quiet Short-haul Research Aircraft (QSRA) N80-31313

AIRCRAFT INSTRUMENTS
Analytic and experimental studies of a true airspeed sensor N80-31396
A carbon fiber exposure test facility and instrumentation
[NASA-TM-80220] N80-31482

AIRCRAFT LANDING
Have Bounce N80-31311
A simulation investigation on the feasibility of curved approaches under Microwave Landing System (MLS) guidance
[NLR-TR-78035-U] N80-31380
Helicopter-ship qualification testing
[NLR-MP-79027-U] N80-31391
Atmospheric turbulence simulation techniques with application to flight analysis
[NASA-CR-3309] N80-32025

AIRCRAFT MAINTENANCE
Production oriented maintenance organization: A critical analysis of sortie-generation capability and maintenance quality
[AD-A087095] N80-31323
Maintainability index model data base study
[AD-A087844] N80-31324
Aircraft Maintenance Effectiveness Simulation (AMES) model
[AD-A087516] N80-31325

AIRCRAFT MANEUVERS
Maneuver spectrum fatigue crack propagation in aluminum alloy sheet materials --- airframe materials
[NLR-TR-78091-U] N80-31393

AIRCRAFT MODELS
Phase 2 and 3 wind tunnel tests of the J-97 powered, external augmentor V/STOL model --- at Ames 40 by 80 wind tunnel
[NASA-CR-163578] N80-31350

AIRCRAFT PERFORMANCE
Society of Experimental Test Pilots Technical Review, volume 14, no. 4: 23rd Symposium Proceedings N80-31305
The Tornado all-weather high-speed low-level system N80-31308
F-16 European test and evaluation N80-31309
The development of the world's first triangine business jet, the Mystere Falcon 50 N80-31316
CL-600 challenger N80-31317
Review of five years of flight testing the B-1 N80-31321
Aircraft Assessment and Acceptance Testing
[AGARD-LS-108] N80-31329
USAF development test and evaluation N80-31331
Some examples of procedures used in UK for acceptance testing of aircraft produced by the aircraft industry under government contract N80-31332
A review of flight test instrumentation systems for acceptance testing of the production aircraft N80-31333
Performance testing production airlines N80-31334
Evaluation of lateral and directional characteristics and spinning behaviour N80-31336
Atmospheric turbulence simulation techniques with application to flight analysis
[NASA-CR-3309] N80-32025
Airborne performance measurement assessment: Low altitude tactical formation in two operating environments
[AD-A087068] N80-32090

AIRCRAFT PILOTS
Perception of aircraft separation with pilot-preferred symbology on a cockpit display of traffic information
[NASA-TM-81172] N80-31397

AIRCRAFT RELIABILITY
Significance of a rotor blade failure for fleet operation, inspection, maintenance, design and certification
[NLR-MP-79021-U] N80-31392
A carbon fiber exposure test facility and instrumentation
[NASA-TM-80220] N80-31482

AIRCRAFT SAFETY
In-flight evaluation of a severe weather avoidance system for aircraft
[AD-A087426] N80-31376
Aircraft static charging testing N80-31757

AIRCRAFT STABILITY
Evaluation of longitudinal characteristics including stability handling and CG range N80-31335
Phase 2 and 3 wind tunnel tests of the J-97 powered, external augmentor V/STOL model --- at Ames 40 by 80 wind tunnel
[NASA-CR-163578] N80-31350

AIRCRAFT STRUCTURES
Aircraft wingtip coupling experiments N80-31319
Mathematical modeling of linear and non-linear aircraft structures
[AGARD-R-687] N80-31326
Optimization of the mathematical model of a structure N80-31327
Reassessment of service life by comparative specimen tests --- fighter aircraft strucutures
[NLR-MP-79008-U] N80-31807

AIRCRAFT SURVIVABILITY
Night/adverse weather A-10 evaluator program (A-10B) N80-31307

AIRFOIL PROFILES
Aerodynamic performance of a 5-metre-diameter Darrieus turbine with extruded aluminum NACA-0015 blades
[SAND-80-0179] N80-31957

AIRFOILS
Mathematical modeling of linear and non-linear aircraft structures
[AGARD-R-687] N80-31326

AIRFRAME MATERIALS
Maneuver spectrum fatigue crack propagation in aluminum alloy sheet materials --- airframe materials
[NLR-TR-78091-U] N80-31393

Cast Aluminum Structures Technology (CAST). Phase 5: Structural and evaluation. Part 1: Full scale test
[AD-A087807] N80-31535
Design and analysis of a stiffened composite fuselage panel
[NASA-CR-159302] N80-31820

AIRFRAMES
Bifilar analysis study, volume 1
[NASA-CR-159227] N80-31382
Bifilar analysis users manual, volume 2
[NASA-CR-159228-VOL-2] N80-31383

AIRLINE OPERATIONS
Assessment of operational automated guideway systems-AIRTRANS, phase 2
[PB80-182538] N80-32302

AIRPLANE PRODUCTION COSTS
Design to life cycle costs interaction of engine and aircraft --- combat aircraft N80-31344
Military engine programs with cost objectives N80-31346

AIRPORTS
Assessment of operational automated guideway systems-AIRTRANS, phase 2
[PB80-182538] N80-32302

AIRSPEED
Bifilar analysis study, volume 1
[NASA-CR-159227] N80-31382
Analytic and experimental studies of a true airspeed sensor N80-31396

ALASKA
The fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska
[PB80-187305] N80-31984

ALGORITHMS
Ground range and bearing error determination and display for an OTH radar system with an Arctic trough ionosphere
[AD-A087010] N80-31691
Dynamic behavior of shortest path routing algorithms for communication networks
[AD-A087706] N80-31697
A study on algorithms and processing programs for data from interference due to hydrometeors at 17.8 GHz
[FUB-12-1979] N80-32036
Canonical forms and unification
[AD-A087640] N80-32119
Evaluation of incident detection algorithms
[PB80-187255] N80-32124
Recursive least squares lattice algorithms: A geometrical approach
[AD-A087586] N80-32160
Batch size effects in the analysis of simulation output
[AD-A087045] N80-32170

ALKALI METALS
Silicon halide-alkali metal flames as a source of solar grade silicon
[NASA-CR-163514] N80-31874

ALL-WEATHER LANDING SYSTEMS
Landing system reliability and safety model
[AD-A087524] N80-31379

ALLOYS
Carburization of austenitic alloys by gaseous impurities in helium
[GA-A-15790] N80-31540
Automotive storage of hydrogen using modified magnesium hydrides
[SAN-1167-1] N80-31650
Amorphous silicon thin film heterojunction solar cells
[DOE/ET-20460/4] N80-31909
Materials program plan for inertial confinement fusion
[ANL/FPP-TM-126] N80-32238

ALLUVIUM
Simulation of reservoir and lake sedimentation
[PB80-192801] N80-31867

ALTITUDE TESTS
Airborne performance measurement assessment: Low altitude tactical formation in two operating environments
[AD-A087068] N80-32090

ALUMINUM
An electron spectroscopic investigation of the interaction of methanol with polycrystalline aluminum
[AD-A087309] N80-31493
Deflagration to detonation transition behavior of aluminized HMX N80-31571
Inorganic geochemistry of Devonian shales in southern West Virginia: Geographic and stratigraphic trends
[DOE-METC/5199/7] N80-31854

ALUMINUM ALLOYS
Nonuniform spectrum fatigue crack propagation in aluminum alloy sheet materials --- airframe materials
[NLR-TR-78091-U] N80-31393
The effect of mechanical working on SiC whisker-reinforced aluminum alloys
[AD-A087565] N80-31485
Cast Aluminum Structures Technology (CAST) structural test and evaluation, phase 5. Part 2: Fatigue and fracture properties of cast aluminum bulkheads
[AD-A087336] N80-31530
Cast Aluminum Structures Technology (CAST) structural test and evaluation, phase 5. Part 3: Static property allowables
[AD-A087337] N80-31531
Advanced aluminum alloys from rapidly solidified powders
[AD-A087401] N80-31534
Cast Aluminum Structures Technology (CAST). Phase 5: Structural and evaluation. Part 1: Full scale test
[AD-A087807] N80-31535
Production of aluminum-silicon alloy and and ferrosilicon and commercial purity aluminum by the direct reduction process
[CONS-5089-8] N80-31541
Fatigue behavior of adhesively bonded joints, volume 1
[AD-A087280] N80-31626
Fatigue behavior of adhesively bonded joints. Volume 2: Appendices
[AD-A087360] N80-31627
Determination of fatigue damage
[AD-A087442] N80-31629
Plasticity under combined stress loading --- aluminum alloys
[UCRL-83322] N80-31840
Evaluation and comparison of nondestructive service inspection methods
[NLR-MP-79005-U] N80-31845
Flight simulation fatigue crack propagation in 7010 and 7075 aluminum alloy plate
[NLR-MP-79019-U] N80-31847
Aluminum-silver alloy films for solar reflectors
[REP-3021] N80-31919

ALUMINUM COATINGS
Environmental testing of coatings for gas turbines
[NLR-MP-79028-U] N80-31404

ALUMINUM OXIDES
The effect of mixed transition-metal dopants on the high temperature creep of polycrystalline alumina N80-31526

AMIDES
LARC-13 adhesive development
[NASA-CR-159317] N80-31479

AMMONIA
Stress-corrosion cracking of steels in ammonia: A survey with consideration on given OTEC design
[ANL/OTEC-BCM-008] N80-31544
Continued evaluation of compact heat exchangers for OTEC evaluation
[COO-4238-14] N80-31945

AMMONIUM PERCHLORATES
Combustion of non-aluminized binders in tapered sandwiches N80-31590
Analysis of ammonium perchlorate combustion in a turbulent flow N80-31594

AMORPHOUS MATERIALS
Amorphous and metastable microcrystalline rapidly solidified alloys. Status and potential
[NASA-CR-163449] N80-31528

AMORPHOUS SEMICONDUCTORS
Amorphous silicon thin film heterojunction solar cells
[DOE/ET-20460/4] N80-31909
Amorphous semiconductors. A bibliography with abstracts
[PB80-811342] N80-32266

AMPLIFIERS
Ku-band field-effect power transistors
[NASA-CR-160010] N80-31732

ANALOG DATA
The LSR/2 optically coupled signal transmission link
[AD-A087552] N80-32215

ANALOG TO DIGITAL CONVERTERS
Quantization noise spectra calculation
[FUB-5-1979] N80-31714

ANALYSIS (MATHEMATICS)
Optical analysis of point focus parabolic radiation concentrators
[SERI/TR-631-336] N80-31917
Nonparametric estimation of a lifetime distribution via the renewal function N80-32164

ANALYSIS OF VARIANCE
Special Sensor H (SSH) moisture sounding
[AD-A087576] N80-32011
Analysis of principle components in the Sebestyen discrimination method
[CNES-NT-92] N80-32175

ANALYTICAL CHEMISTRY
Chemical characterization and quality control for an adhesive
[AD-A087739] N80-31558

ANECHOIC CHAMBERS
The influence of wall resonances on the levitation of objects in a single-axis acoustic processing chamber
[NASA-TM-78299] N80-32187

ANGLE OF ATTACK
Ranges and critical values of advance ratio for blade/vortex intersection patterns of a helicopter rotor
[NPL-MP-79030-U] N80-31360
Flow visualization study of the HiMAT RPRV
[NASA-CR-163094] N80-31381
Validation of high angle-of-attack analysis methods
[AD-A087621] N80-31411

ANIONS
Ion chromatography of anions
[PB80-184450] N80-31522

ANISOTROPIC PLATES
A new method for the solution of anisotropic thin plate bending problems --- using Green's function N80-31813

ANISOTROPY
Influence of the space structure and physical properties of rain on the evaluation of the anisotropy and depolarizing properties --- centimeter waves
[FUB-22-1979] N80-31722

ANNULI
Experimental study of the steady natural convection in a horizontal annulus with irregular boundaries --- convective heat transfer from spent fuel assemblies in containers
[SAND-79-2354C] N80-31767

ANTENNA DESIGN
Influence of interorbit acceleration on the design of large space antennas N80-31461
A theoretical study of dielectric-filled edge-slot antennas
[AD-A087482] N80-31702

ANTENNA FEEDS
A simple stripline design for uneven power split
[NASA-TM-81870] N80-31684
Column network study for a planar array used with an unattended radar
[AD-A087909] N80-31698

ANTENNA RADIATION PATTERNS
Radiation and scattering from bodies of translation, volume 1
[AD-A087402] N80-31688
Column network study for a planar array used with an unattended radar
[AD-A087909] N80-31698

ANTENNAS
Evaluation of losses in microstrip antenna materials
[AD-A087476] N80-31701

ANTIREFLECTION COATINGS
Silicon solar cell fabrication technology
[NASA-CR-163394] N80-31871

ANTISUBMARINE WARFARE
Remotely piloted seaplane for antisubmarine warfare
[AD-A086932] N80-31388

APERTURES
Common aperture techniques for imaging electro-optical sensors
[AD-A087558] N80-32216

APPROACH CONTROL
Development of advanced avionics systems applicable to terminal-configured vehicles
[NASA-CR-3280] N80-31375

APPROXIMATION
On the utility of plane strain approximations for oblique impact computations
[AD-A081120] N80-31819
SCRAM: A fast computational model for the optical performance of point focus solar central receiver systems
[SAND-80-0433] N80-31925
Assessment of industrial energy conservation by unit processes
[ORAU/IEA-80-4-M] N80-31939
Computing finite-difference approximations to derivatives for numerical optimization
[AD-A087428] N80-32151
An approximate solution of singularly perturbed non-linear pursuit-evasion games
[TAE-359] N80-32178
AQUIFERS
Simplified groundwater flow modeling: An application of Kalman filter based identification
[UCRL-82649] N80-31861
ARCHES
Elastic buckling of arches by finite element method N80-31817
ARCHITECTURE
Critical excitations for linear and nonlinear structural systems N80-31816
Environmental wind in built-up areas
[VKI-TM-26] N80-32043
ARCHITECTURE (COMPUTERS)
Multi-microprocessor/multi-microcomputer tures: Their modeling and analysis N80-32108
Automatic transaction decomposition in a distributed CODASYL prototype system N80-32115
ARCTIC REGIONS
Ground range and bearing error determination and display for an OTH radar system with an Arctic trough ionosphere
[AD-A087010] N80-31691
ARGON
Adherence of ion beam sputter deposited metal films on H-13 steel
[NASA-TM-81585] N80-31527
ARGON LASERS
Polar nephelometer for atmospheric particulate studies
[NASA-TM-81113] N80-31996
ARID LANDS
Evaluating soil moisture and textural relationships using regression analysis
[AD-A087371] N80-31852
ARIZONA
Measurement, prediction, and hazard evaluation of Earth fissures and subsidence, south-central Arizona
[PB80-183908] N80-32019
ARMED FORCES (UNITED STATES)
Progress on the US Air Force approach for the practical management of engine life cycle costs --- gas turbine engines N80-31345
ARPA COMPUTER NETWORK
INTERLISP maintenance
[AD-A087338] N80-32118
ARSENIC COMPOUNDS
Selenium immersed thermistor bolometer study
[NASA-CR-160013] N80-31776
ARTIFICIAL INTELLIGENCE
USAFSAM waiver file intelligent terminal: Hardware reference manual
[AD-A087340] N80-32110
ASSEMBLING
Fabrication for precision mechanisms
[BDX-613-2388] N80-31670
ASSESSMENTS
Preliminary assessment of the electromagnetic environment in the immediate vicinity of the ETA accelerator
[UCID-18631] N80-31708
ASTEROIDS
Where are the asteroids? The design of ASTPT and ASTID
[AD-A087422] N80-32312
ASTRONOMICAL CATALOGS
Documentation for the machine-readable version of the catalog of supplemental stars to the Bonner Durchmusterung
[NASA-TM-81119] N80-32303
Documentation for the machine-readable version of the Perth 70: A catalogue of positions of 24900 stars tape B, mean values of the observation
[NASA-TM-80849] N80-32304
Astronomical Data Center Bulletin, volume 1, no. 1
[NASA-TM-80764] N80-32305
ASTRONOMICAL PHOTOGRAPHY
Pinhole X-ray/coronagraph optical systems concept definition study
[NASA-CR-161567] N80-32208
ATHLETES
Restoration of physical performance capacity of athletes after prolonged restriction of their motor activity
[NASA-TM-76305] N80-32066
ATLANTIC OCEAN
Mariners Weather Log, volume 24, no. 2
[PB80-188444] N80-32048
ATMOSPHERIC ATTENUATION
SCRAM: A fast computational model for the optical performance of point focus solar central receiver systems
[SAND-80-0433] N80-31925
Time delay of terrestrial light pulses propagating through clouds to satellite systems
[AD-A087242] N80-31999
ATMOSPHERIC BOUNDARY LAYER
The occurence of a nocturnal wind maximum at low altitude --- on clear nights
[KNMI-V-346] N80-32040
ATMOSPHERIC CHEMISTRY
Atmospheric particulate analysis using angular light scattering
[NASA-TM-81112] N80-31995
ATMOSPHERIC CIRCULATION
Effective transport velocity and plume elongation in nocturnal valley wind fields
[LA-UR-80-791] N80-31978
A computer program for the scattering of a pollutant
[VKI-PREPRINT-1979-4] N80-31979
ATMOSPHERIC COMPOSITION
APTI (Air Pollution Training Institute) course 450 source sampling for particulate pollutants. Student workbook
[PB80-182439] N80-31988
Program of research and monitoring for early detection of stratospheric ozone change. Report to Congress of findings for 1978 - 1979
[PB80-184021] N80-32022
ATMOSPHERIC DENSITY
CAD: A code for the calculation of atmospheric density --- atmospheric drag effects on Earth orbiting satellites
[AD-A087447] N80-32005
ATMOSPHERIC DIFFUSION
Characterization and influence of the parameters of a model to describe hydrometeor diffusion
[FUB-23-1979] N80-32037
ATMOSPHERIC EFFECTS
Environmental testing of coatings for gas turbines
[NLR-MP-79028-U] N80-31404
ATMOSPHERIC ELECTRICITY
Atmospheric Electricity-Aircraft Interaction
[AGARD-LS-110] N80-31743
Atmospheric electricity interactions with aircraft: An overview N80-31744
Aircraft mishap experience from atmospheric electricity hazards N80-31745
Phenomenology of lightning/aircraft interaction N80-31746
Susceptibility of avionics to lightning indirect effects N80-31747
Models for assessing hazards due to lightning N80-31748
Lightning test criteria for aircraft avionics systems N80-31749
Lightning testing for aircraft avionics systems N80-31750
Basic phenomenology of electrical discharges at atmospheric pressure N80-31754
ATMOSPHERIC ENTRY
Space shuttle orbiter flow visualization study --- water tunnel study of vortex flow during atmospheric entry
[NASA-CR-163092] N80-31438
ATMOSPHERIC ENTRY SIMULATION
Current operation and future uses of high power plasma generators
[SNIAS-801-430-104] N80-32243
ATMOSPHERIC HEATING
Anthropogenic climate changes. State-of-the-art survey
[KNMI-V-347] N80-32041
ATMOSPHERIC MODELS
Atmospheric modeling of air pollution. A bibliography with abstracts
[PB80-811623] N80-31980
Atmospheric modeling of air pollution. A bibliography with abstracts
[PB80-811631] N80-31981
Theoretical and experimental investigations of upper atmosphere dynamics
[NASA-CR-163519] N80-31994
Ionospheric modeling and propagation analysis
[AD-A087259] N80-31998
Modelling of equatorial phase and amplitude scintillations from OGO-6 and AE irregularity data
[AD-A087011] N80-32000
Stability of boundary layer flow
[AD-A087028] N80-32001
Analytic modeling of severe vortical storms
[AD-A086919] N80-32027
Atmospheric marine boundary layer mixing rates in the California coastal region
[AD-A087264] N80-32033
National Hurricane and Experimental Meteorology Laboratory collected reprints, 1979
[PB80-192917] N80-32049
Solar eclipse (1979). Part 1: Atmospheric sciences laboratory field program summary
[AD-A087318] N80-32317
ATMOSPHERIC MOISTURE
Special Sensor H (SSH) moisture sounding
[AD-A087576] N80-32011
Anomalous snowfall caused by natural-draft cooling towers
[RAND/N-1479-DOE] N80-32024
Development of the microwave radiative transfer program for cloudy atmospheres applications to DMSP SSM/T channels
[AD-A087434] N80-32032
ATMOSPHERIC PHYSICS
Solar eclipse (1979). Part 1: Atmospheric sciences laboratory field program summary
[AD-A087318] N80-32317
ATMOSPHERIC REFRACTION
The Mini-Refractionsonde System (MRS) for measuring refractive index
[AD-A087845] N80-31434
ATMOSPHERIC SCATTERING
A study on algorithms and processing programs for data from interference due to hydrometeors at 17.8 GHz
[FUB-12-1979] N80-32036
ATMOSPHERIC TEMPERATURE
Icing characteristics of low altitude, supercooled layer clouds
[AD-A087137] N80-32031
Influence of volcanic aerosols and oceanic surface temperatures on tropospheric temperatures
[COO-2195-36] N80-32035
ATMOSPHERIC TURBULENCE
Atmospheric turbulence simulation techniques with application to flight analysis
[NASA-CR-3309] N80-32025
ATMOSPHERICS
Size distribution, chemical composition and optical properties of atmospheric dust in Israel: A comparison of urban and desert aerosols under clear and dusty conditions
[AD-A087608] N80-32010
ATOMIC COLLISIONS
Research studies on radiative collision lasers
[AD-A087714] N80-31785
Measurements of electronic stimulation of atoms in collisions with atoms and molecules near the threshold
[MPIS-14/1979] N80-32196
ATOMIC STRUCTURE
Energy-related atomic and molecular structure and scattering studies
[DOE/ER-04971/2] N80-32194
ATOMS
Research studies on radiative collisional processes
[AD-A087527] N80-32193
ATTACK AIRCRAFT
Thermal conditions in the cockpit of USAF aircraft: Inflight measurements from the A-7, A-10, F-4, F-15, and YC-14
[AD-A087273] N80-32104

ATTENUATION COEFFICIENTS
A study of the transmission characteristics of suppressor nozzles
[NASA-CR-165133] N80-32186
ATTENUATORS
Measuring features of the fluence at the far field of CO2 pulsed laser: An issue study with suggestions on how to do it
[PB80-191141] N80-31789
ATTITUDE CONTROL
Processing of Meteosat attitude measurement flight data and evaluation of the performance of an adaptive filtering technique
[NLR-TR-78146-U] N80-31437
Auxiliary control of LSS N80-31459
ATTITUDE INDICATORS
A simulator study of control and display augmentations for helicopters
[NASA-CR-163451] N80-31408
AUDIOMETRY
USAFSAM microprocessor audiometer: System reference manual
[AD-A087342] N80-32081
AUDITORY PERCEPTION
Towards a better understanding of temporary threshold shift of hearing
[RAE-TM-FS-319] N80-32086
AURORAS
Nonlinear evolution of diffuse auroral F region ionospheric irregularities
[AD-A086998] N80-32003
The investigation of the magnetospheric dynamics in conjunction with the SCATHA satellite observations
[AD-A087433] N80-32006
AUSTENITE
Carburization of austenitic alloys by gaseous impurities in helium
[GA-A-15790] N80-31540
AUTOCORRELATION
Workshop on Digital Time Series Analysis with Geophysical Applications
[CSIR-S-238] N80-32150
Simulation of some autoregressive Markovian sequences of positive random variables
[AD-A087368] N80-32153
AUTOMATED GUIDEWAY TRANSIT VEHICLES
Assessment of operational automated guideway systems-AIRTRANS, phase 2
[PB80-182538] N80-32302
AUTOMATIC CONTROL
Design, construction, and operation of a 150 kW solar-powered irrigation facility, phase 2
[ALO-4159-1] N80-31903
Automatic-control system for the 17-metre Vertical Axis Wind Turbine (VAWT)
[SAND-78-0984] N80-31958
Method of growing a ribbon crystal particularly suited for facilitating automated control of ribbon width
[NASA-CASE-NPO-14295-1] N80-32245
AUTOMATIC FLIGHT CONTROL
Validation of high angle-of-attack analysis methods
[AD-A087621] N80-31411
AUTOMOBILE FUELS
Automotive storage of hydrogen using modified magnesium hydrides
[SAN-1167-1] N80-31650
AUTONOMIC NERVOUS SYSTEM
Orthoclinostatic test as one of the methods for evaluating the human functional state
[NASA-TM-76321] N80-32070
AUTOREGRESSIVE PROCESSES
Simulation of some autoregressive Markovian sequences of positive random variables
[AD-A087368] N80-32153
AUXILIARY POWER SOURCES
Advanced technology components for model GTP305-2 aircraft auxiliary power system
[AD-A087838] N80-31403
AVAILABILITY
Evaluation of service availability in a packet switching network
[FUB-26-1979] N80-31724
AVIONICS
Electro-magnetic compatibility --- the effect of interference on aircraft systems N80-31339
Space shuttle navigation analysis. Volume 1: GPS aided navigation
[NASA-CR-160765] N80-31440
Space shuttle navigation analysis. Volume 2: Baseline system navigation
[NASA-CR-160766] N80-31441
Atmospheric Electricity-Aircraft interaction
[AGARD-LS-110] N80-31743
Protection of aircraft avionics from lightning indirect effects N80-31752
Static charging effects on avionic systems N80-31755
Alleviation techniques for effects of static charging on avionics N80-31756
Guidance and control software
[AGARD-AG-258] N80-32125
A modern facility for software production and maintenance N80-32128
Logic structure for testability and failure detection N80-32129
Compiler writing techniques for avionics applications N80-32131
Software verification and validation N80-32132
Software applications as demonstrated in the P-3C avionics system N80-32141
Executive software reusability for distributed avionics architectures N80-32142
AVOIDANCE
In-flight evaluation of a severe weather avoidance system for aircraft
[AD-A087426] N80-31376
Evaluation of incident detection algorithms
[PB80-187255] N80-32124
AXIAL FLOW TURBINES
An experimental evaluation of the performance deficit of an aircraft engine starter turbine
[NASA-TM-81571] N80-31400
AXIAL LOADS
Analysis of axially loaded stringer stiffened circular cylinders
[FFA-TN-HU-2134] N80-31843
Buckling of cylinders with longitudinal stiffeners subjected to axial compression
[FFA-TN-HU-2184] N80-31844
AXIAL STRAIN
Strain hardening and ductility of iron: Axisymmetric vs plane strain elongation
[DOE/ER-04072/3] N80-31543
AXIAL STRESS
Finite layer analysis of consolidation, part 2
[PB80-182587] N80-31677
AXISYMMETRIC BODIES
Measurements of pressure distributions and pressure drags at zero incidence on both blunt and sharp axisymmetric forebodies at a Mach number of 3
[ARC-R/M-3849] N80-31367
The design of axisymmetric cowls for podded nacelles for high by-pass ratio turbofan engines
[ARC-R/M-3846] N80-31394
AXISYMMETRIC FLOW
A spline relaxation procedure for calculating axisymmetric flow fields about body/propeller combinations. 1: Frozen vorticity and potential flows
[AD-A087027] N80-31762
Axisymmetric flow fields in motored and firing spark-ignition engines N80-31791

B

B-1 AIRCRAFT
Review of five years of flight testing the B-1 N80-31321
BACKGROUND RADIATION
CARS concentration sensitivity with and without nonresonant background suppression
[AD-A087557] N80-31497
BALL BEARINGS
SSME turbopump bearing analytical study
[NASA-CR-161554] N80-31794
Activities of the European Space Tribology Laboratory for 1979
[ESA-ESTL-44] N80-31804
BALLISTICS
Rotating valve for velocity combustion response measurements N80-31606
BALLOON-BORNE INSTRUMENTS
Balloon-supported Loran antenna, new hardware for tethered balloons, and payloads used in BAMM flights
[AD-A087487] N80-31377
Balloon-supported antenna for Loran C/D navigation system
[AD-A087488] N80-31378
BALMER SERIES
A measurement of deuterium neutral by the Balmer-series in the STP-2 high beta screw pinch Tokamak
[IPPJ-471] N80-32224
BASALT
Functions of an engineered barrier system for a nuclear waste repository in basalt
[RHO-BWI-LD-23] N80-32202
Technical program plan, Basalt Waste Isolation Project
[RHO-CD-132-REV-5] N80-32205
BATCH PROCESSING
Batch size effects in the analysis of simulation output
[AD-A087045] N80-32170
BAYES THEOREM
A Bayesian procedure to compare and choose among logistic regression models N80-32167
The Bayesian approach to statistics
[AD-A087836] N80-32173
Is Bayesian estimation proper for estimating the individual's ability
[AD-A087829] N80-32174
BEDS (GEOLOGY)
Numerical calculation of thermal convection in porous media in two dimensions with applications to nuclear repository design
[UCID-18700] N80-31769
BEDS (PROCESS ENGINEERING)
Underground gasification for steeply dipping coal beds. Rawlins test no. 1
[SAN-13108-35] N80-31653
BELL AIRCRAFT
P-59 N80-31318
BENDING
A new method for the solution of anisotropic thin plate bending problems --- using Green's function N80-31813
Thermal bending of thick rectangular plates of bimodulus composite material
[AD-A087425] N80-31833
BENDING MOMENTS
Comparison of calculated and measured blade loads on a full-scale tilting proprotor in a wind tunnel
[NASA-TM-81228] N80-31386
Finite element analysis of piping tees
[AD-A087353] N80-32152
BIBLIOGRAPHIES
Chemical research projects office: An overview and bibliography, 1975-1980
[NASA-TM-81227] N80-31473
Biocompatible materials. A bibliography with abstracts
[PB80-811904] N80-31475
Synthetic fuels from municipal, industrial, and agricultural wastes. Citations from the NTIS data base
[PB80-811375] N80-31660
Telecommunication: Economic studies. Citations from the NTIS data base
[PB80-811136] N80-31728
Telecommunication: Economic studies. Citations from the NTIS data base
[PB80-811144] N80-31729
Nondestructive ultrasonic testing and inspection. Citations from the NTIS data base
[PB80-811821] N80-31808
Nondestructive ultrasonic testing and inspection. Citations from the NTIS data base
[PB80-811839] N80-31809
Nondestructive ultrasonic testing and inspection. Citations from the Engineering Index data base
[PB80-811847] N80-31810
Nondestructive ultrasonic testing and inspection. Citations from the Engineering Index data base
[PB80-811854] N80-31811
Finite elements in structural analysis. A bibliography with abstracts
[PB80-811516] N80-31850
Earth resources: A continuing bibliography (issue 26)
[NASA-SP-7041(26)] N80-31855
Solar thermal heating and cooling. A bibliography with abstracts
[NASA-CR-163535] N80-31963

Solar thermal components. A bibliography with abstracts
[NASA-CR-163448] N80-31964
Wind power. Citations from the NTIS data base
[PB80-811458] N80-31965
Atmospheric modeling of air pollution. A bibliography with abstracts
[PB80-811623] N80-31980
Atmospheric modeling of air pollution. A bibliography with abstracts
[PB80-811631] N80-31981
Additions and corrections to the bibliography of geologic studies, Columbia Plateau (Columbia River Basalt) and adjacent areas, in Idaho, 1980
[RHO-BWI-C-66] N80-32013
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 209)
[NASA-SP-7011(209)] N80-32062
Helmets: Construction, effectiveness, and human factors. Citations from the NTIS data base
[PB80-810963] N80-32106
Computer software reliability. A bibliography with abstracts
[PB80-811797] N80-32123
Gunn effect devices. Citations from the Engineering Index data base
[PB80-812050] N80-32263
Gunn effect devices. Citations from the Engineering Index data base
[PB80-812068] N80-32264
Gunn effect and transferred electron devices. Citations from the NTIS data base
[PB80-812035] N80-32265
Amorphous semiconductors. A bibliography with abstracts
[PB80-811342] N80-32266
Transferred electron devices. Citations from the Engineering Index data base
[PB80-812043] N80-32267
Distributed data processing. Citations from the NTIS data base
[PB80-812217] N80-32280
Distributed Data processing. Citations from the Engineering Index data base
[PB80-812225] N80-32281
Distributed data processing. Citations from the Engineering Index data base
[PB80-812233] N80-32282

BINARY ALLOYS
Aluminum-silver alloy films for solar reflectors
[REP-3021] N80-31919

BIOCHEMISTRY
Materials processing in space, 1980 science planning document --- crystal growth, containerless processing, solidification, bioprocessing, and ultrahigh vacuum processes
[NASA-TM-78297] N80-31419

BIOENGINEERING
Biocompatible materials. A bibliography with abstracts
[PB80-811904] N80-31475

BIOLOGICAL EFFECTS
Fossil fuels research matrix program. US Environmental Protection Agency/Department of Energy Fossil Fuels Research Materials Facility
[ORNL/TM-7346] N80-31632
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 2: Threatened and endangered birds and other threatened and endangered forms
[NASA-CR-163122-VOL-4-PT-2] N80-31970
Health and environmental research related to energy development and use --- biomolecular and cellular science, environmental biology, and nuclear medicine
[UCLA-12-1217] N80-32061
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 209)
[NASA-SP-7011(209)] N80-32062
Effects of hirudin-induced activation of nonenzymatic fibrinolysis during immobilization stress
[NASA-TM-76189] N80-32065
Proceedings Of a Workshop on Thermal Physiology
[PB80-187867] N80-32087
Effects of aerosols, oxides of nitrogen, and oxidants on human health
[PB80-184583] N80-32088

BIOMASS ENERGY PRODUCTION
Chemistry of lignite liquefaction
[FE-2211-11] N80-31642
Liquid fuels from biomass: Catalysts and reaction conditions
[LBL-9789] N80-31646
Survey of biomass gasification. Volume 3: Current technology and research
[SERI/TR-33-239-VOL-3] N80-31648
Synthetic fuels from municipal, industrial, and agricultural wastes. Citations from the NTIS data base
[PB80-811375] N80-31660

BIOTECHNOLOGY
Certain problems of space biotechnology
[NASA-TM-76235] N80-31421

BIRD-AIRCRAFT COLLISIONS
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082

BIRDS
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 2: Threatened and endangered birds and other threatened and endangered forms
[NASA-CR-163122-VOL-4-PT-2] N80-31970

BLACK BODY RADIATION
Blackbody curves for the IUE spectral range lambda 1150 to lamda 3200 from 6,000 to 200,000 K
[NASA-TM-81997] N80-32306

BLADE TIPS
Ranges and critical values of advance ratio for blade/vortex intersection patterns of a helicopter rotor
[NPL-MP-79030-U] N80-31360

BLOCKING
A study of the use of blocking masses in reducing helicopter cabin noise
[RAE-TM-AERO-1838] N80-31395

BLOOD
Biocompatible materials. A bibliography with abstracts
[PB80-811904] N80-31475

BLOOD CIRCULATION
Effect of hypokinesia on blood microcirculation
[NASA-TM-76308] N80-32068

BLOOD FLOW
Blood filling and flow in lungs during change in body position in space
[NASA-TM-76333] N80-32071

BLOOD VOLUME
Blood filling and flow in lungs during change in body position in space
[NASA-TM-76333] N80-32071

BLUNT BODIES
Measurements of pressure distributions and pressure drags at zero incidence on both blunt and sharp axisymmetric forebodies at a Mach number of 3
[ARC-R/M-3849] N80-31367

BODIES OF REVOLUTION
Radiation and scattering from bodies of translation, volume 1
[AD-A087402] N80-31688

BODY KINEMATICS
Blood filling and flow in lungs during change in body position in space
[NASA-TM-76333] N80-32071

BODY-WING CONFIGURATIONS
An investigation of scale effects on the transonic flow over swept wings. Part 1: Measurements on a model of a transport-aircraft configuration
[ARC-R/M-3842-PT-1] N80-31364
Jet interference on supercritical wings. Part 1: Experiments on a two-dimensional wing. Part 2: Experiments on a swept wing --- wind tunnel tests
[ARC-R/M-3845] N80-31365

BOILERS
Recent coal-oil mixture combustion tests at PETC
[DOE/PETC-TR-80/5] N80-31658

BOLOMETERS
Selenium immersed thermistor bolometer study
[NASA-CR-160013] N80-31776
Investigation of electrical noise in selenium-immersed thermistor bolometers
[NASA-TM-82001] N80-31778

BONDING
Advanced photovoltaic concentrator cells
[DSE-4042-T40] N80-31904

BONE DEMINERALIZATION
Changes in bone tissue under conditions of hypokinesia and in connection with age
[NASA-TM-76154] N80-32064

BOOLEAN ALGEBRA
A catalogue of canonical term rewriting systems
[AD-A087641] N80-32120

BOUNDARY LAYER EQUATIONS
A numerical method for the calculation of laminar incompressible boundary layers with strong viscous-inviscid interaction
[NLR-TR-79023-U] N80-31369

BOUNDARY LAYER FLOW
Stability of boundary layer flow
[AD-A087028] N80-32001

BOUNDARY LAYER SEPARATION
Contribution to the study of supersonic laminar separation: Utilization and improvements in integral methods of calculation
[ONERA-NT-1980-1] N80-31363

BOUNDARY LAYER STABILITY
Laminar flow cyclone development program
[FE-3242-40] N80-31770

BOUNDARY LAYER TRANSITION
Experimental investigation of hydrodynamic self-acting gas bearings at high Knudsen numbers
[AD-A087400] N80-31801

BOUNDARY LAYERS
Atmospheric marine boundary layer mixing rates in the California coastal region
[AD-A087264] N80-32033

BOUNDARY VALUE PROBLEMS
Interplanetary two point boundary value problems: Extension of the Unified System for Orbit Computation (USOC), volume 4
[ESA-CR(P)-1347] N80-31424
Finite element analysis of piping tees
[AD-A087353] N80-32152
On the numerical integration of two-point boundary value problems for stiff systems of ordinary differential equations
[AD-A087396] N80-32155

BRAIN
Effect of sinusoidal modulated currents and acute hypoxia on corticosterone content and activity of certain dehydrogenases in tissues of different rat organs during hypokinesia
[NASA-TM-76161] N80-32057

BRAIN DAMAGE
Certain features of the cochleovestibular syndrome in the residual stage of traumatic brain disease
[NASA-TM-76337] N80-32073

BRIDGES (STRUCTURES)
Investigation of the vibrational behavior of a cable-stayed bridge under wind loads
[NLR-MP-79004-U] N80-31672

BRILLOUIN EFFECT
Application of advanced optical spectroscopic methods to energetic materials N80-31597

BROADCASTING
Crystal palace band 2 tests: Comparison of transmitted polarizations
[BBC-RD-1980/7] N80-31682
A feasibility study of a satellite frequency modulation broadcasting system. Volume 3: Complementary study on the attenuation in the shadow zones, multiple paths, and circular polarization reception antennas
[ESA-CR(P)-1313-VOL-3] N80-31726

BUCKLING
Dynamic buckling of inelastic spherical shells N80-31815
Further experimental studies on vibrations and buckling of eccentrically loaded stiffened cylindrical shells
[TAE-331] N80-31818
New general and complementary energy theorems, finite strain, rate-sensitive inelasticity, and finite elements: Some computational studies
[AD-A087227] N80-31824
Analysis of axially loaded stringer stiffened circular cylinders
[FFA-TN-HU-2134] N80-31843

Buckling of cylinders with longitudinal stiffeners subjected to axial compression
[FFA-TN-HU-2184] N80-31844

BULKHEADS
Cast Aluminum Structures Technology (CAST) structural test and evaluation, phase 5. Part 2: Fatigue and fracture properties of cast aluminum bulkheads
[AD-A087336] N80-31530

BURNERS
Investigation of three velocity coupled T-burner design N80-31607

BURNING RATE
A model for confined combustion of compressible, linear viscoelastic solid propellant N80-31574
Combustion characteristics of consolidated propellants N80-31583
Effect of erosive burning on pressure and temperature sensitivity N80-31592
An investigation of the effects of formulation parameters on erosive burning of composite propellants N80-31593
Effect of binder type on aluminum combustion and aluminum oxide formation N80-31596
L*-instability in ducted rocket fuel generators N80-31610
LLL in situ coal gasification project
[UCRL-50026-79-4] N80-31654

BURNING TIME
Admittances and characteristic combustion times of reactive gaseous propellant injectors N80-31620

C

CADMIUM
Hydrogen production from the solar based LASL cadmium cycle
[LA-UR-80-1400] N80-31643

CADMIUM TELLURIDES
Controlled cadmium telluride thin films for solar cell applications: Emerging materials systems for solar cell applications
[DOE/ET-23013/T4] N80-31907
Feasibility of open tube slider growth of HgCdTe from Te- rich solution
[AD-A086342] N80-32248

CALENDARS
Programs for distributed computing: The calendar application
[AD-A087357] N80-32111

CALIBRATING
An experimental weight function method for stress intensity factor calibration
[AD-A087846] N80-31837

CALIFORNIA
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California, volume 1
[PB80-187594] N80-31982
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California. Volume 2: Appendix
[PB80-187602] N80-31983

CAMERAS
Adaptation of a Kratky camera to use with a one dimensional position sensitive detector
[AD-A087523] N80-31780

CANADAIR AIRCRAFT
CL-600 challenger N80-31317

CANARD CONFIGURATIONS
Flow visualization study of the HiMAT RPRV
[NASA-CR-163094] N80-31381

CANONICAL FORMS
Canonical forms and unification
[AD-A087640] N80-32119
A catalogue of canonical term rewriting systems
[AD-A087841] N80-32120

CANOPIES
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082

CANTILEVER BEAMS
Remote measurement of crack growth in Double Cantilever Beam (DCB) specimens
[NLR-TR-79006-U] N80-31841

CAPACITANCE
Evaluation program for secondary spacecraft cells: Initial evaluation tests of General Electric Company $40.00 ampere-hour nickel-cadmium spacecraft cells for the tracking data relay satellite system
[NASA-CR-160016] N80-31888

CAPACITORS
Capacitors for aircraft high power
[AD-A087427] N80-31734

CAPE KENNEDY LAUNCH COMPLEX
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 2: Threatened and endangered birds and other threatened and endangered forms
[NASA-CR-163122-VOL-4-PT-2] N80-31970

CARBON
Complete burning and extinction of a carbon particle in an oxidizing atmosphere
[FE-3084] N80-31514

CARBON DIOXIDE
Prospect of a global warming and studies of its societal impacts
[CONF-7910158-1] N80-31976

CARBON DIOXIDE LASERS
Short intense submillimeter pulse generation
[AD-A087421] N80-31783
Measuring features of the fluence at the far field of CO2 pulsed laser: An issue study with suggestions on how to do it
[PB80-191141] N80-31789

CARBON FIBERS
The vulnerability of electric equipment to carbon fibers of mixed lengths: An analysis
[NASA-TM-80215] N80-31481
A carbon fiber exposure test facility and instrumentation
[NASA-TM-80220] N80-31482
Activated carbon fabric from pitch
[AD-A087030] N80-31553
Composite rotor blades for large wind energy installations
[NASA-TM-75822] N80-31881

CARBON MONOXIDE
Mechanistic studies related to the metal catalyzed reduction of carbon monoxide to hydrocarbons
[DOE/ER-04222/3] N80-31500
Complete burning and extinction of a carbon particle in an oxidizing atmosphere
[FE-3084] N80-31514
Investigation of dispersed iron alloy catalyst in the carbon monoxide-hydrogen synthesis reaction
[COO-4993-2] N80-31542

CARBON STEELS
Stress-corrosion cracking of steels in ammonia: A survey with consideration on given OTEC design
[ANL/OTEC-BCM-008] N80-31544

CARBONATES
Synthesis of dawsonites
[NASA-CASE-ARC-113261-1] N80-31490
Fuel cell research on second-generation molten-carbonate systems
[SAN-11276-2] N80-31935
Development of molten carbonate fuel cell power plant technology
[DOE/ET-15440/1] N80-31938

CARBURIZING
Carburization of austenitic alloys by gaseous impurities in helium
[GA-A-15790] N80-31540

CARDIOVASCULAR SYSTEM
Orthoclinostatic test as one of the methods for evaluating the human functional state
[NASA-TM-76321] N80-32070

CARGO
An analysis of the future requirements for materials handling equipment in the military airlift command
[AD-A087094] N80-31370

CARGO AIRCRAFT
Thermal conditions in the cockpit of USAF aircraft: Inflight measurements from the A-7, A-10, F-4, F-15, and YC-14
[AD-A087273] N80-32104

CARRIER MOBILITY
Infrared absorption spectrum of free carrier in polar semiconductors
[DOE/ER-10444/1] N80-31739

CAST ALLOYS
Cast Aluminum Structures Technology (CAST) structural test and evaluation, phase 5. Part 2: Fatigue and fracture properties of cast aluminum bulkheads
[AD-A087336] N80-31530
Cast Aluminum Structures Technology (CAST) structural test and evaluation, phase 5. Part 3: Static property allowables
[AD-A087337] N80-31531
Cast Aluminum Structures Technology (CAST). Phase 5: Structural and evaluation. Part 1: Full scale test
[AD-A087807] N80-31535

CASTING
Adherence of ion beam sputter deposited metal films on H-13 steel
[NASA-TM-81585] N80-31527
Laminated Fresnel lenses
[SAND-80-7007] N80-32218

CATALOGS (PUBLICATIONS)
Source header list, supplement 3
[AD-A087000] N80-32276

CATALYSIS
Study of catalyst cured LaRC-160/Celion 6000 composites
[NASA-CR-159335] N80-31480
Photocatalytic production of hydrogen from water and Texas lignite using a platinized titania catalyst
[AD-A087364] N80-31494
Mechanistic studies related to the metal catalyzed reduction of carbon monoxide to hydrocarbons
[DOE/ER-04222/3] N80-31500

CATALYSTS
Photoassisted water-gas shift reaction over platinized Ti O(2) catalysts
[AD-A087363] N80-31492
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases
[FE-14809-1] N80-31502
Investigation of dispersed iron alloy catalyst in the carbon monoxide-hydrogen synthesis reaction
[COO-4993-2] N80-31542
Synthesis of block copolymers of methyl siloxane, phenyl siloxane, vinyl siloxane, etcetera
[UCRL-15159] N80-31564
Multiphase reactor modeling for zinc chloride catalyzed coal liquefaction
[LBL-9870] N80-31626
Liquid fuels from biomass: Catalysts and reaction conditions
[LBL-9789] N80-31646

CATALYTIC ACTIVITY
Catalyzed combustion of lean fuel/air mixtures
[LBL-10842] N80-31513

CAUSES
Review of book vestibular crises
[NASA-TM-76354] N80-32078

CAVITATION FLOW
Water tunnel simulation study of the later stages of water entry of conical head bodies. Phase 2: Effect of the afterbody on steady state ventilated cavities
[AD-A086980] N80-31761
Observation of pressure variation in the cavitation region of submerged journal bearings
[NASA-TM-81582] N80-31798

CAVITIES
Collective acceleration of electrons using autoacceleration processes
[AD-A087001] N80-32199

CAVITY RESONATORS
Sensitive measurement of photon lifetime and true reflectances in an optical cavity by a phase shift method
[AD-A087248] N80-32211

CEILINGS (ARCHITECTURE)
Demonstration of an advanced solar garden with a water ceiling
[DOE/R5-10122/1] N80-31931

CELLULOSE NITRATE
Shock tube ignition of nitrocellulose and nitramines N80-31585

CEMENTS
An investigation to measure interparticle friction and to determine important material and environmental variables which influence this friction --- metallic and nonmetallic powders N80-31793

CENSORED DATA (MATHEMATICS)
A comparison between MLE and BLUE for a decreasing failure rate distribution when using censored-data
[AD-A087359] N80-32171
CERAMICS
Study of solid metal/ceramic reactions
[DOE/ER-10413/1] N80-31508
The 3500 hour durability testing of commercial ceramic materials
[NASA-CR-159785] N80-31552
Ceramics for vehicular engines: State-of-the-art
[AD-A087589] N80-31560
CEREBRAL CORTEX
The influence of modulated sinusoidal current on the state of chromatin from neurons of the cerebral cortex of rats in hypokinesia
[NASA-TM-76160] N80-32056
CHANNEL FLOW
Characterization of open-cycle, coal-fired MHD generators
[ARI-RP-46] N80-32234
CHANNELS (DATA TRANSMISSION)
A study of peak multiplexed signal level in the context of 2 1/2 or 3-channel surround-sound transmissions
[BBC-RD-1980/6] N80-31683
CHARGE COUPLED DEVICES
Integration of filters by means of linear MOS circuits
[DRIC-T-6106] N80-31742
CHARGE TRANSFER
Hydrogen-transfer and charge transfer in photochemical and high energy radiation induced reactions: Effects of thiols
[DOE/ER-03118/13] N80-31505
CHARGE TRANSFER DEVICES
Charge storage, retention and endurance in MNOS devices
[AD-A067432] N80-32256
CHARGED PARTICLES
On the secular decrease in the semimajor axis of Lageos orbit
[NASA-TM-80734] N80-31426
CHECKOUT
Checking of communications and radio navigation systems N80-31340
Aircraft static charging testing N80-31757
CHEMICAL ANALYSIS
Automated multi-sample gas chromatographic analysis of fossil fuel gases
[MLM-2721] N80-31506
Computer simulation of displacement cation exchange chromatography: Separation of trivalent actinides and lanthanides
[ORNL/TM-6738] N80-31515
Metallurgical analysis and high temperautre degradation of the black chrome selective absorber
[LBL-10293] N80-31538
Analysis of fluoride in polymer materials
[MHSMP-80-23] N80-31562
Analytical testing and characterization of three polysiloxane gums
[UCRL-84351] N80-31563
Aviation turbine fuels, 1979
[DOE/BETC-PPS-80/2] N80-31627
Fossil fuels research matrix program. US Environmental Protection Agency/Department of Energy Fossil Fuels Research Materials Facility
[ORNL/TM-7346] N80-31632
Thermoelectric materials evaluation program
[MMM-2331-0602] N80-31934
Analysis of coal-derived products and environmental systems by synchronous fluorescence and room temperature phosphorescence
[CONF-800602-4] N80-31977
CHEMICAL COMPOSITION
Electrochemical generation of the naked metal anionic clusters
[AD-A087344] N80-31495
Size distribution, chemical composition and optical properties of atmospheric dust in Israel: A comparison of urban and desert aerosols under clear and dusty conditions
[AD-A087608] N80-32010
CHEMICAL ENGINEERING
Pilot study to select candidates for energy Conservation research for the chemical industry
[DOE/TIC-11114] N80-31940
CHEMICAL MACHINING
Fabrication of Josephson tunnel junctions by reactive ion milling
[AD-A087448] N80-32249
CHEMICAL PROPERTIES
Chemical characterization and quality control for an adhesive
[AD-A087739] N80-31558
CHEMICAL PROPULSION
Chemical propulsion technology N80-31453
Low-thrust vehicles concept studies N80-31456
Auxiliary control of LSS N80-31459
Low-thrust chemical rocket engine study N80-31467
Low-thrust chemical propulsion N80-31468
Low-thrust chemical orbit to orbit propulsion system propellant management study N80-31469
CHEMICAL REACTIONS
An improved synthesis of 2,4,8,10-tetroxaspiro (5.5) undecane
[NASA-CASE-ARC-11243-2] N80-31472
Research studies in/NF4(+)/salts
[AD-A086981] N80-31474
Mechanistic studies related to the metal catalyzed reduction of carbon monoxide to hydrocarbons
[DOE/ER-04222/3] N80-31500
Crossed molecular beam studies of chemiluminescent reactions
[LBL-10545] N80-31504
Study of solid metal/ceramic reactions
[DOE/ER-10413/1] N80-31508
A prediction model for turbulent diffusion flames, including NO-formation
[VKI-PREPRINT-1979-14] N80-31519
The autoxidation of hydrazine and alkyl substituted hydrazine vapors
[PERME-MEMO-92] N80-31520
Effects of surface condition on the corrosion of candidate structural materials in a simulated HTGR-GT environment
[GA-A-15673] N80-31539
Synthesis of block copolymers of methyl siloxane, phenyl siloxane, vinyl siloxane, etcetera
[UCRL-15159] N80-31564
Cook-off in fuel fire N80-31577
A priori thermochemistry and rate constant estimates for flame zone reactions N80-31589
A mechanism for the photochemical induced combustion of H2/F2 mixtures inhibited by O2 N80-31623
Chemistry of lignite liquefaction
[FE-2211-11] N80-31642
Hydrogen production from the solar based LASL cadmium cycle
[LA-UR-80-1400] N80-31643
Experimental study of chemically reacting turbulent free shear layers
[FE-2446-8] N80-31766
CHEMICAL REACTORS
Advanced development of a short-residence-time hydrogasifier
[FE-3125-12] N80-31638
Advanced development of a short-residence-time hydrogasifier
[FE-3125-18] N80-31639
Design, engineering and evaluation of refractory liners for slagging gasifiers
[IITRI-M-6043-5] N80-31640
Materials for coal conversion and use. Volume 2: Materials of construction for coal conversion systems. Part 1: Coal gasification. Part 2: Coal liquefaction
[FE-2468-59-VOL-2-PT-1/2] N80-31644
Development of a model and computer code to describe solar grade silicon production processes
[NASA-CR-163515] N80-31873
Silicon halide-alkali metal flames as a source of solar grade silicon
[NASA-CR-163514] N80-31874
Limit cycle solutions of reaction-diffusion equations
[AD-A087114] N80-32180
CHEMILUMINESCENCE
Crossed molecular beam studies of chemiluminescent reactions
[LBL-10545] N80-31504
CHEMISORPTION
Surface defects and thermodynamics of chemisorbed layers
[AD-A086918] N80-32251
CHOROID MEMBRANES
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
CHROMATOGRAPHY
Computer simulation of displacement cation exchange chromatography: Separation of trivalent actinides and lanthanides
[ORNL/TM-6738] N80-31515
Ion chromatography of anions
[PB80-184450] N80-31522
CHROMIUM
Metallurgical analysis and high temperautre degradation of the black chrome selective absorber
[LBL-10293] N80-31538
CHROMOSPHERE
Spectrum synthesis of EUV solar flare line profiles
[NASA-CR-161551] N80-32315
CIRCUIT BOARDS
Cost effective system for connecting multiwire cables to printed wiring boards
[BDX-613-2302] N80-31738
CIRCUITS
Microwave frequency memory --- microwave oscillators
[RSRE-MEMO-3257] N80-31741
High voltage nanosecond pulse generator
[AD-A087291] N80-31784
CIRCULAR CYLINDERS
Hydrodynamic coefficients for vertical circular cylinders at finite depth
[AD-A087334] N80-31763
Analysis of axially loaded stringer stiffened circular cylinders
[FFA-TN-HU-2134] N80-31843
Buckling of cylinders with longitudinal stiffeners subjected to axial compression
[FFA-TN-HU-2184] N80-31844
CIRCUMSOLAR RADIATION
Effect of circumsolar radiation on performance of focusing collectors
[SERI/TR-34-093] N80-31916
Circumsolar radiation
[SAND-80-7009] N80-32319
CITIES
Environmental wind in built-up areas
[VKI-TM-26] N80-32043
CIVIL AVIATION
Sabreliner 65 N80-31315
The development of the world's first triengine business jet, the Mystere Falcon 50 N80-31316
CL-600 challenger N80-31317
CLEAN ENERGY
Fossil energy program
[ORNL-5630] N80-31902
CLEANING
Possible methods for removing small airborne particles from the flow in the 5 meter pressurized low-speed wind tunnel
[RAE-TM-AERO-1826] N80-31416
CLIMATE
Prospect of a global warming and studies of its societal impacts
[CONF-7910158-1] N80-31976
Program of research and monitoring for early detection of stratospheric ozone change. Report to Congress of findings for 1978 - 1979
[PB80-184021] N80-32022
On the dynamic forcing of short-term climate fluctuations by feedback mechanisms
[NASA-CR-162865] N80-32034
Anthropogenic climate changes. State-of-the-art survey
[KNMI-V-347] N80-32041
CLIMATOLOGY
On the dynamic forcing of short-term climate fluctuations by feedback mechanisms
[NASA-CR-162865] N80-32034
Climatology in the Netherlands. Abstracts of seven lectures given on Climate Day
[KNMI-V-345] N80-32039
The global 2000 report to the president. Entering the twenty-first century. Volume 2: The technical report --- trends in population, climate, gross national product, earth resources, technology, and man environment interactions N80-32296
CLOSED CYCLES
Evaluation of control strategies for solar collector loops
[LBL-10716] N80-31932

CLOUD COVER
Development of the microwave radiative transfer program for cloudy atmospheres applications to DMSP SSM/T channels
[AD-A087434] N80-32032
CLOUD PHOTOGRAPHS
Users Guide for the analysis and interpretation of satellite imagery on the High Plains summer cloud and mesoscale systems
[PB80-175987] N80-32045
CLOUD PHYSICS
Anomalous snowfall caused by natural-draft cooling towers
[RAND/N-1479-DOE] N80-32024
Numerical study of rotating interstellar clouds: Equilibrium and collapse
[UCRL-52946] N80-32308
CLOUDS (METEOROLOGY)
Mariners Weather Log, volume 24, no. 2
[PB80-188444] N80-32048
CNOIDAL WAVES
A study of nonlinear waves described by the cubic Schrodinger equation --- cnoidal waves N80-32177
COAGULATION
Effects of hirudin-induced activation of nonenzymatic fibrinolysis during immobilization stress
[NASA-TM-76189] N80-32065
COAL
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[FE-2315-48] N80-31629
Cogeneration Technology Alternatives Study (CTAS). Volume 3: Industrial processes
[NASA-CR-159767] N80-31870
General application of the critical path method to resource characterization and planning for underground coal mining
[DOE/ET-11268/3] N80-32272
COAL DERIVED LIQUIDS
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[FE-2315-48] N80-31629
Research and development of an advanced process for conversion of coal to synthetic gasoline and other distillate motor fuels
[FE-1800-45] N80-31641
Chemistry of lignite liquefaction
[FE-2211-11] N80-31642
Analysis of coal-derived products and environmental systems by synchronous fluorescence and room temperature phosphorescence
[CONF-800602-4] N80-31977
COAL GASIFICATION
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases
[FE-14809-1] N80-31502
A study of industrial hydrogen and syngas supply systems
[NASA-CR-163523] N80-31624
Pipeline gas from coal: Hydrogenation (IGT hydrogasification process)
[FE-2434-33A] N80-31630
Molten salt coal gasification process development unit
[SAN-1429-56] N80-31631
Pittsburgh Energy Technology Center hydrogasification process: Conceptual commercial scale plant design
[DOE/MC-08484/T1] N80-31633
Advanced coal gasification system for electric power generation
[FE-1514-101] N80-31634
Pipeline gas from coal: Hydrogenation (IGT hydrogasification process)
[FE-2434-58] N80-31636
Coal gasification pilot plant support studies
[FE-2806-5] N80-31637
Advanced development of a short-residence-time hydrogasifier
[FE-3125-12] N80-31638
Advanced development of a short-residence-time hydrogasifier
[FE-3125-18] N80-31639
Design, engineering and evaluation of refractory liners for slagging gasifiers
[IITRI-M-6043-5] N80-31640
Materials for coal conversion and use. Volume 2: Materials of construction for coal conversion systems. Part 1: Coal gasification. Part 2: Coal liquefaction
[FE-2468-59-VOL-2-PT-1/2] N80-31644
Methane recovery from coalbeds project, phase 2
[DOE/MC-08089/T4] N80-31645
Gasification of coal with solar energy
[UCRL-84458] N80-31652
Underground gasification for steeply dipping coal beds. Rawlins test no. 1
[SAN-13108-35] N80-31653
LLL in situ coal gasification project
[UCRL-50026-79-4] N80-31654
Instrumentation and process control development for in situ coal gasification
[SAND-80-1025] N80-31655
Mixing and gasification of coal in entrained flow systems. Volume 2: User's manual for a computer program for 1-dimensional coal combustion or gasification (1-DICOG)
[FE-2666-F-VOL-2] N80-31656
Development of molten carbonate fuel cell power plant technology
[DOE/ET-15440/1] N80-31938
Pollutants from synthetic fuels production: Coal gasification screening test results
[PB80-182769] N80-31986
Coal gasification/gas cleanup test facility: Volume 1. Description and operation
[PB80-188378] N80-31990
Review of Department of Energy sponsored codes and documentation available from Purdue and Lehigh Universities processes modeling contracts
[K/CSD/TM-35] N80-32278
COAL LIQUEFACTION
Ultrasonic characterization of coal liquefaction products
[DOE/PC-10346/1] N80-31503
Multiphase reactor modeling for zinc chloride catalyzed coal liquefaction
[LBL-9870] N80-31628
Research and development of an advanced process for conversion of coal to synthetic gasoline and other distillate motor fuels
[FE-1800-45] N80-31641
Chemistry of lignite liquefaction
[FE-2211-11] N80-31642
Materials for coal conversion and use. Volume 2: Materials of construction for coal conversion systems. Part 1: Coal gasification. Part 2: Coal liquefaction
[FE-2468-59-VOL-2-PT-1/2] N80-31644
Review of Department of Energy sponsored codes and documentation available from Purdue and Lehigh Universities processes modeling contracts
[K/CSD/TM-35] N80-32278
COAL UTILIZATION
Combustion studies of coal-in-oil droplets
[DOE/ET-10660/1] N80-31499
Methane recovery from coalbeds project, phase 2
[DOE/MC-08089/T4] N80-31645
Recent coal-oil mixture combustion tests at PETC
[DOE/PETC-TR-80/5] N80-31658
Fossil energy program
[ORNL-5630] N80-31902
COALESCING
Combustion studies of coal-in-oil droplets
[DOE/ET-10660/1] N80-31499
COANDA EFFECT
Development of a nozzle to improve the turning of supersonic Coanda jets
[AD-A087709] N80-31765
COASTAL WATER
Federal plan for ocean pollution research development and monitoring
[PB80-193295] N80-31989
Seasat SAR Coastal Ocean Wave Analysis. A wave refraction and diffraction study
[PB80-189384] N80-32052
Coastal upwelling ecosystems analysis. Data report 65: Sediment data from short cores during JOINT 2 off Peru
[PB80-183155] N80-32053
COASTS
Remote sensing procedures for detecting and monitoring various activities regulated by the Mobile District
[AD-A087584] N80-31973
COATINGS
Aluminum-silver alloy films for solar reflectors
[REP-3021] N80-31919
COAXIAL CABLES
Performance characteristics of leaky coaxial cables
[AD-A087475] N80-31703
COBOL
Testing COBOL programs by mutation. Volume 1: Introduction to the CMS.1 system
[AD-A087310] N80-32117
COCHLEA
Certain features of the cochleovestibular syndrome in the residual stage of traumatic brain disease
[NASA-TM-76337] N80-32073
COCKPITS
Perception of aircraft separation with pilot-preferred symbology on a cockpit display of traffic information
[NASA-TM-81172] N80-31397
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082
Thermal conditions in the cockpit of USAF aircraft: Inflight measurements from the A-7, A-10, F-4, F-15, and YC-14
[AD-A087273] N80-32104
CODES
Statistical properties of the digital sum in partial response codes
[FUB-21-1979] N80-32176
CODING
The possibility of utilizing coding techniques to improve the availability of digital radio link networks at frequencies over 10 GHz
[FUB-54-1978] N80-31712
Some properties of the partial response codes of an order greater than two
[FUB-9-1979] N80-31717
Space-variant processing using phase codes and Fourier-plane sampling techniques
[AD-A087285] N80-31779
COEFFICIENTS
Hydrodynamic coefficients for vertical circular cylinders at finite depth
[AD-A087334] N80-31763
COGENERATION
Cogeneration Technology Alternatives Study (CTAS). Volume 3: Energy conversion system characteristics
[NASA-CR-159761] N80-31869
Cogeneration Technology Alternatives Study (CTAS). Volume 3: Industrial processes
[NASA-CR-159767] N80-31870
Feasibility study: Fuel cell cogeneration in a water pollution control facility, volume 1
[DOE/ET-12431/T1-VOL-1] N80-31922
COGNITION
Individual difference relations in psychometric and experimental cognitive tasks
[AD-A086057] N80-32093
COGNITIVE PSYCHOLOGY
Individual difference relations in psychometric and experimental cognitive tasks
[AD-A086057] N80-32093
COLD FLOW TESTS
Rotating valve for velocity combustion response measurements N80-31606
Flowfield studies of dump combusters N80-31615
Advanced coal gasification system for electric power generation
[FE-1514-101] N80-31634
COLLAPSE
Numerical study of rotating interstellar clouds: Equilibrium and collapse
[UCRL-52946] N80-32308
COLLISION AVOIDANCE
Air-to-air target acquisition factors and means of improvement
[AD-A087848] N80-32095
COLUMBIA RIVER BASIN (ID-OR-WA)
LANDSAT data as a basis for regional environmental assessment within the Columbia Plateau
[RHO-BWI-SA-43] N80-31862
COMBINATORIAL ANALYSIS
Partitioning and cooperation in a distributed multiprocessor operating system: Medusa N80-32144
COMBINED STRESS
Plasticity under combined stress loading --- aluminum alloys
[UCRL-83322] N80-31840

COMBUSTION
Studies of combustion kinetics and mechanisms
[DOE/ER-14953/T1] N80-31516
The 16th JANNAF Combustion Meeting, volume 1
[AD-A084680] N80-31565
Compaction and the burning to detonation transition at low confinement N80-31572
Effect of propellant crack burning on high energy propellant safety N80-31573
Rotating valve for velocity combustion response measurements N80-31606
A mechanism for the photochemical induced combustion of H2/F2 mixtures inhibited by O2
N80-31623
Mixing and gasification of coal in entrained flow systems. Volume 2: User's manual for a computer program for 1-dimensional coal combustion or gasification (1-DICOG)
[FE-2666-F-VOL-2] N80-31656
Prospect of a global warming and studies of its societal impacts
[CONF-7910158-1] N80-31976
Review of stiffness and implicit finite difference methods in combustion modeling
[SAND-79-8623] N80-32163

COMBUSTION CHAMBERS
Assessment of chamber pressure oscillations in the shuttle SRB N80-31601
Flowfield studies of dump combusters
N80-31615

COMBUSTION CONTROL
Catalyzed combustion of lean fuel/air mixtures
[LBL-10842] N80-31513

COMBUSTION EFFICIENCY
Combustion studies of coal-in-oil droplets
[DOE/ET-10660/1] N80-31499
Complete burning and extinction of a carbon particle in an oxidizing atmosphere
[FE-3084] N80-31514
Reduction of combustion efficiency associated with liquid phase drop decomposition N80-31617
High density fuels design considerations for combustors and combustion assessories in subsonic cruise missile propulsion systems N80-31618
Recent coal-oil mixture combustion tests at PETC
[DOE/PETC-TR-80/5] N80-31658

COMBUSTION PRODUCTS
Pipeline gas from coal: Hydrogenation (IGT hydrogasification process)
[FE-2434-58] N80-31636
Numerical simulation of advection fog formation on multi-disperse aerosols due to combustion-related pollutants
[NASA-CR-161566] N80-31971

COMBUSTION STABILITY
Effect of binder type on aluminum combustion and aluminum oxide formation N80-31596
On response functions for composite solid propellant N80-31603
Studies of motor instability problems N80-31608
Admittances and characteristic combustion times of reactive gaseous propellant injectors N80-31620
Design and evaluation of high performance rocket engine injectors for use with hydrocarbon fuels
N80-31621

COMMAND AND CONTROL
Packet radio deployment study
[AD-A087417] N80-31693
Requirements definition and design guidelines for man-machine interface in C3 system acquisition
[AD-A087258] N80-32102
Software verification and validation N80-32132

COMMERCIAL AIRCRAFT
The NASA high-speed turboprop program
[NASA-TM-81561] N80-31401

COMMERCIAL ENERGY
Aviation turbine fuels, 1979
[DOE/BETC-PPS-80/2] N80-31627
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 1: Conceptual design, sections 1 through 4
[DOE/ET-20567/1-2-BK-1] N80-31896
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 2: Conceptual design, sections 5 and 6
[DOE/ET-20567/1-2-BK-2] N80-31897
Energy analysis of geothermal-electric systems
[COO-5085-4] N80-31915
Solar central receiver hybrid power systems sodium-cooled receiver concept. Volume 1: Executive summary
[DOE/ET/20567-1/1] N80-31948
Residential photovoltaic systems: A review and comparative evaluation of four independent studies of potential concepts
[SAND-80-7010] N80-31949
Photovoltaic institutional issues study
[SAND-79-7054] N80-31950

COMMUNICATION EQUIPMENT
Pseudonoise spread-spretrum systems for military communications
[AD-A087701] N80-31700

COMMUNICATION NETWORKS
Packet radio deployment study
[AD-A087417] N80-31693
Dynamic behavior of shortest path routing algorithms for communication networks
[AD-A087706] N80-31697
DYMAC communications system
[LA-8182-M] N80-31707
The possibility of utilizing coding techniques to improve the availability of digital radio link networks at frequencies over 10 GHz
[FUB-54-1978] N80-31712
Customer access protocols to integrated services digital networks
[FUB-7-1979] N80-31716
Procedures for out-of-service verification and hop length dimensioning in numerical radio links
[FUB-10-1979] N80-31718
Development of COST 202 project: Numerical local networks for telecommunications
[FUB-14-1979] N80-31719
Capacity optimization of a reserve network used for rerouting damaged service blocks --- communication networks
[FUB-18-1979] N80-31720
A procedure for satisfying in an optimal way time varying circuit requirements --- communication networks
[FUB-19-1979] N80-31721
Evaluation of service availability in a packet switching network
[FUB-26-1979] N80-31724
Applications of information theory to data communication networks
[AD-A087624] N80-32146

COMMUNICATION SATELLITES
Lease versus buy considerations for MILSATCOM systems and an acquisition strategy for STRATSAT SSS lease/buy study
[AD-A087411] N80-31430
DSCS 2, battery anomaly investigation satellites 9437 and 9438
[AD-A087390] N80-31432
Equatorial scintillation of satellite signals at uhf and l-band for two different elevation angles
[AD-A087404] N80-31690
Telecommunication: Economic studies. Citations from the NTIS data base
[PB80-811136] N80-31728
Telecommunication: Economic studies. Citations from the NTIS data base
[PB80-811144] N80-31729

COMMUNICATION THEORY
Statistical properties of the digital sum in partial response codes
[FUB-21-1979] N80-32176

COMPARISON
Methodology for the comparative assessment of the Satellite Power System (SPS) and alternative technologies
[NASA-CR-163049] N80-31951

COMPILERS
INTERLISP maintenance
[AD-A087338] N80-32118
Compiler writing techniques for avionics applications N80-32131

COMPOSITE MATERIALS
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159111] N80-31447
Micromechanics of short-fiber composite
N80-31477
Investigation of constraint effects on flaw growth in composite laminates N80-31478
Study of catalyst cured LaRC-160/Celion 6000 composites
[NASA-CR-159335] N80-31480
Statistical analysis of strength and life of composite materials
[AD-A087741] N80-31484
Superconductivity in filamentary eutectic composites
[COO-4938-3] N80-31486
Study of fiber-matrix interface structure and interfacial diffusion phenomena in Cotac-type solidification composites. Effect on the thermal stability of the fibers
[ONERA-NT-1979-11] N80-31489
Design and analysis of a stiffened composite fuselage panel
[NASA-CR-159302] N80-31820
Thermoelasticity of circular cylindrical shells laminated of bimodulus composite materials
[AD-A087429] N80-31836

COMPOSITE PROPELLANTS
Statistical analysis of composite solid propellant combustion N80-31591
An investigation of the effects of formulation parameters on erosive burning of composite propellants N80-31593
On response functions for composite solid propellant N80-31603

COMPOSITE STRUCTURES
Cost analysis of composite fan blade manufacturing processes
[NASA-CR-159876] N80-31398
High energy density composite flywheel program
[AD-A087076] N80-31892
A mass reduction effort of the electric and hybrid vehicle --- composite door panels
[NASA-CR-163520] N80-32298

COMPRESSIBLE BOUNDARY LAYER
A critical commentary on mean flow data for two-dimensional compressible turbulent boundary layers
[AGARD-AG-253] N80-31354

COMPRESSION LOADS
Compression-ignition sensitivity studies of liquid monopropellant in a dynamic-loading environment
N80-31581

COMPUTATION
Applications of the finite element method to the calculation of electromagnetic fields in cylindrical structures
[FUB-2-1979] N80-31713
Quantization noise spectra calculation
[FUB-5-1979] N80-31714
On the utility of plane strain approximations for oblique impact computations
[AD-A081120] N80-31819
Computational astrophysics relating to the interstellar medium: Problems and prospects for the 1980's --- structure and dynamics of interstellar gas
[UCRL-84410] N80-32307

COMPUTATIONAL FLUID DYNAMICS
The treatment of the sonic line and of shocks in a finite element approach to transonic flow computations
[AD-A087740] N80-31359

COMPUTER ASSISTED INSTRUCTION
Methods for collecting and analyzing task analysis data
[AD-A087710] N80-32094

COMPUTER DESIGN
USAFSAM waiver file intelligent terminal: Hardware reference manual
[AD-A087340] N80-32110

COMPUTER GRAPHICS
Satellite derived winds
[AD-A087023] N80-32026
Conversion of grid-point data into meteorological maps with a mini-computer system
[WMO-553] N80-32042
A method of interpolation using cubic polynomials which avoids unnatural overshoots --- computer plotting
[RAE-TM-AERO-1812] N80-32122

COMPUTER NETWORKS
European cooperation in field of aerospace information N80-32285
The role of NASA for aerospace information
N80-32286

COMPUTER PROGRAMMING
Maintainability index model data base study
[AD-A087844] N80-31324
Interplanetary two point boundary value problems: Extension of the Unified System for Orbit Computation (USOC), volume 4
[ESA-CR(P)-1347] N80-31424
Canonical forms and unification
[AD-A087640] N80-32119

COMPUTER PROGRAMS
Development of advanced avionics systems applicable to terminal-configured vehicles
[NASA-CR-3280] N80-31375
Bifilar analysis study, volume 1
[NASA-CR-159227] N80-31382
Bifilar analysis users manual, volume 2
[NASA-CR-159228-VOL-2] N80-31383
Aircraft hydraulic systems dynamic analysis component data handbook
[AD-A087366] N80-31390
Level B/C software ground navigation program. Delta-T processor
[NASA-TM-82184] N80-31446
Integrated analysis of large space systems N80-31462
Nonlinear viscoelastic behavior of a composite material using a finite element micromechanical analysis
[AD-A087367] N80-31483
A primitive variable computer model for combustion within solid fuel ramjets N80-31609
Radiation and scattering from bodies of translation, volume 1
[AD-A087402] N80-31688
Radiation and scattering from bodies of translation. Volume 2: User's manual, computer program documentation
[AD-A087403] N80-31689
Ground range and bearing error determination and display for an OTH radar system with an Arctic trough ionosphere
[AD-A087010] N80-31691
Rotor-bearing dynamics technology design guide. Part 1: Flexible rotor dynamics
[AD-A087806] N80-31802
Two dimensional linear elastic analysis of fracture specimens: User's manual of a finite element computer program
[AD-A087440] N80-31830
An experimental weight function method for stress intensity factor calibration
[AD-A087846] N80-31837
A description of a system of programs for mathematically processing on unified series (YeS) computers photographic images of the Earth taken from spacecraft
[NASA-TM-76208] N80-31856
State estimation and absolute image registration for geosynchronous satellites
[NASA-TM-80712] N80-31858
A study of LANDSAT multispectral scanner data tapes --- corrected data and data restoration
[RAE-TR-80018] N80-31864
Development of a model and computer code to describe solar grade silicon production processes
[NASA-CR-163515] N80-31873
Three computer codes to read, plot and tabulate operational test-site recorded solar data
[NASA-TM-78293] N80-31879
A computer program for the scattering of a pollutant
[VKI-PREPRINT-1979-4] N80-31979
CAD: A code for the calculation of atmospheric density --- atmospheric drag effects on Earth orbiting satellites
[AD-A087447] N80-32005
USAFSAM waiver file intelligent terminal: Hardware reference manual
[AD-A087340] N80-32110
Programs for distributed computing: The calendar application
[AD-A087357] N80-32111
Implementing advanced data analysis techniques in near-real-time materials accounting
[LA-UR-80-1816] N80-32113
Modeling a software engineering project management system N80-32116
Testing COBOL programs by mutation. Volume 1: Introduction to the CMS 1 system
[AD-A087310] N80-32117
INTERLISP maintenance
[AD-A087338] N80-32118
A catalogue of canonical term rewriting systems
[AD-A087641] N80-32120
Graphics library for real time display and data analysis
[UCID-18543] N80-32121
Computer software reliability. A bibliography with abstracts
[PB80-811797] N80-32123
Evaluation of incident detection algorithms
[PB80-187255] N80-32124
Guidance and control software
[AGARD-AG-258] N80-32125
An approach to the derivation and validation of requirements N80-32126
Trends in the development of software for guidance and control N80-32127
A modern facility for software production and maintenance N80-32128
The United States Department of Defense common high order language N80-32130
Software maintenance management process N80-32133
Advanced design concepts and practices in the F-16 mission computer software N80-32135
Main computer software for the MRCA TORNADO N80-32136
Design and development of software for Sea Harrier HUDWAC N80-32138
Software for an integrated flight control and night vision system for military helicopters N80-32139
Space shuttle applications. Part 1: Redundant computer operation. Part 2: Redundant computer software design and test N80-32140
Software applications as demonstrated in the P-3C avionics system N80-32141
Executive software reusability for distributed avionics architectures N80-32142
Characterization of open-cycle, coal-fired MHD generators
[ARI-RP-46] N80-32234
Review of Department of Energy sponsored codes and documentation available from Purdue and Lehigh Universities processes modeling contracts
[K/CSD/TM-35] N80-32278
Where are the asteroids? The design of ASTPT and ASTID
[AD-A087422] N80-32312
Longitudinal and transverse magnetic field program procedure and detailed specification for Sigma 5
[NASA-TM-78292] N80-32314

COMPUTER SYSTEMS DESIGN
Integrated analysis capability for large space systems N80-31463
Requirements definition and design guidelines for man-machine interface in C3 system acquisition
[AD-A087258] N80-32102
Handbook of procedures for estimating computer system sizing and timing parameters. Volume 2: Addendum
[AD-A086140] N80-32112
Modeling a software engineering project management system N80-32116
General application of the critical path method to resource characterization and planning for underground coal mining
[DOE/ET-11268/3] N80-32272

COMPUTER SYSTEMS PERFORMANCE
Handbook of procedures for estimating computer system sizing and timing parameters. Volume 2: Addendum
[AD-A086140] N80-32112
Assessment of operational automated guideway systems-AIRTRANS, phase 2
[PB80-182538] N80-32302

COMPUTER SYSTEMS PROGRAMS
TACAN operational description for the space shuttle orbital flight test program
[NASA-CR-160775] N80-31439
Guidance and control software
[AGARD-AG-258] N80-32125
An approach to the derivation and validation of requirements N80-32126
Trends in the development of software for guidance and control N80-32127
A modern facility for software production and maintenance N80-32128
The United States Department of Defense common high order language N80-32130
Software maintenance management process N80-32133

COMPUTER SYSTEMS SIMULATION
Handbook of procedures for estimating computer system sizing and timing parameters. Volume 2: Addendum
[AD-A086140] N80-32112

COMPUTER TECHNIQUES
Aerodynamic performance of a 5-metre-diameter Darrieus turbine with extruded aluminum NACA-0015 blades
[SAND-80-0179] N80-31957
Programs for distributed computing: The calendar application
[AD-A087357] N80-32111

COMPUTERIZED DESIGN
Simulation and visualization of face seal motion stability by means of computer generated movies
[NASA-TM-81581] N80-31797
Characterization of open-cycle, coal-fired MHD generators
[ARI-RP-43] N80-31936
A fast analysis and modification algorithm for computer aided design of large scale networks N80-32143

COMPUTERIZED SIMULATION
Have Bounce N80-31311
Aircraft Maintenance Effectiveness Simulation (AMES) model
[AD-A087516] N80-31325
Logistics forecasting for achieving low life cycle cost --- aircraft maintenance N80-31347
Computer simulation of ejection seat performance and preliminary correlation with empirical data
[AD-A087275] N80-31372
Development and validation of a hybrid-computer simulator for a transonic cryogenic wind tunnel
[NASA-TP-1695] N80-31413
Computer simulation of displacement cation exchange chromatography: Separation of trivalent actinides and lanthanides
[ORNL/TM-6738] N80-31515
Assessment of frequency selective fading on DCS transmission system performance.
[AD-A087794] N80-31695
Space-variant processing using phase codes and Fourier-plane sampling techniques
[AD-A087285] N80-31779
Simulation and visualization of face seal motion stability by means of computer generated movies
[NASA-TM-81581] N80-31797
Solar domestic hot water system, a comparative study and storage tank investigation N80-31868
Quantitative simulation of a magnetospheric substorm. 1: Model logic and overview
[NASA-CR-163547] N80-32007
Quantitative simulation of a magnetospheric substorm. 2: Comparison with observations
[NASA-CR-163548] N80-32008
Simulation of some autoregressive Markovian sequences of positive random variables
[AD-A087368] N80-32153
Batch size effects in the analysis of simulation output
[AD-A087045] N80-32170

COMPUTERS
USAFSAM waiver file intelligent terminal: Hardware reference manual
[AD-A087340] N80-32110
Robustness of multiloop linear feedback systems
[NASA-CR-163450] N80-32148

CONCENTRATING
Gallium arsenide solar cells for very high concentration systems: Recent results, problems and expectations
[CISE-1518] N80-31962

CONCENTRATION (COMPOSITION)
CARS concentration sensitivity with and without nonresonant background suppression
[AD-A087557] N80-31497
Evaluation of cars in a practical combustion environment N80-31612
Investigation of the feasibility of CARS measurements in scramjet combustion N80-31613
Comparison of thermocouple, gas sampling, and Raman measured temperatures in an afterburning turbojet engine plume N80-31614
Experimental study of chemically reacting turbulent free shear layers
[FE-2446-8] N80-31766

APTI (Air Pollution Training Institute) course 450 source sampling for particulate pollutants. Student workbook
[PB80-182439] N80-31988

CONCENTRATORS
Optical analysis of point focus parabolic radiation concentrators
[SERI/TR-631-336] N80-31917
Dual curvature acoustically damped concentrating collector
[DOE/CS-34196/T1] N80-31921
Terrestrial photovoltaic power systems with sunlight concentration
[SAND-80-7008] N80-31942

CONCENTRIC CYLINDERS
Experimental study of the steady natural convection in a horizontal annulus with irregular boundaries --- convective heat transfer from spent fuel assemblies in containers
[SAND-79-2354C] N80-31767

CONCORDE AIRCRAFT
The logic of the electric flight control system experiment on the Concorde --- achieving low speed longitudinal stability by active control N80-32137

CONCRETE STRUCTURES
Seismic stability of block structures N80-31665
Measurement and correlation analysis plan for concrete tie and fastener performance analysis
[PB80-183882] N80-31674

CONCRETES
Development and evaluation of the epoxy repair method for reinforced concrete flexural members N80-31666

CONDENSATES
Thermochemical stability diagrams for condensed phases and volatility diagrams for volatile species over condensed phases in twenty metal-sulfur-oxygen systems between 1150 and 1450 K
[DOE/FE-13547/01] N80-31510

CONDUCTIVE HEAT TRANSFER
Coal processing for fuel cell utilization: Task 9: One-dimensional (streamtube) model for entrained-flow gasifier analysis
[METC-8450-T2-VOL-1] N80-31912

CONFERENCES
Workshop on Satellite Power Systems (SPS) Effects on Optical and Radio Astronomy
[CONF-7905143] N80-31435
Large Space Systems/Low-Thrust Propulsion Technology
[NASA-CP-2144] N80-31449
Federal plan for ocean pollution research development and monitoring
[PB80-193295] N80-31989
Proceedings Of a Workshop on Thermal Physiology
[PB80-187667] N80-32087
Workshop on Digital Time Series Analysis with Geophysical Applications
[CSIR-S-238] N80-32150

CONFIDENCE LIMITS
Determination of tire quality from nondestructive inspection
[PB80-185358] N80-31812
Batch size effects in the analysis of simulation output
[AD-A087045] N80-32170

CONFIGURATION INTERACTION
Repeatability of spatial configurations defined by interaction matrices N80-32179

CONGRESSIONAL REPORTS
Program of research and monitoring for early detection of stratospheric ozone change. Report to Congress of findings for 1978 - 1979
[PB80-184021] N80-32022

CONICAL BODIES
Water tunnel simulation study of the later stages of water entry of conical head bodies. Phase 2: Effect of the afterbody on steady state ventilated cavities
[AD-A086980] N80-31761

CONNECTORS
Ultra low optical fiber cable assemblies
[AD-A087517] N80-32217

CONSTRAINTS
Investigation of constraint effects on flaw growth in composite laminates N80-31478

CONSTRUCTION MATERIALS
Effects of surface condition on the corrosion of candidate structural materials in a simulated HTGR-GT environment
[GA-A-15673] N80-31539
Materials for coal conversion and use. Volume 2: Materials of construction for coal conversion systems. Part 1: Coal gasification. Part 2: Coal liquefaction
[FE-2468-59-VOL-2-PT-1/2] N80-31644

CONSUMABLES (SPACECRAFT)
Space transportation system disconnect --- replenishing fluids during orbital servicing
[NASA-CR-161565] N80-31442

CONTAINERLESS MELTS
Materials processing in space, 1980 science planning document --- crystal growth, containerless processing, solidification, bioprocessing, and ultrahigh vacuum processes
[NASA-TM-78297] N80-31419

CONTAINERS
A methodology for modeling confined, temperature sensitive cushioning systems
[AD-A087351] N80-31799

CONTAMINANTS
Numerical simulation of advection fog formation on multi-disperse aerosols due to combustion-related pollutants
[NASA-CR-161586] N80-31971
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California, volume 1
[PB80-187594] N80-31982
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California. Volume 2: Appendix
[PB80-187602] N80-31983
Pollutants from synthetic fuels production: Coal gasification screening test results
[PB80-182769] N80-31986
Federal plan for ocean pollution research development and monitoring
[PB80-193295] N80-31989

CONTINUOUS WAVE RADAR
Doppler radar studies during the Sierra Cooperative Pilot Project
[PB80-191455] N80-32047

CONTOURS
A detailed magnetic survey of the Saint Lawrence River: Oak Point to Lake Ontario, New York
[PB80-191471] N80-32021

CONTROL
Wind tunnel measurement of lateral aerodynamic derivatives using a new oscillatory rig, with results and comparisons for the Gnat aircraft
[ARC-R/M-3847] N80-31366

CONTROL SURFACES
Electromechanical actuation development
[AD-A085847] N80-31409

CONTROL THEORY
On the total synthesis problem of linear multivariable control N80-32147

CONTROL UNITS (COMPUTERS)
USAFSAM waver file intelligent terminal: Hardware reference manual
[AD-A087340] N80-32110

CONTROLLABILITY
Evaluation of lateral and directional characteristics and spinning behaviour N80-31336

CONVECTION
Gravitational convection of subcooled He 1 and the transition into superfluid He 2 at atmospheric pressure
[LBL-10928] N80-31671
Experimental techniques for determination of the role of diffusion and convection in crystal growth from solution
[NASA-TM-78131] N80-32247

CONVECTIVE HEAT TRANSFER
Experimental study of the steady natural convection in a horizontal annulus with irregular boundaries --- convective heat transfer from spent fuel assemblies in containers
[SAND-79-2354C] N80-31767

CONVERGENT-DIVERGENT NOZZLES
Development of a nozzle to improve the turning of supersonic Coanda jets
[AD-A087709] N80-31765

COORDINATION
Microcomputers and timesharing N80-32109

COPOLYMERS
Melt rheology of block copolymers in relation to melt structure
[AD-A087484] N80-31561
Synthesis of block copolymers of methyl siloxane, phenyl siloxane, vinyl siloxane, etcetera
[UCRL-15159] N80-31564

COPPER
Stark profile measurement of Cu reversal lines in a dense plasma N80-32222

COPPER SELENIDES
Emerging materials systems for solar cell applications, CU/sub 2-x/Se
[DOE/ET-23005/T4] N80-31910

CORE FLOW
Characterization of open-cycle, coal-fired MHD generators
[ARI-RP-43] N80-31936

CORE SAMPLING
Undisturbed sampling and cyclic load testing of sands
[AD-A087298] N80-31669
Initial report on geological materials collected at RISP Site J9
[PB80-188253] N80-32018

CORN
Economic evaluation of the MIT process for manufacture of ethanol
[DSE-3992-T1] N80-31647

CORONAGRAPHS
Pinhole X-ray/coronagraph optical systems concept definition study
[NASA-CR-161567] N80-32206

CORRELATION
A study into the use of a photon correlation technique in both low and high speed flows --- laser anemometer
[VKI-TM-27] N80-31771

CORRELATORS
Detection of weak signals in non-Gaussian noise N80-31679

CORROSION
Effects of surface condition on the corrosion of candidate structural materials in a simulated HTGR-GT environment
[GA-A-15673] N80-31539
Environmental fatigue --- in metal structures
[NLR-MP-79025-U] N80-31848

CORTI ORGAN
Certain features of the cochleovestibular syndrome in the residual stage of traumatic brain disease
[NASA-TM-76337] N80-32073

CORTICOSTEROIDS
Effect of sinusoidal modulated currents and acute hypoxia on corticosterone content and activity of certain dehydrogenases in tissues of different rat organs during hypokinesia
[NASA-TM-76161] N80-32057

COSMIC RAYS
Isotropic modulation of galactic cosmic rays
[LPS-79-12] N80-32321

COST ANALYSIS
Cost analysis of composite fan blade manufacturing processes
[NASA-CR-159876] N80-31398
Video distribution system cost model
[NASA-CR-160020] N80-31685
Method of testing, rating and estimating the heating seasonal performance of heat pumps
[PB80-185622] N80-31773
Investigation of learning and experience curves
[SERI/TR-353-459] N80-31911
Automatic-control system for the 17-metre Vertical Axis Wind Turbine (VAWT)
[SAND-78-0984] N80-31958
Assessment of operational automated guideway systems-AIRTRANS, phase 2
[PB80-182539] N80-32302

COST EFFECTIVENESS
Assessment of industrial energy conservation by unit processes
[ORAU/IEA-80-4-M] N80-31939
Microcomputers and timesharing N80-32109

COST ESTIMATES
An approach to the life cycle analysis of aircraft turbine engines N80-31343
Evaluating and selecting the preferred air breathing weapon system N80-31349

Cryogenic methane separation/catalytic hydrogasification process analysis
[FE-3044-T7] N80-31635
Economic evaluation of the MIT process for manufacture of ethanol
[DSE-3992-T1] N80-31647
Cogeneration Technology Alternatives Study (CTAS). Volume 3: Energy conversion system characteristics
[NASA-CR-159761] N80-31869
Solar energy system economic evaluation for Elcam-Tempe, Tempe, Arizona and Elcam-San Diego, San Diego, California
[NASA-CR-161492] N80-31872
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 2: Conceptual design, sections 5 and 6
[DOE/ET-20567/1-2-BK-2] N80-31897

COST REDUCTION
The application of design to cost at Rolls-Royce
N80-31348
An improved synthesis of 2,4,8,10-tetroxaspiro (5,5) undecane
[NASA-CASE-ARC-11243-2] N80-31472
Investigation of learning and experience curves
[SERI/TR-353-459] N80-31911

COUNTERS
Film advance indicator
[NASA-CASE-LAR-12474-1] N80-31774

COUPLINGS
Aircraft wingtip coupling experiments N80-31319

COVALENT BONDS
Semiconducting and metallic covalent polymers: (CH)x and its derivatives
[AD-A086941] N80-31555

COVARIANCE
Space shuttle navigation analysis. Volume 2: Baseline system navigation
[NASA-CR-160766] N80-31441
On the theory of crossover designs with residual effects N80-32165

COWLINGS
The design of axisymmetric cowls for podded nacelles for high by-pass ratio turbofan engines
[ARC/R/M-3846] N80-31394

CRACK CLOSURE
Local approach to problems of fatigue crack growth
[ICAF-1143] N80-31821

CRACK INITIATION
Environmental fatigue — in metal structures
[NLR-MP-79025-U] N80-31846
Finite element analysis of piping tees
[AD-A087353] N80-32152

CRACK PROPAGATION
Maneuver spectrum fatigue crack propagation in aluminum alloy sheet materials — airframe materials
[NLR-TR-79091-U] N80-31393
The fatigue crack propagation behavior of semi-crystalline polymers N80-31550
Durability methods development, volume 1. Phase 1: Summary
[AD-A087301] N80-31805
Local approach to problems of fatigue crack growth
[ICAF-1143] N80-31821
Efficient computational techniques for the analysis of some problems of fracture in pressure vessels and piping
[AD-A087225] N80-31822
Dynamic fracture analysis. A translating singularity finite element procedure
[AD-A087226] N80-31823
Numerical modeling of dynamic crack propagation in finite bodies, by moving singular elements. Part 2: Results
[AD-A087228] N80-31825
On crack propagation along crystallographic slip bands
[AD-A087129] N80-31829
Numerical modeling of dynamic propagation in finite bodies, by moving singular elements. Part 1: Formulation
[AD-A087395] N80-31835
An experimental weight function method for stress intensity factor calibration
[AD-A087846] N80-31837
Crack propagation in Hastelloy X
[ORNL/TM-7255] N80-31839
Remote measurement of crack growth in Double Cantilever Beam (DCB) specimens
[NLR-TR-79006-U] N80-31841
Flight simulation fatigue crack propagation in 7010 and 7075 aluminum alloy plate
[NLR-MP-79019-U] N80-31847
Environmental fatigue — in metal structures
[NLR-MP-79025-U] N80-31846

CRACKING (FRACTURING)
Hydrogen induced intergranular cracking of nickel-base alloys
[AD-A087305] N80-31533
Durability methods development, volume 1. Phase 1: Summary
[AD-A087301] N80-31805
Elastic-plastic fracture analysis of type 304 stainless steel flat-plate and pipe sections containing surface flaws N80-31814
Evaluation and comparison of nondestructive service inspection methods
[NLR-MP-79005-U] N80-31845

CRACKS
Effect of propellant crack burning on high energy propellant safety N80-31573

CRASH INJURIES
A general statistical approach for using auxiliary information in the development of an impact acceleration injury prediction model
[AD-A087810] N80-31374

CREEP ANALYSIS
Nonlinear viscoelastic behavior of a composite material using a finite element micromechanical analysis
[AD-A087367] N80-31483
The effect of mixed transition-metal dopants on the high temperature creep of polycrystalline alumina N80-31526

CREEP PROPERTIES
Methods for the interpolation and the extrapolation of the results of creep rupture tests
[NLR-MP-79007-U] N80-31846

CREEP RUPTURE STRENGTH
Probabilistic models of the stress-rupture of composite material, phase 3
[COO-4027-3] N80-31487
Methods for the interpolation and the extrapolation of the results of creep rupture tests
[NLR-MP-79007-U] N80-31846

CREEP TESTS
Gold plated lead-clinched lead solder joint study
[AD-A087352] N80-31733

CRITICAL EXPERIMENTS
Criticality safety considerations in the geologic disposal of spent nuclear fuel assemblies
[PNL-3268] N80-32200

CRITICAL PATH METHOD
General application of the critical path method to resource characterization and planning for underground coal mining
[DOE/ET-11268/3] N80-32272

CROP DUSTING
Computation of spanwise distribution of circulation and lift coefficient for flapped wings of arbitrary planform
[NASA-CR-159329] N80-31353

CROP GROWTH
Demonstration of an advanced solar garden with a water ceiling
[DOE/TS-10122/1] N80-31931

CRUDE OIL
Material-flow data structures as a basis for energy information system design
[LBL-10248] N80-31923
The fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska
[PB80-167305] N80-31984

CRYOGENIC MAGNETS
MHD high performance demonstration experiment
[FE-2895-7] N80-32231

CRYOGENIC ROCKET PROPELLANTS
Conceptual design of an orbital propellant transfer experiment. Volume 2: Study results
[NASA-CR-165150] N80-31423

CRYOGENIC WIND TUNNELS
Development and validation of a hybrid-computer simulator for a transonic cryogenic wind tunnel
[NASA-TP-1695] N80-31413

CRYOGENICS
Cryogenic methane separation/catalytic hydrogasification process analysis
[FE-3044-T7] N80-31635
Superconductivity and cryogenics for mirror fusion
[UCRL-83916] N80-32235

CRYSTAL DISLOCATIONS
Grain boundary dislocations in plane matching grain boundaries
[DOE/ER-05002/7] N80-32261

CRYSTAL GROWTH
Materials processing in space, 1980 science planning document — crystal growth, containerless processing, solidification, bioprocessing, and ultrahigh vacuum processes
[NASA-TM-78297] N80-31410
Means for growing ribbon crystals without subjecting the crystals to thermal shock-induced strains
[NASA-CASE-NPO-14298-1] N80-32244
Method of growing a ribbon crystal particularly suited for facilitating automated control of ribbon width
[NASA-CASE-NPO-14295-1] N80-32245
Experimental techniques for determination of the role of diffusion and convection in crystal growth from solution
[NASA-TM-76131] N80-32247

CRYSTAL LATTICES
High pressure studies to determine the effects of volume and temperature on the lattice dynamics of molecular solids: N2, CO2, CH4
[DOE/ER-10443/1] N80-32183

CRYSTAL STRUCTURE
Hydrogen mobility at high concentrations
[MLM-2720(OP)] N80-31511

CRYSTALLINITY
Inelastic deformation in crystalline nonmetallic materials
[COO-4441-3] N80-31488

CRYSTALS
Properties of low-index laser materials
[UCRL-84399] N80-31786
Crystal cleaving machine
[NASA-CASE-GSC-12584-1] N80-32246

CUMULONIMBUS CLOUDS
National Hurricane and Experimental Meteorology Laboratory collected reprints, 1979
[PB80-192917] N80-32049

CUMULUS CLOUDS
National Hurricane and Experimental Meteorology Laboratory collected reprints, 1979
[PB80-192917] N80-32049

CURING
Effects of moisture, residual thermal curing stresses and mechanical load on the damage development in quasi-isotropic laminates N80-31476

CURRENT DENSITY
Structural analysis of superconducting bending magnets
[LBL-10950] N80-32184

CURVE FITTING
Methods for the interpolation and the extrapolation of the results of creep rupture tests
[NLR-MP-79007-U] N80-31846

CUSHIONS
A methodology for modeling confined, temperature sensitive cushioning systems
[AD-A087351] N80-31799

CUTTERS
Crystal cleaving machine
[NASA-CASE-GSC-12584-1] N80-32246

CYBERNETICS
On the total synthesis problem of linear multivariable control N80-32147

CYCLIC LOADS
Undisturbed sampling and cyclic load testing of sands
[AD-A087298] N80-31669

CYCLONES
Mariners Weather Log, volume 24, no. 2
[PB80-188444] N80-32048

CYCLOPROPANE
Collisional relaxation of vibrational energy transient in the methylcyclopropane system. A variable encounter method study
[AD-A087802] N80-31496

CYCLOTRON RESONANCE
Plasma instability in electron and positron colliding beams in storage ring
[AD-A087733] N80-32228

CYCLOTRON RESONANCE DEVICES
Electromagnetic oscillating two stream instability of plasma waves
[AD-A087732] N80-32227

CYLINDRICAL BODIES
Applications of the finite element method to the calculation of electromagnetic fields in cylindrical structures
[FUB-2-1979] N80-31713
Thermoelasticity of circular cylindrical shells laminated of bimodulus composite materials
[AD-A087429] N80-31836

CYLINDRICAL SHELLS
Further experimental studies on vibrations and buckling of eccentrically loaded stiffened cylindrical shells
[TAE-331] N80-31818
Analysis of axially loaded stringer stiffened circular cylinders
[FFA-TN-HU-2134] N80-31843
Buckling of cylinders with longitudinal stiffeners subjected to axial compression
[FFA-TN-HU-2184] N80-31844

CYTOLOGY
Certain problems of space biotechnology
[NASA-TM-76235] N80-31421

D

D REGION
Solar eclipse (1979). Part 1: Atmospheric sciences laboratory field program summary
[AD-A087318] N80-32317

DAMAGE ASSESSMENT
Determination of fatigue damage
[AD-A087442] N80-31829

DAMPING
Reduction in swing of a sonar body winched from the sea by a helicopter
[ARL/AERO-NOTE-395] N80-31868

DASSAULT AIRCRAFT
The development of the world's first trengine business jet, the Mystere Falcon 50 N80-31316

DATA
A study of LANDSAT multispectral scanner data tapes — corrected data and data restoration
[RAE-TR-80018] N80-31864

DATA ACQUISITION
Data acquisition techniques for exploiting the uniqueness of the time-of-flight mass spectrometer: Application to sampling pulsed gas systems
[NASA-TM-81224] N80-31775
Adaptation of a Kiefly camera to use with a one dimensional position sensitive detector
[AD-A087523] N80-31780
Environmental data for sites in the National Solar Data Network
[SOLAR/0010-80/02] N80-31975
Coal gasification/gas cleanup test facility: Volume 1. Description and operation
[PB80-188378] N80-31990
The International Halley Watch
[NASA-TM-82181] N80-32310

DATA BASES
Maintainability index model data base study
[AD-A087844] N80-31324
Measurement, prediction, and hazard evaluation of Earth fissures and subsidence, south-central Arizona
[PB80-183908] N80-32019
Data structure independence in data base management systems N80-32107
Automatic transaction decomposition in a distributed CODASYL prototype system N80-32115
Distributed data processing. Citations from the NTIS data base
[PB80-812217] N80-32280
Distributed Data processing. Citations from the Engineering Index data base
[PB80-812225] N80-32281
Distributed data processing. Citations from the Engineering Index data base
[PB80-812233] N80-32282
Astronomical Data Center Bulletin, volume 1, no. 1
[NASA-TM-80784] N80-32305

DATA CONVERSION ROUTINES
A description of a system of programs for mathematically processing on unified series (YeS) computers photographic images of the Earth taken from spacecraft
[NASA-TM-76208] N80-31856
Conversion of grid-point data into meteorological maps with a mini-computer system
[WMO-553] N80-32042
Evaluation of incident detection algorithms
[PB80-187255] N80-32124

DATA CONVERTERS
Digital demodulator
[NASA-CASE-LAR-12659-1] N80-31731

DATA LINKS
The LSR/2 optically coupled signal transmission link
[AD-A087552] N80-32215

DATA MANAGEMENT
Integrated analysis of large space systems N80-31462
Data structure independence in data base management systems N80-32107
Overview of integrated programs for aerospace-vehicle design (IPAD)
[NASA-TM-81874] N80-32145
Data element dictionary: DTIC uniform data system
[AD-A083800] N80-32277

DATA PROCESSING
Level B/C software ground navigation program. Delta-T processor
[NASA-TM-82184] N80-31446
Preliminary assessment of the electromagnetic environment in the immediate vicinity of the ETA accelerator
[UCID-18631] N80-31708
A description of a system of programs for mathematically processing on unified series (YeS) computers photographic images of the Earth taken from spacecraft
[NASA-TM-76208] N80-31856
Three computer codes to read, plot and tabulate operational test-site recorded solar data
[NASA-TM-78293] N80-31879
Satellite derived winds
[AD-A087023] N80-32026
A demonstration test of the Modular Automated Weather System (MAWS)
[AD-A087070] N80-32030
A study on algorithms and processing programs for data from interference due to hydrometeors at 17.8 GHz
[FUB-12-1979] N80-32036
The influence of visual-spatial ability and study procedures on map learning skill
[AD-A087247] N80-32089
Graphics library for real time display and data analysis
[UCID-18543] N80-32121
Simulation of some autoregressive Markovian sequences of positive random variables
[AD-A087368] N80-32153
Universal documentation system handbook. Volume 1: System description, program introduction and statement of capability
[AD-A087072] N80-32274
Universal documentation system handbook. Volume 2: Program requirements and operations requirements documents
[AD-A087073] N80-32275
Distributed data processing. Citations from the NTIS data base
[PB80-812217] N80-32280
Distributed Data processing. Citations from the Engineering Index data base
[PB80-812225] N80-32281
Distributed data processing. Citations from the Engineering Index data base
[PB80-812233] N80-32282

DATA PROCESSING TERMINALS
The TOUCH PAD: A versatile computer input device
[RSRE-MEMO-3229] N80-32114

DATA REDUCTION
Analysis of principle components in the Sebestyen discrimination method
[CNES-NT-92] N80-32175

DEPERSONALIZATION

On the feasibility of using FLIR (Forward Looking Infrared) data for crosswind measurements
[AD-A087738] N80-32214
Data reduction and analysis for the TRW IMP-7 plasma wave experiment
[NASA-CR-160011] N80-32320

DATA RETRIEVAL
Full text handling: A critical review N80-32292
The role of World Data Centers and the Lunar and Planetary Institute in the international exchange of lunar and planetary data
[LPI-CONTRIB-382] N80-32294

DATA SYSTEMS
Data system for the Infra-Red Astronomical Satellite (IRAS) N80-32134

DATA TRANSMISSION
DYMAC communications system
[LA-8182-M] N80-31707
Demonstration of fiber optic link applications in utility plant multiplexed instrument and control systems
[EPRI-NP-1322] N80-31768
Space-variant processing using phase codes and Fourier-plane sampling techniques
[AD-A087285] N80-31779

DAWSONITE
Synthesis of dawsonites
[NASA-CASE-ARC-113261-1] N80-31490

DECISION MAKING
The use of simulators for training in-flight and emergency procedures
[AGARD-AG-248] N80-31412
Material-flow data structures as a basis for energy information system design
[LBL-10248] N80-31923

DEFECTS
Investigation of constraint effects on flaw growth in composite laminates N80-31478

DEFENSE PROGRAM
DOD low-thrust mission studies N80-31455

DEFLAGRATION
The 16th JANNAF Combustion Meeting, volume 1
[AD-A084680] N80-31565
Primer on SDT, XDT, pickup, and sympathetic detonation N80-31566
Burning to detonation transition in porous beds of a high energy propellant N80-31570
Deflagration to detonation transition behavior of aluminized HMX N80-31571
Compaction and the burning to detonation transition at low confinement N80-31572
Detection of local heating and reaction induced by impact N80-31578

DEFORMATION
Inelastic deformation in crystalline nonmetallic materials
[COO-4441-3] N80-31488
Detection of local heating and reaction induced by impact N80-31578
New general and complementary energy theorems, finite strain, rate-sensitive inelasticity, and finite elements: Some computational studies
[AD-A087227] N80-31824

DEGRADATION
Metallurgical analysis and high temperautre degradation of the black chrome selective absorber
[LBL-10293] N80-31538
Federal plan for ocean pollution research development and monitoring
[PB80-193295] N80-31989

DELTA WINGS
Calculations by a first order theory of supersonic flow around delta wings
[FFA-TN-AU-810] N80-31362

DEMODULATORS
Digital demodulator
[NASA-CASE-LAR-12659-1] N80-31731

DEMOGRAPHY
The global 2000 report to the president. Entering the twenty-first century. Volume 2: The technical report --- trends in population, climate, gross national product, earth resources, technology, and man environment interactions N80-32296

DENSE PLASMAS
Stark profile measurement of Cu reversal lines in a dense plasma N80-32222

DEPERSONALIZATION
A demonstration test of the Modular Automated Weather System (MAWS)
[AD-A087070] N80-32030

DEPLOYMENT
Large space systems technology program
N80-31451
Effect of orbital transfer loads on large platforms
N80-31460

DESCENT TRAJECTORIES
Store separation testing techniques at the Arnold Engineering Development Center. Volume 2: Description of captive trajectory store separation testing in the aerodynamic wind tunnel 4T
[AD-A087561] N80-31357

DESIGN ANALYSIS
The prevention of electronical breakdown and electrostatic voltage problems in the space shuttle and its payloads. Part 2: Design guides and operations considerations
[NASA-TM-81138] N80-31444

DESTRUCTIVE TESTS
High energy density composite flywheel program
[AD-A087076] N80-31892

DETONABLE GAS MIXTURES
Catalyzed combustion of lean fuel/air mixtures
[LBL-10842] N80-31513

DETONATION
The 16th JANNAF Combustion Meeting, volume 1
[AD-A084680] N80-31565
Primer on SDT, XDT, pickup, and sympathetic detonation N80-31566
Propellant explosive reactions in the instrumented shotgun test N80-31568
A scaling relationship for impact initiated detonations N80-31569
Burning to detonation transition in porous beds of a high energy propellant N80-31570
Deflagration to detonation transition behavior of aluminized HMX N80-31571
Compaction and the burning to detonation transition at low confinement N80-31572
Effect of propellant crack burning on high energy propellant safety N80-31573
Transition to detonation of crosslinked double-base propellant in large scale NOL card gap tests
N80-31580
Temporal and spatial location of the transition-to-detonation point in propellant grains
N80-31598

DEUTERIUM PLASMA
A measurement of deuterium neutral by the Balmer-series in the STP-2 high beta screw pinch Tokamak
[IPPJ-471] N80-32224

DIAGNOSIS
Diagnosis of latent forms of labyrinthine affections
[NASA-TM-76338] N80-32074

DIAMINES
Measurement of thermophysical properties of epoxy/diamine polymers and associated additive properties
[AD-A087833] N80-31559

DIATOMIC MOLECULES
Investigation of electron attachment in polyatomic molecules
[AD-A087278] N80-32192

DICTIONARIES
Data element dictionary: DTIC uniform data system
[AD-A083800] N80-32277
The use of multilingual reference tools in the production and transfer of technical information
N80-32289

DIELECTRICS
Evaluation of losses in microstrip antenna materials
[AD-A087476] N80-31701
A theoretical study of dielectric-filled edge-slot antennas
[AD-A087482] N80-31702
Wave propagation in a dc superconducting cable. Part 1: Analysis
[LA-UR-80-125] N80-31705
Propagation in dielectric guides
[FUB-6-1979] N80-31715
Capacitors for aircraft high power
[AD-A087427] N80-31734

DIES
Adherence of ion beam sputter deposited metal films on H-13 steel
[NASA-TM-81585] N80-31527

DIESEL ENGINES
Ceramics for vehicular engines: State-of-the-art
[AD-A087589] N80-31560

DIESEL FUELS
Cogeneration Technology Alternatives Study (CTAS). Volume 3: Energy conversion system characteristics
[NASA-CR-159761] N80-31869

DIFFERENCE EQUATIONS
Robustness of multiloop linear feedback systems
[NASA-CR-163450] N80-32148
Computing finite-difference approximations to derivatives for numerical optimization
[AD-A087428] N80-32151

DIFFERENTIAL EQUATIONS
On the numerical integration of two-point boundary value problems for stiff systems of ordinary differential equations
[AD-A087396] N80-32155
An approximate solution of singularly perturbed non-linear pursuit-evasion games
[TAE-359] N80-32178

DIFFUSION
Fast diffusion and electromigration of metallic solutes in thorium N80-31524
A computer program for the scattering of a pollutant
[VKI-PREPRINT-1979-4] N80-31979
Molecular mechanisms of the epithelial transport of toxic metal ions, particularly mercury, cadmium, lead, arsenic, zinc, and copper
[COO-2792-3] N80-32085
Limit cycle solutions of reaction-diffusion equations
[AD-A087114] N80-32180
Experimental techniques for determination of the role of diffusion and convection in crystal growth from solution
[NASA-TM-76131] N80-32247

DIGITAL RADAR SYSTEMS
High resolution digital radar imaging of rotating objects
[AD-A087510] N80-31704

DIGITAL SYSTEMS
Hybrid fault diagnosis in digital systems
N80-31730

DIGITAL TECHNIQUES
Some properties of the partial response codes of an order greater than two
[FUB-9-1979] N80-31717
Development of COST 202 project: Numerical local networks for telecommunications
[FUB-14-1979] N80-31719
Errors in automatic pass point mensuration using digital techniques
[AD-A087443] N80-31859
Workshop on Digital Time Series Analysis with Geophysical Applications
[CSIR-S-238] N80-32150

DIMERS
Optical and discharge studies of novel electronic transition laser species
[AD-A087123] N80-31782
Energy-related atomic and molecular structure and scattering studies
[DOE/ER-04971/2] N80-32194

DIRECT CURRENT
Wave propagation in a dc superconducting cable. Part 1: Analysis
[LA-UR-80-125] N80-31705
Technique of electrical stimulation of the vestibular analyzer under clinical conditions
[NASA-TM-76347] N80-32075

DIRECT POWER GENERATORS
AC/DC power converter for batteries and fuel cells
[EPRI-EM-1286] N80-31937

DISCONNECT DEVICES
Space transportation system disconnect --- replenishing fluids during orbital servicing
[NASA-CR-161565] N80-31442

DISCRIMINATION
Analysis of principle components in the Sebestyen discrimination method
[CNES-NT-92] N80-32175

DISPERSING
Investigation of dispersed iron alloy catalyst in the carbon monoxide-hydrogen synthesis reaction
[COO-4993-2] N80-31542

DISPERSIONS
Investigations into the electrodeposition of dispersion layers under zero gravity conditions
[ESA-TT-574] N80-31425

DISPLACEMENT MEASUREMENT
Remote measurement of crack growth in Double Cantilever Beam (DCB) specimens
[NLR-TR-79006-U] N80-31841

DISPLAY DEVICES
A simulator study of control and display augmentations for helicopters
[NASA-CR-163451] N80-31408
Ground-referenced visual orientation with imaging displays --- psychophysiology
[AD-A081882] N80-32063
Graphics library for real time display and data analysis
[UCID-18543] N80-32121

DISTANCE MEASURING EQUIPMENT
Performance of Navigation systems --- air navigation N80-31341

DISTORTION
Voice performance measurements
[AD-A087108] N80-31686
Statistical properties of the digital sum in partial response codes
[FUB-21-1979] N80-32176

DISTRIBUTED PARAMETER SYSTEMS
Video distribution system cost model
[NASA-CR-160020] N80-31682
Automatic transaction decomposition in a distributed CODASYL prototype system N80-32115

DITCHING (LANDING)
A general statistical approach for using auxiliary information in the development of an impact acceleration injury prediction model
[AD-A087810] N80-31374

DOCUMENTATION
European cooperation in field of aerospace information N80-32285
The role of NASA for aerospace information
N80-32286
State-of-the-art of standardization of bibliographic data elements N80-32287
State-of-the-art of data exchange: Problems of formats and standards N80-32288
Kinds of access to unclassified literature
N80-32290
The role of World Data Centers and the Lunar and Planetary Institute in the international exchange of lunar and planetary data
[LPI-CONTRIB-382] N80-32294

DOCUMENTS
NSSDC and WDC-A-R/S document availability and distribution services
[NASA-TM-81120] N80-32273
The management of documents having a restricted character N80-32291
Astronomical Data Center Bulletin, volume 1, no. 1
[NASA-TM-80764] N80-32305

DOMESTIC ENERGY
Solar project description for Sir Galahad Company, single family residence, Virginia Beach, Virginia
[SOLAR/1026-79/50] N80-31920

DOORS
A mass reduction effort of the electric and hybrid vehicle --- composite door panels
[NASA-CR-163520] N80-32298

DOPPLER RADAR
Moving target detector data utilization investigation
[AD-A086962] N80-31687
Doppler radar studies during the Sierra Cooperative Pilot Project
[PB80-191455] N80-32047

DOUBLE BASE PROPELLANTS
Transition to detonation of crosslinked double-base propellant in large scale NOL card gap tests
N80-31580
Combustion characteristics of consolidated propellants N80-31583

DRAG REDUCTION
The pressure footprint of a turbulent layer on a compliant boundary
[AD-A087296] N80-31764

DROP SIZE
Numerical simulation of advection fog formation on multi-disperse aerosols due to combustion-related pollutants
[NASA-CR-161566] N80-31971

DROP TESTS
Store separation testing techniques at the Arnold Engineering Development Center. Volume 4: Description of dynamic drop store separation testing
[AD-A087490] N80-31358

DROPS (LIQUIDS)
Mean droplet diameter resulting from atomization of a transverse liquid jet in a supersonic air stream
N80-31616

DUCTED ROCKET ENGINES
L*-instability in ducted rocket fuel generators
N80-31610

DUCTILITY
Strain hardening and ductility of iron: Axisymmetric vs plane strain elongation
[DOE/ER-04072/3] N80-31543

DURABILITY
Durability methods development, volume 1. Phase 1: Summary
[AD-A087301] N80-31805

DUST
Possible methods for removing small airborne particles from the flow in the 5 meter pressurized low-speed wind tunnel
[RAE-TM-AERO-1826] N80-31416

DYNAMIC CHARACTERISTICS
Numerical study of rotating interstellar clouds: Equilibrium and collapse
[UCRL-52946] N80-32308

DYNAMIC LOADS
Compression-ignition sensitivity studies of liquid monopropellant in a dynamic-loading environment
N80-31581

DYNAMIC MODELS
Systematic approach for assessment of alternative nuclear waste management strategies
[CONF-791112-66] N80-32206

DYNAMIC RESPONSE
Mathematical modeling of linear and non-linear aircraft structures
[AGARD-R-687] N80-31326
Effects of nonlinearities on wing-store flutter
N80-31328
Gust response analysis by modal decomposition of the gust impingement distribution N80-31406
Seismic response of light attachments to buildings
[PB80-1185028] N80-31676
Dynamic buckling of inelastic spherical shells
N80-31815
STINT/CD: A stand-alone explicit time integration package for structural dynamics analysis
[AD-A087423] N80-31831

DYNAMIC STABILITY
Optimization of the mathematical model of a structure N80-31327
Stability of boundary layer flow
[AD-A087028] N80-32001
Computational astrophysics relating to the interstellar medium: Problems and prospects for the 1980's --- structure and dynamics of interstellar gas
[UCRL-84410] N80-32307

DYNAMIC STRUCTURAL ANALYSIS
Primary propulsion/large space system interactions N80-31456
STINT/CD: A stand-alone explicit time integration package for structural dynamics analysis
[AD-A087423] N80-31831
Mathematical formulation of damping for structural response analysis
[NLR-MP-79010-U] N80-31842
Theory and calculation of vibrating structures
[ONERA-P-1980-1] N80-31849

DYNAMIC TESTS
Store separation testing techniques at the Arnold Engineering Development Center. Volume 4: Description of dynamic drop store separation testing
[AD-A087490] N80-31358

E

EAR
Occupational changes in the organ of hearing and equilibrium in sailors and fisherman
[NASA-TM-76335] N80-32072
Diagnosis of latent forms of labyrinthine affections
[NASA-TM-76338] N80-32074
Review of book-Ultrasound in Otorhinolaryngology
[NASA-TM-76349] N80-32076

EARTH ATMOSPHERE
Theoretical and experimental investigations of upper atmosphere dynamics
[NASA-CR-163519] N80-31994
Atmospheric particulate analysis using angular light scattering
[NASA-TM-81112] N80-31995

EARTH MANTLE
Altimetry data over trenches and island-arcs and convection in the mantle
[NASA-CR-163516] N80-32050

EARTH MOVEMENTS
Measurement, prediction, and hazard evaluation of Earth fissures and subsidence, south-central Arizona
[PB80-183908] N80-32019

EARTH OBSERVATIONS (FROM SPACE)
LANDSAT data as a basis for regional environmental assessment within the Columbia Plateau
[RHO-BWI-SA-43] N80-31962

EARTH ORBITS
CAD: A code for the calculation of atmospheric density --- atmospheric drag effects on Earth orbiting satellites
[AD-A087447] N80-32005

EARTH RESOURCES
Raduga experiment: Multizonal photographing the Earth from the Soyuz-22 spacecraft
[NASA-TM-76234] N80-31857
Sensors for remote sensing
[CISE-N-190] N80-31863
The global 2000 report to the president. Entering the twenty-first century, volume 1 N80-32295
The global 2000 report to the president. Entering the twenty-first century. Volume 2: The technical report --- trends in population, climate, gross national product, earth resources, technology, and man environment interactions N80-32296

EARTH RESOURCES PROGRAM
Earth resources: A continuing bibliography (issue 26)
[NASA-SP-7041(26)] N80-31855

EARTH SATELLITES
Report on active and planned spacecraft and experiments
[NASA-TM-80905] N80-31420

EARTH TIDES
Tidal corrections to geodetic quantities
[PB80-189376] N80-32020

EARTH-MOON SYSTEM
Mineralogic and petrologic studies of lunar samples and meteorites
[NASA-CR-163498] N80-32309

EARTHQUAKE DAMAGE
Seismic stability of block structures N80-31665

EARTHQUAKE RESISTANCE
Seismic response of light attachments to buildings
[PB80-1185028] N80-31676

EARTHQUAKES
Critical excitations for linear and nonlinear structural systems N80-31816

ECHO SOUNDING
Tristatic sodar --- acoustic radar
[LPS-80-6] N80-31725

ECONOMIC ANALYSIS
Gulf Coast manganese nodule processing plant location criteria
[PB80-182082] N80-31549
Economic evaluation of the MIT process for manufacture of ethanol
[DSE-3992-T1] N80-31647

ECONOMIC FACTORS
Lease versus buy considerations for MILSATCOM systems and an acquisition strategy for STRATSAT SSS lease/buy study
[AD-A087411] N80-31430

ECONOMIC IMPACT
An attempt to estimate the economic effects in the choice of space technology spin-offs
[SNIAS-801-422-107] N80-32301

ECOSYSTEMS
Coastal upwelling ecosystems analysis. Data report 65: Sediment data from short cores during JOINT 2 off Peru
[PB80-183155] N80-32053

EDGE DISLOCATIONS
On crack propagation along crystallographic slip bands
[AD-A087128] N80-31828

EDUCATION
Team training applications of voice processing technology
[AD-A085999] N80-32092
Methods for collecting and analyzing task analysis data
[AD-A087710] N80-32094

EFFICIENCY
Method of testing, rating and estimating the heating seasonal performance of heat pumps
[PB80-185622] N80-31773

EFFLUENTS
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California, volume 1
[PB80-187594] N80-31982
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California. Volume 2: Appendix
[PB80-187602] N80-31983
Pollutants from synthetic fuels production: Coal gasification screening test results
[PB80-182769] N80-31986

EIGENVALUES
On the numerical integration of two-point boundary value problems for stiff systems of ordinary differential equations
[AD-A087396] N80-32155

EJECTION SEATS
Computer simulation of ejection seat performance and preliminary correlation with empirical data
[AD-A087275] N80-31372

ELASTIC BUCKLING
Elastic buckling of arches by finite element method N80-31817

ELASTIC PROPERTIES
On crack propagation along crystallographic slip bands
[AD-A087128] N80-31828
Two dimensional linear elastic analysis of fracture specimens: User's manual of a finite element computer program
[AD-A087440] N80-31830
Detachment of an elastic matrix from a rigid spherical inclusion
[AD-A087414] N80-31834

ELASTOMERS
Effect of oxidizing fuels on aircraft fuel system elastomers and sealants
[AD-A087267] N80-31554
Formation and failure of elastomer networks via thermal, mechanical and surface characterization
[AD-A087284] N80-31556
Melt rheology of block copolymers in relation to melt structure
[AD-A087484] N80-31561
Detachment of an elastic matrix from a rigid spherical inclusion
[AD-A087414] N80-31834

ELASTOPLASTICITY
Dynamic buckling of inelastic spherical shells
N80-31815

ELECTRETS
The use of miniature electret microphones in small optoacoustic cells
[AD-A087520] N80-31737

ELECTRIC AUTOMOBILES
Small passenger car transmission test: Ford C4 transmission
[NASA-CR-159881] N80-31795
Small passenger car transmission test: Chevrolet LUV transmission
[NASA-CR-159882] N80-31796

ELECTRIC BATTERIES
Investigation of methods to eliminate voltage delay in Li/SOCl2 cells
[AD-A086992] N80-31893
AC/DC power converter for batteries and fuel cells
[EPRI-EM-1286] N80-31937

ELECTRIC CHARGE
Evaluation program for secondary spacecraft cells: Initial evaluation tests of General Electric Company $40.00 ampere-hour nickel-cadmium spacecraft cells for the tracking data relay satellite system
[NASA-CR-160016] N80-31898

ELECTRIC CONNECTORS
Gold plated lead-clinched lead solder joint study
[AD-A087352] N80-31733

ELECTRIC CORONA
Balloon-supported antenna for Loran C/D navigation system
[AD-A087488] N80-31378
ELECTRIC CURRENT
Models for assessing hazards due to lightning
N80-31748
The influence of modulated sinusoidal current on the state of chromatin from neurons of the cerebral cortex of rats in hypokinesia
[NASA-TM-76160] N80-32056
The dynamics of certain indicators of nuclein metabolism during hypokinesia in rats of different ages under the influence of sinusoidal modulated currents and measured physical load
[NASA-TM-76162] N80-32058
Interaction of high voltage surfaces with the space plasma
[NASA-CR-165131] N80-32223
ELECTRIC DISCHARGES
The prevention of electrical breakdown and electrostatic voltage problems in the space shuttle and its payloads. Part 1: Theory and phenomena
[NASA-TM-81137] N80-31443
The prevention of electronical breakdown and electrostatic voltage problems in the space shuttle and its payloads. Part 2: Design guides and operations considerations
[NASA-TM-81138] N80-31444
Basic phenomenology of electrical discharges at atmospheric pressure N80-31754
Optical and discharge studies of novel electronic transition laser species
[AD-A087123] N80-31782
ELECTRIC EQUIPMENT TESTS
Long-term lithium battery tests, 2
[SAND-79-1383] N80-31956
ELECTRIC FIELD STRENGTH
Phenomenology of lightning/aircraft interaction
N80-31746
ELECTRIC FIELDS
Models for assessing hazards due to lightning
N80-31748
ELECTRIC GENERATORS
Advanced coal gasification system for electric power generation
[FE-1514-101] N80-31634
Cogeneration Technology Alternatives Study (CTAS). Volume 3: Energy conversion system characteristics
[NASA-CR-159761] N80-31869
Wind power. Citations from the NTIS data base
[PB80-811458] N80-31985
ELECTRIC HYBRID VEHICLES
Small passenger car transmission test; Ford C4 transmission
[NASA-CR-159881] N80-31795
Small passenger car transmission test; Chevrolet LUV transmission
[NASA-CR-159882] N80-31796
A mass reduction effort of the electric and hybrid vehicle — composite door panels
[NASA-CR-163520] N80-32298
Design study of steel V-Belt CVT for electric vehicles
[NASA-CR-159845] N80-32299
ELECTRIC MOTORS
Electromechanical actuation development
[AD-A095847] N80-31409
Test of an electrohydraulic digital actuator for advanced missile systems
[AD-A087274] N80-31431
ELECTRIC NETWORKS
The noise in electric networks
[LPS-80-10] N80-31727
ELECTRIC POTENTIAL
MHD high performance demonstration experiment
[FE-2895-7] N80-32231
ELECTRIC POWER
Energy analysis of geothermal-electric systems
[COO-5085-4] N80-31915
ELECTRIC POWER PLANTS
Lyapunov stability of multi-machine power systems
N80-31792
Cogeneration Technology Alternatives Study (CTAS). Volume 3: Industrial processes
[NASA-CR-159767] N80-31870
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 1: Conceptual design, sections 1 through 4
[DOE/ET-20567/1-2-BK-1] N80-31896
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 2: Conceptual design, sections 5 and 6
[DOE/ET-20567/1-2-BK-2] N80-31897
Feasibility study: Fuel cell cogeneration in a water pollution control facility, volume 1
[DOE/ET-12431/T1-VOL-1] N80-31922
Development of molten carbonate fuel cell power plant technology
[DOE/ET-15440/1] N80-31938
Evaluation of line focus solar central power systems. Volume 1: Executive summary
[ATR-80(7773-03)-1-VOL-1] N80-31943
Solar central receiver hybrid power systems sodium-cooled receiver concept. Volume 1: Executive summary
[DOE/ET/20567-1/1] N80-31948
Methods for large-scale nonlinear optimization — Applications to electric power technology
[AD-A087555] N80-32158
ELECTRIC POWER TRANSMISSION
DSCS 2, battery anomaly investigation satellites 9437 and 9438
[AD-A087380] N80-31432
ELECTRIC PROPULSION
Electric propulsion technology N80-31452
Auxiliary control of LSS N80-31459
Electric propulsion and power N80-31465
Electric propulsion for SPS N80-31466
ELECTRIC PULSES
High voltage nanosecond pulse generator
[AD-A087291] N80-31784
ELECTRIC STIMULI
Technique of electrical stimulation of the vestibular analyzer under clinical conditions
[NASA-TM-76347] N80-32075
ELECTRIC TERMINALS
Photovoltaic module electrical termination design requirement study
[JPL-955367-80/1] N80-31877
ELECTRICAL FAULTS
The prevention of electrical breakdown and electrostatic voltage problems in the space shuttle and its payloads. Part 1: Theory and phenomena
[NASA-TM-81137] N80-31443
The prevention of electronical breakdown and electrostatic voltage problems in the space shuttle and its payloads. Part 2: Design guides and operations considerations
[NASA-TM-81138] N80-31444
ELECTRICAL MEASUREMENT
Properties of superconductor-normal metal-superconductor microbridges
[AD-A087512] N80-32258
ELECTRICAL PROPERTIES
Pilot line report: Development of a high efficiency thin silicon solar cell
[NASA-CR-163522] N80-31876
Photovoltaic module electrical termination design requirement study
[JPL-955367-80/1] N80-31877
Physical models of thin film polycrystalline solar cells based on measured grain-boundary and electronic parameter properties
[DSE-4042-T37] N80-31908
Fundamental studies of grain boundary passivation in polycrystalline silicon with application to improved photovoltaic devices
[SAND-80-0879] N80-32262
ELECTRICAL RESISTIVITY
Electrical transportation doped polyacetylene
[AD-A087289] N80-31557
Evaluation of losses in microstrip antenna materials
[AD-A087476] N80-31701
Wave propagation in a dc superconducting cable. Part 2: Parametric effects
[LA-YR-80-126] N80-31706
Controlled cadmium telluride thin films for solar cell applications. Emerging materials systems for solar cell applications
[DOE/ET-23013/T4] N80-31907
ELECTRIFICATION
Susceptibility of avionics to lightning indirect effects N80-31747
Railroad electrification in America's future: An assessment of prospects and impacts
[SAN-1176-T4] N80-32300
ELECTRO-OPTICS
Energy-related atomic and molecular structure and scattering studies
[DOE/ER-04971/2] N80-32194
Common aperture techniques for imaging electro-optical sensors
[AD-A087558] N80-32216
ELECTROCATALYSTS
Cell module and fuel conditioner
[NASA-CR-159888] N80-31882
ELECTROCHEMICAL CELLS
Advanced photovoltaic concentrator cells
[DSE-4042-T40] N80-31904
Emerging materials systems for solar cell applications, CU/sub 2-x/Se
[DOE/ET-23005/T4] N80-31910
Photoelectrochemical solar cells based on d-band electrochemistry at transition metal diselenides
[IS-4724] N80-31952
ELECTROCHEMICAL CORROSION
Electronic properties of materials and corrosion phenomena. A nonconventional approach to the mechanism of stress corrosion cracking
[CISE-N-188] N80-31547
ELECTROCHEMISTRY
Electrochemical generation of the naked metal anionic clusters
[AD-A087344] N80-31495
Analysis of fluoride in polymer materials
[MHSMP-80-23] N80-31562
Photoelectrochemical solar cells based on d-band electrochemistry at transition metal diselenides
[IS-4724] N80-31952
ELECTRODEPOSITION
Investigations into the electrodeposition of dispersion layers under zero gravity conditions
[ESA-TT-574] N80-31425
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113/40-3] N80-31905
ELECTRODES
Porous electrode studies
[AD-A087528] N80-31736
MHD electrode development
[FE-15529-2] N80-32230
Development, characterization and evaluation of materials for open cycle MHD
[PNL-2004-12] N80-32232
ELECTROLYSIS
A study on the electrolysis of sulfur dioxide and water for the sulfur cycle hydrogen production process
[NASA-CR-163517] N80-31625
Electrolysis-based hydrogen storage technology
[BNL-26923] N80-31928
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113-040-T6] N80-31953
ELECTROLYTES
Investigations into the electrodeposition of dispersion layers under zero gravity conditions
[ESA-TT-574] N80-31425
Development of advanced batteries for utility application
[EPRI-EM-1341] N80-31961
ELECTROLYTIC CELLS
Investigations into the electrodeposition of dispersion layers under zero gravity conditions
[ESA-TT-574] N80-31425
A study on the electrolysis of sulfur dioxide and water for the sulfur cycle hydrogen production process
[NASA-CR-163517] N80-31625
Evaluation program for secondary spacecraft cells: initial evaluation tests of General Electric Company 6.0 ampere hour nickle cadmium spacecraft cells for the dynamic explorer satellite program
[NASA-CR-160014] N80-31886
Initial Evaluation tests of 20.0 amphere-hour sealed nickel-cadmium cells manufactured for NASA's standard cell program
[NASA-CR-160015] N80-31887
Evaluation program for secondary spacecraft cells: initial evaluation tests of General Electric Company 50.0 ampere hour nickel cadmium spacecraft cells for the LANDSAT-D satellite program
[NASA-CR-160017] N80-31889

Investigation of methods to eliminate voltage delay in Li/SOCl2 cells
[AD-A086992] N80-31893

ELECTROMAGNETIC COMPATIBILITY
Electro-magnetic compatibility --- the effect of interference on aircraft systems N80-31339

ELECTROMAGNETIC FIELDS
Preliminary assessment of the electromagnetic environment in the immediate vicinity of the ETA accelerator
[UCID-18631] N80-31708
Analysis of electromagnetic wave field from models with one or two privileged directions
[CRPE-NT-76] N80-31710
Applications of the finite element method to the calculation of electromagnetic fields in cylindrical structures
[FUB-2-1979] N80-31713

ELECTROMAGNETIC INTERFERENCE
Electro-magnetic compatibility --- the effect of interference on aircraft systems N80-31339
Radar EMI at sea
[AD-A087213] N80-31692
A study on algorithms and processing programs for data from interference due to hydrometeors at 17.8 GHz
[FUB-12-1979] N80-32036

ELECTROMAGNETIC MEASUREMENT
Initial direct strike lightning data
[NASA-TM-81867] N80-32023
A versatile fiber-optics signal link for EMP testing and general laboratory applications
[AD-A087253] N80-32210

ELECTROMAGNETIC NOISE
Detection of weak signals in non-Gaussian noise N80-31679
The noise in electric networks
[LPS-80-10] N80-31727
Investigation of electrical noise in selenium-immersed thermistor bolometers
[NASA-TM-82001] N80-31778
The LSR/2 optically coupled signal transmission link
[AD-A087552] N80-32215

ELECTROMAGNETIC PROPULSION
Advanced concepts --- specific impulse, mass drivers, electromagnetic launchers, and the rail gun N80-31471

ELECTROMAGNETIC PULSES
The increased attachment due to ionization induced smog in EMP environments
[AD-A087850] N80-31972

ELECTROMAGNETIC RADIATION
Radiation and scattering from bodies of translation, volume 1
[AD-A087402] N80-31688
Radiation and scattering from bodies of translation. Volume 2: User's manual, computer program documentation
[AD-A087403] N80-31689
Equatorial scintillation of satellite signals at uhf and l-band for two different elevation angles
[AD-A087404] N80-31690
Proceedings of Seminar on Frequency Selective Fading and its Effect on Digital LOS Radio
[AD-A087793] N80-31696
Analysis of electromagnetic wave field from models with one or two privileged directions
[CRPE-NT-76] N80-31710
Conceptual design of RST: An rf-driven, steady-state Tokamak
[EPRI-AP-1351] N80-32233

ELECTROMAGNETIC SCATTERING
Radiation and scattering from bodies of translation. Volume 2: User's manual, computer program documentation
[AD-A087403] N80-31689

ELECTROMAGNETIC SHIELDING
Atmospheric electricity interactions with aircraft: An overview N80-31744

ELECTROMAGNETIC WAVE TRANSMISSION
Propagation in dielectric guides
[FUB-6-1979] N80-31715

ELECTROMAGNETISM
Initial direct strike lightning data
[NASA-TM-81867] N80-32023
The nature of science: A case study of electromagnetic theory from Oersted to Hertz
[AD-A087200] N80-32182

ELECTROMECHANICAL DEVICES
Electromechanical actuation development
[AD-A085847] N80-31409

ELECTROMIGRATION
Fast diffusion and electromigration of metallic solutes in thorium N80-31524

ELECTRON ACCELERATORS
Preliminary assessment of the electromagnetic environment in the immediate vicinity of the ETA accelerator
[UCID-18631] N80-31708
Collective acceleration of electrons using autoacceleration processes
[AD-A087001] N80-32199
Pulsed power technology for particle beam fusion
[SAND-80-0696C] N80-32240

ELECTRON BEAMS
Investigation of electron attachment in polyatomic molecules
[AD-A087278] N80-32192
Plasma instability in electron and positron colliding beams in storage ring
[AD-A087733] N80-32228

ELECTRON DENSITY (CONCENTRATION)
The increased attachment due to ionization induced smog in EMP environments
[AD-A087850] N80-31972

ELECTRON DENSITY PROFILES
Stark profile measurement of Cu reversal lines in a dense plasma N80-32222

ELECTRON ENERGY
Irreversibility and transport in the lower hybrid drift instability
[AD-A087728] N80-32229

ELECTRON MICROSCOPY
The role of electron microscopy by transmission in the study of radiation damage in metals
[CISE-1541] N80-31546

ELECTRON SCATTERING
Energy-related atomic and molecular structure and scattering studies
[DOE/ER-04971/2] N80-32194

ELECTRON SPECTROSCOPY
An electron spectroscopic investigation of the interaction of methanol with polycrystalline aluminum
[AD-A087309] N80-31493

ELECTRON TUNNELING
Fabrication of Josephson tunnel junctions by reactive ion milling
[AD-A087448] N80-32249
Superconducting tunneling and tunneling applications in high Tc A15 superconductors
[AD-A087125] N80-32253

ELECTRONIC CONTROL
University of Washington electrostatic scrubber tests: Combined particulate and SO2 control
[PB80-182603] N80-31985

ELECTRONIC EQUIPMENT
The vulnerability of electric equipment to carbon fibers of mixed lengths: An analysis
[NASA-TM-80215] N80-31481
A carbon fiber exposure test facility and instrumentation
[NASA-TM-80220] N80-31482
Radar EMI at sea
[AD-A087213] N80-31692
Susceptibility of avionics to lightning indirect effects N80-31747
Lightning testing for aircraft avionics systems N80-31750

ELECTRONIC FILTERS
Integration of filters by means of linear MOS circuits
[DRIC-T-6106] N80-31742

ELECTRONICS
Indirectly funded research and exploratory development at the Applied Physics Laboratory, fiscal year 1978
[AD-A086948] N80-32322

ELECTROPHORESIS
Certain problems of space biotechnology
[NASA-TM-76235] N80-31421

ELECTROSTATIC CHARGE
A carbon fiber exposure test facility and instrumentation
[NASA-TM-80220] N80-31482
Static charging effects on avionic systems N80-31755
Alleviation techniques for effects of static charging on avionics N80-31756
Aircraft static charging testing N80-31757

ELECTROSTATICS
The prevention of electrical breakdown and electrostatic voltage problems in the space shuttle and its payloads. Part 1: Theory and phenomena
[NASA-TM-81137] N80-31443
The prevention of electronical breakdown and electrostatic voltage problems in the space shuttle and its payloads. Part 2: Design guides and operations considerations
[NASA-TM-81138] N80-31444
University of Washington electrostatic scrubber tests: Combined particulate and SO2 control
[PB80-182603] N80-31985
Magnetospheric and interplanetary electrostatics: A simple but explicit model
[AD-A087110] N80-32004

ELLIPSOIDS
The method of contracting ellipsoids
[AD-A087485] N80-32162

ELONGATION
Strain hardening and ductility of iron: Axisymmetric vs plane strain elongation
[DOE/ER-04072/3] N80-31543

EMISSION
Atomic emission lines in the near ultraviolet; hydrogen through krypton, section 1
[NASA-TM-80268-SECT-1] N80-32190
Atomic emission lines in the near ultraviolet; hydrogen through krypton, section 2
[NASA-TM-80268-SECT-2] N80-32191

EMOTIONAL FACTORS
Changes in gas exchange, tissue respiration and glycolysis in rats during hypokinesia
[NASA-TM-76149] N80-32055

EMULSIONS
Physical properties and stability of water in fuel oil emulsions
[PB80-184203] N80-31523

ENDOCRINE SYSTEMS
Therapeutic gymnastics in comprehensive treatment of patients with generalized myasthenia
[NASA-TM-76312] N80-32069

ENERGETIC PARTICLES
Application of advanced optical spectroscopic methods to energetic materials N80-31597
Relaxation of charged particles injected into a hot plasma
[FOA-C-20342-A2] N80-32242

ENERGY ABSORPTION
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082

ENERGY CONSERVATION
Ceramics for vehicular engines: State-of-the-art
[AD-A087589] N80-31560
Energy budget procedures and performance criteria for energy conserving building illumination systems
[PB80-184229] N80-31673
Assessment of industrial energy conservation by unit processes
[ORAU/IEA-80-4-M] N80-31939
Pilot study to select candidates for energy Conservation research for the chemical industry
[DOE/TIC-11114] N80-31940

ENERGY CONVERSION
Shear ignition of explosives N80-31576
Cogeneration Technology Alternatives Study (CTAS). Volume 3: Energy conversion system characteristics
[NASA-CR-159761] N80-31869
Cogeneration Technology Alternatives Study (CTAS). Volume 3: Industrial processes
[NASA-CR-159767] N80-31870
Basic research needs and priorities in solar energy Volume 2: Technology crosscuts for DOE
[SERI/TR-351-358-VOL-2] N80-31899
Field experience with solar concentrating collector control systems
[SAND-79-2044C] N80-31924
AC/DC power converter for batteries and fuel cells
[EPRI-EM-1286] N80-31937

ENERGY CONVERSION EFFICIENCY
Pilot line report: Development of a high efficiency thin silicon solar cell
[NASA-CR-163522] N80-31876
Feasibility study: Fuel cell cogeneration in a water pollution control facility, volume 1
[DOE/ET-12431/T1-VOL-1] N80-31922

Evaluation of control strategies for solar collector loops
[LBL-10716] N80-31932
Efficiency of energy conversion in Nitinol
[LBL-9750] N80-31947
Analytical evaluation of a solar thermophotovoltaic converter
[SAND-78-1962] N80-31954

ENERGY DISSIPATION

A study of estuarine tidal dissipation and bottom stress
[PB80-194988] N80-32054
An experimental investigation of the trapping and energy loss mechanisms of intense relativistic electron rings in hydrogen gas and plasma N80-32221

ENERGY POLICY

A study of industrial hydrogen and syngas supply systems
[NASA-CR-163523] N80-31624
Multiphase reactor modeling for zinc chloride catalyzed coal liquefaction
[LBL-9870] N80-31628
Pipeline gas from coal: Hydrogenation (IGT hydrogasification process)
[FE-2434-33A] N80-31630
Molten salt coal gasification process development unit
[SAN-1429-56] N80-31631
Fossil fuels research matrix program. US Environmental Protection Agency/Department of Energy Fossil Fuels Research Materials Facility
[ORNL/TM-7346] N80-31632
Pittsburgh Energy Technology Center hydrogasification process: Conceptual commercial scale plant design
[DOE/MC-08484/T1] N80-31633
Advanced coal gasification system for electric power generation
[FE-1514-101] N80-31634
Cryogenic methane separation/catalytic hydrogasification process analysis
[FE-3044-T7] N80-31635
Advanced development of a short-residence-time hydrogasifier
[FE-3125-12] N80-31638
Advanced development of a short-residence-time hydrogasifier
[FE-3125-18] N80-31639
Chemistry of lignite liquefaction
[FE-2211-11] N80-31642
Liquid fuels from biomass: Catalysts and reaction conditions
[LBL-9789] N80-31646
Economic evaluation of the MIT process for manufacture of ethanol
[DSE-3992-T1] N80-31647
Recent coal-oil mixture combustion tests at PETC
[DOE/PETC-TR-80/5] N80-31658
Energy budget procedures and performance criteria for energy conserving building illumination systems
[PB80-184229] N80-31673
Small passenger car transmission test: Ford C4 transmission
[NASA-CR-159881] N80-31795
Small passenger car transmission test: Chevrolet LUV transmission
[NASA-CR-159882] N80-31796
Solar energy system demonstration project at Wilmington Swim School, New Castle, Delaware
[NASA-CR-161538] N80-31878
Solar energy system performance evaluation. Seasonal report for Wormser, Columbia, South Carolina
[NASA-CR-161546] N80-31880
Solar energy system performance evaluation: Seasonal report for Colt Yosemite, Yosemite National Park, California
[NASA-CR-161539] N80-31883
A quantitative evaluation of closed-cycle ocean thermal energy conversion (OTEC) technology in central station applications
[R-2595-DOE] N80-31885
Satellite power systems (SPS) concept definition study. Volume 2, part 1: System engineering
[NASA-CR-3318] N80-31890
Solar energy applications for dwelling; modelling and simulation part
[EUR-6681/I-EN] N80-31894
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 1: Conceptual design, sections 1 through 4
[DOE/ET-20567/1-2-BK-1] N80-31896
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 2: Conceptual design, sections 5 and 6
[DOE/ET-20567/1-2-BK-2] N80-31897
Basic research needs and priorities in solar energy. Volume 1: Executive summary. Technology crosscuts for DOE
[SERI/TR-351-358-VOL-1] N80-31898
Sites for wind-power installations: Physical modeling of the influence of hills, ridges and complex terrain on wind speed and turbulence. Part 1: Executive summary
[RLO-2438-78/1] N80-31900
Sites for wind-power installations: Wind characteristics over ridges, part 2
[RLO-2438-78/2] N80-31901
Fossil energy program
[ORNL-5630] N80-31902
Investigation of learning and experience curves
[SERI/TR-353-459] N80-31911
Energy analysis of geothermal-electric systems
[COO-5085-4] N80-31915
Material-flow data structures as a basis for energy information system design
[LBL-10248] N80-31923
Analytical modeling of line focus solar collectors
[SERI/TP-333-591] N80-31926
Solar energy conversion through biophotolysis
[SAN-0034-239-1-T2] N80-31927
Electrolysis-based hydrogen storage technology
[BNL-26923] N80-31928
Federal demonstrations of solar heating and cooling on commercial buildings have not been very effective
[EMD-80-41] N80-31929
Summary of guidelines for siting wind turbine generators relative to small-scale, two-dimensional terrain features
[RLO-2443-77/1] N80-31930
Solar assisted heat pump studies: Heat pump hardware and experiments, simulations, Earth coupling contracts and supporting contracts
[BNL-27668] N80-31933
AC/DC power converter for batteries and fuel cells
[EPRI-EM-1286] N80-31937
Development of molten carbonate fuel cell power plant technology
[DOE/ET-15440/1] N80-31938
Assessment of industrial energy conservation by unit processes
[ORAU/IEA-80-4-M] N80-31939
Residential solar heating and cooling using evacuated tube solar collectors: CSU Solar House 3, executive summary
[COO-2858-24] N80-31941
Terrestrial photovoltaic power systems with sunlight concentration
[SAND-80-7008] N80-31942
Evaluation of line focus solar central power systems. Volume 2: Systems evaluation
[ATR-80(7773-03)-1-VOL-2] N80-31944
Continued evaluation of compact heat exchangers for OTEC evaluation
[COO-4238-14] N80-31945
Ocean energy systems: Multiyear program plan
[DOE/CS-0161] N80-31946
Photovoltaic institutional issues study
[SAND-79-7054] N80-31950
Photoelectrochemical solar cells based on d-band electrochemistry at transition metal diselenides
[IS-4724] N80-31952
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113-040-T6] N80-31953
Gallium arsenide solar cells for very high concentration systems: Recent results, problems and expectations
[CISE-1518] N80-31962
Wind power. Citations from the NTIS data base
[PB80-811458] N80-31965
Interactions between energy supply and transportation-related energy use, volume 1
[PB80-185002] N80-31968
Pollutants from synthetic fuels production: Coal gasification screening test results
[PB80-182769] N80-31986
Review of Department of Energy sponsored codes and documentation available from Purdue and Lehigh Universities processes modeling contracts
[K/CSD/TM-35] N80-32278
Example of a policy aimed at increasing the value of spin-offs from space technology in other fields
[SNIAS-801-422-101] N80-32297

ENERGY REQUIREMENTS

Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 1: Conceptual design, sections 1 through 4
[DOE/ET-20567/1-2-BK-1] N80-31896
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 2: Conceptual design, sections 5 and 6
[DOE/ET-20567/1-2-BK-2] N80-31897

ENERGY STORAGE

Automotive storage of hydrogen using modified magnesium hydrides
[SAN-1167-1] N80-31650
Hydrides versus competing options for storing hydrogen in energy systems
[CONF-800402-13] N80-31657
Capacitors for aircraft high power
[AD-A087427] N80-31734
High energy density composite flywheel program
[AD-A087076] N80-31892
Electrolysis-based hydrogen storage technology
[BNL-26923] N80-31928
Solar assisted heat pump studies: Heat pump hardware and experiments, simulations, Earth coupling contracts and supporting contracts
[BNL-27668] N80-31933
Development of molten carbonate fuel cell power plant technology
[DOE/ET-15440/1] N80-31938
Example of a policy aimed at increasing the value of spin-offs from space technology in other fields
[SNIAS-801-422-101] N80-32297

ENERGY TECHNOLOGY

Multiphase reactor modeling for zinc chloride catalyzed coal liquefaction
[LBL-9870] N80-31628
Liquid fuels from biomass: Catalysts and reaction conditions
[LBL-9789] N80-31646
Survey of biomass gasification. Volume 3: Current technology and research
[SERI/TR-33-239-VOL-3] N80-31648
Instrumentation and process control development for in situ coal gasification
[SAND-80-1025] N80-31655
Basic research needs and priorities in solar energy. Volume 1: Executive summary. Technology crosscuts for DOE
[SERI/TR-351-358-VOL-1] N80-31898
Fossil energy program
[ORNL-5630] N80-31902
Evaluation of line focus solar central power systems. Volume 1: Executive summary
[ATR-80(7773-03)-1-VOL-1] N80-31943
Evaluation of line focus solar central power systems. Volume 2: Systems evaluation
[ATR-80(7773-03)-1-VOL-2] N80-31944
Ocean energy systems: Multiyear program plan
[DOE/CS-0161] N80-31946
Solar central receiver hybrid power systems sodium-cooled receiver concept. Volume 1: Executive summary
[DOE/ET/20567-1/1] N80-31948
Methodology for the comparative assessment of the Satellite Power System (SPS) and alternative technologies
[NASA-CR-163049] N80-31951
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California, volume 1
[PB80-187594] N80-31982
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California. Volume 2: Appendix
[PB80-187602] N80-31983
Pollutants from synthetic fuels production: Coal gasification screening test results
[PB80-182769] N80-31986

ENERGY TRANSFER

Direct ohmic heating of positive ions in Tokamak plasmas
[DOE/ET/53036-16] N80-32237

Heat transfer in inertial confinement fusion reactor systems
[CONF-800723-8] N80-32239

ENGINE DESIGN
The application of design to cost and life cycle cost to aircraft engines
[AGARD-LS-107] N80-31342
Design to life cycle costs interaction of engine and aircraft --- combat aircraft N80-31344
Military engine programs with cost objectives N80-31346
The application of design to cost at Rolls-Royce N80-31348
Improved components for engine fuel savings
[NASA-TM-81577] N80-31402
Investigation of three velocity coupled T-burner design N80-31607
High density fuels design considerations for combustors and combustion assessories in subsonic cruise missile propulsion systems N80-31618
Investigation of a putty propellant turbine power system N80-31622
Free-piston regenerative hot gas hydraulic engine
[NASA-CASE-LEW-12274-1] N80-31790

ENGINE INLETS
Experimental investigation of the radiation of sound from an unflanged duct and a bellmouth, including the flow effect
[NASA-TP-1697] N80-32188

ENGINE NOISE
Experimental investigation of the radiation of sound from an unflanged duct and a bellmouth, including the flow effect
[NASA-TP-1697] N80-32188

ENGINE PARTS
Improved components for engine fuel savings
[NASA-TM-81577] N80-31402

ENGINE STARTERS
An experimental evaluation of the performance deficit of an aircraft engine starter turbine
[NASA-TM-81571] N80-31400

ENGINE TESTS
Some examples of procedures used in UK for acceptance testing of aircraft produced by the aircraft industry under government contract N80-31332
Performance testing production airlines N80-31334
Studies of motor instability problems N80-31608

ENGINES
Efficiency of energy conversion in Nitinol
[LBL-9750] N80-31947

ENTRAINMENT
Coal processing for fuel cell utilization. Task 9. One-dimensional (streamtube) model for entrained-flow gasifier analysis
[METC-8450-T2-VOL-1] N80-31912

ENVIRONMENT EFFECTS
Fossil fuels research matrix program. US Environmental Protection Agency/Department of Energy Fossil Fuels Research Materials Facility
[ORNL/TM-7346] N80-31632
Atmospheric modeling of air pollution. A bibliography with abstracts
[PB80-811623] N80-31980
Atmospheric modeling of air pollution. A bibliography with abstracts
[PB80-811631] N80-31981
The fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska
[PB80-187305] N80-31984
Health and environmental research related to energy development and use --- biomolecular and cellular science, environmental biology, and nuclear medicine
[UCLA-12-1217] N80-32061
Systematic approach for assessment of alternative nuclear waste management strategies
[CONF-791112-66] N80-32206

ENVIRONMENT MANAGEMENT
General application of the critical path method to resource characterization and planning for underground coal mining
[DOE/ET-11268/3] N80-32272
The global 2000 report to the president. Entering the twenty-first century, volume 1 N80-32295

ENVIRONMENT MODELS
Results of a joint USA/USSR hydrodynamic and transport modeling project, appendices B, C, and D
[PB80-187529] N80-31866
Simulation of reservoir and lake sedimentation
[PB80-182801] N80-31867
On the dynamic forcing of short-term climate fluctuations by feedback mechanisms
[NASA-CR-162865] N80-32034
Climatology in the Netherlands. Abstracts of seven lectures given on Climate Day
[KNMI-V-345] N80-32039

ENVIRONMENT PROTECTION
LASL experience in decontamination of the environment
[LA-UR-80-926] N80-31974
Small-scale demonstration of high-level radioactive waste processing and solidification using actual SRP waste
[DP-MS-80-2] N80-32201

ENVIRONMENTAL CONTROL
Thermal conditions in the cockpit of USAF aircraft: inflight measurements from the A-7, A-10, F-4, F-15, and YC-14
[AD-A087273] N80-32104

ENVIRONMENTAL ENGINEERING
Passive solar space heating
[LA-UR-80-1076] N80-31959

ENVIRONMENTAL MONITORING
Satellite activities of NOAA, 1979 N80-31429
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 1: Marine turtle studies
[NASA-CR-163122-VOL-4-PT-1] N80-31969
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 2: Threatened and endangered birds and other threatened and endangered forms
[NASA-CR-163122-VOL-4-PT-2] N80-31970
Program of research and monitoring for early detection of stratospheric ozone change. Report to Congress of findings for 1978 - 1979
[PB80-184021] N80-32022

ENZYMES
Effects of hirudin-induced activation of nonenzymatic fibrinolysis during immobilization stress
[NASA-TM-76189] N80-32065

EPITAXY
Improvement in GAAS device yield and performance through substrate defect gettering
[AD-A087712] N80-32257

EPITHELIUM
Molecular mechanisms of the epithelial transport of toxic metal ions, particularly mercury, cadmium, lead, arsenic, zinc, and copper
[COO-2792-3] N80-32085

EPOXY COMPOUNDS
Measurement of thermophysical properties of epoxy/diamine polymers and associated additive properties
[AD-A087833] N80-31559
Development and evaluation of the epoxy repair method for reinforced concrete flexural members N80-31666

EPOXY RESINS
Progress report 3 of cooperative program for design, fabrication, and testing of high modulus composite helicopter shafting
[NASA-TM-82279] N80-31387
Statistical analysis of strength and life of composite materials
[AD-A087741] N80-31484
Application of physiochemical analysis methods to forming stratified materials with high temperature energy matrices
[SNIAS-801-422-105] N80-31521

EQUALIZERS (CIRCUITS)
Microwave transversal equalizer
[AD-A087603] N80-31699

EQUATIONS OF MOTION
Determination of the character of the lateral-directional motion of an airborne towed vehicle
[AD-A087445] N80-31389
Wessex modernization: A preliminary simulation study
[AD-A087799] N80-31410
Hydrodynamic coefficients for vertical circular cylinders at finite depth
[AD-A087334] N80-31763

EQUIPMENT SPECIFICATIONS
An analysis of the future requirements for materials handling equipment in the military airlift command
[AD-A087094] N80-31370
Project FIRES. Volume 1: Program overview and summary, phase 1B
[NASA-CR-161529] N80-32098
Project FIRES. Volume 3: Protective ensemble design and procurement specification, phase 1B
[NASA-CR-161531] N80-32100

ERGOMETERS
Physical exercises on a bicycle-ergometer and running track to prevent hypodynamia in workers of intellectual labor
[NASA-TM-76306] N80-32067

EROSION
Measurement, prediction, and hazard evaluation of Earth fissures and subsidence, south-central Arizona
[PB80-183908] N80-32019

EROSIVE BURNING
The 16th JANNAF combustion meeting, volume 2
[CPIA-PUBL-308-VOL-2] N80-31588
Effect of erosive burning on pressure and temperature sensitivity N80-31592
An investigation of the effects of formulation parameters on erosive burning of composite propellants N80-31593
Erosive burning, a survey of the Russian literature N80-31595

ERROR ANALYSIS
Performance of Navigation systems --- air navigation N80-31341
Residual error of dual-frequency spatial radio tracking systems due to the ionosphere
[CNES-NT-93] N80-31709
Influence of propagation characteristics and repeaters on the performance of a multiple link teletext system
[FUB-24-1979] N80-31723
Computing finite-difference approximations to derivatives for numerical optimization
[AD-A087428] N80-32151

ERROR CORRECTING CODES
The possibility of utilizing coding techniques to improve the availability of digital radio link networks at frequencies over 10 GHz
[FUB-54-1978] N80-31712
SCRAM: A fast computational model for the optical performance of point focus solar central receiver systems
[SAND-80-0433] N80-31925

ERROR DETECTION CODES
Errors in automatic pass point mensuration using digital techniques
[AD-A087443] N80-31859
Applications of information theory to data communication networks
[AD-A087624] N80-32146

ESTIMATES
A study of estuarine tidal dissipation and bottom stress
[PB80-194988] N80-32054

ESTIMATING
Nonparametric estimation of a lifetime distribution via the renewal function N80-32164
The application of cluster analysis to the mass appraisal of forest and vacant land N80-32168

ESTUARIES
A study of estuarine tidal dissipation and bottom stress
[PB80-194988] N80-32054

ETHANE
Economic evaluation of the MIT process for manufacture of ethanol
[DSE-3992-T1] N80-31647

ETIOLOGY
Review of book vestibular crises
[NASA-TM-76354] N80-32078
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080

EULER EQUATIONS OF MOTION
On the utility of plane strain approximations for oblique impact computations
[AD-A081120] N80-31819

EUROPE
Solar energy applications for dwelling; modelling and simulation part
[EUR-6681/I-EN] N80-31894
EUROPIUM
Design, fabrication and testing of an optical temperature sensor
[NASA-CR-165125] N80-31777
EUTECTICS
Superconductivity in filamentary eutectic composites
[COO-4938-3] N80-31486
EVALUATION
Evaluation of laminar flow control system concepts for subsonic commercial transport aircraft
[NASA-CR-159254] N80-31384
Evaluation of service availability in a packet switching network
[FUB-26-1979] N80-31724
A quantitative evaluation of closed-cycle ocean thermal energy conversion (OTEC) technology in central station applications
[R-2595-DOE] N80-31885
Federal demonstrations of solar heating and cooling on commercial buildings have not been very effective
[EMD-80-41] N80-31929
Thermoelectric materials evaluation program
[MMM-2331-0602] N80-31934
Evaluation of line focus solar central power systems. Volume 2: Systems evaluation
[ATR-80(7773-03)-1-VOL-2] N80-31944
Continued evaluation of compact heat exchangers for OTEC evaluation
[COO-4238-14] N80-31945
Development of the Elstar (Environmental Lagrangian Simulator of Transport and Atmospheric Reactions) photochemical air quality simulation model and its evaluation relative to the LARPP (Los Angeles Reactive Pollutant Program) data base
[PB80-188139] N80-31992
Development, characterization and evaluation of materials for open cycle MHD
[PNL-2004-12] N80-32232
EVAPORATION
Reduction of combustion efficiency associated with liquid phase drop decomposition N80-31617
EVAPORATIVE COOLING
Anomalous snowfall caused by natural-draft cooling towers
[RAND/N-1479-DOE] N80-32024
EXHAUST DIFFUSERS
Tests of a lightweight 200 kW MHD channel and diffuser
[AD-A087022] N80-32226
EXHAUST EMISSION
Relationship between specific non-methane hydrocarbons and ozone in ambient air and their role in transportation control strategies
[PB80-184922] N80-31993
EXHAUST GASES
Infrared analysis of coal gasifier product gases
[LA-UR-80-1625] N80-31518
EXOBIOLOGY
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 209)
[NASA-SP-7011(209)] N80-32062
EXPERIMENTAL DESIGN
Testing for a change point
[AD-A087111] N80-32169
EXPERIMENTATION
Materials processing in space program tasks
[NASA-TM-78294] N80-31418
Research studies in/NF4(-)/salts
[AD-A086981] N80-31474
EXPLORER 47 SATELLITE
Data reduction and analysis for the TRW IMP-7 plasma wave experiment
[NASA-CR-160011] N80-32320
EXPLOSIVES
Shear ignition of explosives N80-31576
Detection of local heating and reaction induced by impact N80-31578
Initiation of granular explosives by ramp waves N80-31579
Taggants in explosives
[PB80-192719] N80-31661
EXTERNAL STORES
Store separation testing techniques at the Arnold Engineering Development Center. Volume 2: Description of captive trajectory store separation testing in the aerodynamic wind tunnel 4T
[AD-A087561] N80-31357
Store separation testing techniques at the Arnold Engineering Development Center. Volume 4: Description of dynamic drop store separation testing
[AD-A087490] N80-31358
EXTINCTION
Complete burning and extinction of a carbon particle in an oxidizing atmosphere
[FE-3084] N80-31514

F

F REGION
Modelling of equatorial phase and amplitude scintillations from OGO-6 and AE irregularity data
[AD-A087011] N80-32000
Nonlinear evolution of diffuse auroral F region ionospheric irregularities
[AD-A086998] N80-32003
F-16 AIRCRAFT
F-16 European test and evaluation N80-31309
Advanced design concepts and practices in the F-16 mission computer software N80-32135
F-18 AIRCRAFT
F/A-18 status report N80-31306
FABRICATION
Cost analysis of composite fan blade manufacturing processes
[NASA-CR-159876] N80-31398
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159111] N80-31447
Transpiration-cooled nosetip development
[AD-A087837] N80-31536
Fabrication for precision mechanisms
[BDX-613-2388] N80-31670
Design, fabrication and testing of an optical temperature sensor
[NASA-CR-165125] N80-31777
Nondestructive ultrasonic testing and inspection. Citations from the Engineering Index data base
[PB80-811854] N80-31811
Silicon solar cell fabrication technology
[NASA-CR-163394] N80-31871
Pilot line report: Development of a high efficiency thin silicon solar cell
[NASA-CR-163522] N80-31876
Advanced photovoltaic concentrator cells
[DSE-4042-T40] N80-31904
Laminated Fresnel lenses
[SAND-80-7007] N80-32218
High quality submicron niobium tunnel junctions with reactive ion beam oxidation
[AD-A087449] N80-32250
FACTOR ANALYSIS
Testing for a change point
[AD-A087111] N80-32169
FAILURE ANALYSIS
Significance of a rotor blade failure for fleet operation, inspection, maintenance, design and certification
[NLR-MP-79021-U] N80-31392
Formation and failure of elastomer networks via thermal, mechanical and surface characterization
[AD-A087284] N80-31556
Temporal and spatial location of the transition-to-detonation point in propellant grains N80-31598
Capacity optimization of a reserve network used for rerouting damaged service blocks --- communication networks
[FUB-18-1979] N80-31720
Hybrid fault diagnosis in digital systems N80-31730
Determination of tire quality from nondestructive inspection
[PB80-185358] N80-31812
High energy density composite flywheel program
[AD-A087076] N80-31892
FAILURE MODES
Seismic stability of block structures N80-31665
Logic structure for testability and failure detection N80-32129
FAN BLADES
Influence of mistuning on blade torsional flutter
[NASA-CR-165137] N80-31351
Cost analysis of composite fan blade manufacturing processes
[NASA-CR-159876] N80-31398
FAR FIELDS
Measuring features of the fluence at the far field of CO2 pulsed laser: An issue study with suggestions on how to do it
[PB80-191141] N80-31789
FARADAY EFFECT
Collective acceleration of electrons using autoacceleration processes
[AD-A087001] N80-32199
FATIGUE (MATERIALS)
The fatigue crack propagation behavior of semi-crystalline polymers N80-31550
Fatigue behavior of adhesively bonded joints. Volume 2: Appendices
[AD-A087360] N80-31827
Determination of fatigue damage
[AD-A087442] N80-31829
Crack propagation in Hastelloy X
[ORNL/TM-7255] N80-31839
Evaluation and comparison of nondestructive service inspection methods
[NLR-MP-79005-U] N80-31845
Flight simulation fatigue crack propagation in 7010 and 7075 aluminum alloy plate
[NLR-MP-79019-U] N80-31847
Environmental fatigue --- in metal structures
[NLR-MP-79025-U] N80-31848
FATIGUE LIFE
Statistical analysis of strength and life of composite materials
[AD-A087741] N80-31484
Durability methods development, volume 1. Phase 1: Summary
[AD-A087301] N80-31805
Reassessment of service life by comparative specimen tests --- fighter aircraft strucutures
[NLR-MP-79008-U] N80-31807
Local approach to problems of fatigue crack growth
[ICAF-1143] N80-31821
Automatic-control system for the 17-metre Vertical Axis Wind Turbine (VAWT)
[SAND-78-0984] N80-31958
FATIGUE TESTS
Maneuver spectrum fatigue crack propagation in aluminum alloy sheet materials --- airframe materials
[NLR-TR-78091-U] N80-31393
Cast Aluminum Structures Technology (CAST). Phase 5: Structural and evaluation. Part 1: Full scale test
[AD-A087807] N80-31535
The 3500 hour durability testing of commercial ceramic materials
[NASA-CR-159785] N80-31552
Reassessment of service life by comparative specimen tests --- fighter aircraft strucutures
[NLR-MP-79008-U] N80-31807
Elastic-plastic fracture analysis of type 304 stainless steel flat-plate and pipe sections containing surface flaws N80-31814
Materials program plan for inertial confinement fusion
[ANL/FPP-TM-126] N80-32238
FEASIBILITY ANALYSIS
Heat reclamation from flight simulators: Summary
[AD-A087295] N80-31415
A feasibility study of a satellite frequency modulation broadcasting system. Volume 3: Complementary study on the attenuation in the shadow zones, multiple paths, and circular polarization reception antennas
[ESA-CR(P)-1313-VOL-3] N80-31726
Telecommunication: Economic studies. Citations from the NTIS data base
[PB80-811144] N80-31729
Porous electrode studies
[AD-A087528] N80-31736
Feasibility study: Fuel cell cogeneration in a water pollution control facility, volume 1
[DOE/ET-12431/T1-VOL-1] N80-31922
On the feasibility of using FLIR (Forward Looking Infrared) data for crosswind measurements
[AD-A087738] N80-32214

FEEDBACK
On the dynamic forcing of short-term climate fluctuations by feedback mechanisms
[NASA-CR-162865] N80-32034
FEEDBACK CONTROL
University of Washington electrostatic scrubber tests: Combined particulate and SO2 control
[PB80-182603] N80-31985
On the total synthesis problem of linear multivariable control N80-32147
Robustness of multiloop linear feedback systems
[NASA-CR-163450] N80-32148
Quantitative synthesis of uncertain multiple input-output feedback system
[AD-A087014] N80-32149
FELDSPARS
Initial report on geological materials collected at RISP Site J9
[PB80-188253] N80-32018
FERROMAGNETIC MATERIALS
The magnetic testing of the X4 spacecraft --- Miranda satellite
[RAE-TR-79144] N80-31436
FIBER COMPOSITES
Micromechanics of short-fiber composite N80-31477
Study of fiber-matrix interface structure and interfacial diffusion phenomena in Cotac-type solidification composites. Effect on the thermal stability of the fibers
[ONERA-NT-1979-11] N80-31489
Phosphorus-containing bisimide resins
[NASA-CASE-ARC-11321-1] N80-31551
FIBER OPTICS
Propagation in dielectric guides
[FUB-6-1979] N80-31715
Demonstration of fiber optic link applications in utility plant multiplexed instrument and control systems
[EPRI-NP-1322] N80-31768
Design, fabrication and testing of an optical temperature sensor
[NASA-CR-165125] N80-31777
A versatile fiber-optics signal link for EMP testing and general laboratory applications
[AD-A087253] N80-32210
The LSR/2 optically coupled signal transmission link
[AD-A087552] N80-32215
Ultra low optical fiber cable assemblies
[AD-A087517] N80-32217
Measurement of the index profile of optical fibers by the refraction method
[FUB-13-1979] N80-32219
FIBER ORIENTATION
Nonlinear viscoelastic behavior of a composite material using a finite element micromechanical analysis
[AD-A087367] N80-31483
FIBER REINFORCED COMPOSITES
Progress report 3 of cooperative program for design, fabrication, and testing of high modulus composite helicopter shafting
[NASA-TM-82272] N80-31387
Probabilistic models of the stress-rupture of composite material, phase 3
[COO-4027-3] N80-31487
Vibration of thick rectangular plates of bimodulus composite material
[AD-A087424] N80-31832
Thermal bending of thick rectangular plates of bimodulus composite material
[AD-A087425] N80-31833
FIBER RELEASE
The vulnerability of electric equipment to carbon fibers of mixed lengths: An analysis
[NASA-TM-80215] N80-31481
FIELD EFFECT TRANSISTORS
Ku-band field-effect power transistors
[NASA-CR-160010] N80-31732
FIELD THEORY (PHYSICS)
The nature of science: A case study of electromagnetic theory from Oersted to Hertz
[AD-A087200] N80-32182
FIGHTER AIRCRAFT
P-59 N80-31318
Production oriented maintenance organization: A critical analysis of sortie-generation capability and maintenance quality
[AD-A087095] N80-31323
Aircraft Maintenance Effectiveness Simulation (AMES) model
[AD-A087516] N80-31325
Design to life cycle costs interaction of engine and aircraft --- combat aircraft N80-31344
FILE MAINTENANCE (COMPUTERS)
INTERLISP maintenance
[AD-A087338] N80-32118
A modern facility for software production and maintenance N80-32128
Software maintenance management process N80-32133
FILTRATION
Possible methods for removing small airborne particles from the flow in the 5 meter pressurized low-speed wind tunnel
[RAE-TM-AERO-1826] N80-31416
FINITE DIFFERENCE THEORY
A primitive variable computer model for combustion within solid fuel ramjets N80-31609
Computing finite-difference approximations to derivatives for numerical optimization
[AD-A087428] N80-32151
Review of stiffness and implicit finite difference methods in combustion modeling
[SAND-79-8623] N80-32163
FINITE ELEMENT METHOD
The treatment of the sonic line and of shocks in a finite element approach to transonic flow computations
[AD-A087740] N80-31359
Nonlinear viscoelastic behavior of a composite material using a finite element micromechanical analysis
[AD-A087367] N80-31483
A calculational model for fragmentation in viscoelastic materials N80-31575
Theoretical determination of nozzle admittances using a finite element method N80-31600
Finite layer analysis of consolidation, part 2
[PB80-182587] N80-31677
Applications of the finite element method to the calculation of electromagnetic fields in cylindrical structures
[FUB-2-1979] N80-31713
Elastic buckling of arches by finite element method N80-31817
Dynamic fracture analysis: A translating-singularity finite element procedure
[AD-A087226] N80-31823
New general and complementary energy theorems, finite strain, rate-sensitive inelasticity, and finite elements: Some computational studies
[AD-A087227] N80-31824
Numerical modeling of dynamic crack propagation in finite bodies, by moving singular elements. Part 2: Results
[AD-A087228] N80-31825
Numerical modeling of dynamic propagation in finite bodies, by moving singular elements. Part 1: Formulation
[AD-A087395] N80-31835
Theory and calculation of vibrating structures
[ONERA-P-1980-1] N80-31849
Finite elements in structural analysis. A bibliography with abstracts
[PB80-811516] N80-31850
Finite element analysis of piping tees
[AD-A087353] N80-32152
FIRE EXTINGUISHERS
Synthesis of dawsonites
[NASA-CASE-ARC-113261-1] N80-31490
FIRE FIGHTING
US Coast Guard lightweight fire-fighting module
[NASA-CR-161552] N80-31667
Project FIRES. Volume 1: Program overview and summary, phase 1B
[NASA-CR-161529] N80-32098
Project FIRES. Volume 4: Prototype protective ensemble qualification test report, phase 1B
[NASA-CR-161532] N80-32099
Project FIRES. Volume 3: Protective ensemble design and procurement specification, phase 1B
[NASA-CR-161531] N80-32100
FIRE PREVENTION
Chemical research projects office: An overview and bibliography, 1975-1980
[NASA-TM-81227] N80-31473
FIRES
Cook-off in fuel fire N80-31577
FISSIONABLE MATERIALS
Application of linear accelerator technology to the detection of trace amounts of transuranics in waste barrels
[LA-UR-80-1274] N80-31507
FISSURES (GEOLOGY)
Measurement, prediction, and hazard evaluation of Earth fissures and subsidence, south-central Arizona
[PB80-183908] N80-32019
FLAME PROPAGATION
Interpretation of Rayleigh scattering in a flame
[LBL-10655] N80-31501
A prediction model for turbulent diffusion flames, including NO-formation
[VKI-PREPRINT-1979-14] N80-31519
Development of combustion data to utilize low-Btu gases as industrial process fuels: Modification of flame characteristics
[DOE/ET-14851/2] N80-31659
FLAMES
Numerical simulation of the interaction of a flame with a Karman vortex street
[LBL-10679] N80-31512
A priori thermochemistry and rate constant estimates for flame zone reactions N80-31589
FLAT PLATES
Elastic-plastic fracture analysis of type 304 stainless steel flat-plate and pipe sections containing surface flaws N80-31814
Gallium arsenide (GaAs) solar cell modeling studies
[NASA-CR-163538] N80-31884
Analytical prediction of liquid photovoltaic/thermal flat-plate collector performance
[COO-4094-66] N80-31913
FLEXIBLE BODIES
The pressure footprint of a turbulent layer on a compliant boundary
[AD-A087296] N80-31764
FLEXIBLE WINGS
Wing profile design of the world championship sail plane SB 11
[NASA-TM-75829] N80-31385
FLIGHT CHARACTERISTICS
Crossing the channel in the Gossamer Albatross N80-31322
FLIGHT CLOTHING
Adhesive coatings for DH-411 helmets
[AD-A087319] N80-32105
FLIGHT CONDITIONS
Initial direct strike lightning data
[NASA-TM-81867] N80-32023
FLIGHT CONTROL
Aircraft wingtip coupling experiments N80-31319
Wessex modernization: A preliminary simulation study
[AD-A087799] N80-31410
Trends in the development of software for guidance and control N80-32127
Logic structure for testability and failure detection N80-32129
The logic of the electric flight control system experiment on the Concorde --- achieving low speed longitudinal stability by active control N80-32137
Software for an integrated flight control and night vision system for military helicopters N80-32139
FLIGHT HAZARDS
Landing system reliability and safety model
[AD-A087524] N80-31379
Atmospheric electricity interactions with aircraft: An overview N80-31744
Aircraft mishap experience from atmospheric electricity hazards N80-31745
The coupling of lightning fields into aircraft and cables N80-31751
Protection of aircraft avionics from lightning indirect effects N80-31752
Lightning effects on aircraft: A cockpit perspective N80-31753
Basic phenomenology of electrical discharges at atmospheric pressure N80-31754
Static charging effects on avionic systems N80-31755
Alleviation techniques for effects of static charging on avionics N80-31756
Aircraft static charging testing N80-31757
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082

FLIGHT INSTRUMENTS
Perception of aircraft separation with pilot-preferred symbology on a cockpit display of traffic information
[NASA-TM-81172] N80-31397
FLIGHT RECORDERS
A review of flight test instrumentation systems for acceptance testing of the production aircraft
N80-31333
FLIGHT SAFETY
Critical interfaces between environment and organism in class A mishaps: A retrospective analysis
[AD-A087341] N80-31371
FLIGHT SIMULATION
Store separation testing techniques at the Arnold Engineering Development Center. Volume 4: Description of dynamic drop store separation testing
[AD-A087490] N80-31358
A simulation investigation on the feasibility of curved approaches under Microwave Landing System (MLS) guidance
[NLR-TR-78035-U] N80-31380
Effects of rotor parameter variations on handling qualities of unaugmented helicopters in simulated terrain flight
[NASA-TM-81190] N80-31407
Flight simulation fatigue crack propagation in 7010 and 7075 aluminum alloy plate
[NLR-MP-79019-U] N80-31847
FLIGHT SIMULATORS
The use of simulators for training in-flight and emergency procedures
[AGARD-AG-248] N80-31412
V/STOL equivalent systems analysis
[AD-A087283] N80-31414
Heat reclamation from flight simulators: Summary
[AD-A087295] N80-31415
FLIGHT TEST VEHICLES
Flight research techniques utilizing remotely piloted research vehicles N80-31337
FLIGHT TESTS
Society of Experimental Test Pilots Technical Review, volume 14, no. 4: 23rd Symposium Proceedings N80-31305
F/A-18 status report N80-31306
Night/adverse weather A-10 evaluator program (A-10B) N80-31307
F-16 European test and evaluation N80-31309
General aviation icing flight test N80-31312
Sabreliner 65 N80-31315
The development of the world's first triengine business jet, the Mystere Falcon 50 N80-31316
CL-600 challenger N80-31317

An experimental study of multiple jet mixing
[NASA-CR-163537] N80-31760
FLOW EQUATIONS
Multisystem modeling of unsteady liquid flow
N80-31758
FLOW GEOMETRY
Ranges and critical values of advance ratio for blade/vortex intersection patterns of a helicopter rotor
[NPL-MP-79030-U] N80-31360
FLOW MEASUREMENT
A study into the use of a photon correlation technique in both low and high speed flows --- laser anemometer
[VKI-TM-27] N80-31771
Laser Doppler velocimetry: Principles, potential and examples of possible applications
[VKI-PREPRINT-1979-6] N80-32220
FLOW VISUALIZATION
A brief investigation of the two-dimensionality of the flow over an airfoil in the 8 foot by 6 foot transonic wind tunnel
[RAE-TM-AERO-1828] N80-31368
Flow visualization study of the HiMAT RPRV
[NASA-CR-163094] N80-31381
Space shuttle orbiter flow visualization study --- water tunnel study of vortex flow during atmospheric entry
[NASA-CR-163092] N80-31438
Investigations of eddy coherence in jet flows
[NASA-CR-163525] N80-31759
FLUENCE
Measuring features of the fluence at the far field of CO2 pulsed laser: An issue study with suggestions on how to do it
[PB80-191141] N80-31789
FLUID DYNAMICS
Axisymmetric flow fields in motored and firing spark-ignition engines N80-31791
FLUID MECHANICS
Effect of grazing flow on the nonlinear acoustic behavior of helmholtz resonators N80-31619
Modeling of fluid transients in machines. Part 2: Advanced considerations N80-31664
FLUID SWITCHING ELEMENTS
Bistable solenoid valve, volume 1
[MU/?.R-97.091/79-VOL-1] N80-31803
FLUIDIZED BED PROCESSORS
Coal gasification pilot plant support studies
[FE-2806-5] N80-31637
Coal gasification/gas cleanup test facility: Volume 1. Description and operation
[PB80-188378] N80-31990
FLUORESCENCE
Analysis of coal-derived products and environmental systems by synchronous fluorescence and room temperature phosphorescence
[CONF-800602-4] N80-31977
FLUORIDES
Analysis of fluoride in polymer materials
[MHSMP-80-23] N80-31562
FLUTTER ANALYSIS
Effects of nonlinearities on wing-store flutter
N80-31328
Influence of mistuning on blade torsional flutter
[NASA-CR-165137] N80-31351
FLUX DENSITY
Initial direct strike lightning data
[NASA-TM-81867] N80-32023
FLY BY WIRE CONTROL
Electromechanical actuation development
[AD-A085847] N80-31409
FLYWHEELS
High energy density composite flywheel program
[AD-A087076] N80-31892
Design study of steel V-Belt CVT for electric vehicles
[NASA-CR-159845] N80-32299
FOCUSING
Effect of circumsolar radiation on performance of focusing collectors
[SERI/TR-34-093] N80-31916
Evaluation of line focus solar central power systems. Volume 1: Executive summary
[ATR-80(7773-03)-1-VOL-1] N80-31943
Laminated Fresnel lenses
[SAND-80-7007] N80-32218
FOG
Numerical simulation of advection fog formation on multi-disperse aerosols due to combustion-related pollutants
[NASA-CR-161566] N80-31971
FOREBODIES
Measurements of pressure distributions and pressure drags at zero incidence on both blunt and sharp axisymmetric forebodies at a Mach number of 3
[ARC-R/M-3849] N80-31367
FORECASTING
An analysis of the future requirements for materials handling equipment in the military airlift command
[AD-A087094] N80-31370
Assumptions and ground rules used in nuclear waste projections and source term data
[ONWI-24] N80-32203
FORMALDEHYDE
An improved synthesis of 2,4,8,10-tetroxaspiro (5.5) undecane
[NASA-CASE-ARC-11243-2] N80-31472
FORMAT
Canonical forms and unification
[AD-A087640] N80-32119
FOSSIL FUELS
Automated multi-sample gas chromatographic analysis of fossil fuel gases
[MLM-2721] N80-31506
Fossil fuels research matrix program. US Environmental Protection Agency/Department of Energy Fossil Fuels Research Materials Facility
[ORNL/TM-7346] N80-31632
Prospect of a global warming and studies of its societal impacts
[CONF-7910158-1] N80-31976
FOURIER TRANSFORMATION
Finite layer analysis of consolidation, part 2
[PB80-182587] N80-31677
Space-variant processing using phase codes and Fourier-plane sampling techniques
[AD-A087285] N80-31779
FRACTOGRAPHY
Significance of a rotor blade failure for fleet operation, inspection, maintenance, design and certification
[NLR-MP-79021-U] N80-31392
Evaluation and comparison of nondestructive service inspection methods
[NLR-MP-79005-U] N80-31845
FRACTURE MECHANICS
Cast Aluminum Structures Technology (CAST) structural test and evaluation, phase 5. Part 2: Fatigue and fracture properties of cast aluminum bulkheads
[AD-A087336] N80-31530
A calculational model for fragmentation in viscoelastic materials N80-31575
Local approach to problems of fatigue crack growth
[ICAF-1143] N80-31821
Efficient computational techniques for the analysis of some problems of fracture in pressure vessels and piping
[AD-A087225] N80-31822
Dynamic fracture analysis. A translating-singularity finite element procedure
[AD-A087226] N80-31823

New general and complementary energy theorems, finite strain, rate-sensitive inelasticity, and finite elements: Some computational studies
[AD-A087227] N80-31824
Two dimensional linear elastic analysis of fracture specimens: User's manual of a finite element computer program
[AD-A087440] N80-31830
Fracture control practices for metal structures
[PB80-185648] N80-31851

FRACTURE STRENGTH
Comparison of fracture toughness in titanium alloys IMI 550 and IMI 551
[NLR-TR-78143-U] N80-31548

FRAME PHOTOGRAPHY
Film advance indicator
[NASA-CASE-LAR-12474-1] N80-31774

FREE CONVECTION
Numerical calculation of thermal convection in porous media in two dimensions with applications to nuclear repository design
[UCID-18700] N80-31769

FREE ELECTRONS
Electronic properties of materials and corrosion phenomena. A nonconventional approach to the mechanism of stress corrosion cracking
[CISE-N-188] N80-31547

FREE JETS
An experimental study of multiple jet mixing
[NASA-CR-163537] N80-31760

FREE RADICALS
Hydrogen-transfer and charge transfer in photochemical and high energy radiation induced reactions: Effects of thiols
[DOE/ER-03118/13] N80-31505

FREE VIBRATION
Vibration of thick rectangular plates of bimodulus composite material
[AD-A087424] N80-31832

FREEZING
Undisturbed sampling and cyclic load testing of sands
[AD-A087298] N80-31669

FREQUENCIES
Tests of a lightweight 200 kW MHD channel and diffuser
[AD-A087022] N80-32226

FREQUENCY CONVERTERS
Theory of Josephson junction mixers
[AD-A087511] N80-32259

FREQUENCY MODULATION
A feasibility study of a satellite frequency modulation broadcasting system. Volume 3: Complementary study on the attenuation in the shadow zones, multiple paths, and circular polarization reception antennas
[ESA-CR(P)-1313-VOL-3] N80-31726

FREQUENCY STABILITY
Microwave frequency memory --- microwave oscillators
[RSRE-MEMO-3257] N80-31741

FRESNEL LENSES
Laminated Fresnel lenses
[SAND-80-7007] N80-32218

FRICTION
An investigation to measure interparticle friction and to determine important material and environmental variables which influence this friction --- metallic and nonmetallic powders N80-31793

FRICTION MEASUREMENT
Measurement and correlation of intragranular stress and particle-wall friction in granular propellant beds N80-31587

FRONTS (METEOROLOGY)
Doppler radar studies during the Sierra Cooperative Pilot Project
[PB80-191455] N80-32047

FUEL CELLS
Cell module and fuel conditioner
[NASA-CR-159888] N80-31882
Coal processing for fuel cell utilization: Task 9: One-dimensional (streamtube) model for entrained-flow gasifier analysis
[METC-8450-T2-VOL-1] N80-31912
Feasibility study: Fuel cell cogeneration in a water pollution control facility, volume 1
[DOE/ET-12431/T1-VOL-1] N80-31922
Fuel cell research on second-generation molten-carbonate systems
[SAN-11276-2] N80-31935
AC/DC power converter for batteries and fuel cells
[EPRI-EM-1266] N80-31937
Development of molten carbonate fuel cell power plant technology
[DOE/ET-15440/1] N80-31938
Tests of a lightweight 200 kW MHD channel and diffuser
[AD-A087022] N80-32226

FUEL COMBUSTION
Catalyzed combustion of lean fuel/air mixtures
[LBL-10842] N80-31513
Cook-off in fuel fire N80-31577

FUEL CONSUMPTION
Improved components for engine fuel savings
[NASA-TM-81577] N80-31402
Recent coal-oil mixture combustion tests at PETC
[DOE/PETC-TR-80/5] N80-31658
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 1: Conceptual design, sections 1 through 4
[DOE/ET-20567/1-2-BK-1] N80-31896
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 2: Conceptual design, sections 5 and 6
[DOE/ET-20567/1-2-BK-2] N80-31897
Interactions between energy supply and transportation-related energy use, volume 1
[PB80-185002] N80-31968

FUEL INJECTION
Admittances and characteristic combustion times of reactive gaseous propellant injectors N80-31620

FUEL OILS
Physical properties and stability of water in fuel oil emulsions
[PB80-184203] N80-31523
Recent coal-oil mixture combustion tests at PETC
[DOE/PETC-TR-80/5] N80-31658

FUEL PRODUCTION
Advanced coal gasification system for electric power generation
[FE-1514-101] N80-31634
Interactions between energy supply and transportation-related energy use, volume 1
[PB80-185002] N80-31968

FUEL SYSTEMS
Effect of oxidizing fuels on aircraft fuel system elastomers and sealants
[AD-A087267] N80-31554

FUEL TANKS
Some civil engineering and management aspects of conversion from JP-4 to JP-8 fuel by the United States Air Force in the continental United States
[AD-A087221] N80-31626

FUEL TESTS
Design and evaluation of high performance rocket engine injectors for use with hydrocarbon fuels N80-31621
Aviation turbine fuels, 1979
[DOE/BETC-PPS-80/2] N80-31627

FULL SCALE TESTS
Some examples of procedures used in UK for acceptance testing of aircraft produced by the aircraft industry under government contract N80-31332
Investigation of the vibrational behavior of a cable-stayed bridge under wind loads
[NLR-MP-79004-U] N80-31672

FUNCTIONS (MATHEMATICS)
Nonparametric estimation of a lifetime distribution via the renewal function N80-32164
The causal analysis of multiple time series: A frequency domain approach using group delay N80-32166

FUSELAGES
Bifilar analysis study, volume 1
[NASA-CR-159227] N80-31382
Design and analysis of a stiffened composite fuselage panel
[NASA-CR-159302] N80-31820

FUSION REACTORS
Superconductivity and cryogenics for mirror fusion
[UCRL-83916] N80-32235
Pulsed power technology for particle beam fusion
[SAND-80-0696C] N80-32240

G

GALACTIC RADIATION
Isotropic modulation of galactic cosmic rays
[LPS-79-12] N80-32321

GALLIUM ARSENIDES
Gallium arsenide (GaAs) solar cell modeling studies
[NASA-CR-163538] N80-31884
Gallium arsenide solar cells for very high concentration systems: Recent results, problems and expectations
[CISE-1518] N80-31962
Improvement in GAAS device yield and performance through substrate defect gettering
[AD-A087712] N80-32257

GAME THEORY
An approximate solution of singularly perturbed non-linear pursuit-evasion games
[TAE-359] N80-32178

GAMMA RAY SPECTRA
Criteria for data elaboration of gamma spectra of ambient samples
[CISE-1536] N80-32197
Field gamma spectrometry system with Ge(Li) detectors
[CISE-1537] N80-32198

GAMMA RAY SPECTROMETERS
Application of nondestructive gamma-ray and neutron techniques for the safeguarding of irradiated fuel materials
[LA-8212] N80-31806

GAS BEARINGS
Experimental investigation of hydrodynamic self-acting gas bearings at high Knudsen numbers
[AD-A087400] N80-31801

GAS CHROMATOGRAPHY
Automated multi-sample gas chromatographic analysis of fossil fuel gases
[MLM-2721] N80-31506

GAS DENSITY
Interpretation of Rayleigh scattering in a flame
[LBL-10655] N80-31501

GAS DYNAMICS
Computational astrophysics relating to the interstellar medium: Problems and prospects for the 1980's --- structure and dynamics of interstellar gas
[UCRL-84410] N80-32307

GAS EXCHANGE
Changes in gas exchange, tissue respiration and glycolysis in rats during hypokinesia
[NASA-TM-76149] N80-32055

GAS GENERATORS
Man-rating of the Navy/Air Force Oxygen Generating System (NAOGS)
[AD-A087270] N80-32103

GAS MIXTURES
Infrared analysis of coal gasifier product gases
[LA-UR-80-1625] N80-31518

GAS RECOVERY
Cryogenic methane separation/catalytic hydrogasification process analysis
[FE-3044-T7] N80-31635

GAS TEMPERATURE
Interpretation of Rayleigh scattering in a flame
[LBL-10655] N80-31501
Shock tube ignition of nitrocellulose and nitramines N80-31585

GAS TURBINE ENGINES
Progress on the US Air Force approach for the practical management of engine life cycle costs --- gas turbine engines N80-31345
Environmental testing of coatings for gas turbines
[NLR-MP-79028-U] N80-31404
The 3500 hour durability testing of commercial ceramic materials
[NASA-CR-159785] N80-31552

GAS TURBINES
Ceramics for vehicular engines: State-of-the-art
[AD-A087589] N80-31560
Cogeneration Technology Alternatives Study (CTAS). Volume 3: Energy conversion system characteristics
[NASA-CR-159761] N80-31869

GAS-METAL INTERACTIONS
Metallurgical studies of hydrogen storage alloys
[DOE/CS-0016/T2] N80-31537
Carburization of austenitic alloys by gaseous impurities in helium
[GA-A-15790] N80-31540

GASIFICATION
Survey of biomass gasification. Volume 3: Current technology and research
[SERI/TR-33-239-VOL-3] N80-31648

GASOLINE
Physical properties and stability of water in fuel oil emulsions
[PB80-184203] N80-31523
GEOCHEMISTRY
Inorganic geochemistry of Devonian shales in southern West Virginia: Geographic and stratigraphic trends
[DOE-METC/5199/7] N80-31854
GEODESY
Tidal corrections to geodetic quantities
[PB80-189376] N80-32020
GEODETIC SATELLITES
A world vertical network
[AD-A086011] N80-31853
GEODETIC SURVEYS
A world vertical network
[AD-A086011] N80-31853
Time delay of terrestrial light pulses propagating through clouds to satellite systems
[AD-A087242] N80-31999
GEODYNAMICS
Altimetry data over trenches and island-arcs and convection in the mantle
[NASA-CR-163516] N80-32050
GEOIDS
A world vertical network
[AD-A086011] N80-31853
GEOLOGICAL SURVEYS
Inorganic geochemistry of Devonian shales in southern West Virginia: Geographic and stratigraphic trends
[DOE-METC/5199/7] N80-31854
Additions and corrections to the bibliography of geologic studies, Columbia Plateau (Columbia River Basalt) and adjacent areas, in Idaho, 1980
[RHO-BWI-C-68] N80-32013
Resistivity sounding investigation by the Schumberger method in the syncline ridge area, Nevada test site, Nevada
[USGS-OFR-80-466] N80-32204
GEOLOGY
Initial report on geological materials collected at RISP Site J9
[PB80-188253] N80-32018
GEOMAGNETISM
The investigation of the magnetospheric dynamics in conjunction with the SCATHA satellite observations
[AD-A067433] N80-32006
Investigation of magnetic field phenomena in the ionosphere
[AD-A087526] N80-32012
GEOPHYSICS
Workshop on Digital Time Series Analysis with Geophysical Applications
[CSIR-S-238] N80-32150
GEOPOTENTIAL
Odd zonal harmonics in the geopotential from analysis of 28 satellite orbits
[RAE-TR-80023] N80-32015
GEOTHERMAL ENERGY CONVERSION
Energy analysis of geothermal-electric systems
[COO-5085-4] N80-31915
GEOTHERMAL TECHNOLOGY
Patent profiles: Solar energy
[PB80-190010] N80-31966
GERMANY
Composite rotor blades for large wind energy installations
[NASA-TM-75822] N80-31881
GETTERS
Improvement in GAAS device yield and performance through substrate deleci gettering
[AD-A087712] N80-32257
GLASS
Glass shell manufacturing in space
[NASA-CR-161556] N80-31422
Selenium immersed thermistor bolometer study
[NASA-CR-160013] N80-31776
Properties of low-index laser materials
[UCRL-84399] N80-31788
Laminated Fresnel lenses
[SAND-80-7007] N80-32218
GLASS FIBERS
Composite rotor blades for large wind energy installations
[NASA-TM-75822] N80-31881
GLIDERS
Wing profile design of the world championship sail plane SB 11
[NASA-TM-75829] N80-31385
GLOBAL POSITIONING SYSTEM
Space shuttle navigation analysis. Volume 1: GPS aided navigation
[NASA-CR-160765] N80-31440
GLOW DISCHARGES
Amorphous silicon thin film heterojunction solar cells
[DOE/ET-20460/4] N80-31909
GLYCOLYSIS
Changes in gas exchange, tissue respiration and glycolysis in rats during hypokinesia
[NASA-TM-76149] N80-32055
Mechanisms of oxygen toxicity at the cellular level
[AD-A087831] N80-32084
GOES SATELLITES
Satellite derived winds
[AD-A087023] N80-32026
GOLD COATINGS
Gold plated lead-clinched lead solder joint study
[AD-A087352] N80-31733
GRAIN BOUNDARIES
Physical models of thin film polycrystalline solar cells based on measured grain-boundary and electronic parameter properties
[DSE-4042-T37] N80-31908
Electronic properties of silicon grain boundaries
[SAND-79-2350C] N80-32260
Grain boundary disincations in plane matching grain boundaries
[DOE/ER-05002/7] N80-32261
Fundamental studies of grain boundary passivation in polycrystalline silicon with application to improved photovoltaic devices
[SAND-80-0879] N80-32262
GRANULAR MATERIALS
Initiation of granular explosives by ramp waves
N80-31579
Measurement and correlation of intragranular stress and particle-wall friction in granular propellant beds
N80-31587
GRAPHITE
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159111] N80-31447
GRAPHS (CHARTS)
Solar energy system economic evaluation for Elcam-Tempe, Tempe, Arizona and Elcam-San Diego, San Diego, California
[NASA-CR-161492] N80-31872
GRAVITATIONAL EFFECTS
Tidal corrections to geodetic quantities
[PB80-189376] N80-32020
GRAVITATIONAL FIELDS
Gravitational convection of subcooled He 1 and the transition into superfluid He 2 at atmospheric pressure
[LBL-10928] N80-31671
A world vertical network
[AD-A086011] N80-31853
GRAVITY WAVES
Seasat SAR Coastal Ocean Wave Analysis. A wave refraction and diffraction study
[PB80-189384] N80-32052
GREAT LAKES (NORTH AMERICA)
Mariners Weather Log, volume 24, no. 2
[PB80-188444] N80-32048
GREECE
Access to aerospace information: The Greek situation N80-32284
GREEN FUNCTION
A new method for the solution of anisotropic thin plate bending problems --- using Green's function
N80-31813
GROSS NATIONAL PRODUCT
The global 2000 report to the president. Entering the twenty-first century. Volume 2: The technical report --- trends in population, climate, gross national product, earth resources, technology, and man environment interactions N80-32296
GROUND STATIONS
Level B/C software ground navigation program: Delta-T processor
[NASA-TM-82184] N80-31446
The International Halley Watch
[NASA-TM-82181] N80-32310
GROUND SUPPORT SYSTEMS
Communication and instrumentation systems for space vehicles
[AD-A087944] N80-31448
GROUND WATER
Simplified groundwater flow modeling: An application of Kalman filter based identification
[UCRL-82649] N80-31861
LANDSAT data as a basis for regional environmental assessment within the Columbia Plateau
[RHO-BWI-SA-43] N80-31862
GROUND WIND
Sites for wind-power installations: Physical modeling of the influence of hills, ridges and complex terrain on wind speed and turbulence. Part 1: Executive summary
[RLO-2438-78/1] N80-31900
Environmental wind in built-up areas
[VKI-TM-26] N80-32043
GUARDS (SHIELDS)
Functions of an engineered barrier system for a nuclear waste repository in basalt
[RHO-BWI-LD-23] N80-32202
GUMS (SUBSTANCES)
Analytical testing and characterization of three polysiloxane gums
[UCRL-84351] N80-31563
GUN PROPELLANTS
Taggants in explosives
[PB80-192719] N80-31661
GUNN DIODES
Microwave frequency memory --- microwave oscillators
[RSRE-MEMO-3257] N80-31741
GUNN EFFECT
Gunn effect devices. Citations from the Engineering index data base
[PB80-812050] N80-32263
Gunn effect devices. Citations from the Engineering index data base
[PB80-812068] N80-32264
Gunn effect and transferred electron devices. Citations from the NTIS data base
[PB80-812035] N80-32265
GUNS (ORDNANCE)
The 16th JANNAF Combustion Meeting, volume 1
[AD-A084680] N80-31565
GUST LOADS
Gust response analysis by modal decomposition of the gust impingement distribution N80-31406
Reassessment of service life by comparative specimen tests --- fighter aircraft structures
[NLR-MP-79008-U] N80-31807
GUSTS
Gust response analysis by modal decomposition of the gust impingement distribution N80-31406

H

HAFNIUM OXIDES
Development, characterization and evaluation of materials for open cycle MHD
[PNL-2004-12] N80-32232
HALITES
Research studies in/NF4(+)/salts
[AD-A086981] N80-31474
HALLEY'S COMET
The International Halley Watch
[NASA-TM-82181] N80-32310
HALOGEN COMPOUNDS
Silicon halide-alkali metal flames as a source of solar grade silicon
[NASA-CR-163514] N80-31874
HALOGENS
Crossed molecular beam studies of chemiluminescent reactions
[LBL-10545] N80-31504
HAMILTONIAN FUNCTIONS
Subharmonic solutions of a forced wave equation
[AD-A087031] N80-32181
HANDBOOKS
Aircraft hydraulic systems dynamic analysis component data handbook
[AD-A087366] N80-31390
Methods for collecting and analyzing task analysis data
[AD-A087710] N80-32094

HANKEL FUNCTIONS
Finite layer analysis of consolidation, part 2
[PB80-182587] N80-31677

HARBORS
US Coast Guard lightweight fire-fighting module
[NASA-CR-161552] N80-31667

HARDWARE
TACAN operational description for the space shuttle orbital flight test program
[NASA-CR-160775] N80-31439

HARMONIC ANALYSIS
Samos 2 (1961 alpha 1): Orbit determination and analysis at 31:2 response
[RAE-TR-80022] N80-31427
Odd zonal harmonics in the geopotential from analysis of 28 satellite orbits
[RAE-TR-80023] N80-32015
Subharmonic solutions of a forced wave equation
[AD-A087031] N80-32181

HARRIER AIRCRAFT
YAV-8B status report N80-31310
Design and development of software for Sea Harrier HUDWAC N80-32138

HASTELLOY (TRADEMARK)
Crack propagation in Hastelloy X
[ORNL/TM-7255] N80-31839

HEAD (ANATOMY)
A general statistical approach for using auxiliary information in the development of an impact acceleration injury prediction model
[AD-A087810] N80-31374
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082

HEALTH PHYSICS
Health and environmental research related to energy development and use --- biomolecular and cellular science, environmental biology, and nuclear medicine
[UCLA-12-1217] N80-32061

HEARING
Towards a better understanding of temporary threshold shift of hearing
[RAE-TM-FS-319] N80-32086

HEAT EXCHANGERS
Solar energy system performance evaluation: Seasonal report for Colt Yosemite, Yosemite National Park, California
[NASA-CR-161539] N80-31883
Continued evaluation of compact heat exchangers for OTEC evaluation
[COO-4238-14] N80-31945

HEAT GENERATION
Detection of local heating and reaction induced by impact N80-31578

HEAT MEASUREMENT
Measuring features of the fluence at the far field of CO2 pulsed laser: An issue study with suggestions on how to do it
[PB80-191141] N80-31789

HEAT OF DISSOCIATION
Automotive storage of hydrogen using modified magnesium hydrides
[SAN-1167-1] N80-31650

HEAT PUMPS
Method of testing, rating and estimating the heating seasonal performance of heat pumps
[PB80-185622] N80-31773
Solar assisted heat pump studies: Heat pump hardware and experiments, simulations, Earth coupling contracts and supporting contracts
[BNL-27668] N80-31933

HEAT STORAGE
Automotive storage of hydrogen using modified magnesium hydrides
[SAN-1167-1] N80-31650
Small solar electric system components demonstration --- thermal storage modules for Brayton systems
[NASA-CR-163513] N80-31875
Thermal energy storage for solar thermal applications program
[SAND-80-8218] N80-31918
Solar thermal components. A bibliography with abstracts
[NASA-CR-163448] N80-31964

HEAT TRANSFER
Numerical calculation of thermal convection in porous media in two dimensions with applications to nuclear repository design
[UCID-18700] N80-31769
Heat transfer in inertial confinement fusion reactor systems
[CONF-800723-8] N80-32239

HEAT TREATMENT
Effects of moisture, residual thermal curing stresses and mechanical load on the damage development in quasi-isotropic laminates N80-31476

HEATING
Heat reclamation from flight simulators: Summary
[AD-A087295] N80-31415
An improved synthesis of 2,4,8,10-tetroxaspiro (5.5) undecane
[NASA-CASE-ARC-11243-2] N80-31472
Prospect of a global warming and studies of its societal impacts
[CONF-7910158-1] N80-31976

HEAVING
Hydrodynamic coefficients for vertical circular cylinders at finite depth
[AD-A087334] N80-31763

HEAVY LIFT LAUNCH VEHICLES
Satellite Power Systems (SPS) concept definition study. Volume 4: Transportation analysis
[NASA-CR-3321] N80-31891

HELICOPTER CONTROL
Effects of rotor parameter variations on handling qualities of unaugmented helicopters in simulated terrain flight
[NASA-TM-81190] N80-31407
A simulator study of control and display augmentations for helicopters
[NASA-CR-163451] N80-31408

HELICOPTER DESIGN
A study of the use of blocking masses in reducing helicopter cabin noise
[RAE-TM-AERO-1838] N80-31395

HELICOPTER PERFORMANCE
Helicopter-ship qualification testing
[NLR-MP-79027-U] N80-31391

HELICOPTERS
Progress report 3 of cooperative program for design, fabrication, and testing of high modulus composite helicopter shafting
[NASA-TM-82272] N80-31387
Wessex modernization: A preliminary simulation study
[AD-A087799] N80-31410
Reduction in swing of a sonar body winched from the sea by a helicopter
[ARL/AERO-NOTE-395] N80-31668

HELIOS PROJECT
The Helios solar probes science summaries
[NASA-TM-82005] N80-32316

HELIOSTATS
SCRAM: A fast computational model for the optical performance of point focus solar central receiver systems
[SAND-80-0433] N80-31925

HELIUM
Carburization of austenitic alloys by gaseous impurities in helium
[GA-A-15790] N80-31540

HELIUM ISOTOPES
Gravitational convection of subcooled He 1 and the transition into superfluid He 2 at atmophenic pressure
[LBL-10928] N80-31671

HELMETS
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082
Adhesive coatings for DH-411 helmets
[AD-A087319] N80-32105
Helmets: Construction, effectiveness, and human factors. Citations from the NTIS data base
[PB80-810963] N80-32106

HELMHOLTZ VORTICITY EQUATION
Effect of grazing flow on the nonlinear acoustic behavior of helmholtz resonators N80-31619

HEXENES
Design of a cost effective solar powered water pump
[PB80-182819] N80-31967

HF LASERS
A mechanism for the photochemical induced combustion of H2/F2 mixtures inhibited by O2 N80-31623

HIGH SPEED CAMERAS
Temporal and spatial location of the transition-to-detonation point in propellant grains N80-31598

HIGH STRENGTH ALLOYS
Comparison of fracture toughness in titanium alloys IMI 550 and IMI 551
[NLR-TR-78143-U] N80-31548
On crack propagation along crystallographic slip bands
[AD-A087128] N80-31828

HIGH STRENGTH STEELS
Stress-corrosion cracking of steels in ammonia: A survey with consideration on given OTEC design
[ANL/OTEC-BCM-008] N80-31544

HIGH TEMPERATURE
Effects of surface condition on the corrosion of candidate structural materials in a simulated HTGR-GT environment
[GA-A-15673] N80-31539
The influence of wall resonances on the levitation of objects in a single-axis acoustic processing chamber
[NASA-TM-78299] N80-32187

HIGH TEMPERATURE ENVIRONMENTS
Materials for coal conversion and use. Volume 2: Materials of construction for coal conversion systems. Part 1: Coal gasification. Part 2: Coal liquefaction
[FE-2468-59-VOL-2-PT-1/2] N80-31644

HIGH TEMPERATURE GASES
Free-piston regenerative hot gas hydraulic engine
[NASA-CASE-LEW-12274-1] N80-31790

HIGH TEMPERATURE PLASMAS
Relaxation of charged particles injected into a hot plasma
[FOA-C-20342-A2] N80-32242

HIGH TEMPERATURE TESTS
Metallurgical analysis and high temperautre degradation of the black chrome selective absorber
[LBL-10293] N80-31538

HIGH VOLTAGES
Interaction of high voltage surfaces with the space plasma
[NASA-CR-165131] N80-32223

HIGHWAYS
Highway noise abatement
[PB80-190622] N80-31991
Evaluation of incident detection algorithms
[PB80-187255] N80-32124

HISTORIES
The nature of science: A case study of electromagnetic theory from Oersted to Hertz
[AD-A087200] N80-32182

HMX
Deflagration to detonation transition behavior of aluminized HMX N80-31571

HOLOGRAPHIC INTERFEROMETRY
Experimental techniques for determination of the role of diffusion and convection in crystal growth from solution
[NASA-TM-76131] N80-32247

HOLOGRAPHY
Holographic observations of black powder combustion N80-31586
Space-variant processing using phase codes and Fourier-plane sampling techniques
[AD-A087285] N80-31779
Atomic scale resolution with correlation holography
[DOE/ER-70004/260] N80-32195

HORIZONTAL ORIENTATION
Experimental study of the steady natural convection in a horizontal annulus with irregular boundaries --- convective heat transfer from spent fuel assemblies in containers
[SAND-79-2354C] N80-31767

HOT-WIRE ANEMOMETERS
Development of a photon correlation laser velocimeter for use in turbulent mixing region measurements N80-31611

HUMAN BODY
Occupational changes in the organ of hearing and equilibrium in sailors and fisherman
[NASA-TM-76335] N80-32072
Use of physical culture to increase resistance of sailors to motion sickness
[NASA-TM-76355] N80-32079

best copy available

HUMAN FACTORS ENGINEERING
Critical interfaces between environment and organism in class A mishaps: A retrospective analysis
[AD-A087341] N80-31371
A review of USAFSAM studies employing multiple-tasks performance devices
[AD-A087272] N80-32091
Project FIRES. Volume 1: Program overview and summary, phase 1B
[NASA-CR-161529] N80-32098
Project FIRES. Volume 3: Protective ensemble design and procurement specification; phase 1B
[NASA-CR-161531] N80-32100
Helmets: Construction, effectiveness, and human factors. Citations from the NTIS data base
[PB80-810963] N80-32108
The TOUCH PAD: A versatile computer input device
[RSRE-MEMO-3229] N80-32114
HUMAN PERFORMANCE
Restoration of physical performance capacity of athletes after prolonged restriction of their motor activity
[NASA-TM-76305] N80-32066
Detection of moving targets in peripheral vision
[AD-A082541] N80-32083
Individual difference relations in psychometric and experimental cognitive tasks
[AD-A086057] N80-32093
Is Bayesian estimation proper for estimating the individual's ability
[AD-A087829] N80-32174
HUMAN REACTIONS
Effects of aerosols, oxides of nitrogen, and oxidants on human health
[PB80-184583] N80-32088
HUMAN WASTES
Development of a preprototype vapor compression distillation water recovery subsystem
[NASA-CR-160779] N80-32101
HURRICANES
Analytic modeling of severe vortical storms
[AD-A086919] N80-32027
Hurricane wind speeds in the United States
[PB80-181126] N80-32044
Mariners Weather Log, volume 24, no. 2
[PB80-188444] N80-32046
National Hurricane and Experimental Meteorology Laboratory collected reprints, 1979
[PB80-192917] N80-32049
HYDRAULIC EQUIPMENT
Test of an electrohydraulic digital actuator for advanced missile systems
[AD-A087274] N80-31431
HYDRAULIC FLUIDS
Free-piston regenerative hot gas hydraulic engine
[NASA-CASE-LEW-12274-1] N80-31790
HYDRAULIC TEST TUNNELS
Water tunnel simulation study of the later stages of water entry of conical head bodies. Phase 2: Effect of the afterbody on steady state ventilated cavities
[AD-A086980] N80-31761
HYDRAZINES
The autoxidation of hydrazine and alkyl substituted hydrazine vapors
[PERME-MEMO-92] N80-31520
HYDRIDES
Hydrides versus competing options for storing hydrogen in energy systems
[CONF-800402-13] N80-31657
HYDROCARBON COMBUSTION
Combustion studies of coal-in-oil droplets
[DOE/ET-10660/1] N80-31499
HYDROCARBON FUEL PRODUCTION
Liquid fuels from biomass: Catalysts and reaction conditions
[LBL-9789] N80-31646
Economic evaluation of the MIT process for manufacture of ethanol
[DSE-3992-T1] N80-31647
HYDROCARBON FUELS
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases
[FE-14809-1] N80-31502
Design and evaluation of high performance rocket engine injectors for use with hydrocarbon fuels
N80-31621
Pipeline gas from coal: Hydrogenation (IGT hydrogasification process)
[FE-2434-33A] N80-31630
Pollutants from synthetic fuels production: Coal gasification screening test results
[PB80-182769] N80-31986
HYDROCARBONS
Mechanistic studies related to the metal catalyzed reduction of carbon monoxide to hydrocarbons
[DOE/ER-04222/3] N80-31500
Photochemical aerosol formation: Reactive hydrocarbon-NOx-SO2 systems
[PB80-187990] N80-31987
Relationship between specific non-methane hydrocarbons and ozone in ambient air and their role in transportation control strategies
[PB80-184922] N80-31993
HYDROCRACKING
Pittsburgh Energy Technology Center hydrogasification process: Conceptual commercial scale plant design
[DOE/MC-08484/T1] N80-31633
Advanced development of a short-residence-time hydrogasifier
[FE-3125-12] N80-31638
Advanced development of a short-residence-time hydrogasifier
[FE-3125-18] N80-31639
Research and development of an advanced process for conversion of coal to synthetic gasoline and other distillate motor fuels
[FE-1800-45] N80-31641
HYDRODYNAMIC EQUATIONS
Results of a joint USA/USSR hydrodynamic and transport modeling project, appendices B, C, and D
[PB80-187529] N80-31866
HYDRODYNAMICS
Hydrodynamic coefficients for vertical circular cylinders at finite depth
[AD-A087334] N80-31763
Experimental investigation of hydrodynamic self-acting gas bearings at high Knudsen numbers
[AD-A087400] N80-31801
Indirectly funded research and exploratory development at the Applied Physics Laboratory, fiscal year 1978
[AD-A086948] N80-32322
HYDROFLUORIC ACID
A mechanism for the photochemical induced combustion of H2/F2 mixtures inhibited by O2
N80-31623
HYDROFOILS
Model scale effects on a 16-309 flapped hydrofoil section
[AD-A087343] N80-31356
HYDROGEN
Hydrogen-transfer and charge transfer in photochemical and high energy radiation induced reactions. Effects of thiols
[DOE/ER-03118/13] N80-31505
Lattice expansion as a measure of surface segregation and solubility of hydrogen in alpha-FeTiH/sub x
[BNL-27523] N80-31509
Hydrogen mobility at high concentrations
[MLM-2729(OP)] N80-31511
Investigation of dispersed iron alloy catalyst in the carbon monoxide-hydrogen synthesis reaction
[COO-4993-2] N80-31542
Automotive storage of hydrogen using modified magnesium hydrides
[SAN-1167-1] N80-31650
Hydrides versus competing options for storing hydrogen in energy systems
[CONF-800402-13] N80-31657
Solar energy conversion through biophotolysis
[SAN-0034-239-1-T2] N80-31927
Electrolysis-based hydrogen storage technology
[BNL-26923] N80-31928
HYDROGEN EMBRITTLEMENT
Trapping by TiC particles and twin formation in Fe-Ti
[AD-A085998] N80-31532
Hydrogen induced intergranular cracking of nickel-base alloys
[AD-A087305] N80-31533
HYDROGEN FUELS
Automotive storage of hydrogen using modified magnesium hydrides
[SAN-1167-1] N80-31650
HYDROGEN PLASMA
An experimental investigation of the trapping and energy loss mechanisms of intense relativistic electron rings in hydrogen gas and plasma N80-32221
HYDROGEN PRODUCTION
Photocatalytic production of hydrogen from water and Texas lignite using a platinized titania catalyst
[AD-A087364] N80-31494
A study of industrial hydrogen and syngas supply systems
[NASA-CR-163523] N80-31624
A study on the electrolysis of sulfur dioxide and water for the sulfur cycle hydrogen production process
[NASA-CR-163517] N80-31625
Hydrogen production from the solar based LASL cadmium cycle
[LA-UR-80-1400] N80-31643
Hydrogen production by the GA sulfur-iodine process
[GA-A-15777-REV] N80-31651
HYDROGENATION
Pipeline gas from coal: Hydrogenation (IGT hydrogasification process)
[FE-2434-33A] N80-31630
Pipeline gas from coal: Hydrogenation (IGT hydrogasification process)
[FE-2434-58] N80-31636
HYDROGRAPHY
On the dynamic forcing of short-term climate fluctuations by feedback mechanisms
[NASA-CR-162865] N80-32034
HYDROLOGY
Technical program plan, Basalt Waste Isolation Project
[RHO-CD-132-REV-5] N80-32205
HYDROLOGY MODELS
Simplified groundwater flow modeling: An application of Kalman filter based identification
[UCRL-82649] N80-31861
HYDROLYSIS
Hydrogen production by the GA sulfur-iodine process
[GA-A-15777-REV] N80-31651
HYDROMETEOROLOGY
Characterization and influence of the parameters of a model to describe hydrometeor diffusion
[FUB-23-1979] N80-32037
Comparison of generalized estimates of probable maximum precipitation with greatest observed rainfalls
[PB80-191463] N80-32046
HYPEROXIA
Mechanisms of oxygen toxicity at the cellular level
[AD-A087831] N80-32064
HYPERVELOCITY PROJECTILES
Hyperfuse: A novel inertial confinement system utilizing hypervelocity projectiles for fusion energy production and fission waste transmutation
[BNL-27764] N80-32241
HYPODYNAMIA
The dynamics of certain indicators of nucleic metabolism during hypokinesia in rats of different ages under the influence of sinusoidal modulated currents and measured physical load
[NASA-TM-76162] N80-32058
Physical exercises on a bicycle-ergometer and running track to prevent hypodynamia in workers of intellectual labor
[NASA-TM-76306] N80-32067
HYPOKINESIA
Changes in gas exchange, tissue respiration and glycolysis in rats during hypokinesia
[NASA-TM-76149] N80-32055
The influence of modulated sinusoidal current on the state of chromatin from neurons of the cerebral cortex of rats in hypokinesia
[NASA-TM-76160] N80-32056
Effect of sinusoidal modulated currents and acute hypoxia on corticosterone content and activity of certain dehydrogenases in tissues of different rat organs during hypokinesia
[NASA-TM-76161] N80-32057
The dynamics of certain indicators of nucleic metabolism during hypokinesia in rats of different ages under the influence of sinusoidal modulated currents and measured physical load
[NASA-TM-76162] N80-32058
Changes in bone tissue under conditions of hypokinesia and in connection with age
[NASA-TM-76154] N80-32064

Restoration of physical performance capacity of athletes after prolonged restriction of their motor activity
[NASA-TM-76305] N80-32066

Effect of hypokinesia on blood microcirculation
[NASA-TM-76308] N80-32068

HYPOXIA
Medical and toxicological factors in aircraft accidents
[AD-A087690] N80-31373

Effect of sinusoidal modulated currents and acute hypoxia on corticosterone content and activity of certain dehydrogenases in tissues of different rat organs during hypokinesia
[NASA-TM-76161] N80-32057

I

ICE ENVIRONMENTS
General aviation icing flight test N80-31312

ICE FORMATION
Icing characteristics of low altitude, supercooled layer clouds
[AD-A087137] N80-32031

IDAHO
Additions and corrections to the bibliography of geologic studies, Columbia Plateau (Columbia River Basalt) and adjacent areas, in Idaho, 1980
[RHO-BWI-C-68] N80-32013

IGNITION
Shear ignition of explosives N80-31576

Compression-ignition sensitivity studies of liquid monopropellant in a dynamic-loading environment N80-31581

Ignition of solid propellants under transient flow conditions N80-31584

Shock tube ignition of nitrocellulose and nitramines N80-31585

IGNITION SYSTEMS
Testing of a unique ignition system for large solid-propellant rocket motors N80-31599

IGNITION TEMPERATURE
Catalyzed combustion of lean fuel/air mixtures
[LBL-10842] N80-31513

ILLUMINATING
Energy budget procedures and performance criteria for energy conserving building illumination systems
[PB80-184229] N80-31673

IMAGE CORRELATORS
State estimation and absolute image registration for geosynchronous satellites
[NASA-TM-80712] N80-31858

IMAGE FILTERS
Application of interframe filtering to line scanned infrared imaging systems
[AD-A086971] N80-32209

IMAGE INTENSIFIERS
Solar magnetic field studies (photon counter) — speckle-imaging
[AD-A082242] N80-32313

IMAGE PROCESSING
A description of a system of programs for mathematically processing on unified series (YeS) computers photographic images of the Earth taken from spacecraft
[NASA-TM-76208] N80-31856

Terrain analyst synthesizer station
[AD-A087370] N80-31860

Comparative experimental study on the use of original and compressed multispectral LANDSAT data for applied research
[DFVLR-FB-80-03] N80-31865

Satellite derived winds
[AD-A087023] N80-32026

IMAGE RESOLUTION
High resolution digital radar imaging of rotating objects
[AD-A087510] N80-31704

IMAGES
Common aperture techniques for imaging electro-optical sensors
[AD-A087558] N80-32216

IMAGING TECHNIQUES
State estimation and absolute image registration for geosynchronous satellites
[NASA-TM-80712] N80-31858

Comparative experimental study on the use of original and compressed multispectral LANDSAT data for applied research
[DFVLR-FB-80-03] N80-31865

Atomic scale resolution with correlation holography
[DOE/ER-70004/260] N80-32195

Common aperture techniques for imaging electro-optical sensors
[AD-A087558] N80-32216

IMIDES
LARC-13 adhesive development
[NASA-CR-159317] N80-31479

IMPACT ACCELERATION
A general statistical approach for using auxiliary information in the development of an impact acceleration injury prediction model
[AD-A087810] N80-31374

IMPACT DAMAGE
Hawk Bounce N80-31311

Propellant explosive reactions in the instrumented shotgun test N80-31568

IMPACT LOADS
On the utility of plane strain approximations for oblique impact computations
[AD-A081120] N80-31819

IMPACT PREDICTION
A general statistical approach for using auxiliary information in the development of an impact acceleration injury prediction model
[AD-A087810] N80-31374

IMPACT TESTS
A scaling relationship for impact initiated detonations N80-31569

Detection of local heating and reaction induced by impact N80-31578

IMPEDANCE MEASUREMENTS
Experimental determination of solid propellant admittances by the impedance tube method N80-31604

IMPEDANCE PROBES
Experimental determination of solid propellant admittances by the impedance tube method N80-31604

IMPINGEMENT
Gust response analysis by modal decomposition of the gust impingement distribution N80-31406

IMPURITIES
Metallurgical studies of hydrogen storage alloys
[DOE/CS-0016/T2] N80-31537

Carburization of austenitic alloys by gaseous impurities in helium
[GA-A-15790] N80-31540

Federal plan for ocean pollution research development and monitoring
[PB80-193295] N80-31989

INCIDENCE
On the utility of plane strain approximations for oblique impact computations
[AD-A081120] N80-31819

INCOMPRESSIBLE FLOW
A numerical method for the calculation of laminar incompressible boundary layers with strong viscous-inviscid interaction
[NLR-TR-79023-U] N80-31369

INDEPENDENT VARIABLES
Wave propagation in a dc superconducting cable. Part 2: Parametric effects
[LA-YR-80-126] N80-31706

INDUSTRIAL ENERGY
A study of industrial hydrogen and syngas supply systems
[NASA-CR-163523] N80-31624

Cogeneration Technology Alternatives Study (CTAS). Volume 3: Energy conversion system characteristics
[NASA-CR-159761] N80-31869

Cogeneration Technology Alternatives Study (CTAS). Volume 3: Industrial processes
[NASA-CR-159767] N80-31870

Pilot study to select candidates for energy Conservation research for the chemical industry
[DOE/TIC-11114] N80-31940

Efficiency of energy conversion in Nitinol
[LBL-9750] N80-31947

Large wind turbine generator performance assessment
[EPRI-AP-1317] N80-31960

INDUSTRIAL PLANTS
Gulf Coast manganese nodule processing plant location criteria

Information flow and analysis: Theory, simulation, and experiments. Part 1: Basic theoretical and conceptual development. Part 2: Simulation examples, and results. Part 3: Preliminary experiments and analysis
[PB80-180995] N80-32279

INFORMATION MANAGEMENT
A research activities management system
[AD-A086576] N80-32271

INFORMATION RETRIEVAL
A research activities management system
[AD-A086576] N80-32271

Data element dictionary: DTIC uniform data system
[AD-A083800] N80-32277

INFORMATION SYSTEMS
Material-flow data structures as a basis for energy information system design
[LBL-10248] N80-31923

International Access to Aerospace Information
[AGARD-CP-279] N80-32283

Access to aerospace information: The Greek situation N80-32284

European cooperation in field of aerospace information N80-32285

The role of NASA for aerospace information N80-32286

State-of-the-art of standardization of bibliographic data elements N80-32287
State-of-the-art of data exchange: Problems of formats and standards N80-32288
Kinds of access to unclassified literature N80-32290
Full text handling: A critical review N80-32292
The numeric aerospace data: Problems of evaluation, handling and dissemination N80-32293
The role of World Data Centers and the Lunar and Planetary Institute in the international exchange of lunar and planetary data
[LPI-CONTRIB-382] N80-32294

INFORMATION THEORY
The use of information transmission as nonparametric correlation in the analysis of complex behavior: A preliminary report
[AD-A087832] N80-32096
Applications of information theory to data communication networks
[AD-A087624] N80-32146
Information flow and analysis: Theory, simulation, and experiments. Part 1: Basic theoretical and conceptual development. Part 2: Simulation examples, and results. Part 3: Preliminary experiments and analysis
[PB80-180995] N80-32279

INFRARED ABSORPTION
Infrared analysis of coal gasifier product gases
[LA-UR-80-1625] N80-31518
Infrared absorption spectrum of free carrier in polar semiconductors
[DOE/ER-10444/1] N80-31739

INFRARED ASTRONOMY SATELLITE
Data system for the Infra-Red Astronomical Satellite (IRAS) N80-32134

INFRARED DETECTORS
Investigation of electrical noise in selenium-immersed thermistor bolometers
[NASA-TM-82001] N80-31778
Advanced silicon material development for LADIR
[AD-A087286] N80-32255

INFRARED IMAGERY
Sensors for remote sensing
[CISE-N-190] N80-31863
Application of interframe filtering to line scanned infrared imaging systems
[AD-A086971] N80-32209

INFRARED RADIATION
Special Sensor H (SSH) moisture sounding
[AD-A087576] N80-32011

INJECTION
Preliminary experiment of neutral beam injection heating in JIPP T-2 stellarator --- Plasma heating
[IPPJ-470] N80-32225

INJECTION LASERS
Injection laser mode studies
[AD-A087522] N80-31787

INJECTORS
Design and evaluation of high performance rocket engine injectors for use with hydrocarbon fuels N80-31621

INORGANIC COMPOUNDS
Numerical calculation of thermal convection in porous media in two dimensions with applications to nuclear repository design
[UCID-18700] N80-31769

INORGANIC SULFIDES
Thermochemical stability diagrams for condensed phases and volatility diagrams for volatile species over condensed phases in twenty metal-sulfur-oxygen systems between 1150 and 1450 K
[DOE/FE-13547/01] N80-31510

INPUT
The TOUCH PAD: A versatile computer input device
[RSRE-MEMO-3229] N80-32114

INPUT/OUTPUT ROUTINES
Quantitative synthesis of uncertain multiple input-output feedback system
[AD-A087014] N80-32149

INSOLATION
Solar energy system economic evaluation for Elcam-Tempe, Tempe, Arizona and Elcam-San Diego, San Diego, California
[NASA-CR-161492] N80-31872
Terrestrial photovoltaic power systems with sunlight concentration
[SAND-80-7008] N80-31942
Environmental data for sites in the National Solar Data Network
[SOLAR/0010-80/02] N80-31975
Circumsolar radiation
[SAND-80-7009] N80-32319

INSTRUMENT APPROACH
A simulation investigation on the feasibility of curved approaches under Microwave Landing System (MLS) guidance
[NLR-TR-78035-U] N80-31380

INSULATION
Development, characterization and evaluation of materials for open cycle MHD
[PNL-2004-12] N80-32232

INTEGRAL CALCULUS
Contribution to the study of supersonic laminar separation: Utilization and improvements in integral methods of calculation
[ONERA-NT-1980-1] N80-31363

INTEGRAL EQUATIONS
Nonlinear viscoelastic behavior of a composite material using a finite element micromechanical analysis
[AD-A087367] N80-31483

INTEGRATED CIRCUITS
Digital demodulator
[NASA-CASE-LAR-12659-1] N80-31731
Integration of filters by means of linear MOS circuits
[DRIC-T-6106] N80-31742
The NBS semiconductor technology program and VLSI (Very Large Scale Integration)
[PB80-185531] N80-32269

INTELLECT
Physical exercises on a bicycle-ergometer and running track to prevent hypodynamia in workers of intellectual labor
[NASA-TM-76306] N80-32067

INTELLIGIBILITY
Voice performance measurements
[AD-A087108] N80-31686

INTERFACES
LSS/propulsion interactions studies N80-31454

INTERFEROMETERS
Communication and instrumentation systems for space vehicles
[AD-A087944] N80-31448

INTERFEROMETRY
Optical probing of acoustic emission during deformation of microtensile specimens N80-32185

INTERGRANULAR CORROSION
Hydrogen induced intergranular cracking of nickel-base alloys
[AD-A087305] N80-31533

INTERNAL PRESSURE
Finite element analysis of piping tees
[AD-A087353] N80-32152

INTERNATIONAL COOPERATION
International Access to Aerospace Information
[AGARD-CP-279] N80-32283
European cooperation in field of aerospace information N80-32285

INTERPLANETARY FLIGHT
Interplanetary two point boundary value problems: Extension of the Unified System for Orbit Computation (USOC), volume 4
[ESA-CR(P)-1347] N80-31424

INTERPLANETARY MAGNETIC FIELDS
Magnetospheric and interplanetary electrostatics: A simple but explicit model
[AD-A087110] N80-32004
Solar-Terrestrial Predictions Proceedings. Volume 3: Solar activity predictions
[PB80-195001] N80-32016

INTERPOLATION
A method of interpolation using cubic polynomials which avoids unnatural overshoots --- computer plotting
[RAE-TM-AERO-1812] N80-32122

INTERRUPTION
Procedures for out-of-service verification and hop length dimensioning in numerical radio links
[FUB-10-1979] N80-31718

INTERSERVICE DATA EXCHANGE PROGRAM
International Access to Aerospace Information
[AGARD-CP-279] N80-32283
State-of-the-art of data exchange: Problems of formats and standards N80-32288
The numeric aerospace data: Problems of evaluation, handling and dissemination N80-32293

INTERSTELLAR GAS
Computational astrophysics relating to the interstellar medium: Problems and prospects for the 1980's --- structure and dynamics of interstellar gas
[UCRL-84410] N80-32307
Numerical study of rotating interstellar clouds: Equilibrium and collapse
[UCRL-52946] N80-32308

INTESTINES
Absorption of thiamine and nicotinic acid in the rat intestine during fasting and immobilization stress
[NASA-TM-76193] N80-32059

INTRUSION
Airborne measurements of stratospheric ozone intrusions into the troposphere over the United States. Volume 2: Data catalog
[PB80-190705] N80-32017

INVENTIONS
Patent profiles: Solar energy
[PB80-190010] N80-31966

INVESTIGATION
On the secular decrease in the semimajor axis of Lageos orbit
[NASA-TM-80734] N80-31426
Investigation of constraint effects on flaw growth in composite laminates N80-31478
Study of catalyst cured LaRC-160/Celion 6000 composites
[NASA-CR-159335] N80-31480
Mechanistic studies related to the metal catalyzed reduction of carbon monoxide to hydrocarbons
[DOE/ER-04222/3] N80-31500
Crossed molecular beam studies of chemiluminescent reactions
[LBL-10545] N80-31504
Taggants in explosives
[PB80-192719] N80-31661
Experimental investigation of hydrodynamic self-acting gas bearings at high Knudsen numbers
[AD-A087400] N80-31801
Investigation of methods to eliminate voltage delay in Li/SOCl2 cells
[AD-A086992] N80-31893
Theoretical and experimental investigations of upper atmosphere dynamics
[NASA-CR-163519] N80-31994
Distributed data processing. Citations from the NTIS data base
[PB80-812217] N80-32280
Distributed Data processing. Citations from the Engineering Index data base
[PB80-812225] N80-32281
Distributed data processing. Citations from the Engineering Index data base
[PB80-812233] N80-32282

ION BEAMS
Pulsed power technology for particle beam fusion
[SAND-80-0696C] N80-32240

ION CONCENTRATION
Ion chromatography of anions
[PB80-184450] N80-31522

ION DENSITY (CONCENTRATION)
The increased attachment due to ionization induced smog in EMP environments
[AD-A087850] N80-31972

ION EXCHANGING
Computer simulation of displacement cation exchange chromatography: Separation of trivalent actinides and lanthanides
[ORNL/TM-6738] N80-31515
A study on the electrolysis of sulfur dioxide and water for the sulfur cycle hydrogen production process
[NASA-CR-163517] N80-31625

ION IMPLANTATION
Fabrication of Josephson tunnel junctions by reactive ion milling
[AD-A087448] N80-32249
High quality submicron niobium tunnel junctions with reactive ion beam oxidation
[AD-A087449] N80-32250

ION SELECTIVE ELECTRODES
Analysis of fluoride in polymer materials
[MHSMP-80-23] N80-31562

ION SOURCES
Adherence of ion beam sputter deposited metal films on H-13 steel
[NASA-TM-81585] N80-31527

IONIC COLLISIONS
Relaxation of charged particles injected into a hot plasma
[FOA-C-20342-A2] N80-32242
IONIZATION
The increased attachment due to ionization induced smog in EMP environments
[AD-A087850] N80-31972
IONOSPHERE
Modelling of equatorial phase and amplitude scintillations from OGO-6 and AE irregularity data
[AD-A087011] N80-32000
Nonlinear evolution of diffuse auroral F region ionospheric irregularities
[AD-A086998] N80-32003
Quantitative simulation of a magnetospheric substorm. 1: Model logic and overview
[NASA-CR-163547] N80-32007
Quantitative simulation of a magnetospheric substorm. 2: Comparison with observations
[NASA-CR-163548] N80-32008
Investigation of magnetic field phenomena in the ionosphere
[AD-A087526] N80-32012
IONOSPHERIC F-SCATTER PROPAGATION
Residual error of dual-frequency spatial radio tracking systems due to the ionosphere
[CNES-NT-93] N80-31709
IONOSPHERIC ION DENSITY
Ionospheric modeling and propagation analysis
[AD-A087259] N80-31998
IONOSPHERIC PROPAGATION
Ground range and bearing error determination and display for an OTH radar system with an Arctic trough ionosphere
[AD-A087010] N80-31691
Ionospheric modeling and propagation analysis
[AD-A087259] N80-31998
IONS
Research studies on radiative collisional processes
[AD-A087527] N80-32193
IPAD
Overview of integrated programs for aerospace-vehicle design (IPAD)
[NASA-TM-81874] N80-32145
IRON
Strain hardening and ductility of iron: Axisymmetric vs plane strain elongation
[DOE/ER-04072/3] N80-31543
IRON ALLOYS
Trapping by TiC particles and twin formation in Fe-Ti
[AD-A085998] N80-31532
Production of aluminum-silicon alloy and and ferrosilicon and commercial purity aluminum by the direct reduction process
[CONS-5089-8] N80-31541
Investigation of dispersed iron alloy catalyst in the carbon monoxide-hydrogen synthesis reaction
[COO-4993-2] N80-31542
IRON COMPOUNDS
Lattice expansion as a measure of surface segregation and solubility of hydrogen in alpha-FeTiH/sub x
[BNL-27523] N80-31509
IRRADIANCE
Measuring features of the fluence at the far field of CO2 pulsed laser: An issue study with suggestions on how to do it
[PB80-191141] N80-31789
IRRADIATION
Materials program plan for inertial confinement fusion
[ANL/FPP-TM-126] N80-32238
IRRIGATION
Design, construction, and operation of a 150 kW solar-powered irrigation facility, phase 2
[ALO-4159-1] N80-31903
ISLANDS
Altimetry data over trenches and island-arcs and convection in the mantle
[NASA-CR-163516] N80-32050
ISOLATION
Technical program plan, Basalt Waste Isolation Project
[RHO-CD-132-REV-5] N80-32205
ISOTROPY
Isotropic modulation of galactic cosmic rays
[LPS-79-12] N80-32321
ISRAEL
Size distribution, chemical composition and optical properties of atmospheric dust in Israel: A comparison of urban and desert aerosols under clear and dusty conditions
[AD-A087608] N80-32010
IUE
Blackbody curves for the IUE spectral range lambda 1150 to lamda 3200 from 6,000 to 200,000 K
[NASA-TM-81997] N80-32306

J

JAMMING
Pseudonoise spread-spretrum systems for military communications
[AD-A087701] N80-31700
JET AIRCRAFT
P-59 N80-31318
JET AIRCRAFT NOISE
A study of the transmission characteristics of suppressor nozzles
[NASA-CR-165133] N80-32186
JET AMPLIFIERS
Development of a nozzle to improve the turning of supersonic Coanda jets
[AD-A087709] N80-31765
JET ENGINE FUELS
Some civil engineering and management aspects of conversion from JP-4 to JP-8 fuel by the United States Air Force in the continental United States
[AD-A087221] N80-31626
Aviation turbine fuels, 1979
[DOE/BETC-PPS-80/2] N80-31627
JET ENGINES
Effect of oxidizing fuels on aircraft fuel system elastomers and sealants
[AD-A087267] N80-31554
JET FLOW
Investigations of eddy coherence in jet flows
[NASA-CR-163525] N80-31759
An experimental study of multiple jet mixing
[NASA-CR-163537] N80-31760
Development of a nozzle to improve the turning of supersonic Coanda jets
[AD-A087709] N80-31765
JOINTS (JUNCTIONS)
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159111] N80-31447
Fatigue behavior of adhesively bonded joints, volume 1
[AD-A087280] N80-31826
JOSEPHSON JUNCTIONS
Fabrication of Josephson tunnel junctions by reactive ion milling
[AD-A087448] N80-32249
Superconducting tunneling and tunneling applications in high Tc A15 superconductors
[AD-A087125] N80-32253
Properties of superconductor-normal metal-superconductor microbridges
[AD-A087512] N80-32258
Theory of Josephson junction mixers
[AD-A087511] N80-32259
JOURNAL BEARINGS
Observation of pressure variation in the cavitation region of submerged journal bearings
[NASA-TM-81582] N80-31798
JUNCTION DIODES
Injection laser mode studies
[AD-A087522] N80-31787
Development of high efficiency cascade solar cells
[DSE-4042-T38] N80-31906
JUPITER PROBES
Design study for electronic system for Jupiter Orbit Probe (JOP)
[NASA-CR-160021] N80-31428

K

KALMAN FILTERS
Simplified groundwater flow modeling: An application of Kalman filter based identification
[UCRL-82649] N80-31861
KARMAN VORTEX STREET
Numerical simulation of the interaction of a flame with a Karman vortex street
[LBL-10679] N80-31512
KERR MAGNETOOPTICAL EFFECT
Raman-induced Kerr effect studies
[AD-A087410] N80-32213
KINETICS
Gallium arsenide (GaAs) solar cell modeling studies
[NASA-CR-163538] N80-31884
KNUDSEN FLOW
Experimental investigation of hydrodynamic self-acting gas bearings at high Knudsen numbers
[AD-A087400] N80-31801

L

LABORATORY EQUIPMENT
The effects of radiation on materials. Instrument design and calibration --- measuring instruments
[CISE-1524] N80-31781
LABYRINTH
Diagnosis of latent forms of labyrinthine affections
[NASA-TM-76338] N80-32074
Technique of electrical stimulation of the vestibular analyzer under clinical conditions
[NASA-TM-76347] N80-32075
LABYRINTHECTOMY
Diagnosis of latent forms of labyrinthine affections
[NASA-TM-76338] N80-32074
LAGEOS (SATELLITE)
On the secular decrease in the semimajor axis of Lageos orbit
[NASA-TM-80734] N80-31426
LAMINAR BOUNDARY LAYER
Design of a calculation method for three dimensional turbulent boundary layers
[NLR-MP-79036-U] N80-31361
LAMINAR FLOW
Contribution to the study of supersonic laminar separation: Utilization and improvements in integral methods of calculation
[ONERA-NT-1980-1] N80-31363
A numerical method for the calculation of laminar incompressible boundary layers with strong viscous-inviscid interaction
[NLR-TR-79023-U] N80-31369
Evaluation of laminar flow control system concepts for subsonic commercial transport aircraft
[NASA-CR-159254] N80-31384
Numerical simulation of the interaction of a flame with a Karman vortex street
[LBL-10679] N80-31512
Laminar flow cyclone development program
[FE-3242-40] N80-31770
LAMINATES
Effects of moisture, residual thermal curing stresses and mechanical load on the damage development in quasi-isotropic laminates N80-31476
Phosphorus-containing bismide resins
[NASA-CASE-ARC-11321-1] N80-31551
Vibration of thick rectangular plates of bimodulus composite material
[AD-A087424] N80-31832
Thermal bending of thick rectangular plates of bimodulus composite material
[AD-A087425] N80-31833
Laminated Fresnel lenses
[SAND-80-7007] N80-32218
LAND MANAGEMENT
LASL experience in decontamination of the environment
[LA-UR-80-926] N80-31974
LAND USE
LANDSAT data as a basis for regional environmental assessment within the Columbia Plateau
[RHO-BWI-SA-43] N80-31862
The application of cluster analysis to the mass appraisal of forest and vacant land N80-32168
LANDING AIDS
A simulator study of control and display augmentations for helicopters
[NASA-CR-163451] N80-31408
LANDSAT SATELLITES
Comparative experimental study on the use of original and compressed multispectral LANDSAT data for applied research
[DFVLR-FB-80-03] N80-31865

LARGE SCALE INTEGRATION
The NBS semiconductor technology program and VLSI (Very Large Scale Integration)
[PB80-185531] N80-32269
LARGE SPACE STRUCTURES
Large Space Systems/Low-Thrust Propulsion Technology
[NASA-CP-2144] N80-31449
Introduction: The challenge of optimum integration of propulsion systems and large space structures N80-31450
Large space systems technology program N80-31451
Electric propulsion technology N80-31452
Chemical propulsion technology N80-31453
LSS/propulsion interactions studies N80-31454
DOD low-thrust mission studies N80-31455
Low-thrust vehicles concept studies N80-31456
Low-thrust vehicle concept studies N80-31457
Primary propulsion/large space system interactions N80-31458
Auxiliary control of LSS N80-31459
Effect of orbital transfer loads on large platforms N80-31460
Influence of interorbit acceleration on the design of large space antennas N80-31461
Integrated analysis of large space systems N80-31462
Integrated analysis capability for large space systems N80-31463
Controls for LSS N80-31464
Electric propulsion and power N80-31465
Solar rocket system concept analysis N80-31470
LASER ANEMOMETERS
A study into the use of a photon correlation technique in both low and high speed flows --- laser anemometer
[VKI-TM-27] N80-31771
LASER APPLICATIONS
Sensors for remote sensing
[CISE-N-190] N80-31863
LASER DOPPLER VELOCIMETERS
Direct measurements of acoustic admittance using laser Doppler velocimetry N80-31605
Development of a photon correlation laser velocimeter for use in turbulent mixing region measurements N80-31611
Laser Doppler velocimetry: Principles, potential and examples of possible applications
[VKI-PREPRINT-1979-6] N80-32220
LASER MATERIALS
Properties of low-index laser materials
[UCRL-84399] N80-31788
LASER MODES
Injection laser mode studies
[AD-A087522] N80-31787
The LSR/2 optically coupled signal transmission link
[AD-A087552] N80-32215
LASER OUTPUTS
Studies of combustion kinetics and mechanisms
[DOE/ER-14953/T1] N80-31516
Research studies on radiative collision lasers
[AD-A087714] N80-31785
LASER SPECTROSCOPY
Microwave investigations of matter
[AD-A087480] N80-31498
Application of advanced optical spectroscopic methods to energetic materials N80-31597
LASER WEAPONS
Measuring features of the fluence at the far field of CO2 pulsed laser: An issue study with suggestions on how to do it
[PB80-191141] N80-31789
LASERS
Research studies on radiative collision lasers
[AD-A087714] N80-31785
LATERAL OSCILLATION
Wind tunnel measurement of lateral aerodynamic derivatives using a new oscillatory rig, with results and comparisons for the Gnat aircraft
[ARC-R/M-3847] N80-31366
LATTICE PARAMETERS
Lattice expansion as a measure of surface segregation and solubility of hydrogen in alpha-FeTiH/sub x
[BNL-27523] N80-31509
High pressure studies to determine the effects of volume and temperature on the lattice dynamics of molecular solids: N2, CO2, CH4
[DOE/ER-10443/1] N80-32183
Grain boundary dislocations in plane matching grain boundaries
[DOE/ER-05002/7] N80-32281
LAUNCHING SITES
Engineering services in support of sounding rockets
[AD-A087801] N80-31433
LAW (JURISPRUDENCE)
Taggants in explosives
[PB80-192719] N80-31661
LEADING EDGES
Basic studies of wing-body interference at high angles of attack and supersonic speeds
[AD-A087134] N80-31355
LEAKAGE
Performance characteristics of leaky coaxial cables
[AD-A087475] N80-31703
LEARNING CURVES
Investigation of learning and experience curves
[SERI/TR-353-459] N80-31911
LEARNING THEORY
The influence of visual-spatial ability and study procedures on map learning skill
[AD-A087247] N80-32089
LEAST SQUARES METHOD
A world vertical network
[AD-A086011] N80-31853
State estimation and absolute image registration for geosynchronous satellites
[NASA-TM-80712] N80-31858
Recursive least squares lattice algorithms: A geometrical approach
[AD-A087566] N80-32160
LENGTH
The vulnerability of electric equipment to carbon fibers of mixed lengths: An analysis
[NASA-TM-80215] N80-31481
LENS DESIGN
Laminated Fresnel lenses
[SAND-80-7007] N80-32216
LEVITATION
The influence of wall resonances on the levitation of objects in a single-axis acoustic processing chamber
[NASA-TM-78299] N80-32187
LIAPUNOV FUNCTIONS
Lyapunov stability of multi-machine power systems N80-31792
LIBRARIES
Graphics library for real time display and data analysis
[UCID-18543] N80-32121
LICENSING
Patent profiles: Solar energy
[PB80-190010] N80-31966
LIFE (DURABILITY)
Silicon solar cell fabrication technology
[NASA-CR-163394] N80-31871
Evaluation program for secondary spacecraft cells: Initial evaluation tests of General Electric Company $40.00 ampere-hour nickel-cadmium spacecraft cells for the tracking data relay satellite system
[NASA-CR-160016] N80-31886
Sensitive measurement of photon lifetime and true reflectances in an optical cavity by a phase shift method
[AD-A087248] N80-32211
LIFE CYCLE COSTS
The application of design to cost and life cycle cost to aircraft engines
[AGARD-LS-107] N80-31342
An approach to the life cycle analysis of aircraft turbine engines N80-31343
Design to life cycle costs interaction of engine and aircraft --- combat aircraft N80-31344
Progress on the US Air Force approach for the practical management of engine life cycle costs --- gas turbine engines N80-31345
Military engine programs with cost objectives N80-31346
Logistics forecasting for achieving low life cycle cost --- aircraft maintenance N80-31347
The application of design to cost at Rolls-Royce N80-31348
Evaluating and selecting the preferred air breathing weapon system N80-31349
LIFE SUPPORT SYSTEMS
Project FIRES. Volume 1: Program overview and summary, phase 1B
[NASA-CR-161529] N80-32098
Project FIRES. Volume 3: Protective ensemble design and procurement specification, phase 1B
[NASA-CR-161531] N80-32100
Man-rating of the Navy/Air Force Oxygen Generating System (NAOGS)
[AD-A087270] N80-32103
LIFT
Computation of spanwise distribution of circulation and lift coefficient for flapped wings of arbitrary planform
[NASA-CR-159329] N80-31353
Wing profile design of the world championship sail plane SB 11
[NASA-TM-75829] N80-31385
LIFT DEVICES
An asymptotic unsteady lifting-line theory with energetics and optimum motion of thrust-producing lifting surfaces
[NASA-CR-163526] N80-31352
LIFT DRAG RATIO
Wing profile design of the world championship sail plane SB 11
[NASA-TM-75829] N80-31385
Aerodynamic performance of a 5-metre-diameter Darrieus turbine with extruded aluminum NACA-0015 blades
[SAND-80-0179] N80-31957
LIFTING BODIES
An asymptotic unsteady lifting-line theory with energetics and optimum motion of thrust-producing lifting surfaces
[NASA-CR-163526] N80-31352
LIGHT ELEMENTS
Atomic emission lines in the near ultraviolet: hydrogen through krypton, section 1
[NASA-TM-80268-SECT-1] N80-32190
Atomic emission lines in the near ultraviolet: hydrogen through krypton, section 2
[NASA-TM-80268-SECT-2] N80-32191
LIGHT EMISSION
Evaluation of two-beam spectroscopy as a plasma diagnostic
[LBL-10913] N80-32236
LIGHT SCATTERING
Mean droplet diameter resulting from atomization of a transverse liquid jet in a supersonic air stream N80-31616
Atmospheric particulate analysis using angular light scattering
[NASA-TM-81112] N80-31995
Polar nephelometer for atmospheric particulate studies
[NASA-TM-81113] N80-31996
Ocean-atmosphere interface: Its influence on radiation
[AD-A087046] N80-32028
LIGHT TRANSMISSION
Time delay of terrestrial light pulses propagating through clouds to satellite systems
[AD-A087242] N80-31999
Transmittance measurements at DIRT-II
[AD-A087003] N80-32212
LIGHTING EQUIPMENT
Energy budget procedures and performance criteria for energy conserving building illumination systems
[PB80-184229] N80-31673
LIGHTNING
Atmospheric Electricity-Aircraft Interaction
[AGARD-LS-110] N80-31743
Aircraft mishap experience from atmospheric electricity hazards N80-31745
Phenomenology of lightning/aircraft interaction N80-31746
Susceptibility of avionics to lightning indirect effects N80-31747
Models for assessing hazards due to lightning N80-31748
Lightning test criteria for aircraft avionics systems N80-31749
Lightning testing for aircraft avionics systems N80-31750
The coupling of lightning fields into aircraft and cables N80-31751

Lightning effects on aircraft: A cockpit perspective N80-31753
The increased attachment due to ionization induced smog in EMP environments
[AD-A087850] N80-31972
Initial direct strike lightning data
[NASA-TM-81867] N80-32023

LIGHTNING SUPPRESSION
Protection of aircraft avionics from lightning indirect effects N80-31752

LIGNITE
Photocatalytic production of hydrogen from water and Texas lignite using a platinized titania catalyst
[AD-A087364] N80-31494
Chemistry of lignite liquefaction
[FE-2211-11] N80-31642

LINE OF SIGHT
Assessment of frequency selective fading on DCS transmission system performance.
[AD-A087794] N80-31695

LINE SPECTRA
Atomic emission lines in the near ultraviolet; hydrogen through krypton, section 1
[NASA-TM-80268-SECT-1] N80-32190
Atomic emission lines in the near ultraviolet; hydrogen through krypton, section 2
[NASA-TM-80268-SECT-2] N80-32191
Stark profile measurement of Cu reversal lines in a dense plasma N80-32222

LINEAR ACCELERATORS
Application of linear accelerator technology to the detection of trace amounts of transuranics in waste barrels
[LA-UR-80-1274] N80-31507

LINEAR PREDICTION
Simulation of some autoregressive Markovian sequences of positive random variables
[AD-A087368] N80-32153

LINEAR PROGRAMMING
The method of contracting ellipsoids
[AD-A087485] N80-32162

LINEAR SYSTEMS
Robustness of multiloop linear feedback systems
[NASA-CR-163450] N80-32148

LININGS
Design, engineering and evaluation of refractory liners for slagging gasifiers
[IITRI-M-6043-5] N80-31640

LIQUEFIED NATURAL GAS
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases
[FE-14809-1] N80-31502

LIQUID FLOW
Multisystem modeling of unsteady liquid flow N80-31758

LIQUID INJECTION
Mean droplet diameter resulting from atomization of a transverse liquid jet in a supersonic air stream N80-31616

LIQUID PHASE EPITAXY
Feasibility of open tube slider growth of HgCdTe from Te- rich solution
[AD-A086342] N80-32246

LIQUID PHASES
A study on mechanical properties of heavy alloys --- of tungsten
[DRIC-T-5966] N80-31545

LITERATURE
Erosive burning, a survey of the Russian literature N80-31595

LITHIUM CHLORIDES
Investigation of methods to eliminate voltage delay in Li/SOCl2 cells
[AD-A086992] N80-31893

LITHIUM SULFUR BATTERIES
Communication and instrumentation systems for space vehicles
[AD-A087944] N80-31448
Long-term lithium battery tests, 2
[SAND-79-1383] N80-31956

LITHOGRAPHY
The mosaics of Mars: As seen by the Viking Lander cameras
[NASA-CR-3326] N80-32311

LITHOSPHERE
Altimetry data over trenches and island-arcs and convection in the mantle
[NASA-CR-163516] N80-32050

LIVER
Effect of sinusoidal modulated currents and acute hypoxia on corticosterone content and activity of certain dehydrogenases in tissues of different rat organs during hypokinesia
[NASA-TM-76161] N80-32057

LOAD DISTRIBUTION (FORCES)
Influence of interorbit acceleration on the design of large space antennas N80-31461

LOAD TESTS
Buckling of cylinders with longitudinal stiffeners subjected to axial compression
[FFA-TN-HU-2184] N80-31844
Methods for the interpolation and the extrapolation of the results of creep rupture tests
[NLR-MP-79007-U] N80-31846

LOADING MOMENTS
Comparison of calculated and measured blade loads on a full-scale tilting proprotor in a wind tunnel
[NASA-TM-81228] N80-31386

LOADS (FORCES)
Effects of moisture, residual thermal curing stresses and mechanical load on the damage development in quasi-isotropic laminates N80-31476
Elastic buckling of arches by finite element method N80-31817
Further experimental studies on vibrations and buckling of eccentrically loaded stiffened cylindrical shells
[TAE-331] N80-31818
Finite element analysis of piping tees
[AD-A087353] N80-32152

LOGIC CIRCUITS
The logic of the electric flight control system experiment on the Concorde --- achieving low speed longitudinal stability by active control N80-32137

LOGISTICS MANAGEMENT
Logistics forecasting for achieving low life cycle cost --- aircraft maintenance N80-31347
Evaluating and selecting the preferred air breathing weapon system N80-31349
Some civil engineering and management aspects of conversion from JP-4 to JP-8 fuel by the United States Air Force in the continental United States
[AD-A087221] N80-31626
Universal documentation system handbook. Volume 1: System description, program introduction and statement of capability
[AD-A087072] N80-32274
Universal documentation system handbook. Volume 2: Program requirements and operations requirements documents
[AD-A087073] N80-32275

LONG TERM EFFECTS
Long-term lithium battery tests, 2
[SAND-79-1383] N80-31956

LONGITUDINAL CONTROL
The logic of the electric flight control system experiment on the Concorde --- achieving low speed longitudinal stability by active control N80-32137

LORAN
Balloon-supported Loran antenna, new hardware for tethered balloons, and payloads used in BAMM flights
[AD-A087487] N80-31377
Balloon-supported antenna for Loran C/D navigation system
[AD-A087488] N80-31378

LOW ALTITUDE
Icing characteristics of low altitude, supercooled layer clouds
[AD-A087137] N80-32031

LOW COST
Logistics forecasting for achieving low life cycle cost --- aircraft maintenance N80-31347
Laminated Fresnel lenses
[SAND-80-7007] N80-32218

LOW GRAVITY MANUFACTURING
Materials processing in space program tasks
[NASA-TM-78294] N80-31418

LOW SPEED STABILITY
The logic of the electric flight control system experiment on the Concorde --- achieving low speed longitudinal stability by active control N80-32137

LOW SPEED WIND TUNNELS
Possible methods for removing small airborne particles from the flow in the 5 meter pressurized low-speed wind tunnel
[RAE-TM-AERO-1826] N80-31416

LOW THRUST
LSS/propulsion interactions studies N80-31454

LOW THRUST PROPULSION
Large Space Systems/Low-Thrust Propulsion Technology
[NASA-CP-2144] N80-31449
Introduction: The challenge of optimum integration of propulsion systems and large space structures N80-31450
Chemical propulsion technology N80-31453
DOD low-thrust mission studies N80-31455
Low-thrust vehicles concept studies N80-31456
Low-thrust vehicle concept studies N80-31457
Low-thrust chemical rocket engine study N80-31467
Low-thrust chemical propulsion N80-31468
Low-thrust chemical orbit to orbit propulsion system propellant management study N80-31469
Advanced concepts --- specific impulse, mass drivers, electromagnetic launchers, and the rail gun N80-31471

LOWER ATMOSPHERE
Prospect of a global warming and studies of its societal impacts
[CONF-7910158-1] N80-31976
Atmospheric modeling of air pollution. A bibliography with abstracts
[PB80-811623] N80-31980
Atmospheric modeling of air pollution. A bibliography with abstracts
[PB80-811631] N80-31981

LUBRICANTS
An investigation to measure interparticle friction and to determine important material and environmental variables which influence this friction --- metallic and nonmetallic powders N80-31793

LUMINOUS INTENSITY
Adaptation of a Kratky camera to use with a one dimensional position sensitive detector
[AD-A087523] N80-31780

LUNAR ROCKS
Mineralogic and petrologic studies of lunar samples and meteorites
[NASA-CR-163498] N80-32309

LUNAR SOIL
Mineralogic and petrologic studies of lunar samples and meteorites
[NASA-CR-163498] N80-32309

LUNGS
Blood filling and flow in lungs during change in body position in space
[NASA-TM-76333] N80-32071

M

MACHINE TOOLS
Crystal cleaving machine
[NASA-CASE-GSC-12584-1] N80-32246

MACHINE TRANSLATION
Documentation for the machine-readable version of the catalog of supplemental stars to the Bonner Durchmusterung
[NASA-TM-81119] N80-32303

MACHINING
Fabrication for precision mechanisms
[BDX-613-2388] N80-31670

MAGNESIUM
Automotive storage of hydrogen using modified magnesium hydrides
[SAN-1167-1] N80-31650

MAGNET COILS
Structural analysis of superconducting bending magnets
[LBL-10950] N80-32184

MAGNETIC COILS
Conceptual design of RST: An rf-driven, steady-state Tokamak
[EPRI-AP-1351] N80-32233

MAGNETIC FIELDS
Investigation of magnetic field phenomena in the ionosphere
[AD-A087526] N80-32012

MAGNETIC MOMENTS
The magnetic testing of the X4 spacecraft --- Miranda satellite
[RAE-TR-79144] N80-31436

MAGNETIC PERMEABILITY
Superconductivity in filamentary eutectic composites
[COO-4938-3] N80-31486
MAGNETIC PROPERTIES
The effects of radiation on materials. Instrument design and calibration --- measuring instruments
[CISE-1524] N80-31781
MAGNETIC PUMPING
Direct ohmic heating of positive ions in Tokamak plasmas
[DOE/ET/53036-16] N80-32237
MAGNETIC SIGNATURES
Longitudinal and transverse magnetic field program procedure and detailed specification for Sigma 5
[NASA-TM-78292] N80-32314
MAGNETIC SURVEYS
A detailed magnetic survey of the Saint Lawrence River: Oak Point to Lake Ontario, New York
[PB80-191471] N80-32021
MAGNETIC TAPES
The mosaics of Mars: As seen by the Viking Lander cameras
[NASA-CR-3326] N80-32311
MAGNETOHYDRODYNAMIC FLOW
Quantitative simulation of a magnetospheric substorm. 1: Model logic and overview
[NASA-CR-163547] N80-32007
MAGNETOHYDRODYNAMIC GENERATORS
Characterization of open-cycle, coal-fired MHD generators
[ARI-RP-43] N80-31936
Tests of a lightweight 200 kW MHD channel and diffuser
[AD-A087022] N80-32226
MHD high performance demonstration experiment
[FE-2895-7] N80-32231
Characterization of open-cycle, coal-fired MHD generators
[ARI-RP-46] N80-32234
MAGNETOHYDRODYNAMIC STABILITY
Quasilinear scattering from waves driven by beam-plasma instabilities
[AD-A087208] N80-32002
Electromagnetic oscillating two stream instability of plasma waves
[AD-A087732] N80-32227
Irreversibility and transport in the lower hybrid drift instability
[AD-A087728] N80-32229
MAGNETOHYDRODYNAMICS
DOD low-thrust mission studies N80-31455
MHD electrode development
[FE-15529-2] N80-32230
MAGNETOMETERS
Investigation of magnetic field phenomena in the ionosphere
[AD-A087526] N80-32012
MAGNETOSPHERE
Magnetospheric and interplanetary electrostatics: A simple but explicit model
[AD-A087110] N80-32004
The investigation of the magnetospheric dynamics in conjunction with the SCATHA satellite observations
[AD-A087433] N80-32006
Quantitative simulation of a magnetospheric substorm. 1: Model logic and overview
[NASA-CR-163547] N80-32007
Quantitative simulation of a magnetospheric substorm. 2: Comparison with observations
[NASA-CR-163548] N80-32008
MAINTAINABILITY
Production oriented maintenance organization: A critical analysis of sortie-generation capability and maintenance quality
[AD-A087095] N80-31323
MAINTENANCE
Development and evaluation of the epoxy repair method for reinforced concrete flexural members
N80-31666
USAFSAM waiver file intelligent terminal: Hardware reference manual
[AD-A087340] N80-32110
INTERLISP maintenance
[AD-A087338] N80-32118
MALFUNCTIONS
Influence of propagation characteristics and repeaters on the performance of a multiple link teletext system
[FUB-24-1979] N80-31723
MAN ENVIRONMENT INTERACTIONS
Anthropogenic climate changes. State-of-the-art survey
[KNMI-V-347] N80-32041
Environmental wind in built-up areas
[VKI-TM-26] N80-32043
MAN MACHINE SYSTEMS
A review of USAFSAM studies employing multiple-tasks performance devices
[AD-A087272] N80-32091
The use of information transmission as nonparametric correlation in the analysis of complex behavior: A preliminary report
[AD-A087832] N80-32096
Requirements definition and design guidelines for man-machine interface in C3 system acquisition
[AD-A087258] N80-32102
MANAGEMENT
The global 2000 report to the president. Entering the twenty-first century, volume 1 N80-32295
MANAGEMENT INFORMATION SYSTEMS
Data structure independence in data base management systems N80-32107
MANAGEMENT METHODS
Progress on the US Air Force approach for the practical management of engine life cycle costs --- gas turbine engines N80-31345
The application of design to cost at Rolls-Royce
N80-31348
The management of documents having a restricted character N80-32291
MANAGEMENT PLANNING
Video distribution system cost model
[NASA-CR-160020] N80-31685
Programs for distributed computing: The calendar application
[AD-A087357] N80-32111
An attempt to estimate the economic effects in the choice of space technology spin-offs
[SNIAS-801-422-107] N80-32301
MANAGEMENT SYSTEMS
Software maintenance management process
N80-32133
MANGANESE
Gulf Coast manganese nodule processing plant location criteria
[PB80-182082] N80-31549
MANGANESE ALLOYS
A theoretical and experimental study of the mechanical behavior of alpha-beta TiMn alloys
N80-31525
MAPPING
Terrain analyst synthesizer station
[AD-A087370] N80-31860
Conversion of grid-point data into meteorological maps with a mini-computer system
[WMO-553] N80-32042
The influence of visual-spatial ability and study procedures on map learning skill
[AD-A087247] N80-32089
MAPS
Additions and corrections to the bibliography of geologic studies, Columbia Plateau (Columbia River Basalt) and adjacent areas, in Idaho, 1980
[RHO-BWI-C-68] N80-32013
MARINE BIOLOGY
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 1: Marine turtle studies
[NASA-CR-163122-VOL-4-PT-1] N80-31969
MARINE METEOROLOGY
The Seasat SAR Wind and Ocean Wave Monitoring Capabilities: A case study for pass 1339m
[NASA-CR-163454] N80-32051
MARINE TECHNOLOGY
Simulation of reservoir and lake sedimentation
[PB80-182801] N80-31867
MARKET RESEARCH
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 1: Conceptual design, sections 1 through 4
[DOE/ET-20567/1-2-BK-1] N80-31896
MARKOV PROCESSES
Simulation of some autoregressive Markovian sequences of positive random variables
[AD-A087368] N80-32153
MARS SURFACE
The mosaics of Mars: As seen by the Viking Lander cameras
[NASA-CR-3326] N80-32311
MASERS
Microwave investigations of matter
[AD-A087480] N80-31498
MASS DISTRIBUTION
A study of the use of blocking masses in reducing helicopter cabin noise
[RAE-TM-AERO-1838] N80-31395
Results of a joint USA/USSR hydrodynamic and transport modeling project, appendices B, C, and D
[PB80-187529] N80-31866
MASS DRIVERS (PAYLOAD DELIVERY)
Advanced concepts --- specific impulse, mass drivers, electromagnetic launchers, and the rail gun
N80-31471
MASS FLOW
Thrusting characteristics of propulsors
[AD-A087281] N80-31800
MASS SPECTRA
Data acquisition techniques for exploiting the uniqueness of the time-of-flight mass spectrometer: Application to sampling pulsed gas systems
[NASA-TM-81224] N80-31775
MASS SPECTROMETERS
Characterization of open-cycle, coal-fired MHD generators
[ARI-RP-46] N80-32234
MATERIAL ABSORPTION
Absorption of thiamine and nicotinic acid in the rat intestine during fasting and immobilization stress
[NASA-TM-76193] N80-32059
MATERIAL BALANCE
LLL in situ coal gasification project
[UCRL-50026-79-4] N80-31654
Results of a joint USA/USSR hydrodynamic and transport modeling project, appendices B, C, and D
[PB80-187529] N80-31866
MATERIALS HANDLING
An analysis of the future requirements for materials handling equipment in the military airlift command
[AD-A087094] N80-31370
A methodology for modeling confined, temperature sensitive cushioning systems
[AD-A087351] N80-31799
Functions of an engineered barrier system for a nuclear waste repository in basalt
[RHO-BWI-LD-23] N80-32202
MATHEMATICAL MODELS
Aircraft hydraulic systems dynamic analysis component data handbook
[AD-A087366] N80-31390
Wessex modernization: A preliminary simulation study
[AD-A087799] N80-31410
Processing of Meteosat attitude measurement flight data and evaluation of the performance of an adaptive filtering technique
[NLR-TR-78146-U] N80-31437
Statistical analysis of strength and life of composite materials
[AD-A087741] N80-31484
A prediction model for turbulent diffusion flames, including NO-formation
[VKI-PREPRINT-1979-14] N80-31519
A model for confined combustion of compressible, linear viscoelastic solid propellant N80-31574
A calculational model for fragmentation in viscoelastic materials N80-31575
On response functions for composite solid propellant N80-31603
A primitive variable computer model for combustion within solid fuel ramjets N80-31609
L*-instability in ducted rocket fuel generators
N80-31610
Video distribution system cost model
[NASA-CR-160020] N80-31685
Radiation and scattering from bodies of translation, volume 1
[AD-A087402] N80-31688
The noise in electric networks
[LPS-80-10] N80-31727
Models for assessing hazards due to lightning
N80-31748

Multisystem modeling of unsteady liquid flow
N80-31758
Axisymmetric flow fields in motored and firing spark-ignition engines N80-31791
Rotor-bearing dynamics technology design guide. Part 1: Flexible rotor dynamics
[AD-A087806] N80-31802
Numerical modeling of dynamic crack propagation in finite bodies, by moving singular elements. Part 2: Results
[AD-A087228] N80-31825
Numerical modeling of dynamic propagation in finite bodies, by moving singular elements. Part 1: Formulation
[AD-A087395] N80-31835
Mathematical formulation of damping for structural response analysis
[NLR-MP-79010-U] N80-31842
Results of a joint USA/USSR hydrodynamic and transport modeling project, appendices B, C, and D
[PB80-187529] N80-31866
Simulation of reservoir and lake sedimentation
[PB80-182801] N80-31867
Gallium arsenide (GaAs) solar cell modeling studies
[NASA-CR-163538] N80-31884
Sites for wind-power installations: Physical modeling of the influence of hills, ridges and complex terrain on wind speed and turbulence. Part 1: Executive summary
[RLO-2438-78/1] N80-31900
Sites for wind-power installations: Wind characteristics over ridges, part 2
[RLO-2438-78/2] N80-31901
Coal processing for fuel cell utilization: Task 9: One-dimensional (streamtube) model for entrained-flow gasifier analysis
[METC-8450-T2-VOL-1] N80-31912
Absorption refrigeration machine driven by solar heat
[EUR-6748-EN] N80-31914
SCRAM: A fast computational model for the optical performance of point focus solar central receiver systems
[SAND-80-0433] N80-31925
Analytical modeling of line focus solar collectors
[SERI/TP-333-591] N80-31926
Interactions between energy supply and transportation-related energy use, volume 1
[PB80-185002] N80-31968
Atmospheric turbulence simulation techniques with application to flight analysis
[NASA-CR-3309] N80-32025
Characterization and influence of the parameters of a model to describe hydrometeor diffusion
[FUB-23-1979] N80-32037
National Hurricane and Experimental Meteorology Laboratory collected reprints, 1979
[PB80-192917] N80-32049
Visual scene perception: Frequency domain data and model parameter estimation procedure
[NLR-MP-79009-U] N80-32097
Multi-microprocessor/multi-microcomputer tures: Their modeling and analysis N80-32108
Programs for distributed computing: The calendar application
[AD-A087357] N80-32111
Aspects of mathematical modeling related to optimization
[AD-A087556] N80-32159
Review of stiffness and implicit finite difference methods in combustion modeling
[SAND-79-8623] N80-32163
On the theory of crossover designs with residual effects N80-32165
A Bayesian procedure to compare and choose among logistic regression models N80-32167
Structural analysis of superconducting bending magnets
[LBL-10950] N80-32184
Research studies on radiative collisional processes
[AD-A087527] N80-32193
Characterization of open-cycle, coal-fired MHD generators
[ARI-RP-46] N80-32234
Review of Department of Energy sponsored codes and documentation available from Purdue and Lehigh Universities processes modeling contracts
[K/CSD/TM-35] N80-32278
Circumsolar radiation
[SAND-80-7009] N80-32319

MATRICES (MATHEMATICS)
On the numerical integration of two-point boundary value problems for stiff systems of ordinary differential equations
[AD-A087396] N80-32155
On the theory of crossover designs with residual effects N80-32165
Repeatibility of spatial configurations defined by interaction matrices N80-32179

MATRIX MANAGEMENT
Fossil fuels research matrix program. US Environmental Protection Agency/Department of Energy Fossil Fuels Research Materials Facility
[ORNL/TM-7346] N80-31632

MAXIMUM LIKELIHOOD ESTIMATES
A comparison between MLE and BLUE for a decreasing failure rate distribution when using censored-data
[AD-A087359] N80-32171

MEASUREMENT
National Bureau of Standards and Agency for International Development (NBS/AID) Course on Weights and Measures Services
[PB80-187206] N80-31675

MECHANICAL DEVICES
Fabrication for precision mechanisms
[BDX-613-2388] N80-31670

MECHANICAL DRIVES
Activities of the European Space Tribology Laboratory for 1979
[ESA-ESTL-44] N80-31804
Design study of steel V-Belt CVT for electric vehicles
[NASA-CR-159845] N80-32299

MECHANICAL PROPERTIES
Micromechanics of short-fiber composite
N80-31477
Statistical analysis of strength and life of composite materials
[AD-A087741] N80-31484
The effect of mechanical working on SiC whisker-reinforced aluminum alloys
[AD-A087565] N80-31485
A theoretical and experimental study of the mechanical behavior of alpha-beta TiMn alloys
N80-31525
Ceramics for vehicular engines: State-of-the-art
[AD-A087589] N80-31560
Photovoltaic module electrical termination design requirement study
[JPL-955367-80/1] N80-31877

MECHANICAL SHOCK
The Shock and Vibration Digest, volume 12, no. 7
[AD-A087855] N80-31662

MEDICAL SCIENCE
Review of book vestibular crises
[NASA-TM-76354] N80-32078
Vestibular reactions in patients during occlusion form of choriocependymitis
[NASA-TM-76356] N80-32080

MELTING
Melt rheology of block copolymers in relation to melt structure
[AD-A087484] N80-31561
Multiphase reactor modeling for zinc chloride catalyzed coal liquefaction
[LBL-9870] N80-31628

MELTS (CRYSTAL GROWTH)
Melt rheology of block copolymers in relation to melt structure
[AD-A087484] N80-31561
Means for growing ribbon crystals without subjecting the crystals to thermal shock-induced strains
[NASA-CASE-NPO-14298-1] N80-32244

MEMBRANES
A study on the electrolysis of sulfur dioxide and water for the sulfur cycle hydrogen production process
[NASA-CR-163517] N80-31625

MEMORY
Individual difference relations in psychometric and experimental cognitive tasks
[AD-A086057] N80-32093

MENTAL PERFORMANCE
The influence of visual-spatial ability and study procedures on map learning skill
[AD-A087247] N80-32089
Individual difference relations in psychometric and experimental cognitive tasks
[AD-A086057] N80-32093

MERCURY TELLURIDES
Feasibility of open tube slider growth of HgCdTe from Te- rich solution
[AD-A086342] N80-32248

MERRITT ISLAND (FL)
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 1: Marine turtle studies
[NASA-CR-163122-VOL-4-PT-1] N80-31969
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 2: Threatened and endangered birds and other threatened and endangered forms
[NASA-CR-163122-VOL-4-PT-2] N80-31970

MESOSCALE PHENOMENA
Users Guide for the analysis and interpretation of satellite imagery on the High Plains summer cloud and mesoscale systems
[PB80-175987] N80-32045

MESSAGE PROCESSING
Some properties of the partial response codes of an order greater than two
[FUB-9-1979] N80-31717
Statistical properties of the digital sum in partial response codes
[FUB-21-1979] N80-32176

METABOLIC WASTES
Fossil fuels research matrix program. US Environmental Protection Agency/Department of Energy Fossil Fuels Research Materials Facility
[ORNL/TM-7346] N80-31632

METABOLISM
The dynamics of certain indicators of nuclein metabolism during hypokinesia in rats of different ages under the influence of sinusoidal modulated currents and measured physical load
[NASA-TM-76162] N80-32058

METAL COATINGS
Adherence of ion beam sputter deposited metal films on H-13 steel
[NASA-TM-81585] N80-31527

METAL DRAWING
Strain hardening and ductility of iron: Axisymmetric vs plane strain elongation
[DOE/ER-04072/3] N80-31543

METAL FATIGUE
Cast Aluminum Structures Technology (CAST) structural test and evaluation, phase 5. Part 2: Fatigue and fracture properties of cast aluminum bulkheads
[AD-A087336] N80-31530
Fracture control practices for metal structures
[PB80-185648] N80-31851

METAL FIBERS
Superconductivity in filamentary eutectic composites
[COO-4938-3] N80-31486

METAL FILMS
Aluminum-silver alloy films for solar reflectors
[REP-3021] N80-31919

METAL HYDRIDES
Hydrogen mobility at high concentrations
[MLM-2729(OP)] N80-31511
Metallurgical studies of hydrogen storage alloys
[DOE/CS-0016/T2] N80-31537
Automotive storage of hydrogen using modified magnesium hydrides
[SAN-1167-1] N80-31650
Electrolysis-based hydrogen storage technology
[BNL-26923] N80-31928

METAL IONS
Molecular mechanisms of the epithelial transport of toxic metal ions, particularly mercury, cadmium, lead, arsenic, zinc, and copper
[COO-2792-3] N80-32085

METAL MATRIX COMPOSITES
Cost analysis of composite fan blade manufacturing processes
[NASA-CR-159876] N80-31398

METAL OXIDE SEMICONDUCTORS
Integration of filters by means of linear MOS circuits
[DRIC-T-6106] N80-31742
METAL OXIDES
Thermochemical stability diagrams for condensed phases and volatility diagrams for volatile species over condensed phases in twenty metal-sulfur-oxygen systems between 1150 and 1450 K
[DOE/FE-13547/01] N80-31510
METAL SHEETS
Maneuver spectrum fatigue crack propagation in aluminum alloy sheet materials --- airframe materials
[NLR-TR-78091-U] N80-31393
METAL SURFACES
Study of solid metal/ceramic reactions
[DOE/ER-10413/1] N80-31508
Fabrication of Josephson tunnel junctions by reactive ion milling
[AD-A087448] N80-32249
METAL VAPOR LASERS
Optical and discharge studies of novel electronic transition laser species
[AD-A087123] N80-31782
METAL-NITRIDE-OXIDE-SILICON
Charge storage, retention and endurance in MNOS devices
[AD-A087432] N80-32256
METALS
The role of electron microscopy by transmission in the study of radiation damage in metals
[CISE-1541] N80-31546
Electronic properties of materials and corrosion phenomena. A nonconventional approach to the mechanism of stress corrosion cracking
[CISE-N-188] N80-31547
METASTABLE STATE
Amorphous and metastable microcrystalline rapidly solidified alloys: Status and potential
[NASA-CR-163449] N80-31528
METEORITIC COMPOSITION
Mineralogic and petrologic studies of lunar samples and meteorites
[NASA-CR-163498] N80-32309
METEOROLOGICAL CHARTS
Conversion of grid-point data into meteorological maps with a mini-computer system
[WMO-553] N80-32042
METEOROLOGICAL PARAMETERS
Three computer codes to read, plot and tabulate operational test-site recorded solar data
[NASA-TM-78293] N80-31879
Environmental data for sites in the National Solar Data Network
[SOLAR/0010-80/02] N80-31975
Fram 1 meteorology report
[AD-A086983] N80-32029
Climatology in the Netherlands. Abstracts of seven lectures given on Climate Day
[KNMI-V-345] N80-32039
METEOROLOGICAL SATELLITES
Satellite derived winds
[AD-A087023] N80-32026
METEOROLOGY
Satellite activities of NOAA, 1979 N80-31429
National Hurricane and Experimental Meteorology Laboratory collected reprints, 1979
[PB80-192917] N80-32049
METHANATION
Methane recovery from coalbeds project, phase 2
[DOE/MC-08089/T4] N80-31645
Feasibility study: Fuel cell cogeneration in a water pollution control facility, volume 1
[DOE/ET-12431/T1-VOL-1] N80-31922
METHANE
Cryogenic methane separation/catalytic hydrogasification process analysis
[FE-3044-T7] N80-31635
Methane recovery from coalbeds project, phase 2
[DOE/MC-08089/T4] N80-31645
Peat biogasification development program
[DOE/ET/14696-T1] N80-31649
METHYL ALCOHOLS
An electron spectroscopic investigation of the interaction of methanol with polycrystalline aluminum
[AD-A087309] N80-31493
METROLOGY
The NBS semiconductor technology program and VLSI (Very Large Scale Integration)
[PB80-185531] N80-32269
MICROCLIMATOLOGY
Environmental wind in built-up areas
[VKI-TM-26] N80-32043
MICROCOMPUTERS
Multi-microprocessor/multi-microcomputer tures: Their modeling and analysis N80-32108
USAFSAM waiver file intelligent terminal: Hardware reference manual
[AD-A087340] N80-32110
MICROCRACKS
A calculational model for fragmentation in viscoelastic materials N80-31575
MICROELECTRONICS
Properties of superconductor-normal metal-superconductor microbridges
[AD-A087512] N80-32258
MICROORGANISMS
Peat biogasification development program
[DOE/ET/14696-T1] N80-31649
MICROPHONES
The use of miniature electret microphones in small optoacoustic cells
[AD-A087520] N80-31737
MICROPROCESSORS
Large wind turbine generator performance assessment
[EPRI-AP-1317] N80-31960
USAFSAM microprocessor audiometer: System reference manual
[AD-A087342] N80-32081
Multi-microprocessor/multi-microcomputer tures: Their modeling and analysis N80-32108
MICROSTRIP TRANSMISSION LINES
A simple stripline design for uneven power split
[NASA-TM-81870] N80-31684
Evaluation of losses in microstrip antenna materials
[AD-A087476] N80-31701
MICROSTRUCTURE
A theoretical and experimental study of the mechanical behavior of alpha-beta TiMn alloys N80-31525
Trapping by TiC particles and twin formation in Fe-Ti
[AD-A085998] N80-31532
A study on mechanical properties of heavy alloys --- of tungsten
[DRIC-T-5966] N80-31545
Materials program plan for inertial confinement fusion
[ANL/FPP-TM-126] N80-32238
MICROWAVE ATTENUATION
Gunn effect devices. Citations from the Engineering Index data base
[PB80-812050] N80-32263
Gunn effect devices. Citations from the Engineering Index data base
[PB80-812068] N80-32264
MICROWAVE EQUIPMENT
Transferred electron devices. Citations from the Engineering Index data base
[PB80-812043] N80-32267
MICROWAVE FREQUENCIES
The possibility of utilizing coding techniques to improve the availability of digital radio link networks at frequencies over 10 GHz
[FUB-54-1978] N80-31712
Influence of the space structure and physical properties of rain on the evaluation of the anisotropy and depolarizing properties --- centimeter waves
[FUB-22-1979] N80-31722
A study on algorithms and processing programs for data from interference due to hydrometeors at 17.8 GHz
[FUB-12-1979] N80-32036
Characterization and influence of the parameters of a model to describe hydrometeor diffusion
[FUB-23-1979] N80-32037
MICROWAVE IMAGERY
The Seasat SAR Wind and Ocean Wave Monitoring Capabilities: A case study for pass 1339m
[NASA-CR-163454] N80-32051
Seasat SAR Coastal Ocean Wave Analysis. A wave refraction and diffraction study
[PB80-189384] N80-32052
MICROWAVE LANDING SYSTEMS
A simulation investigation on the feasibility of curved approaches under Microwave Landing System (MLS) guidance
[NLR-TR-78035-U] N80-31380
MICROWAVE OSCILLATORS
Microwave frequency memory --- microwave oscillators
[RSRE-MEMO-3257] N80-31741
MICROWAVE TRANSMISSION
Measurements of millimeter wave radar transmission and backscatter during dusty infrared test 2, dirt 2
[AD-A086189] N80-31694
Assessment of frequency selective fading on DCS transmission system performance,
[AD-A087794] N80-31695
Satellite power systems (SPS) concept definition study. Volume 2, part 1: System engineering
[NASA-CR-3318] N80-31890
MICROWAVES
Microwave transversal equalizer
[AD-A087603] N80-31699
Proceedings Of a Workshop on Thermal Physiology
[PB80-187867] N80-32087
MILITARY HELICOPTERS
Software for an integrated flight control and night vision system for military helicopters N80-32139
MILLIMETER WAVES
Microwave investigations of matter
[AD-A087480] N80-31498
Measurements of millimeter wave radar transmission and backscatter during dusty infrared test 2, dirt 2
[AD-A086189] N80-31694
MINERALOGY
Mineralogic and petrologic studies of lunar samples and meteorites
[NASA-CR-163498] N80-32309
MINES (EXCAVATIONS)
General application of the critical path method to resource characterization and planning for underground coal mining
[DOE/ET-11268/3] N80-32272
MINIATURE ELECTRONIC EQUIPMENT
The use of miniature electret microphones in small optoacoustic cells
[AD-A087520] N80-31737
MINIATURIZATION
Fabrication for precision mechanisms
[BDX-613-2388] N80-31670
MINICOMPUTERS
Conversion of grid-point data into meteorological maps with a mini-computer system
[WMO-553] N80-32042
MIRANDA SATELLITE
The magnetic testing of the X4 spacecraft --- Miranda satellite
[RAE-TR-79144] N80-31436
MISSILE RANGES
Universal documentation system handbook. Volume 1: System description, program introduction and statement of capability
[AD-A087072] N80-32274
Universal documentation system handbook. Volume 2: Program requirements and operations requirements documents
[AD-A087073] N80-32275
MISSILE SYSTEMS
Test of an electrohydraulic digital actuator for advanced missile systems
[AD-A087274] N80-31431
MISSION PLANNING
Design study for electronic system for Jupiter Orbit Probe (JOP)
[NASA-CR-160021] N80-31428
STS-1 operational flight profile. Volume 4: Onorbit profile-cycle 3.1.1
[NASA-TM-82183] N80-31445
Large space systems technology program N80-31451
MIXTURES
Analysis of coal-derived products and environmental systems by synchronous fluorescence and room temperature phosphorescence
[CONF-800602-4] N80-31977
MODAL RESPONSE
The LSR/2 optically coupled signal transmission link
[AD-A087552] N80-32215
MODELS
Modeling a software engineering project management system N80-32116
MODULATED CONTINUOUS RADIATION
Isotropic modulation of galactic cosmic rays
[LPS-79-12] N80-32321

MODULATION
The influence of modulated sinusoidal current on the state of chromatin from neurons of the cerebral cortex of rats in hypokinesia
[NASA-TM-76160] N80-32056
The dynamics of certain indicators of nuclein metabolism during hypokinesia in rats of different ages under the influence of sinusoidal modulated currents and measured physical load
[NASA-TM-76162] N80-32058

MODULES
US Coast Guard lightweight fire-fighting module
[NASA-CR-161552] N80-31667

MOISTURE CONTENT
Effects of moisture, residual thermal curing stresses and mechanical load on the damage development in quasi-isotropic laminates N80-31476
Nonlinear viscoelastic behavior of a composite material using a finite element micromechanical analysis
[AD-A087367] N80-31483

MOLECULAR BEAMS
Crossed molecular beam studies of chemiluminescent reactions
[LBL-10545] N80-31504
Investigation of electron attachment in polyatomic molecules
[AD-A087278] N80-32192

MOLECULAR BIOLOGY
Health and environmental research related to energy development and use --- biomolecular and cellular science, environmental biology, and nuclear medicine
[UCLA-12-1217] N80-32061

MOLECULAR COLLISIONS
Crossed molecular beam studies of chemiluminescent reactions
[LBL-10545] N80-31504
Measurements of electronic stimulation of atoms in collisions with atoms and molecules near the threshold
[MPIS-14/1979] N80-32196

MOLECULAR DIFFUSION
Hydrogen mobility at high concentrations
[MLM-2729(OP)] N80-31511

MOLECULAR ENERGY LEVELS
Collisional relaxation of vibrational energy transient in the methylcyclopropane system. A variable encounter method study
[AD-A087802] N80-31496

MOLECULAR EXCITATION
Quasticontinuum physics --- high vibrational excitation in molecules
[AD-A087622] N80-31786

MOLECULAR INTERACTIONS
Quasticontinuum physics --- high vibrational excitation in molecules
[AD-A087622] N80-31786

MOLECULAR OSCILLATIONS
Quasticontinuum physics --- high vibrational excitation in molecules
[AD-A087622] N80-31786

MOLECULAR RELAXATION
Collisional relaxation of vibrational energy transient in the methylcyclopropane system. A variable encounter method study
[AD-A087802] N80-31496

MOLECULAR STRUCTURE
An electron spectroscopic investigation of the interaction of methanol with polycrystalline aluminum
[AD-A087309] N80-31493
Formation and failure of elastomer networks via thermal, mechanical and surface characterization
[AD-A087284] N80-31556
Melt rheology of block copolymers in relation to melt structure
[AD-A087484] N80-31561
Energy-related atomic and molecular structure and scattering studies
[DOE/ER-04971/2] N80-32194

MOLTEN SALT ELECTROLYTES
Fuel cell research on second-generation molten-carbonate systems
[SAN-11276-2] N80-31935

MOLTEN SALTS
Molten salt coal gasification process development unit
[SAN-1429-56] N80-31631

MONOMERS
Synthesis of block copolymers of methyl siloxane, phenyl siloxane, vinyl siloxane, etcetera
[UCRL-15159] N80-31564

MONOPROPELLANTS
Compression-ignition sensitivity studies of liquid monopropellant in a dynamic-loading environment N80-31581

MONOPULSE RADAR
An analysis of radome-induced radar pointing error N80-31681

MONTE CARLO METHOD
Batch size effects in the analysis of simulation output
[AD-A087045] N80-32170

MOON ILLUSION
Ground-referenced visual orientation with imaging displays --- psychophysiology
[AD-A081882] N80-32063

MOSAICS
The mosaics of Mars: As seen by the Viking Lander cameras
[NASA-CR-3326] N80-32311

MOTION SICKNESS
Use of physical culture to increase resistance of sailors to motion sickness
[NASA-TM-76355] N80-32079

MOVING TARGET INDICATORS
Moving target detector data utilization investigation
[AD-A086962] N80-31687

MRCA AIRCRAFT
The Tornado all-weather high-speed low-level system N80-31308
Main computer software for the MRCA TORNADO N80-32136

MULTICHANNEL COMMUNICATION
Applications of information theory to data communication networks
[AD-A087624] N80-32146

MULTIPATH TRANSMISSION
Crystal palace band 2 tests: Comparison of transmitted polarizations
[BBC-RD-1980/7] N80-31682
Assessment of frequency selective fading on DCS transmission system performance.
[AD-A087794] N80-31695
Proceedings of Seminar on Frequency Selective Fading and its Effect on Digital LOS Radio
[AD-A087793] N80-31696

MULTIPLEXING
A study of peak multiplexed signal level in the context of 2 1/2 or 3-channel surround-sound transmissions
[BBC-RD-1980/6] N80-31683
Demonstration of fiber optic link applications in utility plant multiplexed instrument and control systems
[EPRI-NP-1322] N80-31768
Applications of information theory to data communication networks
[AD-A087624] N80-32146

MULTIPROCESSING (COMPUTERS)
Multi-microprocessor/multi-microcomputer tures: Their modeling and analysis N80-32108
Microcomputers and timesharing N80-32109
Graphics library for real time display and data analysis
[UCID-18543] N80-32121
Partitioning and cooperation in a distributed multiprocessor operating system: Medusa N80-32144

MULTISPECTRAL BAND CAMERAS
Raduga experiment: Multizonal photographing the Earth from the Soyuz-22 spacecraft
[NASA-TM-76234] N80-31857

MULTISPECTRAL BAND SCANNERS
A study of LANDSAT multispectral scanner data tapes --- corrected data and data restoration
[RAE-TR-80018] N80-31864
Remote sensing procedures for detecting and monitoring various activities regulated by the Mobile District
[AD-A087584] N80-31973

MULTISPECTRAL PHOTOGRAPHY
Comparative experimental study on the use of original and compressed multispectral LANDSAT data for applied research
[DFVLR-FB-80-03] N80-31865

MULTISTATIC RADAR
Tristatic sodar --- acoustic radar
[LPS-80-6] N80-31725

MULTIVARIATE STATISTICAL ANALYSIS
On the theory of crossover designs with residual effects N80-32165
Stochastic ordering and a class of multivariate new better than used distributions
[AD-A087288] N80-32172

MUSCULAR FUNCTION
Therapeutic gymnastics in comprehensive treatment of patients with generalized myasthenia
[NASA-TM-76312] N80-32069

MUSCULOSKELETAL SYSTEM
Effects of factors of prolonged space flight on conditions of tortoise skeleton
[NASA-TM-76352] N80-32060

N

NACELLES
Comparison of calculated and measured blade loads on a full-scale tilting proprotor in a wind tunnel
[NASA-TM-81228] N80-31386
The design of axisymmetric cowls for podded nacelles for high by-pass ratio turbofan engines
[ARC-R/M-3846] N80-31394

NASA PROGRAMS
Materials processing in space program tasks
[NASA-TM-78294] N80-31418
NSSDC and WDC-A-R/S document availability and distribution services
[NASA-TM-81120] N80-32273

NATURAL GAS
Pipeline gas from coal: Hydrogenation (IGT hydrogasification process)
[FE-2434-33A] N80-31630
Molten salt coal gasification process development unit
[SAN-1429-56] N80-31631
Cryogenic methane separation/catalytic hydrogasification process analysis
[FE-3044-T7] N80-31635

NAVIGATION
Performance of Navigation systems --- air navigation N80-31341
Level B/C software ground navigation program. Delta-T processor
[NASA-TM-82184] N80-31446

NAVIGATION AIDS
Space shuttle navigation analysis. Volume 1: GPS aided navigation
[NASA-CR-160765] N80-31440
Space shuttle navigation analysis. Volume 2: Baseline system navigation
[NASA-CR-160766] N80-31441

NAVIGATION INSTRUMENTS
Checking of communications and radio navigation systems N80-31340

NAVSTAR SATELLITES
Space shuttle navigation analysis. Volume 1: GPS aided navigation
[NASA-CR-160765] N80-31440

NEAR FIELDS
Measurement of the index profile of optical fibers by the refraction method
[FUB-13-1979] N80-32219

NECK (ANATOMY)
A general statistical approach for using auxiliary information in the development of an impact acceleration injury prediction model
[AD-A087810] N80-31374

NEGATIVE CONDUCTANCE
Gunn effect devices. Citations from the Engineering Index data base
[PB80-812050] N80-32263
Gunn effect devices. Citations from the Engineering Index data base
[PB80-812068] N80-32264

NEGATIVE RESISTANCE DEVICES
Improvement in GAAS device yield and performance through substrate defect gettering
[AD-A087712] N80-32257

NEPHELOMETERS
Polar nephelometer for atmospheric particulate studies
[NASA-TM-81113] N80-31996

NETHERLANDS
Results of comparative measurements with various types of pluviometers during the period of December 1971 to January 1975 at De Bilt, Netherlands
[KNMI-V-342] N80-32038

The occurence of a nocturnal wind maximum at low altitude --- on clear nights
[KNMI-V-346] N80-32040

NETWORK ANALYSIS
Video distribution system cost model
[NASA-CR-160020] N80-31685
Material-flow data structures as a basis for energy information system design
[LBL-10248] N80-31923
A fast analysis and modification algorithm for computer aided design of large scale networks
N80-32143

NETWORK SYNTHESIS
Lyapunov stability of multi-machine power systems
N80-31792
A fast analysis and modification algorithm for computer aided design of large scale networks
N80-32143

NEUROMUSCULAR TRANSMISSION
Therapeutic gymnastics in comprehensive treatment of patients with generalized myasthenia
[NASA-TM-76312] N80-32069

NEUTRAL BEAMS
Preliminary experiment of neutral beam injection heating in JIPP T-2 stellarator --- Plasma heating
[IPPJ-470] N80-32225

NEUTRAL GASES
An experimental investigation of the trapping and energy loss mechanisms of intense relativistic electron rings in hydrogen gas and plasma N80-32221

NEUTRAL PARTICLES
On the secular decrease in the semimajor axis of Lageos orbit
[NASA-TM-80734] N80-31426
A measurement of deuterium neutral by the Balmer-series in the STP-2 high beta screw pinch Tokamak
[IPPJ-471] N80-32224

NEUTRON IRRADIATION
Semiconductor measurement technology: Technical impediments to a more effective utilization of neutron transmutation doped silicon for high-power device fabrication
[PB80-183874] N80-32268

NEUTRON SPECTROMETERS
Application of nondestructive gamma-ray and neutron techniques for the safeguarding of irradiated fuel materials
[LA-8212] N80-31806

NEW YORK
A detailed magnetic survey of the Saint Lawrence River: Oak Point to Lake Ontario, New York
[PB80-191471] N80-32021

NICKEL ALLOYS
Hydrogen induced intergranular cracking of nickel-base alloys
[AD-A087305] N80-31533

NICKEL CADMIUM BATTERIES
DSCS 2, battery anomaly investigation satellites 9437 and 9438
[AD-A087390] N80-31432
Evaluation program for secondary spacecraft cells: Initial evaluation tests of General Electric Company 6.0 ampere hour nickle cadmium spacecraft cells for the dynamic explorer satellite program
[NASA-CR-160014] N80-31886
Initial Evaluation tests of 20.0 amphere-hour sealed nickel-cadmium cells manufactured for NASA's standard cell program
[NASA-CR-160015] N80-31887
Evaluation program for secondary spacecraft cells: Initial evaluation tests of General Electric Company $40.00 ampere-hour nickel-cadmium spacecraft cells for the tracking data relay satellite system
[NASA-CR-160016] N80-31888
Evaluation program for secondary spacecraft cells: Initial evaluation tests of General Electric Company 50.0 ampere hour nickel cadmium spacecraft cells for the LANDSAT-D satellite program
[NASA-CR-160017] N80-31889

NICOTINIC ACID
Absorption of thiamine and nicotinic acid in the rat intestine during fasting and immobilization stress
[NASA-TM-76193] N80-32059

NIGHT VISION
Software for an integrated flight control and night vision system for military helicopters N80-32139

NIOBIUM ALLOYS
High quality submicron niobium tunnel junctions with reactive ion beam oxidation
[AD-A087449] N80-32250

NITINOL ALLOYS
Efficiency of energy conversion in Nitinol
[LBL-9750] N80-31947

NITRAMINE PROPELLANTS
Shock tube ignition of nitrocellulose and nitramines
N80-31585

NITRIC ACID
The increased attachment due to ionization induced smog in EMP environments
[AD-A087850] N80-31972

NITRIC OXIDE
Photochemical aerosol formation: Reactive hydrocarbon-NOx-SO2 systems
[PB80-187990] N80-31987

NITROGEN COMPOUNDS
Shock tube ignition of nitrocellulose and nitramines
N80-31585

NITROGEN DIOXIDE
Development of the Elstar (Environmental Lagrangian Simulator of Transport and Atmospheric Reactions) photochemical air quality simulation model and its evaluation relative to the LARPP (Los Angeles Reactive Pollutant Program) data base
[PB80-188139] N80-31992

NITROGEN FLUORIDES
Research studies in/NF4(+)/salts
[AD-A086981] N80-31474

NITROGEN OXIDES
A prediction model for turbulent diffusion flames, including NO-formation
[VKI-PREPRINT-1979-14] N80-31519
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California, volume 1
[PB80-187594] N80-31982
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California. Volume 2: Appendix
[PB80-187602] N80-31983
Photochemical aerosol formation: Reactive hydrocarbon-NOx-SO2 systems
[PB80-187990] N80-31987
Effects of aerosols, oxides of nitrogen, and oxidants on human health
[PB80-184583] N80-32088

NOAA SATELLITES
Satellite activities of NOAA, 1979 N80-31429

NOCTURNAL VARIATIONS
The occurence of a nocturnal wind maximum at low altitude --- on clear nights
[KNMI-V-346] N80-32040

NODULES
Gulf Coast manganese nodule processing plant location criteria
[PB80-182082] N80-31549

NOISE PROPAGATION
Experimental investigation of the radiation of sound from an unflanged duct and a bellmouth, including the flow effect
[NASA-TP-1697] N80-32188

NOISE REDUCTION
A study of the use of blocking masses in reducing helicopter cabin noise
[RAE-TM-AERO-1838] N80-31395
Exploratory studies on the design of acoustic splitters for wind tunnels
[RAE-TM-AERO-1829] N80-31417
Space-variant processing using phase codes and Fourier-plane sampling techniques
[AD-A087285] N80-31779
Highway noise abatement
[PB80-190622] N80-31991
A study of the transmission characteristics of suppressor nozzles
[NASA-CR-165133] N80-32186
Application of interframe filtering to line scanned infrared imaging systems
[AD-A086971] N80-32209
The LSR/2 optically coupled signal transmission link
[AD-A087552] N80-32215

NOISE SPECTRA
Quantization noise spectra calculation
[FUB-5-1979] N80-31714

NONDESTRUCTIVE TESTS
Application of nondestructive gamma-ray and neutron techniques for the safeguarding of irradiated fuel materials
[LA-8212] N80-31806
Nondestructive ultrasonic testing and inspection. Citations from the NTIS data base
[PB80-811821] N80-31808
Nondestructive ultrasonic testing and inspection. Citations from the NTIS data base
[PB80-811839] N80-31809
Nondestructive ultrasonic testing and inspection. Citations from the Engineering Index data base
[PB80-811847] N80-31810
Nondestructive ultrasonic testing and inspection. Citations from the Engineering Index data base
[PB80-811854] N80-31811
Determination of tire quality from nondestructive inspection
[PB80-185358] N80-31812
Further experimental studies on vibrations and buckling of eccentrically loaded stiffened cylindrical shells
[TAE-331] N80-31818
Evaluation and comparison of nondestructive service inspection methods
[NLR-MP-79005-U] N80-31845

NONFLAMMABLE MATERIALS
Phosphorus-containing bisimide resins
[NASA-CASE-ARC-11321-1] N80-31551

NONLINEAR EQUATIONS
An approximate solution of singularly perturbed non-linear pursuit-evasion games
[TAE-359] N80-32178
Computational astrophysics relating to the interstellar medium: Problems and prospects for the 1980's --- structure and dynamics of interstellar gas
[UCRL-84410] N80-32307

NONLINEAR SYSTEMS
Methods for large-scale nonlinear optimization --- Applications to electric power technology
[AD-A087555] N80-32158

NONLINEARITY
Effects of nonlinearities on wing-store flutter
N80-31328

NONPARAMETRIC STATISTICS
Testing for a change point
[AD-A087111] N80-32169

NORMALITY
Batch size effects in the analysis of simulation output
[AD-A087045] N80-32170

NOSE TIPS
Transpiration-cooled nosetip development
[AD-A087837] N80-31536

NOZZLE DESIGN
Development of a nozzle to improve the turning of supersonic Coanda jets
[AD-A087709] N80-31765

NOZZLE FLOW
Theoretical determination of nozzle admittances using a finite element method N80-31600

NOZZLE GEOMETRY
An experimental study of multiple jet mixing
[NASA-CR-163537] N80-31760
A study of the transmission characteristics of suppressor nozzles
[NASA-CR-165133] N80-32186

NUCLEAR FUEL REPROCESSING
Implementing advanced data analysis techniques in near-real-time materials accounting
[LA-UR-80-1816] N80-32113

NUCLEAR FUELS
Resin bead U and PU analysis of WAK input solutions: A statistical summary of experiment no. 1 --- spent fuels
[ORNL/TM-7362] N80-31517

NUCLEAR FUSION
Superconductivity and cryogenics for mirror fusion
[UCRL-83916] N80-32235
Materials program plan for inertial confinement fusion
[ANL/FPP-TM-126] N80-32238

NUCLEAR MAGNETIC RESONANCE
Hydrogen mobility at high concentrations
[MLM-2729(OP)] N80-31511

NUCLEAR REACTIONS
Semiconductor measurement technology: Technical impediments to a more effective utilization of neutron transmutation doped silicon for high-power device fabrication
[PB80-183874] N80-32268

NUCLEAR REACTORS
Gasification of coal with solar energy
[UCRL-84458] N80-31652

NUMERICAL ANALYSIS
A numerical method for the calculation of laminar incompressible boundary layers with strong viscous-inviscid interaction
[NLR-TR-79023-U] N80-31369
Sites for wind-power installations: Wind characteristics over ridges, part 2
[RLO-2438-78/2] N80-31901
An efficient method for performing partial fraction expansion
[AD-A087486] N80-32161

NUMERICAL CONTROL
Numerical simulation of the interaction of a flame with a Karman vortex street
[LBL-10679] N80-31512

NUMERICAL INTEGRATION
On the numerical integration of two-point boundary value problems for stiff systems of ordinary differential equations
[AD-A087396] N80-32155

NUMERICAL STABILITY
Computing finite-difference approximations to derivatives for numerical optimization
[AD-A087428] N80-32151

NUMERICAL WEATHER FORECASTING
Numerical simulation of advection fog formation on multi-disperse aerosols due to combustion-related pollutants
[NASA-CR-161566] N80-31971

NUSSELT NUMBER
Experimental study of the steady natural convection in a horizontal annulus with irregular boundaries --- convective heat transfer from spent fuel assemblies in containers
[SAND-79-2354C] N80-31767

NYLON (TRADEMARK)
The fatigue crack propagation behavior of semi-crystalline polymers N80-31550

O

OCCLUSION
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080

OCEAN MODELS
On the dynamic forcing of short-term climate fluctuations by feedback mechanisms
[NASA-CR-162865] N80-32034
Seasat SAR Coastal Ocean Wave Analysis. A wave refraction and diffraction study
[PB80-189384] N80-32052

OCEAN SURFACE
Verification of the bulk model for calculations of the overwater index of refraction structure function, (C sub N)2
[AD-A087097] N80-31997
On the dynamic forcing of short-term climate fluctuations by feedback mechanisms
[NASA-CR-162865] N80-32034

OCEAN THERMAL ENERGY CONVERSION
Stress-corrosion cracking of steels in ammonia: A survey with consideration on given OTEC design
[ANL/OTEC-BCM-008] N80-31544
A quantitative evaluation of closed-cycle ocean thermal energy conversion (OTEC) technology in central station applications
[R-2595-DOE] N80-31885
Continued evaluation of compact heat exchangers for OTEC evaluation
[COO-4238-14] N80-31945

OCEANOGRAPHIC PARAMETERS
Influence of volcanic aerosols and oceanic surface temperatures on tropospheric temperatures
[COO-2195-36] N80-32035

OCEANOGRAPHY
Satellite activities of NOAA, 1979 N80-31429

OFF-ON CONTROL
Evaluation of control strategies for solar collector loops
[LBL-10716] N80-31932

OFFSHORE ENERGY SOURCES
Ocean energy systems: Multiyear program plan
[DOE/CS-0161] N80-31946

OFFSHORE PLATFORMS
A quantitative evaluation of closed-cycle ocean thermal energy conversion (OTEC) technology in central station applications
[R-2595-DOE] N80-31885

OGIVES
An analysis of radome-induced radar pointing error N80-31681

OHMIC DISSIPATION
Direct ohmic heating of positive ions in Tokamak plasmas
[DOE/ET/53036-16] N80-32237

OIL POLLUTION
The fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska
[PB80-187305] N80-31984

OIL RECOVERY
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California, volume 1
[PB80-187594] N80-31982
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California. Volume 2: Appendix
[PB80-187602] N80-31983

ONE DIMENSIONAL FLOW
Mixing and gasification of coal in entrained flow systems. Volume 2: User's manual for a computer program for 1-dimensional coal combustion or gasification (1-DICOG)
[FE-2666-F-VOL-2] N80-31656
Coal processing for fuel cell utilization: Task 9: One-dimensional (streamtube) model for entrained-flow gasifier analysis
[METC-8450-T2-VOL-1] N80-31912

OPERATING SYSTEMS (COMPUTERS)
Quantitative synthesis of uncertain multiple input-output feedback system
[AD-A087014] N80-32149

OPERATIONAL HAZARDS
Airborne performance measurement assessment: Low altitude tactical formation in two operating environments
[AD-A087068] N80-32090

OPERATIONS RESEARCH
Lease versus buy considerations for MILSATCOM systems and an acquisition strategy for STRATSAT SSS lease/buy study
[AD-A087411] N80-31430
A research activities management system
[AD-A086576] N80-32271
Information flow and analysis: Theory, simulation, and experiments. Part 1: Basic theoretical and conceptual development. Part 2: Simulation examples, and results. Part 3: Preliminary experiments and analysis
[PB80-180995] N80-32279

OPTICAL EMISSION SPECTROSCOPY
Evaluation of two-beam spectroscopy as a plasma diagnostic
[LBL-10913] N80-32236

OPTICAL HETERODYNING
Laser Doppler velocimetry: Principles, potential and examples of possible applications
[VKI-PREPRINT-1979-6] N80-32220

OPTICAL MEASUREMENT
Pinhole X-ray/coronagraph optical systems concept definition study
[NASA-CR-161567] N80-32208
Measurement of the index profile of optical fibers by the refraction method
[FUB-13-1979] N80-32219

OPTICAL MEASURING INSTRUMENTS
Film advance indicator
[NASA-CASE-LAR-12474-1] N80-31774
Design, fabrication and testing of an optical temperature sensor
[NASA-CR-165125] N80-31777

OPTICAL PROPERTIES
Infrared analysis of coal gasifier product gases
[LA-UR-80-1625] N80-31518
Size distribution, chemical composition and optical properties of atmospheric dust in Israel: A comparison of urban and desert aerosols under clear and dusty conditions
[AD-A087608] N80-32010
Laminated Fresnel lenses
[SAND-80-7007] N80-32218

OPTICAL PUMPING
Optical and discharge studies of novel electronic transition laser species
[AD-A087123] N80-31782
Short intense submillimeter pulse generation
[AD-A087421] N80-31783

OPTICAL RADAR
Advanced silicon material development for LADIR
[AD-A087286] N80-32255

OPTICAL REFLECTION
Optical analysis of point focus parabolic radiation concentrators
[SERI/TR-631-336] N80-31917

OPTICAL RESONATORS
Sensitive measurement of photon lifetime and true reflectances in an optical cavity by a phase shift method
[AD-A087248] N80-32211

OPTICAL SCANNERS
Method of growing a ribbon crystal particularly suited for facilitating automated control of ribbon width
[NASA-CASE-NPO-14295-1] N80-32245

OPTICAL WAVEGUIDES
The LSR/2 optically coupled signal transmission link
[AD-A087552] N80-32215

OPTIMAL CONTROL
Visual scene perception. Frequency domain data and model parameter estimation procedure
[NLR-MP-79009-U] N80-32097

OPTIMIZATION
Capacity optimization of a reserve network used for rerouting damaged service blocks --- communication networks
[FUB-18-1979] N80-31720
A procedure for satisfying in an optimal way time varying circuit requirements --- communication networks
[FUB-19-1979] N80-31721
SCRAM: A fast computational model for the optical performance of point focus solar central receiver systems
[SAND-80-0433] N80-31925
Computing finite-difference approximations to derivatives for numerical optimization
[AD-A087428] N80-32151
Methods for large-scale nonlinear optimization --- Applications to electric power technology
[AD-A087555] N80-32158
Aspects of mathematical modeling related to optimization
[AD-A087556] N80-32159

ORBIT CALCULATION
Interplanetary two point boundary value problems: Extension of the Unified System for Orbit Computation (USOC), volume 4
[ESA-CR(P)-1347] N80-31424
Samos 2 (1961 alpha 1): Orbit determination and analysis at 31:2 response
[RAE-TR-80022] N80-31427

ORBIT DECAY
On the secular decrease in the semimajor axis of Lageos orbit
[NASA-TM-80734] N80-31426

ORBIT TRANSFER VEHICLES
Conceptual design of an orbital propellant transfer experiment. Volume 2: Study results
[NASA-CR-165150] N80-31423
Low-thrust vehicles concept studies N80-31456
Low-thrust vehicle concept studies N80-31457
Electric propulsion for SPS N80-31466
Low-thrust chemical orbit to orbit propulsion system propellant management study N80-31469
Solar rocket system concept analysis N80-31470

ORBITAL POSITION ESTIMATION
State estimation and absolute image registration for geosynchronous satellites
[NASA-TM-80712] N80-31858

ORBITAL SERVICING
Space transportation system disconnect --- replenishing fluids during orbital servicing
[NASA-CR-161565] N80-31442

ORBITS
TACAN operational description for the space shuttle orbital flight test program
[NASA-CR-160775] N80-31439
ORGANIC COMPOUNDS
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113/40-3] N80-31905
Analysis of coal-derived products and environmental systems by synchronous fluorescence and room temperature phosphorescence
[CONF-800602-4] N80-31977
ORGANIC PEROXIDES
The autoxidation of hydrazine and alkyl substituted hydrazine vapors
[PERME-MEMO-92] N80-31520
ORGANISMS
The dynamics of certain indicators of nuclein metabolism during hypokinesia in rats of different ages under the influence of sinusoidal modulated currents and measured physical load
[NASA-TM-76162] N80-32058
ORGANOMETALLIC COMPOUNDS
Organic metals and semiconductors: The chemistry of polyacetylene (CH)x, and its derivatives
[AD-A087054] N80-31529
Organic metals and semiconductors: The chemistry of polyacetylene, CH(x), and its derivatives
[AD-A087102] N80-32252
Organic metals and semiconductors: Polyacetylene (CH)x and its derivatives
[AD-A087024] N80-32254
ORGANS
Biocompatible materials. A bibliography with abstracts
[PB80-811904] N80-31475
OSCILLATIONS
Comparison of calculated and measured blade loads on a full-scale tilting proprotor in a wind tunnel
[NASA-TM-81228] N80-31386
OSTEOPOROSIS
Changes in bone tissue under conditions of hypokinesia and in connection with age
[NASA-TM-76154] N80-32064
OTOLARYNGOLOGY
Review of book-Ultrasound in Otorhinolaryngology
[NASA-TM-76349] N80-32076
OTOLOGY
Review of book-Ultrasound in Otorhinolaryngology
[NASA-TM-76349] N80-32076
OUTPUT
Batch size effects in the analysis of simulation output
[AD-A087045] N80-32170
OVER-THE-HORIZON RADAR
Ground range and bearing error determination and display for an OTH radar system with an Arctic trough ionosphere
[AD-A087010] N80-31691
OVERPRESSURE
Propellant explosive reactions in the instrumented shotgun test N80-31568
OXIDATION
Catalyzed combustion of lean fuel/air mixtures
[LBL-10842] N80-31513
Complete burning and extinction of a carbon particle in an oxidizing atmosphere
[FE-3084] N80-31514
The autoxidation of hydrazine and alkyl substituted hydrazine vapors
[PERME-MEMO-92] N80-31520
OXIDE FILMS
Adherence of ion beam sputter deposited metal films on H-13 steel
[NASA-TM-81585] N80-31527
Fabrication of Josephson tunnel junctions by reactive ion milling
[AD-A087448] N80-32249
OXIDIZERS
Effects of aerosols, oxides of nitrogen, and oxidants on human health
[PB80-184583] N80-32088
OXIMETRY
Effects of aerosols, oxides of nitrogen, and oxidants on human health
[PB80-184583] N80-32088
OXYGEN
Mechanisms of oxygen toxicity at the cellular level
[AD-A087831] N80-32084
OXYGEN PRODUCTION
Man-rating of the Navy/Air Force Oxygen Generating System (NAOGS)
[AD-A087270] N80-32103
OXYGEN SUPPLY EQUIPMENT
Man-rating of the Navy/Air Force Oxygen Generating System (NAOGS)
[AD-A087270] N80-32103
OZONE
Development of the Elstar (Environmental Lagrangian Simulator of Transport and Atmospheric Reactions) photochemical air quality simulation model and its evaluation relative to the LARPP (Los Angeles Reactive Pollutant Program) data base
[PB80-188139] N80-31992
Relationship between specific non-methane hydrocarbons and ozone in ambient air and their role in transportation control strategies
[PB80-184922] N80-31993
The influence of atmospheric dynamics on ozone and temperature structure
[AD-A087702] N80-32009
Airborne measurements of stratospheric ozone intrusions into the troposphere over the United States. Volume 2: Data catalog
[PB80-190705] N80-32017
Program of research and monitoring for early detection of stratospheric ozone change. Report to Congress of findings for 1978 - 1979
[PB80-184021] N80-32022
OZONOMETRY
Program of research and monitoring for early detection of stratospheric ozone change. Report to Congress of findings for 1978 - 1979
[PB80-184021] N80-32022

P

P-N JUNCTIONS
Development of high efficiency cascade solar cells
[DSE-4042-T38] N80-31906
P-3 AIRCRAFT
Software applications as demonstrated in the P-3C avionics system N80-32141
PACIFIC OCEAN
Mariners Weather Log, volume 24, no. 2
[PB80-188444] N80-32048
PACKET SWITCHING
Evaluation of service availability in a packet switching network
[FUB-26-1979] N80-31724
PANELS
A mass reduction effort of the electric and hybrid vehicle --- composite door panels
[NASA-CR-163520] N80-32298
PAPER (MATERIAL)
Capacitors for aircraft high power
[AD-A087427] N80-31734
PARABOLIC REFLECTORS
Optical analysis of point focus parabolic radiation concentrators
[SERI/TR-631-336] N80-31917
Dual curvature acoustically damped concentrating collector
[DOE/CS-34196/T1] N80-31921
PARALLAX
Errors in automatic pass point mensuration using digital techniques
[AD-A087443] N80-31859
PARALLEL PLATES
Tests of a lightweight 200 kW MHD channel and diffuser
[AD-A087022] N80-32226
PARALLEL PROGRAMMING
Partitioning and cooperation in a distributed multiprocessor operating system: Medusa N80-32144
PARAMETER IDENTIFICATION
Gallium arsenide (GaAs) solar cell modeling studies
[NASA-CR-163538] N80-31884
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 1: Conceptual design, sections 1 through 4
[DOE/ET-20567/1-2-BK-1] N80-31896
PARTIAL DIFFERENTIAL EQUATIONS
Limit cycle solutions of reaction-diffusion equations
[AD-A087114] N80-32180
PARTICLE BEAMS
Quasilinear scattering from waves driven by beam-plasma instabilities
[AD-A087208] N80-32002
Pulsed power technology for particle beam fusion
[SAND-80-0696C] N80-32240
PARTICLE COLLISIONS
Research studies on radiative collisional processes
[AD-A087527] N80-32193
Plasma instability in electron and positron colliding beams in storage ring
[AD-A087733] N80-32228
PARTICLE DENSITY (CONCENTRATION)
A measurement of deuterium neutral by the Balmer-series in the STP-2 high beta screw pinch Tokamak
[IPPJ-471] N80-32224
PARTICLE INTERACTIONS
Repeatibility of spatial configurations defined by interaction matrices N80-32179
PARTICLE PRECIPITATION
Nonlinear evolution of diffuse auroral F region ionospheric irregularities
[AD-A086998] N80-32003
PARTICLE SIZE DISTRIBUTION
Effect of binder type on aluminum combustion and aluminum oxide formation N80-31596
Reduction of combustion efficiency associated with liquid phase drop decomposition N80-31617
Coal processing for fuel cell utilization: Task 9: One-dimensional (streamtube) model for entrained-flow gasifier analysis
[METC-8450-T2-VOL-1] N80-31912
Numerical simulation of advection fog formation on multi-disperse aerosols due to combustion-related pollutants
[NASA-CR-161566] N80-31971
APTI (Air Pollution Training Institute) course 450 source sampling for particulate pollutants. Student workbook
[PB80-182439] N80-31988
Atmospheric particulate analysis using angular light scattering
[NASA-TM-81112] N80-31995
Size distribution, chemical composition and optical properties of atmospheric dust in Israel: A comparison of urban and desert aerosols under clear and dusty conditions
[AD-A087608] N80-32010
PARTICULATE SAMPLING
APTI (Air Pollution Training Institute) course 450 source sampling for particulate pollutants. Student workbook
[PB80-182439] N80-31988
PASSENGERS
Physiological reactions of a passenger to transportation conditions
[NASA-TM-76350] N80-32077
Assessment of operational automated guideway systems-AIRTRANS, phase 2
[PB80-182538] N80-32302
PASSIVITY
Physical models of thin film polycrystalline solar cells based on measured grain-boundary and electronic parameter properties
[DSE-4042-T37] N80-31908
PATENT POLICY
Patent profiles: Solar energy
[PB80-190010] N80-31966
PATHOGENESIS
Review of book vestibular crises
[NASA-TM-76354] N80-32078
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
PATTERN RECOGNITION
Analysis of principle components in the Sebestyen discrimination method
[CNES-NT-92] N80-32175
PAYLOAD DELIVERY (STS)
Introduction: The challenge of optimum integration of propulsion systems and large space structures N80-31450
Electric propulsion technology N80-31452
Chemical propulsion technology N80-31453
DOD low-thrust mission studies N80-31455
Low-thrust vehicles concept studies N80-31456
Low-thrust vehicle concept studies N80-31457

Effect of orbital transfer loads on large platforms
N80-31460
Solar rocket system concept analysis N80-31470
Satellite Power Systems (SPS) concept definition study. Volume 4: Transportation analysis
[NASA-CR-3321] N80-31891

PAYLOADS
Large space systems technology program
N80-31451

PCM TELEMETRY
Communication and instrumentation systems for space vehicles
[AD-A087944] N80-31448

PENETRATION
On the utility of plane strain approximations for oblique impact computations
[AD-A081120] N80-31819

PERCEPTION
Individual difference relations in psychometric and experimental cognitive tasks
[AD-A086057] N80-32093

PERFORMANCE PREDICTION
Measurement and correlation analysis plan for concrete tie and fastener performance analysis
[PB80-183882] N80-31674
Optical analysis of point focus parabolic radiation concentrators
[SERI/TR-631-336] N80-31917
Continued evaluation of compact heat exchangers for OTEC evaluation
[COO-4238-14] N80-31945

PERFORMANCE TESTS
Aircraft Assessment and Acceptance Testing
[AGARD-LS-108] N80-31329
Some comments on the problems involved in aircraft assessment and acceptance testing N80-31330
Performance testing production airlines
N80-31334
Evaluation of longitudinal characteristics including stability handling and CG range N80-31335
Computer simulation of ejection seat performance and preliminary correlation with empirical data
[AD-A087275] N80-31372
The magnetic testing of the X4 spacecraft --- Miranda satellite
[RAE-TR-79144] N80-31436
Lightning test criteria for aircraft avionics systems
N80-31749
Lightning testing for aircraft avionics systems
N80-31750
Method of testing, rating and estimating the heating seasonal performance of heat pumps
[PB80-185622] N80-31773
Bistable solenoid valve, volume 1
[MU/LR-97 091/79-VOL-1] N80-31803
Evaluation program for secondary spacecraft cells: Initial evaluation tests of General Electric Company 6.0 ampere hour nickle cadmium spacecraft cells for the dynamic explorer satellite program
[NASA-CR-160014] N80-31886
Initial Evaluation tests of 20.0 amphere-hour sealed nickel-cadmium cells manufactured for NASA's standard cell program
[NASA-CR-160015] N80-31887
Evaluation program for secondary spacecraft cells: Initial evaluation tests of General Electric Company 50.0 ampere hour nickel cadmium spacecraft cells for the LANDSAT-D satellite program
[NASA-CR-160017] N80-31889
Passive solar space heating
[LA-UR-80-1076] N80-31959
A review of USAFSAM studies employing multiple-tasks performance devices
[AD-A087272] N80-32091
Project FIRES. Volume 4: Prototype protective ensemble qualification test report, phase 1B
[NASA-CR-161532] N80-32099
MHD high performance demonstration experiment
[FE-2895-7] N80-32231

PERIODIC VARIATIONS
Climatology in the Netherlands. Abstracts of seven lectures given on Climate Day
[KNMI-V-345] N80-32039

PERIODICALS
Mariners Weather Log, volume 24, no. 2
[PB80-198444] N80-32048

PERIPHERAL EQUIPMENT (COMPUTERS)
The TOUCH PAD: A versatile computer input device
[RSRE-MEMO-3229] N80-32114

PERMAFROST
The fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska
[PB80-187305] N80-31984

PERTURBATION THEORY
A study of nonlinear waves described by the cubic Schrodinger equation --- cnoidal waves N80-32177

PERU
Coastal upwelling ecosystems analysis. Data report 65: Sediment data from short cores during JOINT 2 off Peru
[PB80-183155] N80-32053

PETROLOGY
Mineralogic and petrologic studies of lunar samples and meteorites
[NASA-CR-163498] N80-32309

PHASE DIAGRAMS
Surface defects and thermodynamics of chemisorbed layers
[AD-A086918] N80-32251

PHASE SHIFT
Sensitive measurement of photon lifetime and true reflectances in an optical cavity by a phase shift method
[AD-A087248] N80-32211

PHASE TRANSFORMATIONS
Hydrogen mobility at high concentrations
[MLM-2729(OP)] N80-31511
Gravitational convection of subcooled He 1 and the transition into superfluid He 2 at atmopheric pressure
[LBL-10928] N80-31671

PHASED ARRAYS
A simple stripline design for uneven power split
[NASA-TM-81870] N80-31684
Column network study for a planar array used with an unattended radar
[AD-A087809] N80-31698

PHOSPHORIC ACID
Cell module and fuel conditioner
[NASA-CR-159888] N80-31682

PHOTOCHEMICAL REACTIONS
Photoassisted water-gas shift reaction over platinized Ti O(2) catalysts
[AD-A087363] N80-31492
Photocatalytic production of hydrogen from water and Texas lignite using a platinized titania catalyst
[AD-A087364] N80-31494
Hydrogen-transfer and charge transfer in photochemical and high energy radiation induced reactions: Effects of thiols
[DOE/ER-03118/13] N80-31505
Photochemical aerosol formation: Reactive hydrocarbon-NOx-SO2 systems
[PB80-187990] N80-31987
Development of the Elstar (Environmental Lagrangian Simulator of Transport and Atmospheric Reactions) photochemical air quality simulation model and its evaluation relative to the LARPP (Los Angeles Reactive Pollutant Program) data base
[PB80-188139] N80-31992
Atmospheric particulate analysis using angular light scattering
[NASA-TM-81112] N80-31995

PHOTOCONDUCTIVITY
Silicon solar cell fabrication technology
[NASA-CR-163394] N80-31871

PHOTOELECTRIC CELLS
Field experience with solar concentrating collector control systems
[SAND-79-2044C] N80-31924
Organic metals and semiconductors: The chemistry of polyacetylene, CH(x), and its derivatives
[AD-A087102] N80-32252

PHOTOELECTRICITY
Photovoltaic institutional issues study
[SAND-79-7054] N80-31950

PHOTOELECTROCHEMICAL DEVICES
Basic research needs and priorities in solar energy. Volume 2: Technology crosscuts for DOE
[SERI/TR-351-358-VOL-2] N80-31899

PHOTOGEOLOGY
LANDSAT data as a basis for regional environmental assessment within the Columbia Plateau
[RHO-BWI-SA-43] N80-31862

PHOTOGRAMMETRY
The mosaics of Mars: As seen by the Viking Lander cameras
[NASA-CR-3326] N80-32311

PHOTOGRAPHIC EQUIPMENT
Film advance indicator
[NASA-CASE-LAR-12474-1] N80-31774
Sensors for remote sensing
[CISE-N-190] N80-31863

PHOTOGRAPHIC PROCESSING
A description of a system of programs for mathematically processing on unified series (YeS) computers photographic images of the Earth taken from spacecraft
[NASA-TM-76208] N80-31856

PHOTOINTERPRETATION
Users Guide for the analysis and interpretation of satellite imagery on the High Plains summer cloud and mesoscale systems
[PB80-175987] N80-32045

PHOTOLYSIS
Solar energy conversion through biophotolysis
[SAN-0034-239-1-T2] N80-31927

PHOTOMASKS
The NBS semiconductor technology program and VLSI (Very Large Scale Integration)
[PB80-185531] N80-32269

PHOTOMETERS
Communication and instrumentation systems for space vehicles
[AD-A087944] N80-31448

PHOTON ABSORPTIOMETRY
A study into the use of a photon correlation technique in both low and high speed flows --- laser anemometer
[VKI-TM-27] N80-31771

PHOTONS
Research studies on radiative collisional processes
[AD-A087527] N80-32193
Atomic scale resolution with correlation holography
[DOE/ER-70004/260] N80-32195
Sensitive measurement of photon lifetime and true reflectances in an optical cavity by a phase shift method
[AD-A087248] N80-32211
Solar magnetic field studies (photon counter) --- speckle imaging
[AD-A082242] N80-32313

PHOTORECONNAISSANCE
A description of a system of programs for mathematically processing on unified series (YeS) computers photographic images of the Earth taken from spacecraft
[NASA-TM-76208] N80-31856

PHOTOTHERMAL CONVERSION
Small solar electric system components demonstration --- thermal storage modules for Brayton systems
[NASA-CR-163513] N80-31675
Thermal energy storage for solar thermal applications program
[SAND-80-8218] N80-31918

PHOTOVOLTAIC CELLS
Advanced photovoltaic concentrator cells
[DSE-4042-T40] N80-31904
Emerging materials systems for solar cell applications. CU/sub 2-x/Se
[DOE/ET-23005/T4] N80-31910
Analytical prediction of liquid photovoltaic/thermal flat-plate collector performance
[COO-4094-66] N80-31913
Residential photovoltaic systems: A review and comparative evaluation of four independent studies of potential concepts
[SAND-80-7010] N80-31949
Photoelectrochemical solar cells based on d-band electrochemistry at transition metal diselenides
[IS-4724] N80-31952

PHOTOVOLTAIC CONVERSION
Photovoltaic module electrical termination design requirement study
[JPL-955367-80/1] N80-31877
Terrestrial photovoltaic power systems with sunlight concentration
[SAND-80-7008] N80-31942
Photovoltaic institutional issues study
[SAND-79-7054] N80-31950
Analytical evaluation of a solar thermophotovoltaic converter
[SAND-78-1962] N80-31954

PHOTOVOLTAIC EFFECT
Fundamental studies of grain boundary passivation in polycrystalline silicon with application to improved photovoltaic devices
[SAND-80-0879] N80-32262
PHYSICAL CHEMISTRY
Indirectly funded research and exploratory development at the Applied Physics Laboratory, fiscal year 1978
[AD-A086948] N80-32322
PHYSICAL EXERCISE
Restoration of physical performance capacity of athletes after prolonged restriction of their motor activity
[NASA-TM-76305] N80-32066
Physical exercises on a bicycle-ergometer and running track to prevent hypodynamia in workers of intellectual labor
[NASA-TM-76306] N80-32067
Therapeutic gymnastics in comprehensive treatment of patients with generalized myasthenia
[NASA-TM-76312] N80-32069
Use of physical culture to increase resistance of sailors to motion sickness
[NASA-TM-76355] N80-32079
PHYSIOCHEMISTRY
Application of physiochemical analysis methods to forming stratified materials with high temperature energy matrices
[SNIAS-801-422-105] N80-31521
PHYSIOLOGICAL EFFECTS
Effects of factors of prolonged space flight on conditions of tortoise skeleton
[NASA-TM-76352] N80-32060
Effect of hypokinesia on blood microcirculation
[NASA-TM-76308] N80-32068
Occupational changes in the organ of hearing and equilibrium in sailors and fisherman
[NASA-TM-76335] N80-32072
Physiological reactions of a passenger to transportation conditions
[NASA-TM-76350] N80-32077
Use of physical culture to increase resistance of sailors to motion sickness
[NASA-TM-76355] N80-32079
Proceedings Of a Workshop on Thermal Physiology
[PB80-187867] N80-32087
PICOSECOND PULSES
Application of advanced optical spectroscopic methods to energetic materials N80-31597
PILOT ERROR
Critical interfaces between environment and organism in class A mishaps: A retrospective analysis
[AD-A087341] N80-31371
Medical and toxicological factors in aircraft accidents
[AD-A087690] N80-31373
PILOT PERFORMANCE
Airborne performance measurement assessment: Low altitude tactical formation in two operating environments
[AD-A087068] N80-32090
PILOT PLANTS
Multiphase reactor modeling for zinc chloride catalyzed coal liquefaction
[LBL-9870] N80-31628
Molten salt coal gasification process development unit
[SAN-1429-56] N80-31631
Pittsburgh Energy Technology Center hydrogasification process: Conceptual commercial scale plant design
[DOE/MC-08484/T1] N80-31633
Pipeline gas from coal: Hydrogenation (IGT hydrogasification process)
[FE-2434-58] N80-31636
Coal gasification pilot plant support studies
[FE-2806-5] N80-31637
Economic evaluation of the MIT process for manufacture of ethanol
[DSE-3992-T1] N80-31647
PILOT TRAINING
The use of simulators for training in-flight and emergency procedures
[AGARD-AG-248] N80-31412
Methods for collecting and analyzing task analysis data
[AD-A087710] N80-32094
PILOTLESS AIRCRAFT
Flight research techniques utilizing remotely piloted research vehicles N80-31[illegible]7
PINHOLES
Pinhole X-ray/coronagraph optical systems concept definition study
[NASA-CR-161567] N80-32208
Interaction of high voltage surfaces with the space plasma
[NASA-CR-165131] N80-32223
PIPER AIRCRAFT
General aviation icing flight test N80-31312
PIPES (TUBES)
Elastic-plastic fracture analysis of type 304 stainless steel flat-plate and pipe sections containing surface flaws N80-31814
Residential solar heating and cooling using evacuated tube solar collectors: CSU Solar House 3, executive summary
[COO-2858-24] N80-31941
Finite element analysis of piping tees
[AD-A087353] N80-32152
PISTON ENGINES
Axisymmetric flow fields in motored and firing spark-ignition engines N80-31791
PISTONS
Free-piston regenerative hot gas hydraulic engine
[NASA-CASE-LEW-12274-1] N80-31790
PLASMA DIAGNOSTICS
Stark profile measurement of Cu reversal lines in a dense plasma N80-32222
A measurement of deuterium neutral by the Balmer-series in the STP-2 high beta screw pinch Tokamak
[IPPJ-471] N80-32224
Evaluation of two-beam spectroscopy as a plasma diagnostic
[LBL-10913] N80-32236
PLASMA DIFFUSION
Characterization of open-cycle, coal-fired MHD generators
[ARI-RP-46] N80-32234
PLASMA GENERATORS
Current operation and future uses of high power plasma generators
[SNIAS-801-430-104] N80-32243
PLASMA HEATING
Preliminary experiment of neutral beam injection heating in JIPP T-2 stellarator — Plasma heating
[IPPJ-470] N80-32225
Direct ohmic heating of positive ions in Tokamak plasmas
[DOE/ET/53036-16] N80-32237
PLASMA INTERACTIONS
Quasilinear scattering from waves driven by beam-plasma instabilities
[AD-A087208] N80-32002
PLASMA WAVES
Electromagnetic oscillating two stream instability of plasma waves
[AD-A087732] N80-32227
Data reduction and analysis for the TRW IMP-7 plasma-wave experiment
[NASA-CR-160011] N80-32320
PLASMA-PARTICLE INTERACTIONS
Relaxation of charged particles injected into a hot plasma
[FOA-C-20342-A2] N80-32242
PLASMAS (PHYSICS)
Analysis of electromagnetic wave field from models with one or two privileged directions
[CRPE-NT-76] N80-31710
Characterization of open-cycle, coal-fired MHD generators
[ARI-RP-43] N80-31936
Nonlinear evolution of diffuse auroral F region ionospheric irregularities
[AD-A086998] N80-32003
Plasma instability in electron and positron colliding beams in storage ring
[AD-A087733] N80-32228
Irreversibility and transport in the lower hybrid drift instability
[AD-A087728] N80-32229
The Helios solar probes science summaries
[NASA-TM-82005] N80-32316
PLASTERS
An investigation to measure interparticle friction and to determine important material and environmental variables which influence this friction — metallic and nonmetallic powders N80-31793
PLASTIC COATINGS
Adhesive coatings for DH-411 helmets
[AD-A087319] N80-32105
PLASTIC DEFORMATION
New general and complementary energy theorems, finite strain, rate-sensitive inelasticity, and finite elements: Some computational studies
[AD-A087227] N80-31824
Optical probing of acoustic emission during deformation of microtensile specimens N80-32185
PLASTIC PROPERTIES
On crack propagation along crystallographic slip bands
[AD-A087128] N80-31828
Plasticity under combined stress loading — aluminum alloys
[UCRL-83322] N80-31840
PLATEAUS
LANDSAT data as a basis for regional environmental assessment within the Columbia Plateau
[RHO-BWI-SA-43] N80-31862
PLATING
Gold plated lead-clinched lead solder joint study
[AD-A087352] N80-31733
PLATINUM
Photocatalytic production of hydrogen from water and Texas lignite using a platinized titania catalyst
[AD-A087364] N80-31494
PLOTTERS
Terrain analyst synthesizer station
[AD-A087370] N80-31860
Conversion of grid-point data into meteorological maps with a mini-computer system
[WMO-553] N80-32042
PLOTTING
A method of interpolation using cubic polynomials which avoids unnatural overshoots — computer plotting
[RAE-TM-AERO-1812] N80-32122
PLUMES
Comparison of thermocouple, gas sampling, and Raman measured temperatures in an afterburning turbojet engine plume N80-31614
Effective transport velocity and plume elongation in nocturnal valley wind fields
[LA-UR-80-791] N80-31978
Anomalous snowfall caused by natural-draft cooling towers
[RAND/N-1479-DOE] N80-32024
PLUTONIUM
DYMAC communications system
[LA-8182-M] N80-31707
Assumptions and ground rules used in nuclear waste projections and source term data
[ONWI-24] N80-32203
PLUTONIUM ISOTOPES
Resin bead U and PU analysis of WAK input solutions: A statistical summary of experiment no. 1 — spent fuels
[ORNL/TM-7362] N80-31517
PODS (EXTERNAL STORES)
The design of axisymmetric cowls for podded nacelles for high by-pass ratio turbofan engines
[ARC-R/M-3846] N80-31394
POINTING CONTROL SYSTEMS
An analysis of radome-induced radar pointing error N80-31681
POINTS (MATHEMATICS)
Testing for a change point
[AD-A087111] N80-32169
POLARIZATION (WAVES)
Influence of the space structure and physical properties of rain on the evaluation of the anisotropy and depolarizing properties — centimeter waves
[FUB-22-1979] N80-31722
POLARIZATION CHARACTERISTICS
Energy-related atomic and molecular structure and scattering studies
[DOE/ER-04971/2] N80-32194
POLARIZED LIGHT
Polar nephelometer for atmospheric particulate studies
[NASA-TM-81113] N80-31996

POLLUTION MONITORING
Pollutants from synthetic fuels production: Coal gasification screening test results
[PB80-182769] N80-31986
POLYCRYSTALS
Inelastic deformation in crystalline nonmetallic materials
[COO-4441-3] N80-31488
The effect of mixed transition-metal dopants on the high temperature creep of polycrystalline alumina N80-31526
Silicon solar cell fabrication technology
[NASA-CR-163394] N80-31871
Physical models of thin film polycrystalline solar cells based on measured grain-boundary and electronic parameter properties
[DOE-4042-T37] N80-31908
Optical probing of acoustic emission during deformation of microtensile specimens N80-32185
Electronic properties of silicon grain boundaries
[SAND-79-2350C] N80-32260
POLYIMIDES
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159111] N80-31447
POLYMER CHEMISTRY
Chemical research projects office: An overview and bibliography, 1975-1980
[NASA-TM-81227] N80-31473
Study of catalyst cured LaRC-160/Celion 6000 composites
[NASA-CR-159335] N80-31480
Electrical transportation doped polyacetylene
[AD-A087289] N80-31557
Analysis of fluoride in polymer materials
[MHSMP-80-23] N80-31562
POLYMER PHYSICS
Chemical research projects office: An overview and bibliography, 1975-1980
[NASA-TM-81227] N80-31473
The fatigue crack propagation behavior of semi-crystalline polymers N80-31550
POLYMERS
Semiconducting and metallic covalent polymers: (CH)x and its derivatives
[AD-A086941] N80-31555
Organic metals and semiconductors: Polyacetylene (CH)x and its derivatives
[AD-A087024] N80-32254
POLYNOMIALS
A method of interpolation using cubic polynomials which avoids unnatural overshoots --- computer plotting
[RAE-TM-AERO-1912] N80-32122
POLYSTATION DOPPLER TRACKING SYSTEM
Doppler radar studies during the Sierra Cooperative Pilot Project
[PB80-191455] N80-32047
POPULATION THEORY
The global 2000 report to the president: Entering the twenty-first century, volume 1 N80-32295
POROSITY
Porous electrode studies
[AD-A087528] N80-31736
PORTABLE EQUIPMENT
US Coast Guard lightweight fire-fighting module
[NASA-CR-161552] N80-31667
POSITION (LOCATION)
Repeatability of spatial configurations defined by interaction matrices N80-32179
POSITIVE IONS
Direct ohmic heating of positive ions in Tokamak plasmas
[DOE/ET/53036-18] N80-32237
POSITRONS
Plasma instability in electron and positron colliding beams in storage ring
[AD-A087733] N80-32228
POSTURE
Orthoclinostatic test as one of the methods for evaluating the human functional state
[NASA-TM-76321] N80-32070
POTABLE WATER
Development of a preprototype vapor compression distillation water recovery subsystem
[NASA-CR-160779] N80-32101
POWDER (PARTICLES)
An investigation to measure interparticle friction and to determine important material and environmental variables which influence this friction --- metallic and nonmetallic powders N80-31793
POWDER METALLURGY
Inelastic deformation in crystalline nonmetallic materials
[COO-4441-3] N80-31488
Process development: Tungsten hemispheres
[AD-A086972] N80-31491
Amorphous and metastable microcrystalline rapidly solidified alloys: Status and potential
[NASA-CR-163449] N80-31528
Advanced aluminum alloys from rapidly solidified powders
[AD-A087401] N80-31534
POWDERED ALUMINUM
Advanced aluminum alloys from rapidly solidified powders
[AD-A087401] N80-31534
POWER LINES
Wave propagation in a dc superconducting cable. Part 2: Parametric effects
[LA-VR-80-126] N80-31706
POWER REACTORS
Semiconductor measurement technology: Technical impediments to a more effective utilization of neutron transmutation doped silicon for high-power device fabrication
[PB80-183874] N80-32268
POWER SPECTRA
Injection laser mode studies
[AD-A087522] N80-31787
Robust and quantized Wiener filters for p-point spectral classes
[AD-A086409] N80-32156
POWER SUPPLY CIRCUITS
A simple stripline design for uneven power split
[NASA-TM-81870] N80-31684
PRECIPITATION (METEOROLOGY)
Results of comparative measurements with various types of pluviometers during the period of December 1971 to January 1975 at De Bilt, Netherlands
[KNMI-V-342] N80-32038
Comparison of generalized estimates of probable maximum precipitation with greatest observed rainfalls
[PB80-191463] N80-32046
Doppler radar studies during the Sierra Cooperative Pilot Project
[PB80-191455] N80-32047
PREDICTION ANALYSIS TECHNIQUES
Influence of mistuning on blade torsional flutter
[NASA-CR-165137] N80-31351
Multisystem modeling of unsteady liquid flow N80-31758
Elastic-plastic fracture analysis of type 304 stainless steel flat-plate and pipe sections containing surface flaws N80-31814
Critical excitations for linear and nonlinear structural systems N80-31816
Solar energy applications for dwelling; modelling and simulation part
[EUR-6881/I-EN] N80-31894
Is Bayesian estimation proper for estimating the individual's ability
[AD-A087929] N80-32174
PREDICTIONS
Investigation of learning and experience curves
[SERI/TR-353-459] N80-31911
Solar-Terrestrial Predictions Proceedings. Volume 3: Solar activity predictions
[PB80-198001] N80-32016
PREFLIGHT ANALYSIS
Store separation testing techniques at the Arnold Engineering Development Center. Volume 4: Description of dynamic drop store separation testing
[AD-A087490] N80-31358
PRESIDENTIAL REPORTS
The global 2000 report to the president. Entering the twenty-first century, volume 1 N80-32295
The global 2000 report to the president. Entering the twenty-first century. Volume 2: The technical report — trends in population, climate, gross national product, earth resources, technology, and man environment interactions N80-32296

PROCESS CONTROL (INDUSTRY)

PRESSURE DISTRIBUTION
Jet interference on supercritical wings. Part 1: Experiments on a two-dimensional wing. Part 2: Experiments on a swept wing --- wind tunnel tests
[ARC-R/M-3845] N80-31365
Measurements of pressure distributions and pressure drags at zero incidence on both blunt and sharp axisymmetric forebodies at a Mach number of 3
[ARC-R/M-3849] N80-31367
PRESSURE GRADIENTS
Effect of erosive burning on pressure and temperature sensitivity N80-31592
Observation of pressure variation in the cavitation region of submerged journal bearings
[NASA-TM-81582] N80-31798
PRESSURE MEASUREMENTS
Direct measurements of acoustic admittance using laser Doppler velocimetry N80-31605
Rotating valve for velocity combustion response measurements N80-31606
PRESSURE OSCILLATIONS
Preliminary experiments on acoustic oscillations driven by periodic shedding N80-31602
PRESSURE VESSELS
Efficient computational techniques for the analysis of some problems of fracture in pressure vessels and piping
[AD-A087225] N80-31822
PRETREATMENT
Pipeline gas from coal: Hydrogenation (IGT hydrogasification process)
[FE-2434-58] N80-31636
Coal gasification pilot plant support studies
[FE-2806-5] N80-31637
Peat biogasification development program
[DOE/ET/14696-T1] N80-31649
PRIMARY BATTERIES
Investigation of methods to eliminate voltage delay in Li/SOCl2 cells
[AD-A086992] N80-31893
PRINTED CIRCUITS
Gold plated lead-clinched lead solder joint study
[AD-A087352] N80-31733
Cost effective system for connecting multiwire cables to printed wiring boards
[BDX-613-2302] N80-31738
PROBABILITY DISTRIBUTION FUNCTIONS
Probabilistic models of the stress-rupture of composite material, phase 3
[COO-4027-3] N80-31487
Batch size effects in the analysis of simulation output
[AD-A087045] N80-32170
A comparison between MLE and BLUE for a decreasing failure rate distribution when using censored-data
[AD-A087359] N80-32171
The Bayesian approach to statistics
[AD-A087836] N80-32173
PROBABILITY THEORY
Hurricane wind speeds in the United States
[PB80-181126] N80-32044
Testing for a change point
[AD-A087111] N80-32169
PROBLEM SOLVING
A new method for the solution of anisotropic thin plate bending problems --- using Green's function N80-31813
Aspects of mathematical modeling related to optimization
[AD-A087556] N80-32159
The method of contracting ellipsoids
[AD-A087485] N80-32162
Limit cycle solutions of reaction-diffusion equations
[AD-A087114] N80-32180
PROCEEDINGS
Federal plan for ocean pollution research development and monitoring
[PB80-193295] N80-31989
PROCESS CONTROL (INDUSTRY)
Underground gasification for steeply dipping coal beds. Rawlins test no. 1
[SAN-13108-35] N80-31653
Instrumentation and process control development for in situ coal gasification
[SAND-80-1025] N80-31655

Mixing and gasification of coal in entrained flow systems. Volume 2: User's manual for a computer program for 1-dimensional coal combustion or gasification (1-DICOG)
[FE-2666-F-VOL-2] N80-31656
Development of combustion data to utilize low-Btu gases as industrial process fuels: Modification of flame characteristics
[DOE/ET-14851/2] N80-31659

PRODUCT DEVELOPMENT
Cost effective system for connecting multiwire cables to printed wiring boards
[BDX-613-2302] N80-31738
Development of advanced batteries for utility application
[EPRI-EM-1341] N80-31961
Design of a cost effective solar powered water pump
[PB80-182819] N80-31967
Development, characterization and evaluation of materials for open cycle MHD
[PNL-2004-12] N80-32232

PRODUCTION ENGINEERING
Some examples of procedures used in UK for acceptance testing of aircraft produced by the aircraft industry under government contract N80-31332
Cost effective system for connecting multiwire cables to printed wiring boards
[BDX-613-2302] N80-31738
Development of a model and computer code to describe solar grade silicon production processes
[NASA-CR-163515] N80-31873
Silicon halide-alkali metal flames as a source of solar grade silicon
[NASA-CR-163514] N80-31874

PRODUCTION MANAGEMENT
The application of design to cost and life cycle cost to aircraft engines
[AGARD-LS-107] N80-31342
Progress on the US Air Force approach for the practical management of engine life cycle costs --- gas turbine engines N80-31345
Military engine programs with cost objectives N80-31346
The application of design to cost at Rolls-Royce N80-31348

PROGRAM VERIFICATION (COMPUTERS)
Testing COBOL programs by mutation. Volume 1: Introduction to the CMS.1 system
[AD-A087310] N80-32117
Computer software reliability. A bibliography with abstracts
[PB80-811797] N80-32123
Software verification and validation N80-32132

PROGRAMMED INSTRUCTION
INTERLISP maintenance
[AD-A087338] N80-32118
Payload crew training scheduler (PACTS) user's manual
[NASA-TM-78284] N80-32270

PROGRAMMING LANGUAGES
The United States Department of Defense common high order language N80-32130
Compiler writing techniques for avionics applications N80-32131

PROJECT MANAGEMENT
Modeling a software engineering project management system N80-32116
Technical program plan, Basalt Waste Isolation Project
[RHO-CD-132-REV-5] N80-32205
MHD electrode development
[FE-15529-2] N80-32230

PROJECT PLANNING
Large space systems technology program N80-31451

PROPAGATION VELOCITY
Gravitational convection of subcooled He 1 and the transition into superfluid He 2 at atmopheric pressure
[LBL-10928] N80-31671

PROPANE
Direct measurements of acoustic admittance using laser Doppler velocimetry N80-31605

PROPELLANT BINDERS
The 16th JANNAF combustion meeting, volume 2
[CPIA-PUBL-308-VOL-2] N80-31588
Combustion of non-aluminized binders in tapered sandwiches N80-31590
Effect of binder type on aluminum combustion and aluminum oxide formation N80-31596

PROPELLANT CHEMISTRY
Research studies in/NF4(+)/salts
[AD-A086981] N80-31474

PROPELLANT COMBUSTION
Transient combustion calculations with variable thermal properties N80-31582
Combustion characteristics of consolidated propellants N80-31583
Holographic observations of black powder combustion N80-31586
The 16th JANNAF combustion meeting, volume 2
[CPIA-PUBL-308-VOL-2] N80-31588
A priori thermochemistry and rate constant estimates for flame zone reactions N80-31589
Statistical analysis of composite solid propellant combustion N80-31591
Analysis of ammonium perchlorate combustion in a turbulent flow N80-31594
Erosive burning, a survey of the Russian literature N80-31595
Effect of binder type on aluminum combustion and aluminum oxide formation N80-31596

PROPELLANT GRAINS
A model for confined combustion of compressible, linear viscoelastic solid propellant N80-31574
Holographic observations of black powder combustion N80-31586
Measurement and correlation of intragranular stress and particle-wall friction in granular propellant beds N80-31587
Temporal and spatial location of the transition-to-detonation point in propellant grains N80-31598
Studies of motor instability problems N80-31608

PROPELLANT SENSITIVITY
Effect of erosive burning on pressure and temperature sensitivity N80-31592
An investigation of the effects of formulation parameters on erosive burning of composite propellants N80-31593

PROPELLANT TESTS
The 16th JANNAF Combustion Meeting, volume 1
[AD-A084680] N80-31565
Use of flash X-ray as a diagnostic tool in the dynamic testing of propellants and rocket motors N80-31567
Propellant explosive reactions in the instrumented shotgun test N80-31568
A scaling relationship for impact initiated detonations N80-31569
Burning to detonation transition in porous beds of a high energy propellant N80-31570
Compaction and the burning to detonation transition at low confinement N80-31572
L*-instability in ducted rocket fuel generators N80-31610
Investigation of a putty propellant turbine power system N80-31622

PROPELLANT TRANSFER
Conceptual design of an orbital propellant transfer experiment. Volume 2: Study results
[NASA-CR-165150] N80-31423

PROPELLER BLADES
The NASA high-speed turboprop program
[NASA-TM-81561] N80-31401

PROPELLERS
A spline relaxation procedure for calculating axisymmetric flow fields about body/propeller combinations. 1: Frozen vorticity and potential flows
[AD-A087027] N80-31762

PROPULSION SYSTEM CONFIGURATIONS
The NASA high-speed turboprop program
[NASA-TM-81561] N80-31401
Large Space Systems/Low-Thrust Propulsion Technology
[NASA-CP-2144] N80-31449
Introduction: The challenge of optimum integration of propulsion systems and large space structures N80-31450
Electric propulsion technology N80-31452
Chemical propulsion technology N80-31453
LSS/propulsion interactions studies N80-31454
Low-thrust vehicles concept studies N80-31456

PROPULSION SYSTEM PERFORMANCE
F/A-18 status report N80-31306
USAF development test and evaluation N80-31331
Primary propulsion/large space system interactions N80-31458
Thrusting characteristics of propulsors
[AD-A087281] N80-31800

PROPULSIVE EFFICIENCY
LSS/propulsion interactions studies N80-31454
Advanced concepts --- specific impulse, mass drivers, electromagnetic launchers, and the rail gun N80-31471

PROTECTIVE CLOTHING
Activated carbon fabric from pitch
[AD-A087030] N80-31553
Project FIRES. Volume 1: Program overview and summary, phase 1B
[NASA-CR-161529] N80-32098
Project FIRES. Volume 4: Prototype protective ensemble qualification test report, phase 1B
[NASA-CR-161532] N80-32099
Project FIRES. Volume 3: Protective ensemble design and procurement specification, phase 1B
[NASA-CR-161531] N80-32100

PSEUDONOISE
Pseudonoise spread-spretrum systems for military communications
[AD-A087701] N80-31700

PSYCHOMETRICS
Is Bayesian estimation proper for estimating the individual's ability
[AD-A087829] N80-32174

PSYCHOMOTOR PERFORMANCE
A review of USAFSAM studies employing multiple-tasks performance devices
[AD-A087272] N80-32091

PSYCHOPHYSIOLOGY
Ground-referenced visual orientation with imaging displays --- psychophysiology
[AD-A081882] N80-32063

PUBLIC HEALTH
Fossil fuels research matrix program. US Environmental Protection Agency/Department of Energy Fossil Fuels Research Materials Facility
[ORNL/TM-7346] N80-31632
Effects of aerosols, oxides of nitrogen, and oxidants on human health
[PB80-184583] N80-32088

PULLEYS
Design study of steel V-Belt CVT for electric vehicles
[NASA-CR-159845] N80-32299

PULSE CODE MODULATION
Digital demodulator
[NASA-CASE-LAR-12659-1] N80-31731

PULSE COMMUNICATION
An analysis of burst communication in time division multiple access systems N80-31678
Activities in the field of communications in Italy, 1978 N80-31711
The possibility of utilizing coding techniques to improve the availability of digital radio link networks at frequencies over 10 GHz
[FUB-54-1978] N80-31712
Customer access protocols to integrated services digital networks
[FUB-7-1979] N80-31716
Procedures for out-of-service verification and hop length dimensioning in numerical radio links
[FUB-10-1979] N80-31718
Development of COST 202 project: Numerical local networks for telecommunications
[FUB-14-1979] N80-31719

PULSE GENERATORS
Capacitors for aircraft high power
[AD-A087427] N80-31734
Short intense submillimeter pulse generation
[AD-A087421] N80-31783
High voltage nanosecond pulse generator
[AD-A087291] N80-31784

PULSED LASERS
Measuring features of the fluence at the far field of CO2 pulsed laser: An issue study with suggestions on how to do it
[PB80-191141] N80-31789

PULSED RADIATION
Capacitors for aircraft high power
[AD-A087427] N80-31734

PUMPS
Design, construction, and operation of a 150 kW solar-powered irrigation facility, phase 2
[ALO-4159-1] N80-31903

PURIFICATION
Production of aluminum-silicon alloy and and ferrosilicon and commercial purity aluminum by the direct reduction process
[CONS-5089-8] N80-31541

PYROLYSIS
Reduction of combustion efficiency associated with liquid phase drop decomposition N80-31617
Gasification of coal with solar energy
[UCRL-84458] N80-31652
Coal processing for fuel cell utilization: Task 9: One-dimensional (streamtube) model for entrained-flow gasifier analysis
[METC-8450-T2-VOL-1] N80-31912

Q

QUALITY CONTROL
Aircraft Assessment and Acceptance Testing
[AGARD-LS-108] N80-31329
Some comments on the problems involved in aircraft assessment and acceptance testing N80-31330
Evaluation of lateral and directional characteristics and spinning behaviour N80-31336
Application of physiochemical analysis methods to forming stratified materials with high temperature energy matrices
[SNIAS-801-422-105] N80-31521
Chemical characterization and quality control for an adhesive
[AD-A087739] N80-31558

QUANTUM MECHANICS
Atomic scale resolution with correlation holography
[DOE/ER-70004/260] N80-32195

R

RADAR ANTENNAS
Balloon-supported Loran antenna, new hardware for tethered balloons, and payloads used in BAMM flights
[AD-A087487] N80-31377
Balloon-supported antenna for Loran C/D navigation system
[AD-A087488] N80-31378
Column network study for a planar array used with an unattended radar
[AD-A087809] N80-31698
Performance characteristics of leaky coaxial cables
[AD-A087475] N80-31703

RADAR DETECTION
Ground range and bearing error determination and display for an OTH radar system with an Arctic trough ionosphere
[AD-A087010] N80-31691

RADAR EQUIPMENT
Radar EMI at sea
[AD-A087213] N80-31692

RADAR IMAGERY
High resolution digital radar imaging of rotating objects
[AD-A087510] N80-31704

RADAR SIGNATURES
Performance characteristics of leaky coaxial cables
[AD-A087475] N80-31703

RADAR TRACKING
Doppler radar studies during the Sierra Cooperative Pilot Project
[PB80-191455] N80-32047
The Seasat SAR Wind and Ocean Wave Monitoring Capabilities: A case study for pass 1339m
[NASA-CR-163454] N80-32051

RADAR TRANSMISSION
Measurements of millimeter wave radar transmission and backscatter during dusty infrared test 2, dirt 2
[AD-A086189] N80-31694
Microwave transversal equalizer
[AD-A087603] N80-31699

RADIAL VELOCITY
Documentation for the machine-readable version of the Perth 70: A catalogue of positions of 24900 stars tape B, mean values of the observation
[NASA-TM-80849] N80-32304

RADIATION ABSORPTION
Hydrogen-transfer and charge transfer in photochemical and high energy radiation induced reactions: Effects of thiols
[DOE/ER-03118/13] N80-31505

RADIATION COUNTERS
Criteria for data elaboration of gamma spectra of ambient samples
[CISE-1536] N80-32197
Field gamma spectrometry system with Ge(Li) detectors
[CISE-1537] N80-32198
Solar magnetic field studies (photon counter) --- speckle imaging
[AD-A082242] N80-32313

RADIATION DAMAGE
The role of electron microscopy by transmission in the study of radiation damage in metals
[CISE-1541] N80-31546
The effects of radiation on materials. Instrument design and calibration --- measuring instruments
[CISE-1524] N80-31781
Semiconductor measurement technology: Technical impediments to a more effective utilization of neutron transmutation doped silicon for high-power device fabrication
[PB80-183874] N80-32268

RADIATION DOSAGE
Systematic approach for assessment of alternative nuclear waste management strategies
[CONF-791112-66] N80-32206

RADIATION EFFECTS
The effects of radiation on materials. Instrument design and calibration --- measuring instruments
[CISE-1524] N80-31781
Health and environmental research related to energy development and use --- biomolecular and cellular science, environmental biology, and nuclear medicine
[UCLA-12-1217] N80-32061
Materials program plan for inertial confinement fusion
[ANL/FPP-TM-126] N80-32238

RADIATION HAZARDS
LASL experience in decontamination of the environment
[LA-UR-80-926] N80-31974
Implementing advanced data analysis techniques in near-real-time materials accounting
[LA-UR-80-1816] N80-32113
Small-scale demonstration of high-level radioactive waste processing and solidification using actual SRP waste
[DP-MS-80-2] N80-32201
Functions of an engineered barrier system for a nuclear waste repository in basalt
[RHO-BWI-LD-23] N80-32202

RADIATION MEASUREMENT
Application of nondestructive gamma-ray and neutron techniques for the safeguarding of irradiated fuel materials
[LA-8212] N80-31806

RADIATION PROTECTION
Proceedings Of a Workshop on Thermal Physiology
[PB80-187867] N80-32087

RADIATION SHIELDING
Interaction of high voltage surfaces with the space plasma
[NASA-CR-165131] N80-32223

RADIATION TRAPPING
An experimental investigation of the trapping and energy loss mechanisms of intense relativistic electron rings in hydrogen gas and plasma N80-32221

RADIATIVE HEAT TRANSFER
Coal processing for fuel cell utilization: Task 9: One-dimensional (streamtube) model for entrained-flow gasifier analysis
[METC-8450-T2-VOL-1] N80-31912
Ocean-atmosphere interface: Its influence on radiation
[AD-A087046] N80-32028
Development of the microwave radiative transfer program for cloudy atmospheres applications to DMSP SSM/T channels
[AD-A087434] N80-32032

RADIATIVE RECOMBINATION
Research studies on radiative collisional processes
[AD-A087527] N80-32193

RADIO ALTIMETERS
Altimetry data over trenches and island-arcs and convection in the mantle
[NASA-CR-163516] N80-32050

RADIO ASTRONOMY
Workshop on Satellite Power Systems (SPS) Effects on Optical and Radio Astronomy
[CONF-7905143] N80-31435

RADIO COMMUNICATION
Activities in the field of communications in Italy, 1978 N80-31711
Procedures for out-of-service verification and hop length dimensioning in numerical radio links
[FUB-10-1979] N80-31718

RADIO EQUIPMENT
Packet radio deployment study
[AD-A087417] N80-31693

RADIO FREQUENCIES
Balloon-supported antenna for Loran C/D navigation system
[AD-A087488] N80-31378
Proceedings Of a Workshop on Thermal Physiology
[PB80-187867] N80-32087
Conceptual design of RST. An rf-driven, steady-state Tokamak
[EPRI-AP-1351] N80-32233

RADIO FREQUENCY INTERFERENCE
Radar EMI at sea
[AD-A087213] N80-31692
Residual error of dual-frequency spatial radio tracking systems due to the ionosphere
[CNES-NT-93] N80-31709

RADIO TRANSMISSION
Proceedings of Seminar on Frequency Selective Fading and its Effect on Digital LOS Radio
[AD-A087793] N80-31696

RADIOACTIVE CONTAMINANTS
LASL experience in decontamination of the environment
[LA-UR-80-926] N80-31974

RADIOACTIVE ISOTOPES
Field gamma spectrometry system with Ge(Li) detectors
[CISE-1537] N80-32198

RADIOACTIVE WASTES
Application of linear accelerator technology to the detection of trace amounts of transuranics in waste barrels
[LA-UR-80-1274] N80-31507
Numerical calculation of thermal convection in porous media in two dimensions with applications to nuclear repository design
[UCID-18700] N80-31769
Preliminary one-dimensional thermal analysis of waste emplacement in tuffs
[SAND-79-1265] N80-32014
Small-scale demonstration of high-level radioactive waste processing and solidification using actual SRP waste
[DP-MS-80-2] N80-32201
Functions of an engineered barrier system for a nuclear waste repository in basalt
[RHO-BWI-LD-23] N80-32202
Assumptions and ground rules used in nuclear waste projections and source term data
[ONWI-24] N80-32203
Resistivity sounding investigation by the Schumberger method in the syncline ridge area, Nevada test site, Nevada
[USGS-OFR-80-466] N80-32204
Systematic approach for assessment of alternative nuclear waste management strategies
[CONF-791112-66] N80-32206
Statistical sensitivity analysis of a simple nuclear waste repository model
[ORNL/TM-7310] N80-32207

RADIOACTIVITY
Criticality safety considerations in the geologic disposal of spent nuclear fuel assemblies
[PNL-3268] N80-32200

RADIOBIOLOGY
Health and environmental research related to energy development and use --- biomolecular and cellular science, environmental biology, and nuclear medicine
[UCLA-12-1217] N80-32061

RADIOMETERS
Communication and instrumentation systems for space vehicles
[AD-A087944] N80-31448
Special Sensor H (SSH) moisture sounding
[AD-A087576] N80-32011
RADOMES
An analysis of radome-induced radar pointing error
N80-31681
RAIL TRANSPORTATION
Railroad electrification in America's future: An assessment of prospects and impacts
[SAN-1176-T4] N80-32300
RAILS
Measurement and correlation analysis plan for concrete tie and fastener performance analysis
[PB80-183882] N80-31674
Railroad electrification in America's future: An assessment of prospects and impacts
[SAN-1176-T4] N80-32300
RAIN
Influence of the space structure and physical properties of rain on the evaluation of the anisotropy and depolarizing properties --- centimeter waves
[FUB-22-1979] N80-31722
A study on algorithms and processing programs for data from interference due to hydrometeors at 17.8 GHz
[FUB-12-1979] N80-32036
RAIN GAGES
Results of comparative measurements with various types of pluviometers during the period of December 1971 to January 1975 at De Bilt, Netherlands
[KNMI-V-342] N80-32038
RAINSTORMS
Comparison of generalized estimates of probable maximum precipitation with greatest observed rainfalls
[PB80-191463] N80-32046
RAMAN SPECTRA
Evaluation of cars in a practical combustion environment N80-31612
Investigation of the feasibility of CARS measurements in scramjet combustion N80-31613
Comparison of thermocouple, gas sampling, and Raman measured temperatures in an afterburning turbojet engine plume N80-31614
RAMAN SPECTROSCOPY
CARS concentration sensitivity with and without nonresonant background suppression
[AD-A087557] N80-31497
Application of advanced optical spectroscopic methods to energetic materials N80-31597
Raman-induced Kerr effect studies
[AD-A087410] N80-32213
RANDOM SAMPLING
On the theory of crossover designs with residual effects N80-32165
RANDOM VARIABLES
Simulation of some autoregressive Markovian sequences of positive random variables
[AD-A087368] N80-32153
Testing for a change point
[AD-A087111] N80-32169
Stochastic ordering and a class of multivariate new better than used distributions
[AD-A087268] N80-32172
RANGE AND RANGE RATE TRACKING
Residual error of dual-frequency spatial radio tracking systems due to the ionosphere
[CNES-NT-93] N80-31709
RANKINE CYCLE
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 1: Conceptual design, sections 1 through 4
[DOE/ET-20567/1-2-BK-1] N80-31896
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 2: Conceptual design, sections 5 and 6
[DOE/ET-20567/1-2-BK-2] N80-31897
Solar central receiver hybrid power systems sodium-cooled receiver concept. Volume 1: Executive summary
[DOE/ET/20567-1/1] N80-31948
RAPID TRANSIT SYSTEMS
Railroad electrification in America's future: An assessment of prospects and impacts
[SAN-1176-T4] N80-32300
RATIONAL FUNCTIONS
An efficient method for performing partial fraction expansion
[AD-A087486] N80-32161
RAYLEIGH SCATTERING
Interpretation of Rayleigh scattering in a flame
[LBL-10655] N80-31501
REACTION KINETICS
Study of catalyst cured LaRC-160/Celion 6000 composites
[NASA-CR-159335] N80-31400
Photoassisted water-gas shift reaction over platinized Ti O(2) catalysts
[AD-A087363] N80-31492
An electron spectroscopic investigation of the interaction of methanol with polycrystalline aluminum
[AD-A087309] N80-31493
Studies of combustion kinetics and mechanisms
[DOE/ER-14953/T1] N80-31516
Organic metals and semiconductors: The chemistry of polyacetylene (CH)x, and its derivatives
[AD-A087054] N80-31529
Liquid fuels from biomass: Catalysts and reaction conditions
[LBL-9789] N80-31646
Experimental study of chemically reacting turbulent free shear layers
[FE-2446-8] N80-31766
Review of stiffness and implicit finite difference methods in combustion modeling
[SAND-79-8623] N80-32163
Limit cycle solutions of reaction-diffusion equations
[AD-A087114] N80-32180
REACTION PRODUCTS
Ultrasonic characterization of coal liquefaction products
[DOE/PC-10346/1] N80-31503
Analysis of coal-derived products and environmental systems by synchronous fluorescence and room temperature phosphorescence
[CONF-800602-4] N80-31977
REACTOR DESIGN
Conceptual design of RST: An rf-driven, steady-state Tokamak
[EPRI-AP-1351] N80-32233
Heat transfer in inertial confinement fusion reactor systems
[CONF-800723-8] N80-32239
REACTOR MATERIALS
Plasticity under combined stress loading --- aluminum alloys
[UCRL-83322] N80-31640
Implementing advanced data analysis techniques in near-real-time materials accounting
[LA-UR-80-1516] N80-32113
REACTOR TECHNOLOGY
Gasification of coal with solar energy
[UCRL-84458] N80-31652
REAL TIME OPERATION
Graphics library for real time display and data analysis
[UCID-18543] N80-32121
RECEIVERS
Evaluation of line focus solar central power systems. Volume 1: Executive summary
[ATR-80(7773-03)-1-VOL-1] N80-31943
Solar central receiver hybrid power systems sodium-cooled receiver concept. Volume 1: Executive summary
[DOE/ET/20567-1/1] N80-31948
RECIRCULATIVE FLUID FLOW
Evaluation of cars in a practical combustion environment N80-31612
RECOGNITION
Individual difference relations in psychometric and experimental cognitive tasks
[AD-A086057] N80-32093
RECURSIVE FUNCTIONS
Recursive least squares lattice algorithms: A geometrical approach
[AD-A087566] N80-32160
RECYCLING
Assumptions and ground rules used in nuclear waste projections and source term data
[ONWI-24] N80-32203
REDUCTION (CHEMISTRY)
Mechanistic studies related to the metal catalyzed reduction of carbon monoxide to hydrocarbons
[DOE/ER-04222/3] N80-31500
Production of aluminum-silicon alloy and and ferrosilicon and commercial purity aluminum by the direct reduction process
[CONS-5089-8] N80-31541
REDUNDANCY
TACAN operational description for the space shuttle orbital flight test program
[NASA-CR-160775] N80-31439
REDUNDANT COMPONENTS
Space shuttle applications. Part 1: Redundant computer operation. Part 2: Redundant computer software design and test N80-32140
REFERENCE ATMOSPHERES
CAO: A code for the calculation of atmospheric density --- atmospheric drag effects on Earth orbiting satellites
[AD-A087447] N80-32005
REFINING
Gulf Coast manganese nodule processing plant location criteria
[PB80-182082] N80-31549
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[FE-2315-48] N80-31629
REFLECTANCE
Aluminum-silver alloy films for solar reflectors
[REP-3021] N80-31919
REFRACTIVITY
The Mini-Refractionsonde System (MRS) for measuring refractive index
[AD-A087845] N80-31434
Properties of low-index laser materials
[UCRL-84399] N80-31788
Verification of the bulk model for calculations of the overwater index of refraction structure function, (C sub N)2
[AD-A087097] N80-31997
Measurement of the index profile of optical fibers by the refraction method
[FUB-13-1979] N80-32219
REFRACTORY MATERIALS
Design, engineering and evaluation of refractory liners for slagging gasifiers
[IITRI-M-6043-5] N80-31640
REFRIGERATING MACHINERY
Absorption refrigeration machine driven by solar heat
[EUR-6748-EN] N80-31914
REFUELING
Conceptual design of an orbital propellant transfer experiment. Volume 2: Study results
[NASA-CR-165150] N80-31423
REGENERATION (ENGINEERING)
Free-piston regenerative hot gas hydraulic engine
[NASA-CASE-LEW-12274-1] N80-31790
Regression-adjusted estimates for regenerative simulations, with graphics
[AD-A087369] N80-32154
REGIONAL PLANNING
Gulf Coast manganese nodule processing plant location criteria
[PB80-182082] N80-31549
REGRESSION ANALYSIS
Evaluating soil moisture and textural relationships using regression analysis
[AD-A087371] N80-31852
Regression-adjusted estimates for regenerative simulations, with graphics
[AD-A087369] N80-32154
A Bayesian procedure to compare and choose among logistic regression models N80-32167
The application of cluster analysis to the mass appraisal of forest and vacant land N80-32168
REGULATIONS
Taggants in explosives
[PB80-192719] N80-31661
RELATIVISTIC ELECTRON BEAMS
An experimental investigation of the trapping and energy loss mechanisms of intense relativistic electron rings in hydrogen gas and plasma N80-32221
RELAXATION TIME
Relaxation of charged particles injected into a hot plasma
[FOA-C-20342-A2] N80-32242
RELIABILITY
Production oriented maintenance organization: A critical analysis of sortie-generation capability and maintenance quality
[AD-A087095] N80-31323

RELIABILITY ANALYSIS
A comparison between MLE and BLUE for a decreasing failure rate distribution when using censored-data
[AD-A087359] N80-32171
RELIABILITY ENGINEERING
USAFSAM waiver file intelligent terminal: Hardware reference manual
[AD-A087340] N80-32110
An approach to the derivation and validation of requirements N80-32126
REMOTE SENSORS
Earth resources: A continuing bibliography (issue 26)
[NASA-SP-7041(26)] N80-31855
Sensors for remote sensing
[CISE-N-190] N80-31863
REMOTELY PILOTED VEHICLES
Flight research techniques utilizing remotely piloted research vehicles N80-31337
Remotely piloted seaplane for antisubmarine warfare
[AD-A086932] N80-31388
REPLENISHMENT
Space transportation system disconnect --- replenishing fluids during orbital servicing
[NASA-CR-161565] N80-31442
REQUIREMENTS
Requirements definition and design guidelines for man-machine interface in C3 system acquisition
[AD-A087258] N80-32102
RESEARCH AIRCRAFT
The Quiet Short-haul Research Aircraft (QSRA) N80-31313
RESEARCH AND DEVELOPMENT
Chemical research projects office: An overview and bibliography, 1975-1980
[NASA-TM-81227] N80-31473
Development of COST 202 project: Numerical local networks for telecommunications
[FUB-14-1979] N80-31719
Basic research needs and priorities in solar energy. Volume 1: Executive summary. Technology crosscuts for DOE
[SERI/TR-351-358-VOL-1] N80-31898
Source header list, supplement 3
[AD-A087000] N80-32276
RESEARCH MANAGEMENT
Materials processing in space program tasks
[NASA-TM-78294] N80-31418
Process development: Tungsten hemispheres
[AD-A086972] N80-31491
Activities in the field of communications in Italy, 1978 N80-31711
Telecommunication: Economic studies. Citations from the NTIS data base
[PB80-811136] N80-31728
A research activities management system
[AD-A086576] N80-32271
RESERVOIRS
Simulation of reservoir and lake sedimentation
[PB80-182801] N80-31867
RESIDUES
University of Washington electrostatic scrubber tests: Combined particulate and SO2 control
[PB80-182603] N80-31985
RESIN BONDING
LARC-13 adhesive development
[NASA-CR-159317] N80-31479
RESIN MATRIX COMPOSITES
Cost analysis of composite fan blade manufacturing processes
[NASA-CR-159876] N80-31398
RESISTANCE HEATING
Quantitative simulation of a magnetospheric substorm. 2: Comparison with observations
[NASA-CR-163548] N80-32008
RESOLUTION
Adaptation of a Kratky camera to use with a one dimensional position sensitive detector
[AD-A087523] N80-31780
RESONANCE
Samos 2 (1961 alpha 1): Orbit determination and analysis at 31:2 response
[RAE-TR-80022] N80-31427
RESONANT VIBRATION
Rotor-bearing dynamics technology design guide. Part 1: Flexible rotor dynamics
[AD-A087806] N80-31802
The influence of wall resonances on the levitation of objects in a single-axis acoustic processing chamber
[NASA-TM-78299] N80-32187
RESONATORS
Effect of grazing flow on the nonlinear acoustic behavior of helmholtz resonators N80-31619
RESOURCES
The global 2000 report to the president. Entering the twenty-first century, volume 1 N80-32295
RESPIRATION
Changes in gas exchange, tissue respiration and glycolysis in rats during hypokinesia
[NASA-TM-76149] N80-32055
RESPIRATORY PHYSIOLOGY
Effects of aerosols, oxides of nitrogen, and oxidants on human health
[PB80-184583] N80-32088
RETRIEVAL
Large space systems technology program N80-31451
RHEOLOGY
Melt rheology of block copolymers in relation to melt structure
[AD-A087484] N80-31561
RIBBONS
Means for growing ribbon crystals without subjecting the crystals to thermal shock-induced strains
[NASA-CASE-NPO-14298-1] N80-32244
Method of growing a ribbon crystal particularly suited for facilitating automated control of ribbon width
[NASA-CASE-NPO-14295-1] N80-32245
RIDING QUALITY
Physiological reactions of a passenger to transportation conditions
[NASA-TM-76350] N80-32077
RIGID STRUCTURES
Further experimental studies on vibrations and buckling of eccentrically loaded stiffened cylindrical shells
[TAE-331] N80-31818
RING CURRENTS
Quantitative simulation of a magnetospheric substorm. 2: Comparison with observations
[NASA-CR-163548] N80-32008
ROCK INTRUSIONS
A detailed magnetic survey of the Saint Lawrence River: Oak Point to Lake Ontario, New York
[PB80-191471] N80-32021
ROCKET ENGINE DESIGN
Testing of a unique ignition system for large solid-propellant rocket motors N80-31599
ROCKET ENGINES
Low-thrust chemical rocket engine study N80-31467
Low-thrust chemical propulsion N80-31468
Solar rocket system concept analysis N80-31470
Use of flash X-ray as a diagnostic tool in the dynamic testing of propellants and rocket motors N80-31567
Thrusting characteristics of propulsors
[AD-A087281] N80-31800
ROCKET NOZZLES
Theoretical determination of nozzle admittances using a finite element method N80-31600
ROCKET PROPELLANTS
Low-thrust chemical orbit to orbit propulsion system propellant management study N80-31469
Design and evaluation of high performance rocket engine injectors for use with hydrocarbon fuels N80-31621
ROCKET SOUNDING
NSSDC and WDC-A-R/S document availability and distribution services
[NASA-TM-81120] N80-32273
ROCKS
Preliminary one-dimensional thermal analysis of waste emplacement in tuffs
[SAND-79-1265] N80-32014
ROSS ICE SHELF
Initial report on geological materials collected at RISP Site J9
[PB80-188253] N80-32018
ROTARY WINGS
Ranges and critical values of advance ratio for blade/vortex intersection patterns of a helicopter rotor
[NPL-MP-79030-U] N80-31360
Significance of a rotor blade failure for fleet operation, inspection, maintenance, design and certification
[NLR-MP-79021-U] N80-31392
ROTATING BODIES
High resolution digital radar imaging of rotating objects
[AD-A087510] N80-31704
ROTATING MATTER
Numerical study of rotating interstellar clouds: Equilibrium and collapse
[UCRL-52946] N80-32308
ROTATION
Composite rotor blades for large wind energy installations
[NASA-TM-75822] N80-31881
ROTOR AERODYNAMICS
Comparison of calculated and measured blade loads on a full-scale tilting proprotor in a wind tunnel
[NASA-TM-81228] N80-31386
The Shock and Vibration Digest, volume 12, no. 7
[AD-A087855] N80-31662
Stability problems of rotor systems N80-31663
Rotor-bearing dynamics technology design guide. Part 1: Flexible rotor dynamics
[AD-A087806] N80-31802
ROTOR BLADES (TURBOMACHINERY)
Bifilar analysis study, volume 1
[NASA-CR-159227] N80-31382
Bifilar analysis users manual, volume 2
[NASA-CR-159228-VOL-2] N80-31383
Comparison of calculated and measured blade loads on a full-scale tilting proprotor in a wind tunnel
[NASA-TM-81228] N80-31386
Large wind turbine generator performance assessment
[EPRI-AP-1317] N80-31960
ROTORS
Bifilar analysis study, volume 1
[NASA-CR-159227] N80-31382
Bifilar analysis users manual, volume 2
[NASA-CR-159228-VOL-2] N80-31383
Effects of rotor parameter variations on handling qualities of unaugmented helicopters in simulated terrain flight
[NASA-TM-81190] N80-31407
RUNNING
Physical exercises on a bicycle-ergometer and running track to prevent hypodynamia in workers of intellectual labor
[NASA-TM-76306] N80-32067
RUNWAY CONDITIONS
Have Bounce N80-31311

S

SAFEGUARD SYSTEM
DYMAC communications system
[LA-8182-M] N80-31707
SAFETY FACTORS
Criticality safety considerations in the geologic disposal of spent nuclear fuel assemblies
[PNL-3268] N80-32200
SAFETY MANAGEMENT
DYMAC communications system
[LA-8182-M] N80-31707
Assessment of operational automated guideway systems-AIRTRANS, phase 2
[PB80-182538] N80-32302
SALT SPRAY TESTS
Environmental testing of coatings for gas turbines
[NLR-MP-79028-U] N80-31404
SAMOS
Samos 2 (1961 alpha 1): Orbit determination and analysis at 31:2 response
[RAE-TR-80022] N80-31427
SAMPLING
A Bayesian procedure to compare and choose among logistic regression models N80-32167
SANDS
Undisturbed sampling and cyclic load testing of sands
[AD-A087298] N80-31669
SANDWICH STRUCTURES
Combustion of non-aluminized binders in tapered sandwiches N80-31590
SATELLITE CONTROL
Data system for the Infra-Red Astronomical Satellite (IRAS) N80-32134

SATELLITE DRAG
CAD: A code for the calculation of atmospheric density --- atmospheric drag effects on Earth orbiting satellites
[AD-A087447] N80-32005
SATELLITE NAVIGATION SYSTEMS
Space shuttle navigation analysis. Volume 1: GPS aided navigation
[NASA-CR-160765] N80-31440
SATELLITE NETWORKS
Video distribution system cost model
[NASA-CR-160020] N80-31685
SATELLITE OBSERVATION
Earth resources: A continuing bibliography (issue 26)
[NASA-SP-7041(26)] N80-31855
Comparative experimental study on the use of original and compressed multispectral LANDSAT data for applied research
[DFVLR-FB-80-03] N80-31865
SATELLITE ORBITS
Odd zonal harmonics in the geopotential from analysis of 28 satellite orbits
[RAE-TR-80023] N80-32015
SATELLITE SOLAR ENERGY CONVERSION
Workshop on Satellite Power Systems (SPS) Effects on Optical and Radio Astronomy
[CONF-7905143] N80-31435
SATELLITE SOLAR POWER STATIONS
Workshop on Satellite Power Systems (SPS) Effects on Optical and Radio Astronomy
[CONF-7905143] N80-31435
Satellite power systems (SPS) concept definition study. Volume 2, part 1: System engineering
[NASA-CR-3318] N80-31890
Methodology for the comparative assessment of the Satellite Power System (SPS) and alternative technologies
[NASA-CR-163049] N80-31951
SATELLITE SOUNDING
NSSDC and WDC-A-R/S document availability and distribution services
[NASA-TM-81120] N80-32273
SATELLITE TRANSMISSION
A feasibility study of a satellite frequency modulation broadcasting system. Volume 3: Complementary study on the attenuation in the shadow zones, multiple paths, and circular polarization reception antennas
[ESA-CR(P)-1313-VOL-3] N80-31726
SATELLITE-BORNE PHOTOGRAPHY
Raduga experiment: Multizonal photographing the Earth from the Soyuz-22 spacecraft
[NASA-TM-76234] N80-31857
Users Guide for the analysis and interpretation of satellite imagery on the High Plains summer cloud and mesoscale systems
[PB80-175987] N80-32045
SATELLITE-BORNE RADAR
Seasat SAR Coastal Ocean Wave Analysis. A wave refraction and diffraction study
[PB80-189384] N80-32052
SCALE EFFECT
Model scale effects on a 16-309 flapped hydrofoil section
[AD-A087343] N80-31356
An investigation of scale effects on the transonic flow over swept wings. Part 1: Measurements on a model of a transport-aircraft configuration
[ARC-R/M-3842-PT-1] N80-31364
SCATHA SATELLITE
The investigation of the magnetospheric dynamics in conjunction with the SCATHA satellite observations
[AD-A087433] N80-32006
SCATTERING
Quasilinear scattering from waves driven by beam-plasma instabilities
[AD-A087208] N80-32002
SCATTERING CROSS SECTIONS
Atomic scale resolution with correlation holography
[DOE/ER-70004/260] N80-32195
SCHAUDER FIXPOINT THEOREM
Quantitative synthesis of uncertain multiple input-output feedback system
[AD-A087014] N80-32149
SCHEDULES
Some examples of procedures used in UK for acceptance testing of aircraft produced by the aircraft industry under government contract N80-31332
SCHEDULING
Programs for distributed computing: The calendar application
[AD-A087357] N80-32111
SCHROEDINGER EQUATION
A study of nonlinear waves described by the cubic Schrodinger equation --- cnoidal waves N80-32177
SCIENTISTS
The nature of science: A case study of electromagnetic theory from Oersted to Hertz
[AD-A087200] N80-32182
SCINTILLATION
Reduction in swing of a sonar body winched from the sea by a helicopter
[ARL/AERO-NOTE-395] N80-31668
Nonlinear evolution of diffuse auroral F region ionospheric irregularities
[AD-A086998] N80-32003
SCRUBBERS
University of Washington electrostatic scrubber tests: Combined particulate and SO2 control
[PB80-182603] N80-31985
SEA ROUGHNESS
Use of physical culture to increase resistance of sailors to motion sickness
[NASA-TM-76355] N80-32079
SEALERS
Effect of oxidizing fuels on aircraft fuel system elastomers and sealants
[AD-A087267] N80-31554
SEALS (STOPPERS)
Space transportation system disconnect --- replenishing fluids during orbital servicing
[NASA-CR-161565] N80-31442
Simulation and visualization of face seal motion stability by means of computer generated movies
[NASA-TM-81581] N80-31797
SEAPLANES
Remotely piloted seaplane for antisubmarine warfare
[AD-A086932] N80-31388
SEARCH RADAR
Column network study for a planar array used with an unattended radar
[AD-A087809] N80-31698
SEASAT PROGRAM
Seasat SAR Coastal Ocean Wave Analysis. A wave refraction and diffraction study
[PB80-189384] N80-32052
SECURITY
The management of documents having a restricted character N80-32291
SEDIMENT TRANSPORT
Simulation of reservoir and lake sedimentation
[PB80-182801] N80-31867
SEDIMENTS
Simulation of reservoir and lake sedimentation
[PB80-182801] N80-31867
SEISMIC ENERGY
Critical excitations for linear and nonlinear structural systems N80-31816
SEISMIC WAVES
Seismic response of light attachments to buildings
[PB80-1185028] N80-31676
SEISMOLOGY
Seismic stability of block structures N80-31665
SELECTION
Evaluating and selecting the preferred air breathing weapon system N80-31349
SELECTIVE FADING
Assessment of frequency selective fading on DCS transmission system performance.
[AD-A087794] N80-31695
Proceedings of Seminar on Frequency Selective Fading and its Effect on Digital LOS Radio
[AD-A087793] N80-31696
SELENIDES
Photoelectrochemical solar cells based on d-band electrochemistry at transition metal diselenides
[IS-4724] N80-31952
SELENIUM
Investigation of electrical noise in selenium-immersed thermistor bolometers
[NASA-TM-82001] N80-31778
SELENIUM COMPOUNDS
Selenium immersed thermistor bolometer study
[NASA-CR-160013] N80-31776
SELENOLOGY
Mineralogic and petrologic studies of lunar samples and meteorites
[NASA-CR-163498] N80-32309
SEMICONDUCTING FILMS
Semiconducting and metallic covalent polymers: (CH)x and its derivatives
[AD-A086941] N80-31555
SEMICONDUCTOR DEVICES
Gunn effect devices. Citations from the Engineering Index data base
[PB80-812050] N80-32263
Gunn effect devices. Citations from the Engineering Index data base
[PB80-812068] N80-32264
Amorphous semiconductors. A bibliography with abstracts
[PB80-811342] N80-32266
SEMICONDUCTOR JUNCTIONS
High quality submicron niobium tunnel junctions with reactive ion beam oxidation
[AD-A087449] N80-32250
SEMICONDUCTORS (MATERIALS)
Organic metals and semiconductors: The chemistry of polyacetylene (CH)x, and its derivatives
[AD-A087054] N80-31529
Infrared absorption spectrum of free carrier in polar semiconductors
[DOE/ER-10444/1] N80-31739
Organic metals and semiconductors: The chemistry of polyacetylene, CH(x), and its derivatives
[AD-A087102] N80-32252
Organic metals and semiconductors: Polyacetylene (CH)x and its derivatives
[AD-A087024] N80-32254
The NBS semiconductor technology program and VLSI (Very Large Scale Integration)
[PB80-185531] N80-32269
SENSITIVITY
CARS concentration sensitivity with and without nonresonant background suppression
[AD-A087557] N80-31497
SEPARATED FLOW
Sites for wind-power installations: Wind characteristics over ridges, part 2
[RLO-2438-78/2] N80-31901
SEPARATION
Store separation testing techniques at the Arnold Engineering Development Center. Volume 2: Description of captive trajectory store separation testing in the aerodynamic wind tunnel 4T
[AD-A087561] N80-31357
SERVICE LIFE
Significance of a rotor blade failure for fleet operation, inspection, maintenance, design and certification
[NLR-MP-79021-U] N80-31392
Reassessment of service life by comparative specimen tests --- fighter aircraft strucutures
[NLR-MP-79006-U] N80-31807
SERVOMECHANISMS
The logic of the electric flight control system experiment on the Concorde --- achieving low speed longitudinal stability by active control N80-32137
SET THEORY
Canonical forms and unification
[AD-A087640] N80-32119
SHADOWGRAPH PHOTOGRAPHY
Flow visualization study of the HiMAT RPRV
[NASA-CR-163094] N80-31381
SHAFTS (MACHINE ELEMENTS)
Progress report 3 of cooperative program for design, fabrication, and testing of high modulus composite helicopter shafting
[NASA-TM-82272] N80-31387
Thrusting characteristics of propulsors
[AD-A087281] N80-31800
SHALE OIL
Combustion studies of coal-in-oil droplets
[DOE/ET-10660/1] N80-31499
SHALES
Inorganic geochemistry of Devonian shales in southern West Virginia: Geographic and stratigraphic trends
[DOE-METC/5199/7] N80-31854
SHALLOW WATER
Simulation of reservoir and lake sedimentation
[PB80-182801] N80-31867

SHEAR FLOW
Investigations of eddy coherence in jet flows
[NASA-CR-163525] N80-31759
SHEAR LAYERS
Experimental study of chemically reacting turbulent free shear layers
[FE-2446-8] N80-31766
SHEAR STRENGTH
LARC-13 adhesive development
[NASA-CR-159317] N80-31479
SHEAR STRESS
Nonlinear viscoelastic behavior of a composite material using a finite element micromechanical analysis
[AD-A087367] N80-31483
SHELLS (STRUCTURAL FORMS)
Glass shell manufacturing in space
[NASA-CR-161556] N80-31422
Thermoelasticity of circular cylindrical shells laminated of bimodulus composite materials
[AD-A087429] N80-31836
SHIELDING
A methodology for modeling confined, temperature sensitive cushioning systems
[AD-A087351] N80-31799
SHIPS
Helicopter-ship qualification testing
[NLR-MP-79027-U] N80-31391
US Coast Guard lightweight fire-fighting module
[NASA-CR-161552] N80-31667
Radar EMI at sea
[AD-A087213] N80-31692
SHOCK LOADS
Initiation of granular explosives by ramp waves
N80-31579
Transition to detonation of crosslinked double-base propellant in large scale NOL card gap tests
N80-31580
SHOCK TUBES
Shock tube ignition of nitrocellulose and nitramines
N80-31585
SHOCK WAVE PROPAGATION
Burning to detonation transition in porous beds of a high energy propellant N80-31570
SHOCK WAVES
Primer on SDT, XDT, pickup, and sympathetic detonation N80-31566
A scaling relationship for impact initiated detonations N80-31569
Deflagration to detonation transition behavior of aluminized HMX N80-31571
Effect of propellant crack burning on high energy propellant safety N80-31573
Raman-induced Kerr effect studies
[AD-A087410] N80-32213
SHORT HAUL AIRCRAFT
Reverse thrust performance of the QCSEE variable pitch turbofan engine
[NASA-TM-81558] N80-31399
SHORT TAKEOFF AIRCRAFT
Design of an adaptive control system for the EBF/STOL aircraft with provisions for eigenvalue and eigenvector selection N80-31405
V/STOL equivalent systems analysis
[AD-A087283] N80-31414
Development of a nozzle to improve the turning of supersonic Coanda jets
[AD-A087709] N80-31765
SIDELOBES
Microwave transversal equalizer
[AD-A087603] N80-31699
SIGNAL ANALYSIS
Robust and quantized Wiener filters for p-point spectral classes
[AD-A086409] N80-32156
Robust Wiener filters for correlated signals and noise
[AD-A086410] N80-32157
Criteria for data elaboration of gamma spectra of ambient samples
[CISE-1536] N80-32197
SIGNAL DETECTION
Detection of weak signals in non-Gaussian noise
N80-31679
Application of the chirped Z-transform to processing frequency hopping spread spectrum signals
N80-31680
SIGNAL DETECTORS
Detection of weak signals in non-Gaussian noise
N80-31679
SIGNAL DISTORTION
Assessment of frequency selective fading on DCS transmission system performance.
[AD-A087794] N80-31695
Microwave transversal equalizer
[AD-A087603] N80-31699
SIGNAL MEASUREMENT
Quantization noise spectra calculation
[FUB-5-1979] N80-31714
SIGNAL MIXING
Theory of Josephson junction mixers
[AD-A087511] N80-32259
SIGNAL PROCESSING
Application of the chirped Z-transform to processing frequency hopping spread spectrum signals
N80-31680
Dynamic behavior of shortest path routing algorithms for communication networks
[AD-A087706] N80-31697
Robust and quantized Wiener filters for p-point spectral classes
[AD-A086409] N80-32156
Robust Wiener filters for correlated signals and noise
[AD-A086410] N80-32157
SIGNAL TRANSMISSION
The role of electron microscopy by transmission in the study of radiation damage in metals
[CISE-1541] N80-31546
Dynamic behavior of shortest path routing algorithms for communication networks
[AD-A087706] N80-31697
Influence of propagation characteristics and repeaters on the performance of a multiple link teletext system
[FUB-24-1979] N80-31723
SIGNS AND SYMPTOMS
Certain features of the cochleovestibular syndrome in the residual stage of traumatic brain disease
[NASA-TM-76337] N80-32073
SILICON
Inorganic geochemistry of Devonian shales in southern West Virginia: Geographic and stratigraphic trends
[DOE-METC/5199/7] N80-31854
Silicon solar cell fabrication technology
[NASA-CR-163394] N80-31871
Development of a model and computer code to describe solar grade silicon production processes
[NASA-CR-163515] N80-31873
Silicon halide-alkali metal flames as a source of solar grade silicon
[NASA-CR-163514] N80-31874
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113/40-3] N80-31905
Physical models of thin film polycrystalline solar cells based on measured grain-boundary and electronic parameter properties
[DSE-4042-T37] N80-31908
Amorphous silicon thin film heterojunction solar cells
[DOE/ET-20460/4] N80-31909
Electronic properties of silicon grain boundaries
[SAND-79-2350C] N80-32260
Fundamental studies of grain boundary passivation in polycrystalline silicon with application to improved photovoltaic devices
[SAND-80-0879] N80-32262
Semiconductor measurement technology: Technical impediments to a more effective utilization of neutron transmutation doped silicon for high-power device fabrication
[PB80-183874] N80-32268
SILICON ALLOYS
Production of aluminum-silicon alloy and and ferrosilicon and commercial purity aluminum by the direct reduction process
[CONS-5089-8] N80-31541
SILICON CARBIDES
The effect of mechanical working on SiC whisker-reinforced aluminum alloys
[AD-A087565] N80-31485
The 3500 hour durability testing of commercial ceramic materials
[NASA-CR-159785] N80-31552
SILICON COMPOUNDS
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113/40-3] N80-31905
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113-040-T6] N80-31953
Advanced silicon material development for LADIR
[AD-A087286] N80-32255
SILICON NITRIDES
The 3500 hour durability testing of commercial ceramic materials
[NASA-CR-159785] N80-31552
SILICON TETRACHLORIDE
Development of a model and computer code to describe solar grade silicon production processes
[NASA-CR-163515] N80-31873
SILOXANES
Analytical testing and characterization of three polysiloxane gums
[UCRL-84351] N80-31563
Synthesis of block copolymers of methyl siloxane, phenyl siloxane, vinyl siloxane, etcetera
[UCRL-15159] N80-31564
SILVER ALLOYS
Aluminum-silver alloy films for solar reflectors
[REP-3021] N80-31919
SIMULATION
Wessex modernization: A preliminary simulation study
[AD-A087799] N80-31410
Regression-adjusted estimates for regenerative simulations, with graphics
[AD-A087369] N80-32154
SINGLE CRYSTALS
Silicon solar cell fabrication technology
[NASA-CR-163394] N80-31871
SINTERING
A study on mechanical properties of heavy alloys --- of tungsten
[DRIC-T-5966] N80-31545
Investigation of electrical noise in selenium-immersed thermistor bolometers
[NASA-TM-82001] N80-31778
SINUSES
Review of book-Ultrasound in Otorhinolaryngology
[NASA-TM-76349] N80-32076
SITE SELECTION
Sites for wind-power installations: Physical modeling of the influence of hills, ridges and complex terrain on wind speed and turbulence. Part 1: Executive summary
[RLO-2438-78/1] N80-31900
Sites for wind-power installations: Wind characteristics over ridges, part 2
[RLO-2438-78/2] N80-31901
Summary of guidelines for siting wind turbine generators relative to small-scale, two-dimensional terrain features
[RLO-2443-77/1] N80-31930
Preliminary one-dimensional thermal analysis of waste emplacement in tuffs
[SAND-79-1265] N80-32014
SITES
Environmental data for sites in the National Solar Data Network
[SOLAR/0010-80/02] N80-31975
SIZE SEPARATION
Possible methods for removing small airborne particles from the flow in the 5 meter pressurized low-speed wind tunnel
[RAE-TM-AERO-1826] N80-31416
SLAGS
Design, engineering and evaluation of refractory liners for slagging gasifiers
[IITRI-M-6043-5] N80-31640
MHD electrode development
[FE-15529-2] N80-32230
SLIPSTREAMS
Thrusting characteristics of propulsors
[AD-A087281] N80-31800
SLOT ANTENNAS
A theoretical study of dielectric-filled edge-slot antennas
[AD-A087482] N80-31702
SMOG
The increased attachment due to ionization induced smog in EMP environments
[AD-A087850] N80-31972
SMOKE
Transmittance measurements at DIRT-II
[AD-A087003] N80-32212

SMOKE TRAILS
Effective transport velocity and plume elongation in nocturnal valley wind fields
[LA-UR-80-791] N80-31978

SNOW
Anomalous snowfall caused by natural-draft cooling towers
[RAND/N-1479-DOE] N80-32024

SODIUM SULFUR BATTERIES
Development of advanced batteries for utility application
[EPRI-EM-1341] N80-31961

SOIL MECHANICS
Undisturbed sampling and cyclic load testing of sands
[AD-A087298] N80-31669
Finite layer analysis of consolidation, part 2
[PB80-182587] N80-31677

SOIL MOISTURE
Evaluating soil moisture and textural relationships using regression analysis
[AD-A087371] N80-31852

SOLAR ACTIVITY
Solar-Terrestrial Predictions Proceedings. Volume 3: Solar activity predictions
[PB80-195001] N80-32016

SOLAR ARRAYS
Photovoltaic module electrical termination design requirement study
[JPL-955367-80/1] N80-31877
Gallium arsenide (GaAs) solar cell modeling studies
[NASA-CR-163538] N80-31884
Interaction of high voltage surfaces with the space plasma
[NASA-CR-165131] N80-32223

SOLAR ATMOSPHERE
Dynamical phenomena in sunspots
[AD-A086010] N80-32318

SOLAR ATRIUMS
Demonstration of an advanced solar garden with a water ceiling
[DOE/R5-10122/1] N80-31931

SOLAR CELLS
Silicon solar cell fabrication technology
[NASA-CR-163394] N80-31871
Pilot line report: Development of a high efficiency thin silicon solar cell
[NASA-CR-163522] N80-31876
Gallium arsenide (GaAs) solar cell modeling studies
[NASA-CR-163538] N80-31884
Satellite power systems (SPS) concept definition study. Volume 2, part 1: System engineering
[NASA-CR-3318] N80-31890
Advanced photovoltaic concentrator cells
[DSE-4042-T40] N80-31904
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113/40-3] N80-31905
Development of high efficiency cascade solar cells
[DSE-4042-T38] N80-31906
Controlled cadmium telluride thin films for solar cell applications: Emerging materials systems for solar cell applications
[DOE/ET-23013/T4] N80-31907
Physical models of thin film polycrystalline solar cells based on measured grain-boundary and electronic parameter properties
[DSE-4042-T37] N80-31908
Amorphous silicon thin film heterojunction solar cells
[DOE/ET-20460/4] N80-31909
Emerging materials systems for solar cell applications, CU/sub 2-x/Se
[DOE/ET-23005/T4] N80-31910
Photoelectrochemical solar cells based on d-band electrochemistry at transition metal diselenides
[IS-4724] N80-31952
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113-040-T6] N80-31953
Gallium arsenide solar cells for very high concentration systems: Recent results, problems and expectations
[CISE-1518] N80-31962

SOLAR COLLECTORS
Solar energy system economic evaluation for Elcam-Tempe, Tempe, Arizona and Elcam-San Diego, San Diego, California
[NASA-CR-161492] N80-31872
Solar energy system performance evaluation: Seasonal report for Colt Yosemite, Yosemite National Park, California
[NASA-CR-161539] N80-31883
Design, construction, and operation of a 150 kW solar-powered irrigation facility, phase 2
[ALO-4159-1] N80-31903
Analytical prediction of liquid photovoltaic/thermal flat-plate collector performance
[COO-4094-66] N80-31913
Absorption refrigeration machine driven by solar heat
[EUR-6748-EN] N80-31914
Effect of circumsolar radiation on performance of focusing collectors
[SERI/TR-34-093] N80-31916
Optical analysis of point focus parabolic radiation concentrators
[SERI/TR-631-336] N80-31917
Dual curvature acoustically damped concentrating collector
[DOE/CS-34196/T1] N80-31921
Field experience with solar concentrating collector control systems
[SAND-79-2044C] N80-31924
Analytical modeling of line focus solar collectors
[SERI/TP-333-591] N80-31926
Evaluation of control strategies for solar collector loops
[LBL-10716] N80-31932
Residential solar heating and cooling using evacuated tube solar collectors: CSU Solar House 3, executive summary
[COO-2858-24] N80-31941
Terrestrial photovoltaic power systems with sunlight concentration
[SAND-80-7008] N80-31942
Evaluation of line focus solar central power systems. Volume 2: Systems evaluation
[ATR-80(7773-03)-1-VOL-2] N80-31944
Design of a cost effective solar powered water pump
[PB80-182819] N80-31967
Environmental data for sites in the National Solar Data Network
[SOLAR/0010-80/02] N80-31975

SOLAR COOLING
Solar thermal heating and cooling. A bibliography with abstracts
[NASA-CR-163535] N80-31963

SOLAR ECLIPSES
Solar eclipse (1979). Part 1: Atmospheric sciences laboratory field program summary
[AD-A087318] N80-32317

SOLAR ENERGY
Hydrogen production from the solar based LASL cadmium cycle
[LA-UR-80-1400] N80-31643
Hydrogen production by the GA sulfur-iodine process
[GA-A-15777-REV] N80-31651
Solar energy system economic evaluation for Elcam-Tempe, Tempe, Arizona and Elcam-San Diego, San Diego, California
[NASA-CR-161492] N80-31872
Solar energy system demonstration project at Wilmington Swim School, New Castle, Delaware
[NASA-CR-161538] N80-31878
Solar energy system performance evaluation. Seasonal report for Wormser, Columbia, South Carolina
[NASA-CR-161546] N80-31880
Basic research needs and priorities in solar energy. Volume 1: Executive summary. Technology crosscuts for DOE
[SERI/TR-351-358-VOL-1] N80-31898
Basic research needs and priorities in solar energy. Volume 2: Technology crosscuts for DOE
[SERI/TR-351-358-VOL-2] N80-31899
Investigation of learning and experience curves
[SERI/TR-353-459] N80-31911
Residential solar heating and cooling using evacuated tube solar collectors: CSU Solar House 3, executive summary
[COO-2858-24] N80-31941
Solar thermal components. A bibliography with abstracts
[NASA-CR-163448] N80-31964
Patent profiles: Solar energy
[PB80-190010] N80-31966
Design of a cost effective solar powered water pump
[PB80-182819] N80-31967

SOLAR ENERGY ABSORBERS
Metallurgical analysis and high temperautre degradation of the black chrome selective absorber
[LBL-10293] N80-31538
Passive solar heating of buildings with attached greenhouse
[DOE/CS-30242/2] N80-31955

SOLAR ENERGY CONVERSION
Three computer codes to read, plot and tabulate operational test-site recorded solar data
[NASA-TM-78293] N80-31879
A quantitative evaluation of closed-cycle ocean thermal energy conversion (OTEC) technology in central station applications
[R-2595-DOE] N80-31885
A review of the methods for passive solar systems analysis
[AD-A087509] N80-31895
Thermal energy storage for solar thermal applications program
[SAND-80-8218] N80-31918
Solar project description for Sir Galahad Company, single family residence, Virginia Beach, Virginia
[SOLAR/1028-79/50] N80-31920
Analytical modeling of line focus solar collectors
[SERI/TP-333-591] N80-31926
Solar energy conversion through biophotolysis
[SAN-0034-239-1-T2] N80-31927
Analytical evaluation of a solar thermophotovoltaic converter
[SAND-78-1962] N80-31954

SOLAR FLARES
Solar-Terrestrial Predictions Proceedings. Volume 3: Solar activity predictions
[PB80-195001] N80-32016
Spectrum synthesis of EUV solar flare line profiles
[NASA-CR-161551] N80-32315

SOLAR GENERATORS
Gasification of coal with solar energy
[UCRL-84458] N80-31652
Small solar electric system components demonstration --- thermal storage modules for Brayton systems
[NASA-CR-163513] N80-31875
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 1: Conceptual design, sections 1 through 4
[DOE/ET-20567/1-2-BK-1] N80-31896
Solar Central Receiver Hybrid Power Systems sodium-cooled receiver concept. Volume 2, book 2: Conceptual design, sections 5 and 6
[DOE/ET-20567/1-2-BK-2] N80-31897
Design, construction, and operation of a 150 kW solar-powered irrigation facility, phase 2
[ALO-4159-1] N80-31903
Evaluation of line focus solar central power systems. Volume 1: Executive summary
[ATR-80(7773-03)-1-VOL-1] N80-31943
Solar central receiver hybrid power systems sodium-cooled receiver concept. Volume 1: Executive summary
[DOE/ET/20567-1/1] N80-31948
Residential photovoltaic systems: A review and comparative evaluation of four independent studies of potential concepts
[SAND-80-7010] N80-31949

SOLAR HEATING
Solar domestic hot water system, a comparative study and storage tank investigation N80-31868
Solar energy system demonstration project at Wilmington Swim School, New Castle, Delaware
[NASA-CR-161538] N80-31878
Solar energy system performance evaluation. Seasonal report for Wormser, Columbia, South Carolina
[NASA-CR-161546] N80-31880
Solar energy system performance evaluation: Seasonal report for Colt Yosemite, Yosemite National Park, California
[NASA-CR-161539] N80-31883

Solar energy applications for dwelling; modelling and simulation part
[EUR-6681/I-EN] N80-31894
A review of the methods for passive solar systems analysis
[AD-A087509] N80-31895
Absorption refrigeration machine driven by solar heat
[EUR-6748-EN] N80-31914
Solar project description for Sir Galahad Company, single family residence, Virginia Beach, Virginia
[SOLAR/1028-79/50] N80-31920
Federal demonstrations of solar heating and cooling on commercial buildings have not been very effective
[EMD-80-41] N80-31929
Evaluation of control strategies for solar collector loops
[LBL-10716] N80-31932
Solar assisted heat pump studies: Heat pump hardware and experiments, simulations, Earth coupling contracts and supporting contracts
[BNL-27668] N80-31933
Residential solar heating and cooling using evacuated tube solar collectors: CSU Solar House 3, executive summary
[COO-2858-24] N80-31941
Passive solar heating of buildings with attached greenhouse
[DOE/CS-30242/2] N80-31955
Passive solar space heating
[LA-UR-80-1076] N80-31959
Solar thermal heating and cooling. A bibliography with abstracts
[NASA-CR-163535] N80-31963

SOLAR HOUSES
Solar project description for Sir Galahad Company, single family residence, Virginia Beach, Virginia
[SOLAR/1028-79/50] N80-31920

SOLAR MAGNETIC FIELD
Solar magnetic field studies (photon counter) --- speckle imaging
[AD-A082242] N80-32313
Longitudinal and transverse magnetic field program procedure and detailed specification for Sigma 5
[NASA-TM-78292] N80-32314

SOLAR OBSERVATORIES
Pinhole X-ray/coronagraph optical systems concept definition study
[NASA-CR-161567] N80-32208

SOLAR POWER SATELLITES
Electric propulsion for SPS N80-31466
Satellite Power Systems (SPS) concept definition study. Volume 4: Transportation analysis
[NASA-CR-3321] N80-31891

SOLAR PROBES
The Helios solar probes science summaries
[NASA-TM-82005] N80-32316

SOLAR PROPULSION
Solar rocket system concept analysis N80-31470

SOLAR RADIATION
Gallium arsenide solar cells for very high concentration systems: Recent results, problems and expectations
[CISE-1518] N80-31962

SOLAR REFLECTORS
SCRAM: A fast computational model for the optical performance of point focus solar central receiver systems
[SAND-80-0433] N80-31925
Demonstration of an advanced solar garden with a water ceiling
[DOE/R5-10122/1] N80-31931
Evaluation of line focus solar central power systems. Volume 2: Systems evaluation
[ATR-80(7773-03)-1-VOL-2] N80-31944

SOLDERED JOINTS
Gold plated lead-clinched lead solder joint study
[AD-A087352] N80-31733

SOLENOID VALVES
Bistable solenoid valve, volume 1
[MU/LR-97.091/79-VOL-1] N80-31803

SOLID PROPELLANT COMBUSTION
A model for confined combustion of compressible, linear viscoelastic solid propellant N80-31574
Assessment of chamber pressure oscillations in the shuttle SRB N80-31601
On response functions for composite solid propellant N80-31603
Experimental determination of solid propellant admittances by the impedance tube method N80-31604

SOLID PROPELLANT IGNITION
Deflagration to detonation transition behavior of aluminized HMX N80-31571

SOLID PROPELLANT ROCKET ENGINES
Cook-off in fuel fire N80-31577
Testing of a unique ignition system for large solid-propellant rocket motors N80-31599
Assessment of chamber pressure oscillations in the shuttle SRB N80-31601
Preliminary experiments on acoustic oscillations driven by periodic shedding N80-31602
Studies of motor instability problems N80-31608
A primitive variable computer model for combustion within solid fuel ramjets N80-31609

SOLID PROPELLANTS
Ignition of solid propellants under transient flow conditions N80-31584
Direct measurements of acoustic admittance using laser Doppler velocimetry N80-31605
Investigation of a putty propellant turbine power system N80-31622

SOLID ROCKET PROPELLANTS
Effect of propellant crack burning on high energy propellant safety N80-31573
Investigation of three velocity coupled T-burner design N80-31607

SOLID-SOLID INTERFACES
Study of fiber-matrix interface structure and interfacial diffusion phenomena in Cotac-type solidification composites. Effect on the thermal stability of the fibers
[ONERA-NT-1979-11] N80-31489

SOLIDIFICATION
Materials processing in space, 1980 science planning document --- crystal growth, containerless processing, solidification, bioprocessing, and ultrahigh vacuum processes
[NASA-TM-78297] N80-31419
Advanced aluminum alloys from rapidly solidified powders
[AD-A087401] N80-31534

SOLIDIFIED GASES
High pressure studies to determine the effects of volume and temperature on the lattice dynamics of molecular solids: N2, CO2, CH4
[DOE/ER-10443/1] N80-32183

SOLITARY WAVES
Electromagnetic oscillating two stream instability of plasma waves
[AD-A087732] N80-32227

SOLUBILITY
Lattice expansion as a measure of surface segregation and solubility of hydrogen in alpha-FeTiH/sub x
[BNL-27523] N80-31509

SOLUTIONS
Subharmonic solutions of a forced wave equation
[AD-A087031] N80-32181
Experimental techniques for determination of the role of diffusion and convection in crystal growth from solution
[NASA-TM-76131] N80-32247

SOLVENTS
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113/40-3] N80-31905
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113-040-T6] N80-31953

SONAR
Reduction in swing of a sonar body winched from the sea by a helicopter
[ARL/AERO-NOTE-395] N80-31668

SONDES
The Mini-Refractionsonde System (MRS) for measuring refractive index
[AD-A087845] N80-31434

SOUND PRESSURE
Towards a better understanding of temporary threshold shift of hearing
[RAE-TM-FS-319] N80-32086

SOUND PROPAGATION
A study of the transmission characteristics of suppressor nozzles
[NASA-CR-165133] N80-32186
Spectral analysis of sound propagation in stratified fluids
[AD-A087735] N80-32189

SOUND TRANSMISSION
A study of peak multiplexed signal level in the context of 2 1/2 or 3-channel surround-sound transmissions
[BBC-RD-1980/6] N80-31683
Highway noise abatement
[PB80-190622] N80-31991
Spectral analysis of sound propagation in stratified fluids
[AD-A087735] N80-32189

SOUNDING
Special Sensor H (SSH) moisture sounding
[AD-A087576] N80-32011

SOUNDING ROCKETS
Engineering services in support of sounding rockets
[AD-A087801] N80-31433
The Mini-Refractionsonde System (MRS) for measuring refractive index
[AD-A087845] N80-31434
Communication and instrumentation systems for space vehicles
[AD-A087944] N80-31448

SOYUZ SPACECRAFT
Raduga experiment: Multizonal photographing the Earth from the Soyuz-22 spacecraft
[NASA-TM-76234] N80-31857

SPACE COOLING (BUILDINGS)
A review of the methods for passive solar systems analysis
[AD-A087509] N80-31895
Solar thermal heating and cooling. A bibliography with abstracts
[NASA-CR-163535] N80-31963

SPACE ENVIRONMENT SIMULATION
Investigation of electrical noise in selenium-immersed thermistor bolometers
[NASA-TM-82001] N80-31778
Activities of the European Space Tribology Laboratory for 1979
[ESA-ESTL-44] N80-31804

SPACE ERECTABLE STRUCTURES
Effect of orbital transfer loads on large platforms N80-31460

SPACE FLIGHT STRESS
Effects of factors of prolonged space flight on conditions of tortoise skeleton
[NASA-TM-76352] N80-32060
Blood filling and flow in lungs during change in body position in space
[NASA-TM-76333] N80-32071

SPACE HEATING (BUILDINGS)
Solar energy system demonstration project at Wilmington Swim School, New Castle, Delaware
[NASA-CR-161538] N80-31878
Solar energy system performance evaluation: Seasonal report for Wormser, Columbia, South Carolina
[NASA-CR-161546] N80-31880
Solar energy system performance evaluation: Seasonal report for Colt Yosemite, Yosemite National Park, California
[NASA-CR-161539] N80-31883
Solar energy applications for dwelling; modelling and simulation part
[EUR-6681/I-EN] N80-31894
Federal demonstrations of solar heating and cooling on commercial buildings have not been very effective
[EMD-80-41] N80-31929
Solar assisted heat pump studies: Heat pump hardware and experiments, simulations, Earth coupling contracts and supporting contracts
[BNL-27668] N80-31933
Passive solar heating of buildings with attached greenhouse
[DOE/CS-30242/2] N80-31955
Passive solar space heating
[LA-UR-80-1076] N80-31959
Solar thermal heating and cooling. A bibliography with abstracts
[NASA-CR-163535] N80-31963

SPACE MANUFACTURING
Glass shell manufacturing in space
[NASA-CR-161556] N80-31422

SPACE MISSIONS
Large space systems technology program N80-31451

SPACE NAVIGATION
Space shuttle navigation analysis. Volume 2: Baseline system navigation
[NASA-CR-160766] N80-31441
SPACE OBSERVATIONS (FROM EARTH)
Where are the asteroids? The design of ASTPT and ASTID
[AD-A087422] N80-32312
SPACE PERCEPTION
Ground-referenced visual orientation with imaging displays --- psychophysiology
[AD-A081882] N80-32063
The influence of visual-spatial ability and study procedures on map learning skill
[AD-A087247] N80-32089
SPACE PLASMAS
Interaction of high voltage surfaces with the space plasma
[NASA-CR-165131] N80-32223
Data reduction and analysis for the TRW IMP-7 plasma wave experiment
[NASA-CR-160011] N80-32320
SPACE PROCESSING
Materials processing in space program tasks
[NASA-TM-78294] N80-31418
Materials processing in space, 1980 science planning document --- crystal growth, containerless processing, solidification, bioprocessing, and ultrahigh vacuum processes
[NASA-TM-78297] N80-31419
Certain problems of space biotechnology
[NASA-TM-76235] N80-31421
SPACE SHUTTLE BOOSTERS
Assessment of chamber pressure oscillations in the shuttle SRB N80-31601
SPACE SHUTTLE MAIN ENGINE
SSME turbopump bearing analytical study
[NASA-CR-161554] N80-31794
SPACE SHUTTLE ORBITERS
Space shuttle status N80-31314
Space shuttle orbiter flow visualization study --- water tunnel study of vortex flow during atmospheric entry
[NASA-CR-163092] N80-31438
STS-1 operational flight profile. Volume 4: Onorbit profile-cycle 3.1.1
[NASA-TM-82183] N80-31445
SPACE SHUTTLE PAYLOADS
The prevention of electrical breakdown and electrostatic voltage problems in the space shuttle and its payloads. Part 1: Theory and phenomena
[NASA-TM-81137] N80-31443
The prevention of electronical breakdown and electrostatic voltage problems in the space shuttle and its payloads. Part 2: Design guides and operations considerations
[NASA-TM-81138] N80-31444
SPACE SHUTTLES
TACAN operational description for the space shuttle orbital flight test program
[NASA-CR-160775] N80-31439
Space shuttle navigation analysis. Volume 1: GPS aided navigation
[NASA-CR-160765] N80-31440
Space shuttle navigation analysis. Volume 2: Baseline system navigation
[NASA-CR-160766] N80-31441
The prevention of electrical breakdown and electrostatic voltage problems in the space shuttle and its payloads. Part 1: Theory and phenomena
[NASA-TM-81137] N80-31443
The prevention of electronical breakdown and electrostatic voltage problems in the space shuttle and its payloads. Part 2: Design guides and operations considerations
[NASA-TM-81138] N80-31444
Satellite Power Systems (SPS) concept definition study. Volume 4: Transportation analysis
[NASA-CR-3321] N80-31891
Space shuttle applications. Part 1: Redundant computer operation. Part 2: Redundant computer software design and test N80-32140
SPACE TRANSPORTATION SYSTEM
TACAN operational description for the space shuttle orbital flight test program
[NASA-CR-160775] N80-31439
Space transportation system disconnect --- replenishing fluids during orbital servicing
[NASA-CR-161565] N80-31442
Large Space Systems/Low-Thrust Propulsion Technology
[NASA-CP-2144] N80-31449
DOD low-thrust mission studies N80-31455
Low-thrust vehicle concept studies N80-31457
Satellite Power Systems (SPS) concept definition study. Volume 4: Transportation analysis
[NASA-CR-3321] N80-31891
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 1: Marine turtle studies
[NASA-CR-163122-VOL-4-PT-1] N80-31969
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 2: Threatened and endangered birds and other threatened and endangered forms
[NASA-CR-163122-VOL-4-PT-2] N80-31970
SPACE TRANSPORTATION SYSTEM FLIGHTS
Space shuttle status N80-31314
SPACE TRANSPORTATION SYSTEM 1 FLIGHT
STS-1 operational flight profile. Volume 4: Onorbit profile-cycle 3.1.1
[NASA-TM-82183] N80-31445
SPACEBORNE EXPERIMENTS
Report on active and planned spacecraft and experiments
[NASA-TM-80905] N80-31420
Payload crew training scheduler (PACTS) user's manual
[NASA-TM-78284] N80-32270
NSSDC and WDC-A-R/S document availability and distribution services
[NASA-TM-81120] N80-32273
The Helios solar probes science summaries
[NASA-TM-82005] N80-32316
SPACEBORNE PHOTOGRAPHY
A description of a system of programs for mathematically processing on unified series (YeS) computers photographic images of the Earth taken from spacecraft
[NASA-TM-76208] N80-31856
SPACECRAFT COMMUNICATION
An analysis of burst communication in time division multiple access systems N80-31678
SPACECRAFT COMPONENTS
Bistable solenoid valve, volume 1
[MU/LR-97.091/79-VOL-1] N80-31803
SPACECRAFT CONFIGURATIONS
Primary propulsion/large space system interactions N80-31458
SPACECRAFT CONTROL
Controls for LSS N80-31464
SPACECRAFT DESIGN
Integrated analysis capability for large space systems N80-31463
SPACECRAFT ELECTRONIC EQUIPMENT
Voltage converter (dc/dc) used on a satellite. Applications to the ARCAD 3 and PICPAB projects
[CRPE-NT-77] N80-31740
SPACECRAFT MODELS
Processing of Meteosat attitude measurement flight data and evaluation of the performance of an adaptive filtering technique
[NLR-TR-78146-U] N80-31437
SPACECRAFT PROPULSION
Large Space Systems/Low-Thrust Propulsion Technology
[NASA-CP-2144] N80-31449
Introduction: The challenge of optimum integration of propulsion systems and large space structures N80-31450
Electric propulsion technology N80-31452
Chemical propulsion technology N80-31453
Auxiliary control of LSS N80-31459
Electric propulsion and power N80-31465
Low-thrust chemical rocket engine study N80-31467
Low-thrust chemical propulsion N80-31468
SPACECRAFT STABILITY
Controls for LSS N80-31464
SPACECRAFT STRUCTURES
Mathematical modeling of linear and non-linear aircraft structures
[AGARD-R-687] N80-31326
Optimization of the mathematical model of a structure N80-31327
Activities of the European Space Tribology Laboratory for 1979
[ESA-ESTL-44] N80-31804
SPACECRAFT TELEVISION
Communication and instrumentation systems for space vehicles
[AD-A087944] N80-31448
SPACECREWS
Development of a preprototype vapor compression distillation water recovery subsystem
[NASA-CR-160779] N80-32101
Payload crew training scheduler (PACTS) user's manual
[NASA-TM-78284] N80-32270
SPACELAB
Payload crew training scheduler (PACTS) user's manual
[NASA-TM-78284] N80-32270
SPACELAB PAYLOADS
Investigations into the electrodeposition of dispersion layers under zero gravity conditions
[ESA-TT-574] N80-31425
Voltage converter (dc/dc) used on a satellite. Applications to the ARCAD 3 and PICPAB projects
[CRPE-NT-77] N80-31740
SPARE PARTS
Capacity optimization of a reserve network used for rerouting damaged service blocks --- communication networks
[FUB-18-1979] N80-31720
SPARK GAPS
High voltage nanosecond pulse generator
[AD-A087291] N80-31784
SPARK IGNITION
Axisymmetric flow fields in motored and firing spark-ignition engines N80-31791
SPATIAL DISTRIBUTION
Repeatibility of spatial configurations defined by interaction matrices N80-32179
SPATIAL RESOLUTION
Pinhole X-ray/coronagraph optical systems concept definition study
[NASA-CR-161567] N80-32208
SPECIFIC IMPULSE
Electric propulsion technology N80-31452
Advanced concepts --- specific impulse, mass drivers, electromagnetic launchers, and the rail gun N80-31471
SPECKLE PATTERNS
Solar magnetic field studies (photon counter) --- speckle imaging
[AD-A082242] N80-32313
SPECTRA
Optical and discharge studies of novel electronic transition laser species
[AD-A087123] N80-31782
SPECTRAL SIGNATURES
Silicon solar cell fabrication technology
[NASA-CR-163394] N80-31871
SPECTROGRAPHS
Spectrum synthesis of EUV solar flare line profiles
[NASA-CR-161551] N80-32315
SPECTROMETERS
Design study for electronic system for Jupiter Orbit Probe (JOP)
[NASA-CR-160021] N80-31428
Field gamma spectrometry system with Ge(Li) detectors
[CISE-1537] N80-32198
SPECTROSCOPIC ANALYSIS
Chemical characterization and quality control for an adhesive
[AD-A087739] N80-31558
Atomic emission lines in the near ultraviolet; hydrogen through krypton, section 1
[NASA-TM-80268-SECT-1] N80-32190
Atomic emission lines in the near ultraviolet; hydrogen through krypton, section 2
[NASA-TM-80268-SECT-2] N80-32191
Evaluation of two-beam spectroscopy as a plasma diagnostic
[LBL-10913] N80-32236
SPECTRUM ANALYSIS
Spectral analysis of sound propagation in stratified fluids
[AD-A087735] N80-32189

SPEECH RECOGNITION
Voice performance measurements
[AD-A087108] N80-31666
Team training applications of voice processing technology
[AD-A085999] N80-32092
SPENT FUELS
Resin bead U and PU analysis of WAK input solutions: A statistical summary of experiment no. 1 --- spent fuels
[ORNL/TM-7362] N80-31517
Experimental study of the steady natural convection in a horizontal annulus with irregular boundaries --- convective heat transfer from spent fuel assemblies in containers
[SAND-79-2354C] N80-31767
Criticality safety considerations in the geologic disposal of spent nuclear fuel assemblies
[PNL-3268] N80-32200
Assumptions and ground rules used in nuclear waste projections and source term data
[ONWI-24] N80-32203
SPHERICAL HARMONICS
Odd zonal harmonics in the geopotential from analysis of 28 satellite orbits
[RAE-TR-80023] N80-32015
SPHERICAL SHELLS
Dynamic buckling of inelastic spherical shells
N80-31815
SPILLING
The fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska
[PB80-187305] N80-31984
SPLINE FUNCTIONS
A spline relaxation procedure for calculating axisymmetric flow fields about body/propeller combinations. 1: Frozen vorticity and potential flows
[AD-A087027] N80-31762
SPREAD SPECTRUM TRANSMISSION
Application of the chirped Z-transform to processing frequency hopping spread spectrum signals
N80-31680
Pseudonoise spread-spretrum systems for military communications
[AD-A087701] N80-31700
SPUTTERING
Adherence of ion beam sputter deposited metal films on H-13 steel
[NASA-TM-81585] N80-31527
Controlled cadmium telluride thin films for solar cell applications: Emerging materials systems for solar cell applications
[DOE/ET-23013/T4] N80-31907
Aluminum-silver alloy films for solar reflectors
[REP-3021] N80-31919
ST LAWRENCE VALLEY (NORTH AMERICA)
A detailed magnetic survey of the Saint Lawrence River: Oak Point to Lake Ontario, New York
[PB80-191471] N80-32021
STABILITY
Physical properties and stability of water in fuel oil emulsions
[PB80-184203] N80-31523
Lyapunov stability of multi-machine power systems
N80-31792
STABILITY DERIVATIVES
Wind tunnel measurement of lateral aerodynamic derivatives using a new oscillatory rig, with results and comparisons for the Gnat aircraft
[ARC-R/M-3847] N80-31366
STABILITY TESTS
The influence of wall resonances on the levitation of objects in a single-axis acoustic processing chamber
[NASA-TM-78299] N80-32187
STAINLESS STEELS
Transpiration-cooled nosetip development
[AD-A087837] N80-31536
Elastic-plastic fracture analysis of type 304 stainless steel flat-plate and pipe sections containing surface flaws N80-31814
STANDARDIZATION
Data element dictionary: DTIC uniform data system
[AD-A083800] N80-32277
State-of-the-art of standardization of bibliographic data elements N80-32287
State-of-the-art of data exchange: Problems of formats and standards N80-32288
STANDARDS
National Bureau of Standards and Agency for International Development (NBS/AID) Course on Weights and Measures Services
[PB80-187206] N80-31675
Photovoltaic institutional issues study
[SAND-79-7054] N80-31950
STANDING WAVE RATIOS
Microwave transversal equalizer
[AD-A087603] N80-31699
STAR DISTRIBUTION
Documentation for the machine-readable version of the catalog of supplemental stars to the Bonner Durchmusterung
[NASA-TM-81119] N80-32303
Documentation for the machine-readable version of the Perth 70: A catalogue of positions of 24900 stars tape B, mean values of the observation
[NASA-TM-80849] N80-32304
STARK EFFECT
Stark profile measurement of Cu reversal lines in a dense plasma N80-32222
STATIC DEFORMATION
Probabilistic models of the stress-rupture of composite material, phase 3
[COO-4027-3] N80-31487
STATIC TESTS
Phase 2 and 3 wind tunnel tests of the J-97 powered, external augmentor V/STOL model --- at Ames 40 by 80 wind tunnel
[NASA-CR-163578] N80-31350
STATISTICAL ANALYSIS
Production oriented maintenance organization: A critical analysis of sortie-generation capability and maintenance quality
[AD-A087095] N80-31323
The vulnerability of electric equipment to carbon fibers of mixed lengths: An analysis
[NASA-TM-80215] N80-31481
Statistical analysis of strength and life of composite materials
[AD-A087741] N80-31484
Resin bead U and PU analysis of WAK input solutions: A statistical summary of experiment no. 1 --- spent fuels
[ORNL/TM-7362] N80-31517
Statistical analysis of composite solid propellant combustion N80-31591
Atmospheric turbulence simulation techniques with application to flight analysis
[NASA-CR-3309] N80-32025
Fram 1 meteorology report
[AD-A086983] N80-32029
Hurricane wind speeds in the United States
[PB80-181126] N80-32044
The causal analysis of multiple time series: A frequency domain approach using group delay
N80-32166
Statistical properties of the digital sum in partial response codes
[FUB-21-1979] N80-32176
Criteria for data elaboration of gamma spectra of ambient samples
[CISE-1536] N80-32197
Statistical sensitivity analysis of a simple nuclear waste repository model
[ORNL/TM-7310] N80-32207
STATISTICAL DECISION THEORY
The Bayesian approach to statistics
[AD-A087836] N80-32173
STATISTICAL DISTRIBUTIONS
Stochastic ordering and a class of multivariate new better than used distributions
[AD-A087288] N80-32172
STATISTICAL TESTS
Testing for a change point
[AD-A087111] N80-32169
STEADY STATE
Conceptual design of RST: An rf-driven, steady-state Tokamak
[EPRI-AP-1351] N80-32233
STEAM TURBINES
Cogeneration Technology Alternatives Study (CTAS). Volume 3: Energy conversion system characteristics
[NASA-CR-159761] N80-31869
STEELS
Adherence of ion beam sputter deposited metal films on H-13 steel
[NASA-TM-81585] N80-31527
STELLAR MOTIONS
Documentation for the machine-readable version of the Perth 70: A catalogue of positions of 24900 stars tape B, mean values of the observation
[NASA-TM-80849] N80-32304
STELLARATORS
Preliminary experiment of neutral beam injection heating in JIPP T-2 stellarator --- Plasma heating
[IPPJ-470] N80-32225
STEREOPHOTOGRAPHY
The mosaics of Mars: As seen by the Viking Lander cameras
[NASA-CR-3326] N80-32311
STEREOSCOPY
Errors in automatic pass point mensuration using digital techniques
[AD-A087443] N80-31859
STIFFNESS
Review of stiffness and implicit finite difference methods in combustion modeling
[SAND-79-8623] N80-32163
STIFFNESS MATRIX
Elastic buckling of arches by finite element method N80-31817
STOCHASTIC PROCESSES
The causal analysis of multiple time series: A frequency domain approach using group delay
N80-32166
Stochastic ordering and a class of multivariate new better than used distributions
[AD-A087288] N80-32172
STOKES FLOW
Evaluation of cars in a practical combustion environment N80-31612
Investigation of the feasibility of CARS measurements in scramjet combustion N80-31613
STORAGE RINGS (PARTICLE ACCELERATORS)
An experimental investigation of the trapping and energy loss mechanisms of intense relativistic electron rings in hydrogen gas and plasma N80-32221
Plasma instability in electron and positron colliding beams in storage ring
[AD-A087733] N80-32228
STORAGE TANKS
Solar domestic hot water system, a comparative study and storage tank investigation N80-31868
STORMS (METEOROLOGY)
Comparison of generalized estimates of probable maximum precipitation with greatest observed rainfalls
[PB80-191463] N80-32046
Doppler radar studies during the Sierra Cooperative Pilot Project
[PB80-191455] N80-32047
Mariners Weather Log, volume 24, no. 2
[PB80-188444] N80-32048
STRAIN ENERGY METHODS
Critical excitations for linear and nonlinear structural systems N80-31816
STRAIN HARDENING
Strain hardening and ductility of iron: Axisymmetric vs plane strain elongation
[DOE/ER-04072/3] N80-31543
STRAIN RATE
New general and complementary energy theorems, finite strain, rate-sensitive inelasticity and finite elements: Some computational studies
[AD-A087227] N80-31824
STRATIFICATION
Spectral analysis of sound propagation in stratified fluids
[AD-A087735] N80-32189
STRATIGRAPHY
Preliminary one-dimensional thermal analysis of waste emplacement in tuffs
[SAND-79-1285] N80-32014
STRATOSPHERE
Airborne measurements of stratospheric ozone intrusions into the troposphere over the United States. Volume 2: Data catalog
[PB80-190705] N80-32017
Program of research and monitoring for early detection of stratospheric ozone change. Report to Congress of findings for 1978 - 1979
[PB80-184021] N80-32022
STRATUS CLOUDS
Icing characteristics of low altitude, supercooled layer clouds
[AD-A087137] N80-32031

STREAMS
Simulation of reservoir and lake sedimentation
[PB80-182801] N80-31867
STRESS (PHYSIOLOGY)
The influence of modulated sinusoidal current on the state of chromatin from neurons of the cerebral cortex of rats in hypokinesia
[NASA-TM-76160] N80-32056
The dynamics of certain indicators of nuclein metabolism during hypokinesia in rats of different ages under the influence of sinusoidal modulated currents and measured physical load
[NASA-TM-76162] N80-32058
Absorption of thiamine and nicotinic acid in the rat intestine during fasting and immobilization stress
[NASA-TM-76193] N80-32059
Effects of hirudin-induced activation of nonenzymatic fibrinolysis during immobilization stress
[NASA-TM-76189] N80-32065
STRESS ANALYSIS
Nonlinear viscoelastic behavior of a composite material using a finite element micromechanical analysis
[AD-A087367] N80-31483
Finite element analysis of piping tees
[AD-A087353] N80-32152
STRESS CORROSION CRACKING
Stress-corrosion cracking of steels in ammonia: A survey with consideration on given OTEC design
[ANL/OTEC-BCM-008] N80-31544
Electronic properties of materials and corrosion phenomena. A nonconventional approach to the mechanism of stress corrosion cracking
[CISE-N-188] N80-31547
Remote measurement of crack growth in Double Cantilever Beam (DCB) specimens
[NLR-TR-79006-U] N80-31841
STRESS INTENSITY FACTORS
Local approach to problems of fatigue crack growth
[ICAF-1143] N80-31821
An experimental weight function method for stress intensity factor calibration
[AD-A087846] N80-31837
STRESS TENSORS
Numerical modeling of dynamic propagation in finite bodies, by moving singular elements. Part 1: Formulation
[AD-A087395] N80-31835
STRESS-STRAIN RELATIONSHIPS
Undisturbed sampling and cyclic load testing of sands
[AD-A087298] N80-31669
Dynamic buckling of inelastic spherical shells N80-31815
Efficiency of energy conversion in Nitinol
[LBL-9750] N80-31947
STRESSES
Measurement and correlation of intragranular stress and particle-wall friction in granular propellant beds N80-31587
STRINGERS
Analysis of axially loaded stringer stiffened circular cylinders
[FFA-TN-HU-2134] N80-31843
Buckling of cylinders with longitudinal stiffeners subjected to axial compression
[FFA-TN-HU-2184] N80-31844
STRIP TRANSMISSION LINES
A simple stripline design for uneven power split
[NASA-TM-81870] N80-31684
STRUCTURAL ANALYSIS
Mathematical modeling of linear and non-linear aircraft structures
[AGARD-R-687] N80-31326
Integrated analysis of large space systems N80-31462
Cast Aluminum Structures Technology (CAST) structural test and evaluation, phase 5. Part 2: Fatigue and fracture properties of cast aluminum bulkheads
[AD-A087336] N80-31530
Cast Aluminum Structures Technology (CAST) structural test and evaluation, phase 5. Part 3: Static property allowables
[AD-A087337] N80-31531
Durability methods development, volume 1. Phase 1: Summary
[AD-A087301] N80-31805
Critical excitations for linear and nonlinear structural systems N80-31816
Two dimensional linear elastic analysis of fracture specimens: User's manual of a finite element computer program
[AD-A087440] N80-31830
Finite elements in structural analysis. A bibliography with abstracts
[PB80-811516] N80-31850
Structural analysis of superconducting bending magnets
[LBL-10950] N80-32184
STRUCTURAL BASINS
Simulation of reservoir and lake sedimentation
[PB80-182801] N80-31867
Altimetry data over trenches and island-arcs and convection in the mantle
[NASA-CR-163516] N80-32050
STRUCTURAL DESIGN
Optimization of the mathematical model of a structure N80-31327
Wing profile design of the world championship sail plane SB 11
[NASA-TM-75829] N80-31385
STRUCTURAL DESIGN CRITERIA
The Quiet Short-haul Research Aircraft (QSRA) N80-31313
Aircraft Assessment and Acceptance Testing
[AGARD-LS-108] N80-31329
USAF development test and evaluation N80-31331
Influence of interorbit acceleration on the design of large space antennas N80-31461
Design, engineering and evaluation of refractory liners for slagging gasifiers
[IITRI-M-6043-5] N80-31640
Photovoltaic module electrical termination design requirement study
[JPL-955367-80/1] N80-31877
STRUCTURAL ENGINEERING
Advanced development of a short-residence-time hydrogasifier
[FE-3125-12] N80-31638
Advanced development of a short-residence-time hydrogasifier
[FE-3125-18] N80-31639
Finite elements in structural analysis. A bibliography with abstracts
[PB80-811516] N80-31850
STRUCTURAL FAILURE
Significance of a rotor blade failure for fleet operation, inspection, maintenance, design and certification
[NLR-MP-79021-U] N80-31392
Cast Aluminum Structures Technology (CAST). Phase 5: Structural and evaluation. Part 1: Full scale test
[AD-A087807] N80-31535
Fracture control practices for metal structures
[PB80-185648] N80-31851
STRUCTURAL MEMBERS
Seismic response of light attachments to buildings
[PB80-1185028] N80-31676
STRUCTURAL PROPERTIES (GEOLOGY)
A detailed magnetic survey of the Saint Lawrence River: Oak Point to Lake Ontario, New York
[PB80-191471] N80-32021
STRUCTURAL STABILITY
Rotor-bearing dynamics technology design guide. Part 1: Flexible rotor dynamics
[AD-A087806] N80-31802
Thermoelastic buckling of plates in a cylindrical geometry against an elastic back support
[HEDL-SA-2066-FP] N80-31838
Review of stiffness and implicit finite difference methods in combustion modeling
[SAND-79-8623] N80-32163
STRUCTURAL VIBRATION
Rotor-bearing dynamics technology design guide. Part 1: Flexible rotor dynamics
[AD-A087806] N80-31802
Mathematical formulation of damping for structural response analysis
[NLR-MP-79010-U] N80-31842
Theory and calculation of vibrating structures
[ONERA-P-1980-1] N80-31849
Tests of a lightweight 200 kW MHD channel and diffuser
[AD-A087022] N80-32226
SUBARCTIC REGIONS
The fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska
[PB80-187305] N80-31984
SUBMILLIMETER WAVES
Microwave investigations of matter
[AD-A087480] N80-31498
Short intense submillimeter pulse generation
[AD-A087421] N80-31783
SUBROUTINES
Bifilar analysis users manual, volume 2
[NASA-CR-159228-VOL-2] N80-31383
SUBSONIC FLOW
A brief investigation of the two-dimensionality of the flow over an airfoil in the 8 foot by 6 foot transonic wind tunnel
[RAE-TM-AERO-1828] N80-31368
SUBSTRATES
Silicon solar cell fabrication technology
[NASA-CR-163394] N80-31871
Amorphous silicon thin film heterojunction solar cells
[DOE/ET-20460/4] N80-31909
Improvement in GAAS device yield and performance through substrate defect gettering
[AD-A087712] N80-32257
SULFUR
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases
[FE-14809-1] N80-31502
SULFUR DIOXIDES
A study on the electrolysis of sulfur dioxide and water for the sulfur cycle hydrogen production process
[NASA-CR-163517] N80-31625
University of Washington electrostatic scrubber tests: Combined particulate and SO2 control
[PB80-182603] N80-31985
SULFUR OXIDES
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California, volume 1
[PB80-187594] N80-31982
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California. Volume 2: Appendix
[PB80-187602] N80-31983
Photochemical aerosol formation: Reactive hydrocarbon-NOx-SO2 systems
[PB80-187990] N80-31987
SULFURIC ACID
An improved synthesis of 2,4,8,10-tetroxaspiro (5.5) undecane
[NASA-CASE-ARC-11243-2] N80-31472
SUMS
Some properties of the partial response codes of an order greater than two
[FUB-9-1979] N80-31717
Statistical properties of the digital sum in partial response codes
[FUB-21-1979] N80-32176
SUNLIGHT
Terrestrial photovoltaic power systems with sunlight concentration
[SAND-80-7008] N80-31942
Analytical evaluation of a solar thermophotovoltaic converter
[SAND-78-1962] N80-31954
SUNSPOT CYCLE
Dynamical phenomena in sunspots
[AD-A086010] N80-32318
SUNSPOTS
Dynamical phenomena in sunspots
[AD-A086010] N80-32318
SUPERCONDUCTING MAGNETS
Structural analysis of superconducting bending magnets
[LBL-10950] N80-32184
Conceptual design of RST: An rf-driven, steady-state Tokamak
[EPRI-AP-1351] N80-32233
SUPERCONDUCTIVITY
Superconductivity in filamentary eutectic composites
[COO-4938-3] N80-31486
Structural analysis of superconducting bending magnets
[LBL-10950] N80-32184
Superconductivity and cryogenics for mirror fusion
[UCRL-83916] N80-32235

SUPERCONDUCTORS
Wave propagation in a dc superconducting cable. Part 1: Analysis
[LA-UR-80-125] N80-31705
Wave propagation in a dc superconducting cable. Part 2: Parametric effects
[LA-YR-80-126] N80-31706
Superconducting tunneling and tunneling applications in high Tc A15 superconductors
[AD-A087125] N80-32253
Properties of superconductor-normal metal-superconductor microbridges
[AD-A087512] N80-32258
SUPERCRITICAL WINGS
Jet interference on supercritical wings. Part 1: Experiments on a two-dimensional wing. Part 2: Experiments on a swept wing --- wind tunnel tests
[ARC-R/M-3845] N80-31365
SUPERFLUIDITY
Gravitational convection of subcooled He 1 and the transition into superfluid He 2 at atmopheric pressure
[LBL-10928] N80-31671
SUPERHIGH FREQUENCIES
Ku-band field-effect power transistors
[NASA-CR-160010] N80-31732
SUPERSONIC COMBUSTION RAMJET ENGINES
Investigation of the feasibility of CARS measurements in scramjet combustion N80-31613
SUPERSONIC FLOW
Basic studies of wing-body interference at high angles of attack and supersonic speeds
[AD-A087134] N80-31355
Calculations by a first order theory of supersonic flow around delta wings
[FFA-TN-AU-810] N80-31362
Contribution to the study of supersonic laminar separation: Utilization and improvements in integral methods of calculation
[ONERA-NT-1980-1] N80-31363
Measurements of pressure distributions and pressure drags at zero incidence on both blunt and sharp axisymmetric forebodies at a Mach number of 3
[ARC-R/M-3849] N80-31367
Investigation of the feasibility of CARS measurements in scramjet combustion N80-31613
Mean droplet diameter resulting from atomization of a transverse liquid jet in a supersonic air stream N80-31616
SUPPLYING
A study of industrial hydrogen and syngas supply systems
[NASA-CR-163523] N80-31624
SURFACE DEFECTS
Surface defects and thermodynamics of chemisorbed layers
[AD-A086918] N80-32251
Improvement in GAAS device yield and performance through substrate defect gettering
[AD-A087712] N80-32257
SURFACE LAYERS
Surface defects and thermodynamics of chemisorbed layers
[AD-A086918] N80-32251
SURFACE PROPERTIES
Aluminum-silver alloy films for solar reflectors
[REP-3021] N80-31919
SURFACE REACTIONS
Study of solid metal/ceramic reactions
[DOE/ER-10413/1] N80-31508
Lattice expansion as a measure of surface segregation and solubility of hydrogen in alpha-FeTiH/sub x
[BNL-27523] N80-31509
Catalyzed combustion of lean fuel/air mixtures
[LBL-10842] N80-31513
Metallurgical studies of hydrogen storage alloys
[DOE/CS-0016/T2] N80-31537
Effects of surface condition on the corrosion of candidate structural materials in a simulated HTGR-GT environment
[GA-A-15673] N80-31539
SURFACES
An asymptotic unsteady lifting-line theory with energetics and optimum motion of thrust-producing lifting surfaces
[NASA-CR-163526] N80-31352
SWEAT COOLING
Transpiration-cooled nosetip development
[AD-A087837] N80-31536
SWEPT WINGS
An investigation of scale effects on the transonic flow over swept wings. Part 1: Measurements on a model of a transport-aircraft configuration
[ARC-R/M-3842-PT-1] N80-31364
Jet interference on supercritical wings. Part 1: Experiments on a two-dimensional wing. Part 2: Experiments on a swept wing --- wind tunnel tests
[ARC-R/M-3845] N80-31365
SWITCHING THEORY
Lyapunov stability of multi-machine power systems N80-31792
SYNCHRONIZERS
SCRAM: A fast computational model for the optical performance of point focus solar central receiver systems
[SAND-80-0433] N80-31925
SYNCHRONOUS SATELLITES
State estimation and absolute image registration for geosynchronous satellites
[NASA-TM-80712] N80-31858
SYNCLINES
Resistivity sounding investigation by the Schumberger method in the syncline ridge area, Nevada test site, Nevada
[USGS-OFR-80-466] N80-32204
SYNOPTIC METEOROLOGY
Mariners Weather Log, volume 24, no. 2
[PB80-188444] N80-32048
The Seasat SAR Wind and Ocean Wave Monitoring Capabilities: A case study for pass 1339m
[NASA-CR-163454] N80-32051
SYNTHESIS (CHEMISTRY)
Synthesis of dawsonites
[NASA-CASE-ARC-113261-1] N80-31490
Investigation of dispersed iron alloy catalyst in the carbon monoxide-hydrogen synthesis reaction
[COO-4993-2] N80-31542
SYNTHETIC APERTURE RADAR
The Seasat SAR Wind and Ocean Wave Monitoring Capabilities: A case study for pass 1339m
[NASA-CR-163454] N80-32051
Seasat SAR Coastal Ocean Wave Analysis. A wave refraction and diffraction study
[PB80-189384] N80-32052
SYNTHETIC FUELS
A study of industrial hydrogen and syngas supply systems
[NASA-CR-163523] N80-31624
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[FE-2315-48] N80-31629
Research and development of an advanced process for conversion of coal to synthetic gasoline and other distillate motor fuels
[FE-1800-45] N80-31641
Gasification of coal with solar energy
[UCRL-84458] N80-31652
Synthetic fuels from municipal, industrial, and agricultural wastes. Citations from the NTIS data base
[PB80-811375] N80-31660
Fossil energy program
[ORNL-5630] N80-31902
SYNTHETIC RESINS
Phosphorus-containing bisimide resins
[NASA-CASE-ARC-11321-1] N80-31551
SYSTEM EFFECTIVENESS
Solar domestic hot water system, a comparative study and storage tank investigation N80-31868
SYSTEM FAILURES
DSCS 2, battery anomaly investigation satellites 9437 and 9438
[AD-A087390] N80-31432
A carbon fiber exposure test facility and instrumentation
[NASA-TM-80220] N80-31482
Nonparametric estimation of a lifetime distribution via the renewal function N80-32164
Assessment of operational automated guideway systems-AIRTRANS, phase 2
[PB80-182538] N80-32302
SYSTEMS ANALYSIS
Landing system reliability and safety model
[AD-A087524] N80-31379
Aircraft hydraulic systems dynamic analysis component data handbook
[AD-A087366] N80-31390
Engineering services in support of sounding rockets
[AD-A087801] N80-31433
Integrated analysis of large space systems N80-31462
An analysis of burst communication in time division multiple access systems N80-31678
Customer access protocols to integrated services digital networks
[FUB-7-1979] N80-31716
Influence of propagation characteristics and repeaters on the performance of a multiple link teletext system
[FUB-24-1979] N80-31723
Hybrid fault diagnosis in digital systems N80-31730
Gallium arsenide (GaAs) solar cell modeling studies
[NASA-CR-163538] N80-31884
Satellite Power Systems (SPS) concept definition study. Volume 4: Transportation analysis
[NASA-CR-3321] N80-31891
Feasibility study: Fuel cell cogeneration in a water pollution control facility, volume 1
[DOE/ET-12431/T1-VOL-1] N80-31922
Methods for collecting and analyzing task analysis data
[AD-A087710] N80-32094
The use of information transmission as nonparametric correlation in the analysis of complex behavior: A preliminary report
[AD-A087832] N80-32096
Requirements definition and design guidelines for man-machine interface in C3 system acquisition
[AD-A087258] N80-32102
Multi-microprocessor/multi-microcomputer
tures: Their modeling and analysis N80-32108
Modeling a software engineering project management system N80-32116
Partitioning and cooperation in a distributed multiprocessor operating system: Medusa N80-32144
Technical program plan, Basalt Waste Isolation Project
[RHO-CD-132-REV-5] N80-32205
SYSTEMS ENGINEERING
Introduction: The challenge of optimum integration of propulsion systems and large space structures N80-31450
Large space systems technology program N80-31451
Cryogenic methane separation/catalytic hydrogasification process analysis
[FE-3044-T7] N80-31635
Hydrogen production by the GA sulfur-iodine process
[GA-A-15777-REV] N80-31651
Activities in the field of communications in Italy, 1978 N80-31711
Satellite power systems (SPS) concept definition study. Volume 2, part 1: System engineering
[NASA-CR-3318] N80-31890
A review of the methods for passive solar systems analysis
[AD-A087509] N80-31895
Data structure independence in data base management systems N80-32107
General application of the critical path method to resource characterization and planning for underground coal mining
[DOE/ET-11268/3] N80-32272
SYSTEMS MANAGEMENT
Data element dictionary: DTIC uniform data system
[AD-A083800] N80-32277
Access to aerospace information: The Greek situation N80-32284
Kinds of access to unclassified literature N80-32290
Full text handling: A critical review N80-32292
The numeric aerospace data: Problems of evaluation, handling and dissemination N80-32293
SYSTEMS SIMULATION
Perception of aircraft separation with pilot-preferred symbology on a cockpit display of traffic information
[NASA-TM-81172] N80-31397

Development of the Elstar (Environmental Lagrangian Simulator of Transport and Atmospheric Reactions) photochemical air quality simulation model and its evaluation relative to the LARPP (Los Angeles Reactive Pollutant Program) data base
[PB80-188139] N80-31992

SYSTEMS STABILITY
Stability problems of rotor systems N80-31663

T

T-39 AIRCRAFT
Sabreliner 65 N80-31315

TABLES (DATA)
Determination of air pollutant emission factors for thermal tertiary oil recovery operations in California. Volume 2: Appendix
[PB80-187602] N80-31983
Astronomical Data Center Bulletin, volume 1, no. 1
[NASA-TM-80764] N80-32305

TACAN
TACAN operational description for the space shuttle orbital flight test program
[NASA-CR-160775] N80-31439

TAIL ROTORS
Progress report 3 of cooperative program for design, fabrication, and testing of high modulus composite helicopter shafting
[NASA-TM-82272] N80-31387

TANKER AIRCRAFT
General aviation icing flight test N80-31312

TARGET ACQUISITION
Air-to-air target acquisition factors and means of improvement
[AD-A087848] N80-32095

TARGET RECOGNITION
Performance characteristics of leaky coaxial cables
[AD-A087475] N80-31703
Detection of moving targets in peripheral vision
[AD-A082541] N80-32083

TDR SATELLITES
Evaluation program for secondary spacecraft cells: Initial evaluation tests of General Electric Company $40.00 ampere-hour nickel-cadmium spacecraft cells for the tracking data relay satellite system
[NASA-CR-160016] N80-31886

TEA LASERS
Optical and discharge studies of novel electronic transition laser species
[AD-A087123] N80-31782
High voltage nanosecond pulse generator
[AD-A087291] N80-31784

TEAMS
Team training applications of voice processing technology
[AD-A085999] N80-32092

TECHNOLOGIES
The global 2000 report to the president. Entering the twenty-first century. Volume 2: The technical report — trends in population, climate, gross national product, earth resources, technology, and man environment interactions N80-32296

TECHNOLOGY ASSESSMENT
Space shuttle status N80-31314
Qualitative armament subsystem assessment N80-31338
Materials for coal conversion and use. Volume 2: Materials of construction for coal conversion systems. Part 1: Coal gasification. Part 2: Coal liquefaction
[FE-2468-59-VOL-2-PT-1/2] N80-31644
Development and evaluation of the epoxy repair method for reinforced concrete flexural members N80-31886
Basic research needs and priorities in solar energy. Volume 1: Executive summary. Technology crosscuts for DOE
[SERI/TR-351-358-VOL-1] N80-31898
Thermoelectric materials evaluation program
[MMM-23309602] N80-31934
Evaluation of line focus solar central power systems. Volume 1: Executive summary
[ATR-80(7773-03)-1-VOL-1] N80-31943
Methodology for the comparative assessment of the Satellite Power System (SPS) and alternative technologies
[NASA-CR-163049] N80-31951
An attempt to estimate the economic effects in the choice of space technology spin-offs
[SNIAS-801-422-107] N80-32301

TECHNOLOGY TRANSFER
Methods for collecting and analyzing task analysis data
[AD-A087710] N80-32094
The use of multilingual reference tools in the production and transfer of technical information N80-32289
Full text handling: A critical review N80-32292

TELECOMMUNICATION
Telecommunication: Economic studies. Citations from the NTIS data base
[PB80-811136] N80-31728
Telecommunication: Economic studies. Citations from the NTIS data base
[PB80-811144] N80-31729

TELEVISION SYSTEMS
Telecommunication: Economic studies. Citations from the NTIS data base
[PB80-811136] N80-31728
Telecommunication: Economic studies. Citations from the NTIS data base
[PB80-811144] N80-31729

TEMPERATURE CONTROL
Passive solar space heating
[LA-UR-80-1076] N80-31959

TEMPERATURE EFFECTS
Nonlinear viscoelastic behavior of a composite material using a finite element micromechanical analysis
[AD-A087367] N80-31483
Peat biogasification development program
[DOE/ET/14696-T1] N80-31649
Development of high efficiency cascade solar cells
[DSE-4042-T38] N80-31906
Charge storage, retention and endurance in MNOS devices
[AD-A087432] N80-32256

TEMPERATURE GRADIENTS
Effect of erosive burning on pressure and temperature sensitivity N80-31592
Sites for wind-power installations: Wind characteristics over ridges, part 2
[RLO-2438-78/2] N80-31901

TEMPERATURE MEASUREMENT
Evaluation of cars in a practical combustion environment N80-31612
Investigation of the feasibility of CARS measurements in scramjet combustion N80-31613
Comparison of thermocouple, gas sampling, and Raman measured temperatures in an afterburning turbojet engine plume N80-31614
The influence of atmospheric dynamics on ozone and temperature structure
[AD-A087702] N80-32009

TEMPERATURE MEASURING INSTRUMENTS
Design, fabrication and testing of an optical temperature sensor
[NASA-CR-165125] N80-31777

TEMPERATURE PROFILES
Numerical simulation of advection fog formation on multi-disperse aerosols due to combustion-related pollutants
[NASA-CR-161566] N80-31971

TENSILE STRENGTH
Gold plated lead-clinched lead solder joint study
[AD-A087352] N80-31733

TENSILE STRESS
Plasticity under combined stress loading — aluminum alloys
[UCRL-83322] N80-31840

TERRAIN ANALYSIS
Errors in automatic pass point mensuration using digital techniques
[AD-A087443] N80-31859
Terrain analysis synthesizer station
[AD-A087370] N80-31860
Summary of guidelines for siting wind turbine generators relative to small scale, two-dimensional terrain features
[RLO-2443-77/1] N80-31930

TEST FACILITIES
Environmental testing of coatings for gas turbines
[NLR-MP-79028-U] N80-31404
Development and validation of a hybrid-computer simulator for a transonic cryogenic wind tunnel
[NASA-TP-1695] N80-31413
Lightning testing for aircraft avionics systems N80-31750
Two-Phase flow model test facility
[PB80-181647] N80-31772
Current operation and future uses of high power plasma generators
[SNIAS-801-430-104] N80-32243

TEST VEHICLES
Development of the German Research Establishment for Gliding N80-31320

TETHERED BALLOONS
Balloon-supported Loran antenna, new hardware for tethered balloons, and payloads used in BAMM flights
[AD-A087487] N80-31377
Balloon-supported antenna for Loran C/D navigation system
[AD-A087488] N80-31378

TEXTS
Influence of propagation characteristics and repeaters on the performance of a multiple link teletext system
[FUB-24-1979] N80-31723

TEXTURES
Evaluating soil moisture and textural relationships using regression analysis
[AD-A087371] N80-31852

THERMAL BUCKLING
Thermoelastic buckling of plates in a cylindrical geometry against an elastic back support
[HEDL-SA-2066-FP] N80-31838

THERMAL CYCLING TESTS
The 3500 hour durability testing of commercial ceramic materials
[NASA-CR-159785] N80-31552

THERMAL DISSOCIATION
Automotive storage of hydrogen using modified magnesium hydrides
[SAN-1167-1] N80-31650
Hydrogen production by the GA sulfur-iodine process
[GA-A-15777-REV] N80-31651

THERMAL EMISSION
Infrared analysis of coal gasifier product gases
[LA-UR-80-1625] N80-31516

THERMAL ENERGY
Cogeneration Technology Alternatives Study (CTAS). Volume 3: Industrial processes
[NASA-CR-159767] N80-31870
Field experience with solar concentrating collector control systems
[SAND-79-2044C] N80-31924
Analytical modeling of line focus solar collectors
[SERI/TP-333-591] N80-31926
Solar thermal components. A bibliography with abstracts
[NASA-CR-163448] N80-31964

THERMAL EXPANSION
Laminated Fresnel lenses
[SAND-80-7007] N80-32218

THERMAL PROTECTION
Proceedings Of a Workshop on Thermal Physiology
[PB80-187867] N80-32087

THERMAL RESISTANCE
The NBS semiconductor technology program and VLSI (Very Large Scale Integration)
[PB80-185531] N80-32289

THERMAL STABILITY
Study of fiber/matrix interface structure and interfacial diffusion phenomena in Cotac-type solidification composites. Effect on the thermal stability of the fibers
[ONERA-NT-1979-11] N80-31489
Thermochemical stability diagrams for condensed phases and volatility diagrams for volatile species over condensed phases in twenty metal-sulfur-oxygen systems between 1150 and 1450 K
[DOE/FE-13547/01] N80-31510

THERMISTORS
Investigation of electrical noise in selenium-immersed thermistor bolometers
[NASA-TM-82001] N80-31778

THERMOCHEMICAL PROPERTIES
Basic research needs and priorities in solar energy. Volume 2: Technology crosscuts for DOE
[SERI/TR-351-358-VOL-2] N80-31899

THERMOCHEMISTRY
Thermochemical stability diagrams for condensed phases and volatility diagrams for volatile species over condensed phases in twenty metal-sulfur-oxygen systems between 1150 and 1489 K
[DOE/PE-13647/01] N80-31510
A priori thermochemistry and rate constant estimates for flame zone reactions N80-31589
THERMOCOUPLES
Comparison of thermocouple, gas sampling, and Raman measured temperatures in an afterburning turbojet engine plume N80-31614
THERMODYNAMIC EFFICIENCY
Coal gasification pilot plant support studies
[FE-2806-5] N80-31937
Hydrogen production by the GA sulfur-iodine process
[GA-A-15777-REV] N80-31981
Analytical prediction of liquid photovoltaic/thermal flat-plate collector performance
[COO-4094-66] N80-31913
Efficiency of energy conversion in fusion
[LBL-9750] N80-31947
THERMODYNAMIC EQUILIBRIUM
Numerical study of rotating interstellar clouds: Equilibrium and collapse
[UCRL-52946] N80-32308
THERMODYNAMIC PROPERTIES
Transient combustion calculations with variable thermal properties N80-31582
THERMODYNAMICS
Shear ignition of explosives N80-31576
Irreversibility and transport in the lower hybrid drift instability
[AD-A087726] N80-32229
Surface defects and thermodynamics of chemisorbed layers
[AD-A086918] N80-32251
THERMOELASTICITY
Thermoelastic buckling of plates in a cylindrical geometry against an elastic back support
[HEDL-SA-2066-FP] N80-31838
THERMOELECTRIC MATERIALS
Thermoelectric materials evaluation program
[MMM-2331-0602] N80-31934
THERMONUCLEAR REACTIONS
Hyperfuse: A novel inertial confinement system utilizing hypervelocity projectiles for fusion energy production and fission waste transmutation
[BNL-27784] N80-32241
THERMOPHYSICAL PROPERTIES
Measurement of thermophysical properties of epoxy/diamine polymers and associated additive properties
[AD-A087833] N80-31559
THERMOPLASTIC RESINS
Melt rheology of block copolymers in relation to melt structure
[AD-A087484] N80-31561
THIAMINE
Absorption of thiamine and nicotinic acid in the rat intestine during fasting and immobilization stress
[NASA-TM-76193] N80-32059
Mechanisms of oxygen toxicity at the cellular level
[AD-A087831] N80-32064
THIN FILMS
Adaptation of a Kratky camera to use with a one dimensional position sensitive detector
[AD-A087523] N80-31780
Controlled cadmium telluride thin films for solar cell applications: Emerging materials systems for solar cell applications
[DOE/ET-23013/T4] N80-31907
Physical models of thin film polycrystalline solar cells based on measured grain-boundary and electronic parameter properties
[DSE-4042-T37] N80-31908
Amorphous silicon thin film heterojunction solar cells
[DOE/ET-20460/4] N80-31909
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113-040-T6] N80-31953
Superconducting tunneling and tunneling applications in high Tc A15 superconductors
[AD-A087125] N80-32253
THIN PLATES
A new method for the solution of anisotropic thin plate bending problems --- using Green's function N80-31813
New general and complementary energy theorems, finite strain, rate-sensitive inelasticity, and finite elements: Some computational studies
[AD-A087227] N80-31824
Thermoelastic buckling of plates in a cylindrical geometry against an elastic back support
[HEDL-SA-2066-FP] N80-31838
THIOLS
Hydrogen-transfer and charge transfer in photochemical and high energy radiation induced reactions: Effects of thiols
[DOE/ER-03118/13] N80-31505
THORIUM
Fast diffusion and electromigration of metallic solutes in thorium N80-31524
THREE AXIS STABILIZATION
The magnetic testing of the X4 spacecraft --- Miranda satellite
[RAE-TR-79144] N80-31436
THREE DIMENSIONAL BOUNDARY LAYER
Design of a calculation method for three dimensional turbulent boundary layers
[NLR-MP-79036-U] N80-31361
THRESHOLDS (PERCEPTION)
Towards a better understanding of temporary threshold shift of hearing
[RAE-TM-FS-319] N80-32086
Visual scene perception: Frequency domain data and model parameter estimation procedure
[NLR-MP-79009-U] N80-32097
THROMBIN
Effects of hirudin-induced activation of nonenzymatic fibrinolysis during immobilization stress
[NASA-TM-76189] N80-32065
THRUST DISTRIBUTION
Auxiliary control of LSS N80-31459
THRUST LOADS
Effect of orbital transfer loads on large platforms N80-31460
Influence of interorbit acceleration on the design of large space antennas N80-31461
THRUST REVERSAL
Reverse thrust performance of the QCSEE variable pitch turbofan engine
[NASA-TM-81558] N80-31399
THUNDERSTORMS
In-flight evaluation of a severe weather avoidance system for aircraft
[AD-A087426] N80-31376
TIDAL WAVES
A study of estuarine tidal dissipation and bottom stress
[PB80-194988] N80-32054
TIDEPOWER
Patent profiles: Solar energy
[PB80-190010] N80-31966
TIME DEPENDENCE
Nonlinear viscoelastic behavior of a composite material using a finite element micromechanical analysis
[AD-A087367] N80-31483
Probabilistic models of the stress-rupture of composite material, phase 3
[COO-4027-3] N80-31487
STINT/CD: A stand-alone explicit time integration package for structural dynamics analysis
[AD-A087423] N80-31831
TIME DIVISION MULTIPLE ACCESS
An analysis of burst communication in time division multiple access systems N80-31678
TIME DIVISION MULTIPLEXING
An analysis of burst communication in time division multiple access systems N80-31678
TIME FUNCTIONS
A procedure for satisfying in an optimal way time varying circuit requirements --- communication networks
[FUB-19-1979] N80-31721
Initial direct strike lightning data
[NASA-TM-81867] N80-32023
TIME LAG
Time delay of terrestrial light pulses propagating through clouds to satellite systems
[AD-A087242] N80-31999
TIME OF FLIGHT SPECTROMETERS
Data acquisition techniques for exploiting the uniqueness of the time-of-flight mass spectrometer: Application to sampling pulsed gas systems
[NASA-TM-81224] N80-31775
TIME SERIES ANALYSIS
Workshop on Digital Time Series Analysis with Geophysical Applications
[CSIR-S-238] N80-32150
The causal analysis of multiple time series: A frequency domain approach using group delay N80-32166
TIME SHARING
Microcomputers and timesharing N80-32109
Partitioning and cooperation in a distributed multiprocessor operating system: Medusa N80-32144
TIN COMPOUNDS
Electrochemical generation of the naked metal anionic clusters
[AD-A087344] N80-31495
TIRES
Determination of tire quality from nondestructive inspection
[PB80-185358] N80-31812
TISSUES (BIOLOGY)
Biocompatible materials: A bibliography with abstracts
[PB80-811904] N80-31475
Changes in bone tissue under conditions of hypokinesia and in connection with age
[NASA-TM-76154] N80-32064
TITANIUM
LARC-13 adhesive development
[NASA-CR-159317] N80-31479
TITANIUM ALLOYS
Lattice expansion as a measure of surface segregation and solubility of hydrogen in alpha-FeTiH/sub x
[BNL-27523] N80-31509
A theoretical and experimental study of the mechanical behavior of alpha-beta TiMn alloys N80-31525
Comparison of fracture toughness in titanium alloys IMI 550 and IMI 551
[NLR-TR-78143-U] N80-31548
TITANIUM CARBIDES
Inelastic deformation in crystalline nonmetallic materials
[COO-4441-3] N80-31488
Trapping by TiC particles and twin formation in Fe-Ti
[AD-A085998] N80-31532
TITANIUM OXIDES
Photoassisted water-gas shift reaction over platinized Ti O(2) catalysts
[AD-A087363] N80-31492
Photocatalytic production of hydrogen from water and Texas lignite using a platinized titania catalyst
[AD-A087364] N80-31494
TOKAMAK DEVICES
A measurement of deuterium neutral by the Balmer-series in the STP-2 high beta screw pinch Tokamak
[IPPJ-471] N80-32224
Preliminary experiment of neutral beam injection heating in JIPP T-2 stellarator --- Plasma heating
[IPPJ-470] N80-32225
Conceptual design of RST: An rf-driven, steady-state Tokamak
[EPRI-AP-1351] N80-32233
Direct ohmic heating of positive ions in Tokamak plasmas
[DOE/ET/53036-16] N80-32237
TOPOGRAPHY
Terrain analyst synthesizer station
[AD-A087370] N80-31860
Sites for wind-power installations: Physical modeling of the influence of hills, ridges and complex terrain on wind speed and turbulence. Part 1: Executive summary
[RLO-2438-78/1] N80-31900
Additions and corrections to the bibliography of geologic studies, Columbia Plateau (Columbia River Basalt) and adjacent areas, in Idaho, 1980
[RHO-BWI-C-68] N80-32013
TORQUE CONVERTERS
Small passenger car transmission test; Ford C4 transmission
[NASA-CR-159881] N80-31795
TORSIONAL STRESS
Plasticity under combined stress loading --- aluminum alloys
[UCRL-83322] N80-31840

TORSIONAL VIBRATION
Influence of mistuning on blade torsional flutter
[NASA-CR-165137] N80-31351
TOUCH
The TOUCH PAD: A versatile computer input device
[RSRE-MEMO-3229] N80-32114
TOWED BODIES
Aircraft wingtip coupling experiments N80-31319
Development of the German Research Establishment for Gliding N80-31320
Determination of the character of the lateral-directional motion of an airborne towed vehicle
[AD-A087445] N80-31389
TOWERS
Anomalous snowfall caused by natural-draft cooling towers
[RAND/N-1479-DOE] N80-32024
TOXICITY
Mechanisms of oxygen toxicity at the cellular level
[AD-A087831] N80-32084
Molecular mechanisms of the epithelial transport of toxic metal ions, particularly mercury, cadmium, lead, arsenic, zinc, and copper
[COO-2792-3] N80-32085
TOXICOLOGY
Medical and toxicological factors in aircraft accidents
[AD-A087690] N80-31373
TRADEOFFS
The application of design to cost and life cycle cost to aircraft engines
[AGARD-LS-107] N80-31342
TRAFFIC CONTROL
Evaluation of incident detection algorithms
[PB80-187255] N80-32124
TRAILING-EDGE FLAPS
Model scale effects on a 16-309 flapped hydrofoil section
[AD-A087343] N80-31356
TRAINING DEVICES
The use of simulators for training in-flight and emergency procedures
[AGARD-AG-248] N80-31412
TRAJECTORY ANALYSIS
Store separation testing techniques at the Arnold Engineering Development Center. Volume 4: Description of dynamic drop store separation testing
[AD-A087490] N80-31358
TRANSFER ORBITS
Effect of orbital transfer loads on large platforms
N80-31460
TRANSFERRED ELECTRON DEVICES
Gunn effect and transferred electron devices. Citations from the NTIS data base
[PB80-812035] N80-32265
Transferred electron devices. Citations from the Engineering Index data base
[PB80-812043] N80-32267
TRANSFORMATIONS (MATHEMATICS)
Application of the chirped Z-transform to processing frequency hopping spread spectrum signals
N80-31680
TRANSIENT PRESSURES
Ignition of solid propellants under transient flow conditions N80-31584
TRANSIENT RESPONSE
Transient combustion calculations with variable thermal properties N80-31582
Modeling of fluid transients in machines. Part 2: Advanced considerations N80-31664
Mathematical formulation of damping for structural response analysis
[NLR-MP-79010-U] N80-31842
TRANSITION METALS
The effect of mixed transition-metal dopants on the high temperature creep of polycrystalline alumina
N80-31526
TRANSLATING
The use of multilingual reference tools in the production and transfer of technical information
N80-32289
TRANSMISSION EFFICIENCY
Demonstration of fiber optic link applications in utility plant multiplexed instrument and control systems
[EPRI-NP-1322] N80-31768
Small passenger car transmission test; Ford C4 transmission
[NASA-CR-159881] N80-31795
Small passenger car transmission test; Chevrolet LUV transmission
[NASA-CR-159882] N80-31796
Transmittance measurements at DIRT-II
[AD-A087003] N80-32212
TRANSMISSION LINES
Wave propagation in a dc superconducting cable. Part 1: Analysis
[LA-UR-80-125] N80-31705
Non-periodic helix TWT study
[AD-A087413] N80-31735
A versatile fiber-optics signal link for EMP testing and general laboratory applications
[AD-A087253] N80-32210
Ultra low optical fiber cable assemblies
[AD-A087517] N80-32217
TRANSMISSIONS (MACHINE ELEMENTS)
Small passenger car transmission test; Ford C4 transmission
[NASA-CR-159881] N80-31795
Small passenger car transmission test; Chevrolet LUV transmission
[NASA-CR-159882] N80-31796
Design study of steel V-Belt CVT for electric vehicles
[NASA-CR-159845] N80-32299
TRANSMITTANCE
Transmittance measurements at DIRT-II
[AD-A087003] N80-32212
TRANSMITTERS
Crystal palace band 2 tests: Comparison of transmitted polarizations
[BBC-RD-1980/7] N80-31682
TRANSMUTATION
Semiconductor measurement technology: Technical impediments to a more effective utilization of neutron transmutation doped silicon for high-power device fabrication
[PB80-183874] N80-32268
TRANSONIC FLOW
The treatment of the sonic line and of shocks in a finite element approach to transonic flow computations
[AD-A087740] N80-31359
An investigation of scale effects on the transonic flow over swept wings. Part 1: Measurements on a model of a transport-aircraft configuration
[ARC-R/M-3842-PT-1] N80-31364
TRANSONIC WIND TUNNELS
A brief investigation of the two-dimensionality of the flow over an airfoil in the 8 foot by 6 foot transonic wind tunnel
[RAE-TM-AERO-1828] N80-31368
TRANSPORT AIRCRAFT
An investigation of scale effects on the transonic flow over swept wings. Part 1: Measurements on a model of a transport-aircraft configuration
[ARC-R/M-3842-PT-1] N80-31364
An analysis of the future requirements for materials handling equipment in the military airlift command
[AD-A087094] N80-31370
Evaluation of laminar flow control system concepts for subsonic commercial transport aircraft
[NASA-CR-159254] N80-31384
TRANSPORT PROPERTIES
Results of a joint USA/USSR hydrodynamic and transport modeling project, appendices B, C, and D
[PB80-187529] N80-31866
The influence of atmospheric dynamics on ozone and temperature structure
[AD-A087702] N80-32009
Irreversibility and transport in the lower hybrid drift instability
[AD-A087728] N80-32229
TRANSPORTATION
An analysis of the future requirements for materials handling equipment in the military airlift command
[AD-A087094] N80-31370
TRANSPORTATION ENERGY
Interactions between energy supply and transportation-related energy use, volume 1
[PB80-185002] N80-31968
TRANSURANIUM ELEMENTS
Application of linear accelerator technology to the detection of trace amounts of transuranics in waste barrels
[LA-UR-80-1274] N80-31507
TRAPPED PARTICLES
Trapping by TiC particles and twin formation in Fe-Ti
[AD-A085998] N80-31532
TRAVELING WAVE TUBES
Non-periodic helix TWT study
[AD-A087413] N80-31735
TRAVELING WAVES
Limit cycle solutions of reaction-diffusion equations
[AD-A087114] N80-32180
TRENDS
The global 2000 report to the president. Entering the twenty-first century, volume 1 N80-32295
The global 2000 report to the president. Entering the twenty-first century. Volume 2: The technical report --- trends in population, climate, gross national product, earth resources, technology, and man environment interactions N80-32296
TRIBOLOGY
Activities of the European Space Tribology Laboratory for 1979
[ESA-ESTL-44] N80-31804
TRIVALENT IONS
Computer simulation of displacement cation exchange chromatography: Separation of trivalent actinides and lanthanides
[ORNL/TM-6738] N80-31515
TROPOSPHERE
Airborne measurements of stratospheric ozone intrusions into the troposphere over the United States. Volume 2: Data catalog
[PB80-190705] N80-32017
Influence of volcanic aerosols and oceanic surface temperatures on tropospheric temperatures
[COO-2195-36] N80-32035
TROUGHS
Ground range and bearing error determination and display for an OTH radar system with an Arctic trough ionosphere
[AD-A087010] N80-31691
TUNGSTEN ALLOYS
Process development: Tungsten hemispheres
[AD-A086972] N80-31491
A study on mechanical properties of heavy alloys --- of tungsten
[DRIC-T-5966] N80-31545
TUNING
Influence of mistuning on blade torsional flutter
[NASA-CR-165137] N80-31351
Bifilar analysis study, volume 1
[NASA-CR-159227] N80-31382
TUNNEL CATHODES
High quality submicron niobium tunnel junctions with reactive ion beam oxidation
[AD-A087449] N80-32250
TURBINE BLADES
Aerodynamic performance of a 5-metre-diameter Darrieus turbine with extruded aluminum NACA-0015 blades
[SAND-80-0179] N80-31957
Large wind turbine generator performance assessment
[EPRI-AP-1317] N80-31960
TURBINE ENGINES
An approach to the life cycle analysis of aircraft turbine engines N80-31343
Logistics forecasting for achieving low life cycle cost --- aircraft maintenance N80-31347
Investigation of a putty propellant turbine power system N80-31622
Aviation turbine fuels, 1979
[DOE/BETC-PPS-80/2] N80-31627
TURBINE PUMPS
SSME turbopump bearing analytical study
[NASA-CR-161554] N80-31794
TURBINE WHEELS
Comparison of calculated and measured blade loads on a full-scale tilting proprotor in a wind tunnel
[NASA-TM-81228] N80-31366
TURBINES
Automatic-control system for the 17-metre Vertical Axis Wind Turbine (VAWT)
[SAND-78-0984] N80-31958
TURBOFAN AIRCRAFT
CL-600 challenger N80-31317
TURBOFAN ENGINES
Influence of mistuning on blade torsional flutter
[NASA-CR-165137] N80-31351

The design of axisymmetric cowls for podded nacelles for high by-pass ratio turbofan engines
[ARC-R/M-3846] N80-31394
Reverse thrust performance of the QCSEE variable pitch turbofan engine
[NASA-TM-81558] N80-31399
Improved components for engine fuel savings
[NASA-TM-81577] N80-31402

TURBOGENERATORS
Advanced technology components for model GTP305-2 aircraft auxiliary power system
[AD-A087838] N80-31403
Energy analysis of geothermal-electric systems
[COO-5085-4] N80-31915
Summary of guidelines for siting wind turbine generators relative to small-scale, two-dimensional terrain features
[RLO-2443-77/1] N80-31930
Large wind turbine generator performance assessment
[EPRI-AP-1317] N80-31960

TURBOJET ENGINES
Comparison of thermocouple, gas sampling, and Raman measured temperatures in an afterburning turbojet engine plume N80-31614

TURBOMACHINE BLADES
Environmental testing of coatings for gas turbines
[NLR-MP-79028-U] N80-31404

TURBOMACHINERY
Modeling of fluid transients in machines. Part 2: Advanced considerations N80-31664

TURBOPROP ENGINES
The NASA high-speed turboprop program
[NASA-TM-81561] N80-31401

TURBULENCE
Development of a photon correlation laser velocimeter for use in turbulent mixing region measurements N80-31611

TURBULENT BOUNDARY LAYER
A critical commentary on mean flow data for two-dimensional compressible turbulent boundary layers
[AGARD-AG-253] N80-31354
Design of a calculation method for three dimensional turbulent boundary layers
[NLR-MP-79036-U] N80-31361
The pressure footprint of a turbulent layer on a compliant boundary
[AD-A087296] N80-31764

TURBULENT DIFFUSION
A prediction model for turbulent diffusion flames, including NO-formation
[VKI-PREPRINT-1979-14] N80-31519

TURBULENT FLOW
Analysis of ammonium perchlorate combustion in a turbulent flow N80-31594
Evaluation of cars in a practical combustion environment N80-31612
Investigations of eddy coherence in jet flows
[NASA-CR-163525] N80-31759
Axisymmetric flow fields in motored and firing spark-ignition engines N80-31791

TURBULENT MIXING
An experimental study of multiple jet mixing
[NASA-CR-163537] N80-31760
Experimental study of chemically reacting turbulent free shear layers
[FE-2446-8] N80-31766

TURTLES
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 1: Marine turtle studies
[NASA-CR-163122-VOL-4-PT-1] N80-31969

TWINNING
Trapping by TiC particles and twin formation in Fe-Ti
[AD-A085998] N80-31532

TWO DIMENSIONAL BOUNDARY LAYER
A critical commentary on mean flow data for two-dimensional compressible turbulent boundary layers
[AGARD-AG-253] N80-31354

TWO DIMENSIONAL FLOW
A brief investigation of the two-dimensionality of the flow over an airfoil in the 8 foot by 6 foot transonic wind tunnel
[RAE-TM-AERO-1828] N80-31368

TWO PHASE FLOW
Two-Phase flow model test facility
[PB80-181647] N80-31772

U

ULTRAHIGH FREQUENCIES
Equatorial scintillation of satellite signals at uhf and l-band for two different elevation angles
[AD-A087404] N80-31690

ULTRAHIGH VACUUM
Materials processing in space, 1980 science planning document --- crystal growth, containerless processing, solidification, bioprocessing, and ultrahigh vacuum processes
[NASA-TM-78297] N80-31419

ULTRASONIC TESTS
Nondestructive ultrasonic testing and inspection. Citations from the NTIS data base
[PB80-811821] N80-31808
Nondestructive ultrasonic testing and inspection. Citations from the NTIS data base
[PB80-811839] N80-31809
Nondestructive ultrasonic testing and inspection. Citations from the Engineering Index data base
[PB80-811847] N80-31810
Nondestructive ultrasonic testing and inspection. Citations from the Engineering Index data base
[PB80-811854] N80-31811
Determination of tire quality from nondestructive inspection
[PB80-185358] N80-31812

ULTRASONICS
Ultrasonic characterization of coal liquefaction products
[DOE/PC-10346/1] N80-31503
Review of book-Ultrasound in Otorhinolaryngology
[NASA-TM-76349] N80-32076

ULTRAVIOLET ABSORPTION
Atomic emission lines in the near ultraviolet; hydrogen through krypton, section 1
[NASA-TM-80268-SECT-1] N80-32190
Atomic emission lines in the near ultraviolet; hydrogen through krypton, section 2
[NASA-TM-80268-SECT-2] N80-32191

ULTRAVIOLET ASTRONOMY
Blackbody curves for the IUE spectral range lambda 1150 to lamda 3200 from 6,000 to 200,000 K
[NASA-TM-81997] N80-32306

ULTRAVIOLET SPECTRA
Atomic emission lines in the near ultraviolet; hydrogen through krypton, section 1
[NASA-TM-80268-SECT-1] N80-32190
Atomic emission lines in the near ultraviolet; hydrogen through krypton, section 2
[NASA-TM-80268-SECT-2] N80-32191

ULTRAVIOLET SPECTROSCOPY
Blackbody curves for the IUE spectral range lambda 1150 to lamda 3200 from 6,000 to 200,000 K
[NASA-TM-81997] N80-32306

UNDERGROUND STORAGE
Criticality safety considerations in the geologic disposal of spent nuclear fuel assemblies
[PNL-3268] N80-32200

UNITED STATES OF AMERICA
Airborne measurements of stratospheric ozone intrusions into the troposphere over the United States. Volume 2: Data catalog
[PB80-190705] N80-32017
Hurricane wind speeds in the United States
[PB80-181126] N80-32044

UNSTEADY FLOW
Multisystem modeling of unsteady liquid flow N80-31758

UPPER ATMOSPHERE
Theoretical and experimental investigations of upper atmosphere dynamics
[NASA-CR-163519] N80-31394
The influence of atmospheric dynamics on ozone and temperature structure
[AD-A087702] N80-32009

UPWELLING WATER
Coastal upwelling ecosystems analysis. Data report 65: Sediment data from short cores during JOINT 2 off Peru
[PB80-183155] N80-32053

URANIUM
Assumptions and ground rules used in nuclear waste projections and source term data
[ONWI-24] N80-32203

URANIUM ISOTOPES
Resin bead U and PU analysis of WAK input solutions: A statistical summary of experiment no. 1 --- spent fuels
[ORNL/TM-7362] N80-31517

USER MANUALS (COMPUTER PROGRAMS)
Bifilar analysis users manual, volume 2
[NASA-CR-159228-VOL-2] N80-31383
Radiation and scattering from bodies of translation. Volume 2: User's manual, computer program documentation
[AD-A087403] N80-31689
Payload crew training scheduler (PACTS) user's manual
[NASA-TM-78284] N80-32270

USER REQUIREMENTS
Project FIRES. Volume 1: Program overview and summary, phase 1B
[NASA-CR-161529] N80-32098
Project FIRES. Volume 3: Protective ensemble design and procurement specification, phase 1B
[NASA-CR-161531] N80-32100

UTILITIES
Demonstration of fiber optic link applications in utility plant multiplexed instrument and control systems
[EPRI-NP-1322] N80-31768
Development of advanced batteries for utility application
[EPRI-EM-1341] N80-31961

V

V/STOL AIRCRAFT
Phase 2 and 3 wind tunnel tests of the J-97 powered, external augmentor V/STOL model --- at Ames 40 by 80 wind tunnel
[NASA-CR-163578] N80-31350
V/STOL equivalent systems analysis
[AD-A087283] N80-31414

VACCINES
Certain problems of space biotechnology
[NASA-TM-76235] N80-31421

VACUUM PUMPS
Design of a cost effective solar powered water pump
[PB80-182819] N80-31967

VALUE ENGINEERING
The application of design to cost and life cycle cost to aircraft engines
[AGARD-LS-107] N80-31342
Military engine programs with cost objectives N80-31346
The application of design to cost at Rolls-Royce N80-31348

VAPOR PHASES
Photoassisted water-gas shift reaction over platinized Ti O(2) catalysts
[AD-A087363] N80-31492

VAPOR PRESSURE
Two-Phase flow model test facility
[PB80-181647] N80-31772

VAPORIZING
Development of a preprototype vapor compression distillation water recovery subsystem
[NASA-CR-160779] N80-32101

VARIANCE (STATISTICS)
Regression-adjusted estimates for regenerative simulations, with graphics
[AD-A087369] N80-32154

VARIATIONAL PRINCIPLES
A study of nonlinear waves described by the cubic Schrodinger equation --- cnoidal waves N80-32177

VECTOR ANALYSIS
Level B/C software ground navigation program. Delta-T processor
[NASA-TM-82184] N80-31446

VECTOR SPACES
Repeatibility of spatial configurations defined by interaction matrices N80-32179

VEHICLE WHEELS
Determination of tire quality from nondestructive inspection
[PB80-185358] N80-31812

VELOCITY MEASUREMENT
Phase 2 and 3 wind tunnel tests of the J-97 powered, external augmentor V/STOL model — at Ames 40 by 80 wind tunnel
[NASA-CR-163578] N80-31350
Analytic and experimental studies of a true airspeed sensor N80-31396
Direct measurements of acoustic admittance using laser Doppler velocimetry N80-31605
Rotating valve for velocity combustion response measurements N80-31606
Investigation of three velocity coupled T-burner design N80-31607
Development of a photon correlation laser velocimeter for use in turbulent mixing region measurements N80-31611
Laser Doppler velocimetry: Principles, potential and examples of possible applications
[VKI-PREPRINT-1979-6] N80-32220
VERTICAL ORIENTATION
Hydrodynamic coefficients for vertical circular cylinders at finite depth
[AD-A087334] N80-31763
Automatic-control system for the 17-metre Vertical Axis Wind Turbine (VAWT)
[SAND-78-0984] N80-31958
VERTICAL PERCEPTION
Review of book vestibular crises
[NASA-TM-76354] N80-32078
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
VERTIGO
Review of book vestibular crises
[NASA-TM-76354] N80-32078
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
VESTIBULAR NYSTAGMUS
Technique of electrical stimulation of the vestibular analyzer under clinical conditions
[NASA-TM-76347] N80-32075
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
VESTIBULAR TESTS
Certain features of the cochleovestibular syndrome in the residual stage of traumatic brain disease
[NASA-TM-76337] N80-32073
Diagnosis of latent forms of labyrinthine affections
[NASA-TM-76338] N80-32074
Review of book vestibular crises
[NASA-TM-76354] N80-32078
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
VESTIBULES
Orthoclinostatic test as one of the methods for evaluating the human functional state
[NASA-TM-76321] N80-32070
Occupational changes in the organ of hearing and equilibrium in sailors and fisherman
[NASA-TM-76335] N80-32072
VHF OMNIRANGE NAVIGATION
Performance of Navigation systems — air navigation N80-31341
VIBRATION DAMPING
Stability problems of rotor systems N80-31663
Mathematical formulation of damping for structural response analysis
[NLR-MP-79010-U] N80-31842
VIBRATION ISOLATORS
Bifilar analysis study, volume 1
[NASA-CR-159227] N80-31382
VIBRATION MEASUREMENT
Investigation of the vibrational behavior of a cable-stayed bridge under wind loads
[NLR-MP-79004-U] N80-31672
VIBRATION MODE
The Shock and Vibration Digest, volume 12, no. 7
[AD-A087855] N80-31662
VIBRATION TESTS
Further experimental studies on vibrations and buckling of eccentrically loaded stiffened cylindrical shells
[TAE-331] N80-31818
VIBRATIONAL SPECTRA
Amorphous silicon thin film heterojunction solar cells
[DOE/ET-20460/4] N80-31909
VIBRATIONAL STRESS
Bifilar analysis study, volume 1
[NASA-CR-159227] N80-31382
Bifilar analysis users manual, volume 2
[NASA-CR-159228-VOL-2] N80-31383
VIDEO COMMUNICATION
Video distribution system cost model
[NASA-CR-160020] N80-31685
VIKING LANDER SPACECRAFT
The mosaics of Mars: As seen by the Viking Lander cameras
[NASA-CR-3326] N80-32311
VINYL COPOLYMERS
Synthesis of block copolymers of methyl siloxane, phenyl siloxane, vinyl siloxane, etcetera
[UCRL-15159] N80-31564
VISCOSITY
Melt rheology of block copolymers in relation to melt structure
[AD-A087484] N80-31561
VISIBILITY
Numerical simulation of advection fog formation on multi-disperse aerosols due to combustion-related pollutants
[NASA-CR-161566] N80-31971
VISUAL ACCOMMODATION
Ground-referenced visual orientation with imaging displays — psychophysiology
[AD-A061882] N80-32063
VISUAL PERCEPTION
Detection of moving targets in peripheral vision
[AD-A082541] N80-32083
The influence of visual-spatial ability and study procedures on map learning skill
[AD-A087247] N80-32089
Air-to-air target acquisition factors and means of improvement
[AD-A087848] N80-32095
Visual scene perception: Frequency domain data and model parameter estimation procedure
[NLR-MP-79009-U] N80-32097
VITRIFICATION
Small-scale demonstration of high-level radioactive waste processing and solidification using actual SRP waste
[DP-MS-80-2] N80-32201
VOICE COMMUNICATION
Voice performance measurements
[AD-A087108] N80-31686
Team training applications of voice processing technology
[AD-A085999] N80-32092
VOICE DATA PROCESSING
Team training applications of voice processing technology
[AD-A085999] N80-32092
VOLATILITY
Thermochemical stability diagrams for condensed phases and volatility diagrams for volatile species over condensed phases in twenty metal-sulfur-oxygen systems between 1150 and 1450 K
[DOE/FE-13547/01] N80-31510
VOLCANOES
Influence of volcanic aerosols and oceanic surface temperatures on tropospheric temperatures
[COO-2195-36] N80-32035
VOLT-AMPERE CHARACTERISTICS
Non-periodic helix TWT study
[AD-A087413] N80-31735
VOLTAGE CONVERTERS (DC TO DC)
Voltage converter (dc/dc) used on a satellite. Applications to the ARCAD 3 and PICPAB projects
[CRPE-NT-77] N80-31740
VORTEX GENERATORS
Space shuttle orbiter flow visualization study — water tunnel study of vortex flow during atmospheric entry
[NASA-CR-163092] N80-31438
Laminar flow cyclone development program
[FE-3242-40] N80-31770
VORTICES
Ranges and critical values of advance ratio for blade/vortex intersection patterns of a helicopter rotor
[NPL-MP-79030-U] N80-31360
Preliminary experiments on acoustic oscillations driven by periodic shedding N80-31602
Investigations of eddy coherence in jet flows
[NASA-CR-163525] N80-31759
VORTICITY
A spline relaxation procedure for calculating axisymmetric flow fields about body/propeller combinations. 1: Frozen vorticity and potential flows
[AD-A087027] N80-31762
VULNERABILITY
The vulnerability of electric equipment to carbon fibers of mixed lengths: An analysis
[NASA-TM-80215] N80-31481

W

WAFERS
Pilot line report: Development of a high efficiency thin silicon solar cell
[NASA-CR-163522] N80-31876
Improvement in GAAS device yield and performance through substrate defect gettering
[AD-A087712] N80-32257
WALL TEMPERATURE
The influence of wall resonances on the levitation of objects in a single-axis acoustic processing chamber
[NASA-TM-78299] N80-32187
WARNING SYSTEMS
Implementing advanced data analysis techniques in near-real-time materials accounting
[LA-UR-80-1816] N80-32113
WASTE DISPOSAL
Preliminary one-dimensional thermal analysis of waste emplacement in tuffs
[SAND-79-1265] N80-32014
Criticality safety considerations in the geologic disposal of spent nuclear fuel assemblies
[PNL-3288] N80-32200
Small-scale demonstration of high-level radioactive waste processing and solidification using actual SRP waste
[DP-MS-80-2] N80-32201
Functions of an engineered barrier system for a nuclear waste repository in basalt
[RHO-BWI-LD-23] N80-32202
Resistivity sounding investigation by the Schumberger method in the syncline ridge area, Nevada test site, Nevada
[USGS-OFR-80-466] N80-32204
Systematic approach for assessment of alternative nuclear waste management strategies
[CONF-791112-66] N80-32206
Statistical sensitivity analysis of a simple nuclear waste repository model
[ORNL/TM-7310] N80-32207
WASTE ENERGY UTILIZATION
Heat reclamation from flight simulators: Summary
[AD-A087295] N80-31415
WASTE TREATMENT
Small-scale demonstration of high-level radioactive waste processing and solidification using actual SRP waste
[DP-MS-80-2] N80-32201
Technical program plan, Basalt Waste Isolation Project
[RHO-CD-132-REV-5] N80-32205
WASTE UTILIZATION
Synthetic fuels from municipal, industrial, and agricultural wastes. Citations from the NTIS data base
[PB80-811375] N80-31660
WATER
Photoassisted water-gas shift reaction over platinized Ti O(2) catalysts
[AD-A087363] N80-31492
Physical properties and stability of water in fuel oil emulsions
[PB80-194203] N80-31523
WATER BALANCE
Results of a joint USA/USSR hydrodynamic and transport modeling project, appendices B, C, and D
[PB80-187529] N80-31866
WATER FLOW
Water tunnel simulation study of the later stages of water entry of conical head bodies. Phase 2: Effect of the afterbody on steady state ventilated cavities
[AD-A086980] N80-31761
Simplified groundwater flow modeling: An application of Kalman filter based identification
[UCRL-82649] N80-31861

WATER HEATING
Solar domestic hot water system, a comparative study and storage tank investigation N80-31868
Demonstration of an advanced solar garden with a water ceiling
[DOE/R5-10122/1] N80-31931
WATER POLLUTION
Federal plan for ocean pollution research development and monitoring
[PB80-193295] N80-31989
WATER TREATMENT
Cell module and fuel conditioner
[NASA-CR-159888] N80-31882
Development of a preprototype vapor compression distillation water recovery subsystem
[NASA-CR-160779] N80-32101
WATER TUNNEL TESTS
Flow visualization study of the HiMAT RPRV
[NASA-CR-163094] N80-31381
Space shuttle orbiter flow visualization study --- water tunnel study of vortex flow during atmospheric entry
[NASA-CR-163092] N80-31438
WATERWAVE ENERGY
Patent profiles: Solar energy
[PB80-190010] N80-31966
WAVE DISPERSION
Propagation in dielectric guides
[FUB-6-1979] N80-31715
WAVE EQUATIONS
Subharmonic solutions of a forced wave equation
[AD-A087031] N80-32181
Electromagnetic oscillating two stream instability of plasma waves
[AD-A087732] N80-32227
WAVE FUNCTIONS
Irreversibility and transport in the lower hybrid drift instability
[AD-A087728] N80-32229
WAVE PROPAGATION
Initiation of granular explosives by ramp waves N80-31579
Wave propagation in a dc superconducting cable. Part 1: Analysis
[LA-UR-80-125] N80-31705
Wave propagation in a dc superconducting cable. Part 2: Parametric effects
[LA-YR-80-126] N80-31706
Propagation in dielectric guides
[FUB-6-1979] N80-31715
Evaluation of two-beam spectroscopy as a plasma diagnostic
[LBL-10913] N80-32236
WAVE REFLECTION
Seasat SAR Coastal Ocean Wave Analysis. A wave refraction and diffraction study
[PB80-189384] N80-32052
WAVE SCATTERING
Characterization and influence of the parameters of a model to describe hydrometeor diffusion
[FUB-23-1979] N80-32037
WAVEFORMS
Initial report on geological materials collected at RISP Site J9
[PB80-188253] N80-32018
Initial direct strike lightning data
[NASA-TM-81867] N80-32023
WEAPON SYSTEMS
The Tornado all-weather high-speed low-level system N80-31308
USAF development test and evaluation N80-31331
Qualitative armament subsystem assessment N80-31338
Evaluating and selecting the preferred air breathing weapon system N80-31349
WEATHER
In-flight evaluation of a severe weather avoidance system for aircraft
[AD-A087426] N80-31376
Mariners Weather Log, volume 24, no. 2
[PB80-188444] N80-32048
WEATHER FORECASTING
Analytic modeling of severe vortical storms
[AD-A086919] N80-32027
A demonstration test of the Modular Automated Weather System (MAWS)
[AD-A087070] N80-32030
Comparison of generalized estimates of probable maximum precipitation with greatest observed rainfalls
[PB80-191463] N80-32046
WEATHER STATIONS
Fram 1 meteorology report
[AD-A086983] N80-32029
A demonstration test of the Modular Automated Weather System (MAWS)
[AD-A087070] N80-32030
WEIGHT (MASS)
National Bureau of Standards and Agency for International Development (NBS/AID) Course on Weights and Measures Services
[PB80-187206] N80-31675
WEIGHT REDUCTION
Satellite Power Systems (SPS) concept definition study. Volume 4: Transportation analysis
[NASA-CR-3321] N80-31891
A mass reduction effort of the electric and hybrid vehicle --- composite door panels
[NASA-CR-163520] N80-32298
WEIGHTING FUNCTIONS
An experimental weight function method for stress intensity factor calibration
[AD-A087846] N80-31837
On the feasibility of using FLIR (Forward Looking Infrared) data for crosswind measurements
[AD-A087738] N80-32214
WEIGHTLESSNESS
Investigations into the electrodeposition of dispersion layers under zero gravity conditions
[ESA-TT-574] N80-31425
WELLS
Design, construction, and operation of a 150 kW solar-powered irrigation facility, phase 2
[ALO-4159-1] N80-31903
WEST VIRGINIA
Inorganic geochemistry of Devonian shales in southern West Virginia: Geographic and stratigraphic trends
[DOE-METC/5199/7] N80-31854
WETLANDS
Remote sensing procedures for detecting and monitoring various activities regulated by the Mobile District
[AD-A087584] N80-31973
WHISKER COMPOSITES
The effect of mechanical working on SiC whisker-reinforced aluminum alloys
[AD-A087565] N80-31485
WIENER FILTERING
Robust and quantized Wiener filters for p-point spectral classes
[AD-A086409] N80-32156
Robust Wiener filters for correlated signals and noise
[AD-A086410] N80-32157
WILDLIFE
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 1: Marine turtle studies
[NASA-CR-163122-VOL-4-PT-1] N80-31969
WINCHES
Reduction in swing of a sonar body winched from the sea by a helicopter
[ARL/AERO-NOTE-395] N80-31668
WIND (METEOROLOGY)
The influence of atmospheric dynamics on ozone and temperature structure
[AD-A087702] N80-32009
Satellite derived winds
[AD-A087023] N80-32026
WIND EFFECTS
Environmental wind in built-up areas
[VKI-TM-26] N80-32043
WIND EROSION
Possible methods for removing small airborne particles from the flow in the 5 meter pressurized low-speed wind tunnel
[RAE-TM-AERO-1826] N80-31416
WIND PROFILES
Numerical simulation of advection fog formation on multi-disperse aerosols due to combustion-related pollutants
[NASA-CR-161566] N80-31971
WIND TUNNEL APPARATUS
Wind tunnel measurement of lateral aerodynamic derivatives using a new oscillatory rig, with results and comparisons for the Gnat aircraft
[ARC-R/M-3847] N80-31366
Exploratory studies on the design of acoustic splitters for wind tunnels
[RAE-TM-AERO-1829] N80-31417
WIND TUNNEL MODELS
Phase 2 and 3 wind tunnel tests of the J-97 powered, external augmentor V/STOL model --- at Ames 40 by 80 wind tunnel
[NASA-CR-163578] N80-31350
Store separation testing techniques at the Arnold Engineering Development Center. Volume 4: Description of dynamic drop store separation testing
[AD-A087490] N80-31358
Flow visualization study of the HiMAT RPRV
[NASA-CR-163094] N80-31381
WIND TUNNEL STABILITY TESTS
Aerodynamic performance of a 5-metre-diameter Darrieus turbine with extruded aluminum NACA-0015 blades
[SAND-80-0179] N80-31957
WIND TUNNEL TESTS
Night/adverse weather A-10 evaluator program (A-10B) N80-31307
Store separation testing techniques at the Arnold Engineering Development Center. Volume 2: Description of captive trajectory store separation testing in the aerodynamic wind tunnel 4T
[AD-A087561] N80-31357
An investigation of scale effects on the transonic flow over swept wings. Part 1: Measurements on a model of a transport-aircraft configuration
[ARC-R/M-3842-PT-1] N80-31364
Jet interference on supercritical wings. Part 1: Experiments on a two-dimensional wing. Part 2: Experiments on a swept wing --- wind tunnel tests
[ARC-R/M-3845] N80-31365
Wind tunnel measurement of lateral aerodynamic derivatives using a new oscillatory rig, with results and comparisons for the Gnat aircraft
[ARC-R/M-3847] N80-31366
Measurements of pressure distributions and pressure drags at zero incidence on both blunt and sharp axisymmetric forebodies at a Mach number of 3
[ARC-R/M-3849] N80-31367
A brief investigation of the two-dimensionality of the flow over an airfoil in the 8 foot by 6 foot transonic wind tunnel
[RAE-TM-AERO-1828] N80-31368
Investigation of the vibrational behavior of a cable-stayed bridge under wind loads
[NLR-MP-79004-U] N80-31672
Sites for wind-power installations: Physical modeling of the influence of hills, ridges and complex terrain on wind speed and turbulence. Part 1: Executive summary
[RLO-2438-78/1] N80-31900
Sites for wind-power installations: Wind characteristics over ridges, part 2
[RLO-2438-78/2] N80-31901
WIND VARIATIONS
The occurence of a nocturnal wind maximum at low altitude --- on clear nights
[KNMI-V-346] N80-32040
WIND VELOCITY
Tristatic sodar --- acoustic radar
[LPS-80-6] N80-31725
Sites for wind-power installations: Physical modeling of the influence of hills, ridges and complex terrain on wind speed and turbulence. Part 1: Executive summary
[RLO-2438-78/1] N80-31900
The occurence of a nocturnal wind maximum at low altitude --- on clear nights
[KNMI-V-346] N80-32040
Hurricane wind speeds in the United States
[PB80-181126] N80-32044
On the feasibility of using FLIR (Forward Looking Infrared) data for crosswind measurements
[AD-A087738] N80-32214
WIND VELOCITY MEASUREMENT
Effective transport velocity and plume elongation in nocturnal valley wind fields
[LA-UR-80-791] N80-31978

WINDMILLS (WINDPOWERED MACHINES)
Summary of guidelines for siting wind turbine generators relative to small-scale, two-dimensional terrain features
[RLO-2443-77/1] N80-31930
Wind power. Citations from the NTIS data base
[PB80-811458] N80-31965
WINDPOWER UTILIZATION
Composite rotor blades for large wind energy installations
[NASA-TM-75822] N80-31881
Wind power. Citations from the NTIS data base
[PB80-811458] N80-31965
Patent profiles: Solar energy
[PB80-190010] N80-31966
WINDPOWERED GENERATORS
Sites for wind-power installations: Physical modeling of the influence of hills, ridges and complex terrain on wind speed and turbulence. Part 1: Executive summary
[RLO-2438-78/1] N80-31900
Sites for wind-power installations: Wind characteristics over ridges, part 2
[RLO-2438-78/2] N80-31901
Automatic-control system for the 17-metre Vertical Axis Wind Turbine (VAWT)
[SAND-78-0984] N80-31958
Large wind turbine generator performance assessment
[EPRI-AP-1317] N80-31960
WING FLAPS
Wing profile design of the world championship sail plane SB 11
[NASA-TM-75829] N80-31385
WING LOADING
Computation of spanwise distribution of circulation and lift coefficient for flapped wings of arbitrary planform
[NASA-CR-159329] N80-31353
WING PROFILES
A brief investigation of the two-dimensionality of the flow over an airfoil in the 8 foot by 6 foot transonic wind tunnel
[RAE-TM-AERO-1828] N80-31368
WING TANKS
Effects of nonlinearities on wing-store flutter
N80-31328
WING TIPS
Aircraft wingtip coupling experiments N80-31319
WIRE
Strain hardening and ductility of iron: Axisymmetric vs plane strain elongation
[DOE/ER-04072/3] N80-31543
WIRING
Cost effective system for connecting multiwire cables to printed wiring boards
[BDX-613-2302] N80-31738

X

X RAY ANALYSIS
Changes in bone tissue under conditions of hypokinesia and in connection with age
[NASA-TM-76154] N80-32064
X RAY DIFFRACTION
Determination of fatigue damage
[AD-A087442] N80-31829
X RAY IMAGERY
Propellant explosive reactions in the instrumented shotgun test N80-31568
X RAY INSPECTION
Use of flash X-ray as a diagnostic tool in the dynamic testing of propellants and rocket motors N80-31567
Compaction and the burning to detonation transition at low confinement N80-31572
X RAY SCATTERING
Adaptation of a Kratky camera to use with a one dimensional position sensitive detector
[AD-A087523] N80-31780
X RAY TELESCOPES
Pinhole X-ray/coronagraph optical systems concept definition study
[NASA-CR-161567] N80-32208
X RAYS
Collective acceleration of electrons using autoacceleration processes
[AD-A087001] N80-32199
XENON
Measurements of electronic stimulation of atoms in collisions with atoms and molecules near the threshold
[MPIS-14/1979] N80-32196

Y

YTTRIUM COMPOUNDS
Development, characterization and evaluation of materials for open cycle MHD
[PNL-2004-12] N80-32232

Z

ZENER EFFECT
Infrared absorption spectrum of free carrier in polar semiconductors
[DOE/ER-10444/1] N80-31739
ZINC CHLORIDES
Multiphase reactor modeling for zinc chloride catalyzed coal liquefaction
[LBL-9870] N80-31628

PERSONAL AUTHOR INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 18 NUMBER 22

Typical Personal Author Index Listing

PERSONAL AUTHOR

BILLMANN, B. N80-16043

NASA ACCESSION NUMBER

Listings in this Index are arranged alphabetically by personal author. The NASA accession number denotes the number by which the citation is identified.

CORPORATE SOURCE INDEX

Typical Corporate Source Index Listing

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The NASA accession number denotes the number by which the citation is identified. The titles are arranged under each corporate source in ascending accession number order.

A

ACUREX CORP., MOUNTAIN VIEW, CALIF.
Design, construction, and operation of a 150 kW solar-powered irrigation facility, phase 2
[ALO-4159-1] N80-31903

ADVANCED RESEARCH AND APPLICATIONS CORP., SUNNYVALE, CALIF.
Improvement in GAAS device yield and performance through substrate defect gettering
[AD-A087712] N80-32257

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).
Mathematical modeling of linear and non-linear aircraft structures
[AGARD-R-687] N80-31326
Aircraft Assessment and Acceptance Testing
[AGARD-LS-108] N80-31329
The application of design to cost and life cycle cost to aircraft engines
[AGARD-LS-107] N80-31342
A critical commentary on mean flow data for two-dimensional compressible turbulent boundary layers
[AGARD-AG-253] N80-31354
The use of simulators for training in-flight and emergency procedures
[AGARD-AG-249] N80-31412
Atmospheric Electricity-Aircraft Interaction
[AGARD-LS-110] N80-31743
Guidance and control software
[AGARD-AG-258] N80-32125
International Access to Aerospace Information
[AGARD-CP-279] N80-32293

AERITALIA S.P.A., TORINO (ITALY).
Effects of nonlinearities on wing-store flutter
N80-31328

AEROCHEM RESEARCH LABS., INC., PRINCETON, N. J.
Experimental study of chemically reacting turbulent free shear layers
[FE-2446-8] N80-31798
Development of a model and computer code to describe solar grade silicon production processes
[NASA-CR-163515] N80-31873
Silicon hydride-alkali metal flames as a source of solar grade silicon
[NASA-CR-163514] N80-31874

AERODYNE RESEARCH, INC., BEDFORD, MASS.
Characterization of open-cycle, coal-fired MHD generators
[ARI-RP-43] N80-31936
Characterization of open-cycle, coal-fired MHD generators
[ARI-RP-46] N80-32234

AEROJET LIQUID ROCKET CO., SACRAMENTO, CALIF.
Low-thrust chemical rocket engine study
N80-31467

AEROJET SERVICES CO., SACRAMENTO, CALIF.
Engineering services in support of sounding rockets
[AD-A087801] N80-31433

AEROJET SOLID PROPULSION CO., SACRAMENTO, CALIF.
Testing of a unique ignition system for large solid-propellant rocket motors N80-31599

AERONAUTICAL RESEARCH ASSOCIATES OF PRINCETON, INC., N. J.
Analysis of ammonium perchlorate combustion in a turbulent flow N80-31594

AERONAUTICAL RESEARCH INST. OF SWEDEN, STOCKHOLM.
Calculations by a first order theory of supersonic flow around delta wings
[FFA-TN-AU-810] N80-31362
Analysis of axially loaded stringer stiffened circular cylinders
[FFA-TN-HU-2134] N80-31843
Buckling of cylinders with longitudinal stiffeners subjected to axial compression
[FFA-TN-HU-2184] N80-31844

AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).
Wessex modernization: A preliminary simulation study
[AD-A087799] N80-31410
Reduction in swing of a sonar body winched from the sea by a helicopter
[ARL/AERO-NOTE-395] N80-31668

AEROPLANE AND ARMAMENT EXPERIMENTAL ESTABLISHMENT, BOSCOMBE DOWN (ENGLAND).
Electro-magnetic compatibility N80-31339
Checking of communications and radio navigation systems N80-31340

AEROSPACE CORP., EL SEGUNDO, CALIF.
Evaluation of line focus solar central power systems. Volume 1: Executive summary
[ATR-80(7773-03)-1-VOL-1] N80-31943
Evaluation of line focus solar central power systems. Volume 2: Systems evaluation
[ATR-80(7773-03)-1-VOL-2] N80-31944
Residential photovoltaic systems: A review and comparative evaluation of four independent studies of potential concepts
[SAND-80-7010] N80-31949
Magnetospheric and interplanetary electrostatics: A simple but explicit model
[AD-A087110] N80-32004
Sensitive measurement of photon lifetime and true reflectances in an optical cavity by a phase shift method
[AD-A087248] N80-32211

AEROTRON, INC., BENNINGTON, VT.
Crossing the channel in the Gossamer Albatross
N80-31322

AIR FORCE ACADEMY, COLO.
A research activities management system
[AD-A086576] N80-32271

AIR FORCE AERO PROPULSION LAB., WRIGHT-PATTERSON AFB, OHIO.
Evaluation of cars in a practical combustion environment N80-31612
Comparison of thermocouple, gas sampling, and Raman measured temperatures in an afterburning turbojet engine plume N80-31614
Flowfield studies of dump combusters
N80-31615

AIR FORCE FLIGHT DYNAMICS LAB., WRIGHT-PATTERSON AFB, OHIO.
Computer simulation of ejection seat performance and preliminary correlation with empirical data
[AD-A087275] N80-31372
Development of a photon correlation laser velocimeter for use in turbulent mixing region measurements N80-31611

AIR FORCE FLIGHT TEST CENTER, EDWARDS AFB, CALIF.
F-16 European test and evaluation N80-31309
Have Bounce N80-31311
Review of five years of flight testing the B-1
N80-31321
USAF development test and evaluation
N80-31331
Performance testing production airlines
N80-31334
Qualitative armament subsystem assessment
N80-31338

AIR FORCE GEOPHYSICS LAB., HANSCOM AFB, MASS.
A demonstration test of the Modular Automated Weather System (MAWS)
[AD-A087070] N80-32030

AIR FORCE GLOBAL WEATHER CENTRAL, OFFUTT AFB, NEBRASKA.
Special Sensor H (SSH) moisture sounding
[AD-A087576] N80-32011

AIR FORCE HUMAN RESOURCES LAB., BROOKS AFB, TEX.
Airborne performance measurement assessment: Low altitude tactical formation in two operating environments
[AD-A087068] N80-32090

AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OHIO.
Production oriented maintenance organization: A critical analysis of sortie-generation capability and maintenance quality
[AD-A087095] N80-31323
An analysis of the future requirements for materials handling equipment in the military airlift command
[AD-A087094] N80-31370
Development of a photon correlation laser velocimeter for use in turbulent mixing region measurements N80-31611
Evaluation of cars in a practical combustion environment N80-31612
Some civil engineering and management aspects of conversion from JP-4 to JP-8 fuel by the United States Air Force in the continental United States
[AD-A087221] N80-31626
A review of the methods for passive solar systems analysis
[AD-A087509] N80-31895

AIR FORCE SYSTEMS COMMAND, WRIGHT-PATTERSON AFB, OHIO.
Progress on the US Air Force approach for the practical management of engine life cycle costs
N80-31345
Erosive burning, a survey of the Russian literature
N80-31595
The mosaics of Mars: As seen by the Viking Lander cameras
[NASA-CR-3326] N80-32311

SOURCE

AIR FORCE WRIGHT AERONAUTICAL LABS., WRIGHT-PATTERSON AFB, OHIO.
In-flight evaluation of a severe weather avoidance system for aircraft
[AD-A087426] N80-31376
Test of an electrohydraulic digital actuator for advanced missile systems
[AD-A087274] N80-31431
Atmospheric electricity interactions with aircraft: An overview N80-31744
An experimental weight function method for stress intensity factor calibration
[AD-A087846] N80-31837
Tests of a lightweight 200 kW MHD channel and diffuser
[AD-A087022] N80-32226
AIR PRODUCTS AND CHEMICALS, INC., ALLENTOWN, PA.
A study of industrial hydrogen and syngas supply systems
[NASA-CR-163523] N80-31624
Cryogenic methane separation/catalytic hydrogasification process analysis
[FE-3044-T7] N80-31635
AIRBORNE INSTRUMENTS LAB., MELVILLE, N. Y.
Microwave transversal equalizer
[AD-A087603] N80-31699
AIRCRAFT RESEARCH ASSOCIATION LTD., BEDFORD (ENGLAND).
The design of axisymmetric cowls for podded nacelles for high by-pass ratio turbofan engines
[ARC-R/M-3846] N80-31394
AIRESEARCH MFG. CO., PHOENIX, ARIZ.
Advanced technology components for model GTP305-2 aircraft auxiliary power system
[AD-A087838] N80-31403
The 3500 hour durability testing of commercial ceramic materials
[NASA-CR-159785] N80-31552
AIRESEARCH MFG. CO., TORRANCE, CALIF.
Electromechanical actuation development
[AD-A085847] N80-31409
Investigation of a putty propellant turbine power system N80-31622
AKRON UNIV., OHIO.
Detachment of an elastic matrix from a rigid spherical inclusion
[AD-A087414] N80-31834
ALABAMA UNIV. IN HUNTSVILLE.
Numerical simulation of advection fog formation on multi-disperse aerosols due to combustion-related pollutants
[NASA-CR-161566] N80-31971
ALUMINUM CO. OF AMERICA, ALCOA CENTER, PA.
Production of aluminum-silicon alloy and and ferrosilicon and commercial purity aluminum by the direct reduction process
[CONS-5089-8] N80-31541
AMES LAB., IOWA.
Photoelectrochemical solar cells based on d-band electrochemistry at transition metal diselenides
[IS-4724] N80-31952
ANALYTIC SCIENCES CORP., READING, MASS.
Validation of high angle-of-attack analysis methods
[AD-A087621] N80-31411
Space shuttle navigation analysis. Volume 1: GPS aided navigation
[NASA-CR-160765] N80-31440
Space shuttle navigation analysis. Volume 2: Baseline system navigation
[NASA-CR-160766] N80-31441
ANALYTICAL AND COMPUTATIONAL MATHEMATICS, ZURICH (SWITZERLAND).
Interplanetary two point boundary value problems: Extension of the Unified System for Orbit Computation (USOC), volume 4
[ESA-CR(P)-1347] N80-31424
APPLIED PHYSICS LAB., JOHNS HOPKINS UNIV., LAUREL, MD.
The 16th JANNAF Combustion Meeting, volume 1
[AD-A084680] N80-31565
The 16th JANNAF combustion meeting, volume 2
[CPIA-PUBL-308-VOL-2] N80-31566
Moving target detector data utilization investigation
[AD-A086962] N80-31687
The investigation of the magnetospheric dynamics in conjunction with the SCATHA satellite observations
[AD-A087433] N80-32006
The Seasat SAR Wind and Ocean Wave Monitoring Capabilities: A case study for pass 1339m
[NASA-CR-163454] N80-32051
Indirectly funded research and exploratory development at the Applied Physics Laboratory, fiscal year 1978
[AD-A086948] N80-32322
APPLIED RESEARCH LAB., STATE COLLEGE, PA.
Water tunnel simulation study of the later stages of water entry of conical head bodies. Phase 2: Effect of the afterbody on steady state ventilated cavities
[AD-A086980] N80-31761
A spline relaxation procedure for calculating axisymmetric flow fields about body/propeller combinations. 1: Frozen vorticity and potential flows
[AD-A087027] N80-31762
ARCON CORP., WALTHAM, MASS.
Ionospheric modeling and propagation analysis
[AD-A087259] N80-31998
ARGONNE NATIONAL LAB., ILL.
Methodology for the comparative assessment of the Satellite Power System (SPS) and alternative technologies
[NASA-CR-163049] N80-31951
Materials program plan for inertial confinement fusion
[ANL/FPP-TM-126] N80-32238
ARINC RESEARCH CORP., ANNAPOLIS, MD.
Video distribution system cost model
[NASA-CR-160020] N80-31685
ARIZONA STATE UNIV., TEMPE.
Terrestrial photovoltaic power systems with sunlight concentration
[SAND-80-7008] N80-31942
ARIZONA UNIV., TUCSON.
Measurement, prediction, and hazard evaluation of Earth fissures and subsidence, south-central Arizona
[PB80-183908] N80-32019
ARMY ARMAMENT RESEARCH AND DEVELOPMENT COMMAND, DOVER, N. J.
Progress report 3 of cooperative program for design, fabrication, and testing of high modulus composite helicopter shafting
[NASA-TM-82272] N80-31387
Holographic observations of black powder combustion N80-31586
ARMY COLD REGIONS RESEARCH AND ENGINEERING LAB., FORT WAINRIGHT, ALASKA.
The fate and effects of crude oil spilled on subarctic permafrost terrain in interior Alaska
[PB80-187305] N80-31984
ARMY ELECTRONICS RESEARCH AND DEVELOPMENT COMMAND, FORT BELVOIR, VA.
Measurements of millimeter wave radar transmission and backscatter during dusty infrared test 2, dirt 2
[AD-A086189] N80-31694
ARMY ELECTRONICS RESEARCH AND DEVELOPMENT COMMAND, WHITE SANDS MISSILE RANGE, N. MEX.
The influence of atmospheric dynamics on ozone and temperature structure
[AD-A087702] N80-32009
Solar eclipse (1979). Part 1: Atmospheric sciences laboratory field program summary
[AD-A087318] N80-32317
ARMY ENGINEER TOPOGRAPHIC LABS., FORT BELVOIR, VA.
Evaluating soil moisture and textural relationships using regression analysis
[AD-A087371] N80-31852
Errors in automatic pass point mensuration using digital techniques
[AD-A087443] N80-31859
Terrain analyst synthesizer station
[AD-A087370] N80-31860
ARMY ENGINEER WATERWAYS EXPERIMENT STATION, VICKSBURG, MISS.
Remote sensing procedures for detecting and monitoring various activities regulated by the Mobile District
[AD-A087584] N80-31973
ARMY MATERIALS AND MECHANICS RESEARCH CENTER, WATERTOWN, MASS.
The effect of mechanical working on SiC whisker-reinforced aluminum alloys
[AD-A087565] N80-31485
Ceramics for vehicular engines: State-of-the-art
[AD-A087589] N80-31560
ARMY MATERIEL DEVELOPMENT AND READINESS COMMAND, ADELPHI, MD.
Pseudonoise spread-spretrum systems for military communications
[AD-A087701] N80-31700
ARMY MISSILE COMMAND, REDSTONE ARSENAL, ALA.
Gold plated lead-clinched lead solder joint study
[AD-A087352] N80-31733
A methodology for modeling confined, temperature sensitive cushioning systems
[AD-A087351] N80-31799
ARNOLD ENGINEERING DEVELOPMENT CENTER, ARNOLD AIR FORCE STATION, TENN.
MHD high performance demonstration experiment
[FE-2895-7] N80-32231
ARO, INC., ARNOLD AIR FORCE STATION, TENN.
Store separation testing techniques at the Arnold Engineering Development Center. Volume 2: Description of captive trajectory store separation testing in the aerodynamic wind tunnel 4T
[AD-A087561] N80-31357
Store separation testing techniques at the Arnold Engineering Development Center. Volume 4: Description of dynamic drop store separation testing
[AD-A087490] N80-31358
ASPEN INST. FOR HUMANISTIC STUDIES, BOULDER, COLO.
Prospect of a global warming and studies of its societal impacts
[CONF-7910158-1] N80-31976
ASTRO RESEARCH CORP., SANTA BARBARA, CALIF.
Influence of interorbit acceleration on the design of large space antennas N80-31461
ATLANTIC RESEARCH CORP., ALEXANDRIA, VA.
An investigation of the effects of formulation parameters on erosive burning of composite propellants N80-31593
L*-instability in ducted rocket fuel generators N80-31610
ATOMIC ENERGY RESEARCH ESTABLISHMENT, HARWELL (ENGLAND).
Full text handling: A critical review N80-32292
ATOMICS INTERNATIONAL DIV., RICHLAND, WASH.
Functions of an engineered barrier system for a nuclear waste repository in basalt
[RHO-BWI-LD-23] N80-32202
AUBURN UNIV., ALA.
An analysis of radome-induced radar pointing error N80-31681
AUTOMATION INDUSTRIES, INC., SILVER SPRING, MD.
Environmental data for sites in the National Solar Data Network
[SOLAR/0010-80/02] N80-31975
AVCO SYSTEMS DIV., WILMINGTON, MASS.
High energy density composite flywheel program
[AD-A087076] N80-31892
AVIONS MARCEL DASSAULT-BREGUET AVIATION, SAINT-CLOUD (FRANCE).
The development of the world's first triengine business jet, the Mystere Falcon 50 N80-31316

B

BALLISTIC RESEARCH LABS., ABERDEEN PROVING GROUND, MD.
A model for confined combustion of compressible, linear viscoelastic solid propellant N80-31574
Transient combustion calculations with variable thermal properties N80-31582
Combustion characteristics of consolidated propellants N80-31583
Shock tube ignition of nitrocellulose and nitramines N80-31585
A priori thermochemistry and rate constant estimates for flame zone reactions N80-31589
On the utility of plane strain approximations for oblique impact computations
[AD-A081120] N80-31819
BARNES ENGINEERING CO., STAMFORD, CONN.
Selenium immersed thermistor bolometer study
[NASA-CR-160013] N80-31776
BATTELLE COLUMBUS LABS., OHIO.
Economic evaluation of the MIT process for manufacture of ethanol
[DSE-3992-T1] N80-31647

Measurement and correlation analysis plan for concrete tie and fastener performance analysis
[PB80-183882] N80-31674
SSME turbopump bearing analytical study
[NASA-CR-161554] N80-31794
Pilot study to select candidates for energy. Conservation research for the chemical industry
[DOE/TIC-11114] N80-31940
Photovoltaic institutional issues study
[SAND-79-7054] N80-31950
Design study of steel V-Belt CVT for electric vehicles
[NASA-CR-159845] N80-32299

BATTELLE PACIFIC NORTHWEST LABS., RICHLAND, WASH.
Workshop on Satellite Power Systems (SPS) Effects on Optical and Radio Astronomy
[CONF-7905143] N80-31435
Criticality safety considerations in the geologic disposal of spent nuclear fuel assemblies
[PNL-3268] N80-32200
Development, characterization and evaluation of materials for open cycle MHD
[PNL-2004-12] N80-32232

BDM CORP., MONTEREY, CALIF.
Atmospheric marine boundary layer mixing rates in the California coastal region
[AD-A087264] N80-32033

BENDIX CORP., KANSAS CITY, MO.
Fabrication for precision mechanisms
[BDX-613-2388] N80-31670
Cost effective system for connecting multiwire cables to printed wiring boards
[BDX-613-2302] N80-31738

BERGEN COUNTY UTILITIES AUTHORITY, LITTLE FERRY, N.J.
Feasibility study: Fuel cell cogeneration in a water pollution control facility, volume 1
[DOE/ET-12431/T1-VOL-1] N80-31922

BOEING AEROSPACE CO., SEATTLE, WASH.
Evaluating and selecting the preferred air breathing weapon system N80-31349
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159111] N80-31447
Auxiliary control of LSS N80-31459
Integrated analysis capability for large space systems N80-31463
LARC-13 adhesive development
[NASA-CR-159317] N80-31479
Emerging materials systems for solar cell applications, CU/sub 2-x/Se
[DOE/ET-23005/T4] N80-31910

BOEING CO., SEATTLE, WASH.
Solar project description for Sir Galahad Company, single family residence, Virginia Beach, Virginia
[SOLAR/1026-79/50] N80-31920

BOEING MILITARY AIRPLANE DEVELOPMENT, SEATTLE, WASH.
Cast Aluminum Structures Technology (CAST) structural test and evaluation, phase 5. Part 2: Fatigue and fracture properties of cast aluminum bulkheads

THIOKOL CORP., BRIGHAM CITY, UTAH.
Investigation of three velocity coupled T-burner design N80-31607

THIOKOL CORP., HUNTSVILLE, ALA.
Studies of motor instability problems N80-31608

THOMSON-CSF, MEUDON-LA-FORET (FRANCE).
A feasibility study of a satellite frequency modulation broadcasting system. Volume 3: Complementary study on the attenuation in the shadow zones, multiple paths, and circular polarization reception antennas
[ESA-CR(P)-1313-VOL-3] N80-31726

TRANSPORTATION RESEARCH BOARD, WASHINGTON, D.C.
Highway noise abatement
[PB80-190622] N80-31991

TRANSPORTATION SYSTEMS CENTER, CAMBRIDGE, MASS.
Determination of tire quality from nondestructive inspection
[PB80-185358] N80-31812
Assessment of operational automated guideway systems-AIRTRANS, phase 2
[PB80-182538] N80-32302

TRW DEFENSE AND SPACE SYSTEMS GROUP, REDONDO BEACH, CALIF.
DSCS 2, battery anomaly investigation satellites 9437 and 9438
[AD-A087390] N80-31432
Analytic modeling of severe vortical storms
[AD-A086919] N80-32027
Data reduction and analysis for the TRW IMP-7 plasma wave experiment
[NASA-CR-160011] N80-32320

TRW, INC., CLEVELAND, OHIO.
Cost analysis of composite fan blade manufacturing processes
[NASA-CR-159876] N80-31398

TRW ENERGY SYSTEMS PLANNING DIV., MCLEAN, VA.
Methane recovery from coalbeds project, phase 2
[DOE/MC-08089/T4] N80-31645
Underground gasification for steeply dipping coal beds. Rawlins test no. 1
[SAN-13108-35] N80-31653

TUEBINGEN UNIV. (WEST GERMANY).
Phenomenology of lightning/aircraft interaction N80-31748

TUFTS UNIV., MEDFORD, MASS.
Balloon-supported Loran antenna, new hardware for tethered balloons, and payloads used in BAMM flights
[AD-A087487] N80-31377
Balloon-supported antenna for Loran C/D navigation system
[AD-A087488] N80-31378

U

UNION CARBIDE CORP., OAK RIDGE, TENN.
Assumptions and ground rules used in nuclear waste projections and source term data
[ONWI-24] N80-32203

UNION CARBIDE CORP., PARMA, OHIO.
Activated carbon fabric from pitch
[AD-A087030] N80-31553

UNITED KINGDOM ATOMIC ENERGY AUTHORITY, ABINGDON (ENGLAND).
Models for assessing hazards due to lightning N80-31749
The coupling of lightning fields into aircraft and cables N80-31751

UNITED TECHNOLOGIES CORP., EAST HARTFORD, CONN.
Feasibility study: Fuel cell cogeneration in a water pollution control facility, volume 1
[DOE/ET-12431/T1-VOL-1] N80-31922

UNITED TECHNOLOGIES CORP., SOUTH WINDSOR, CONN.
Cogeneration Technology Alternatives Study (CTAS). Volume 3: Energy conversion system characteristics
[NASA-CR-159761] N80-31869
AC/DC power converter for batteries and fuel cells
[EPRI-EM-1298] N80-31937
Development of molten carbonate fuel cell power plant technology
[DOE/ET-15440/1] N80-31938

UNITED TECHNOLOGIES CORP., SUNNYVALE, CALIF.
Preliminary experiments on acoustic oscillations driven by periodic shedding N80-31602
Rotating valve for velocity combustion response measurements N80-31606
Investigation of a putty propellant turbine power system N80-31622

UNITED TECHNOLOGIES RESEARCH CENTER, EAST HARTFORD, CONN.
Influence of mistuning on blade torsional flutter
[NASA-CR-165137] N80-31351
CARS concentration sensitivity with and without nonresonant background suppression
[AD-A087557] N80-31487
Investigation of the feasibility of CARS measurements in scramjet combustion N80-31613
Design, fabrication and testing of an optical temperature sensor
[NASA-CR-165125] N80-31777

UNIVERSITY OF CENTRAL FLORIDA, ORLANDO.
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 1: Marine turtle studies
[NASA-CR-163122-VOL-4-PT-1] N80-31969
A continuation of base-line studies for environmentally monitoring Space Transportation Systems (STS) at John F. Kennedy Space Center. Volume 4: Threatened and endangered species of the Kennedy Space Center. Part 2: Threatened and endangered birds and other threatened and endangered forms
[NASA-CR-163122-VOL-4-PT-2] N80-31970

UNIVERSITY OF NORTHERN ILLINOIS, DE KALB.
Initial report on geological materials collected at RISP Site J8
[PB80-198253] N80-32019

UNIVERSITY OF SOUTHERN CALIFORNIA, LOS ANGELES.
Reduction of combustion efficiency associated with liquid phase drop decomposition N80-31617
High resolution digital radar imaging of rotating objects
[AD-A087510] N80-31704
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113/40-3] N80-31905
Low cost solar cells based on amorphous silicon electrodeposited from organic solvents
[SAN-0113-040-T6] N80-31953
Development of the microwave radiative transfer program for cloudy atmospheres applications to DMSP SSM/T channels
[AD-A087434] N80-33002
Raman-induced Kerr effect studies
[AD-A087410] N80-32213

CONTRACT NUMBER INDEX

Typical Contract Number Index Listing

Listings in this index are arranged alphanumerically by contract number. Under each contract number the NASA accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The NASA accession number denotes the number by which the citation is identified.

REPORT/ACCESSION NUMBER INDEX

Typical Report/Accession Number Index Listing

Listings in this index are arranged alphanumerically by report number. The NASA accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley

COLORADO
University of Colorado, Boulder

DISTRICT OF COLUMBIA
Library of Congress

GEORGIA
Georgia Institute of Technology, Atlanta

ILLINOIS
The John Crerar Library, Chicago

MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge

MISSOURI
Linda Hall Library, Kansas City

NEW YORK
Columbia University, New York

OKLAHOMA
University of Oklahoma, Bizzell Library

PENNSYLVANIA
Carnegie Library of Pittsburgh

WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries.

CALIFORNIA
Los Angeles Public Library
San Diego Public Library

COLORADO
Denver Public Library

CONNECTICUT
Hartford Public Library

MARYLAND
Enoch Pratt Free Library, Baltimore

MASSACHUSETTS
Boston Public Library

MICHIGAN
Detroit Public Library

MINNESOTA
Minneapolis Public Library

MISSOURI
Kansas City Public Library
St. Louis Public Library

NEW JERSEY
Trenton Public Library

NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library

OHIO
Akron Public Library
Cincinnati Public Library
Cleveland Public Library
Dayton Public Library
Toledo Public Library

TENNESSEE
Memphis Public Library

TEXAS
Dallas Public Library
Fort Worth Public Library

WASHINGTON
Seattle Public Library

WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

STAR

AN ABSTRACT JOURNAL

Scientific and Technical Aerospace Reports

PRODUCED BY THE
SCIENTIFIC AND TECHNICAL
INFORMATION
BRANCH

NASA

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

NAS 1.9/4:

WHAT YOU CAN DO FOR *STAR*

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those that you will transmit to NASA, DoD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Scientific and Technical Information Facility, P. O. Box 8757, B. W. I. Airport, Maryland 21240.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR's* companion journal, *International Aerospace Abstracts*.

You may specify a particular source to be included in a report announcement if you wish, otherwise the report will be placed on public sale at the National Technical Information Service. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

The semimonthly issues and the cumulative index issues are available postpaid on subscription and in single copy from the Superintendent of Documents, United States Government Printing Office, Washington, D.C., 20402, United States of America.

Semimonthly issues

Annual subscription rates: $60.00 domestic; $75.00 foreign. Price per single copy: $2.50 domestic; $3.15 foreign.

Cumulative index issues, semiannual and annual

Annual subscription rates for both: $25.00 domestic; $31.25 foreign. Price per single copy: semiannual $9.50 domestic, $11.90 foreign; annual $16.00 domestic; $20.00 foreign.

Domestic subscription rates

Apply to the United States, Canada, Mexico, and all Central and South American countries, except as noted below.

Foreign subscription rates

Apply to Argentina, Brazil, French Guiana, Guyana, Surinam, Belize, and all other countries throughout the world.

Payment should be by check, money order, or document coupons, and must accompany order. Remittances from foreign countries should be made by international money order or draft on an American bank, payable to the Superintendent of Documents, or by UNESCO book coupons.

PUBLISHED BY:

UNITED STATES GOVERNMENT
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
SCIENTIFIC AND TECHNICAL INFORMATION BRANCH
Scientific and Technical Aerospace Reports, Volume 18, is prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by PRC Data Services Company.

The Administrator of the National Aeronautics and Space Administration has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Agency. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through June 30, 1981.

US ISSN 0036-8741

INTRODUCTION

Scientific and Technical Aerospace Reports (STAR) is a major component of a comprehensive National Aeronautics and Space Administration information system covering aeronautics, space, and supporting disciplines. *STAR* is issued on the 8th and 23rd of each month and announces current publications of the following types:

- NASA, NASA contractor, and NASA grantee reports
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms
- Translations in report form
- NASA-owned patents and patent applications
- Dissertations and theses

NEWARK PUBLIC LIBRARY
DEC 23 1980
U. S. GOVT. PUBS.
DEPOSITORY 376

Cumulative index volumes are published semiannually and annually.

Journal, book, and conference literature, cover-to-cover journal translations, and certain foreign dissertations are announced in a companion journal, *International Aerospace Abstracts (IAA)*, available on subscription from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

ON-GOING RESEARCH PROJECTS

By arrangement between NASA and the Smithsonian Science Information Exchange (SSIE), a separate section of information on aerospace-related *On-Going Research Projects* is inserted into each issue of *STAR*. The insert presents titles of active NASA grants and university contracts, summary portions of recently updated *NASA Research and Technology Objectives and Plans (RTOPs)*, and notices of non-NASA research projects that were funded in the most recent or current fiscal year. The latter are selected by SSIE. The project announcements in the insert are arranged by *STAR* divisions but are otherwise entirely separate from *STAR*. They are not indexed nor machine-searchable by NASA. Current and retrospective searches are available from SSIE, 1730 M Street, N.W., Washington, D.C. 20036.

SUBJECT SCOPE

Subject scope of *STAR*, *IAA*, and *On-Going Research Projects* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

OTHER NASA PUBLICATIONS
